<i>SMF103_IBM_HTTP_Server.<fieldname></i>			
SMF103_IBM_HTTP_Server.Header_Self_Defining_Section.<fieldname>			
zFLG	HEX	1	(IBM name: SMF105FLG) System indicator: Bit Meaning when set 0-2 Reserved. 3-6 Version indicators 7 Reserved.
zRTY	INT	1	(IBM name: SMF105RTY) Record type 103 (x'67')
zTME	TSTMP	8	(IBM name: SMF105TME) Date/Time that the record was moved into the SMF buffer.
zSID	CHAR	4	(IBM name: SMF105SID) System identification (from the SID parameter).
zSSID	CHAR	4	(IBM name: SMF105SSI) Sub system identification
zSTY	INT	2	(IBM name: SMF105STY) Record SubType.
zSTN	INT	2	(IBM name: SMF105TRN) Number of triplets in this record.

SMF103_IBM_HTTP_Server.Self_Defining_Section.<fieldname>			
zPRS	INT	4	(IBM name: SMF105PRS) Offset to the IBM HTTP Server product section from the beginning of the record (including RDW).
zPRL	INT	2	(IBM name: SMF105PRL) Length of the IBM HTTP Server product section.
zPRN	INT	2	(IBM name: SMF105PRN) Number of the IBM HTTP Server product section.
zXES	INT	4	(IBM name: SMF105MES) Offset to metric section from beginning of the record (including RDW).
zXEL	INT	2	(IBM name: SMF105MEL) Length of the metric section.
zXEN	INT	2	(IBM name: SMF105MEN) Number of the metric section.

Secondary segment: [SMF103_Product_Information](#)

Field Name	Type	Len	Description
<i>SMF103_Product_Information.<fieldname></i>			

zMFV	DEC	2 (2,0)	(IBM name: SMF105MFV) HTTP Server version number.
zPRD	CHAR	8	(IBM name: SMF105PRD) Product name (IBM HTTP Server).

Secondary segment: SMF103_Subtype_13_Configuration

Field Name	Type	Len	Description
<i>SMF103_Subtype_13_Configuration.<fieldname></i>			
zPID	INT	4	Process ID.
zREADY	INT	4	Number of ready threads.
zBUSY	INT	4	Number of busy threads.
zREAD	INT	4	Number of reading threads.
zWRITE	INT	4	Number of writing threads.
zLOG	INT	4	Number of logging threads.
zDNS	INT	4	Number of domain name server threads.
zCLOSING	INT	4	Number of closing threads.
zKEEPALIVE	INT	4	Number of keepalive threads.
zTRANSKB	INT	4	Number of KB transferred.
zREQUESTS	INT	4	Number of requests served.
zNAME_LEN	INT	4	Length of server name.
zNAME	XVCHAR	0 1024	Server name.

Secondary segment: SMF103_Subtype_14_Performance

Field Name	Type	Len	Description
<i>SMF103_Subtype_14_Performance.<fieldname></i>			
zPID	INT	4	(IBM Name: PID) Process ID.
zMETHOD_LENGTH	INT	4	(IBM Name: METHOD_LENGTH) Length of the HTTP request method.
zDOMAIN_LENGTH	INT	4	(IBM Name: DOMAIN_LENGTH) Length of the HTTP host header.
zURL_LENGTH	INT	4	(IBM Name: URL_LENGTH) Length of the HTTP request URL.
zRIP_LENGTH	INT	4	(IBM Name: RIP_LENGTH) Length of the client IP address.
zCPU_TIME	CHAR	8	(IBM Name: CPU_TIME) Accumulated CPU time in seconds.
zELAPSED_TIME	INT	8	(IBM Name: ELAPSED_TIME) Long. Elapsed request time in milliseconds.
zMETHOD	XVCHAR	0 1024	(IBM Name: METHOD) HTTP request method.
zDOMAIN	XVCHAR	0 1024	(IBM Name: DOMAIN) HTTP request domain.
zURL	XVCHAR		

		0 1024	(IBM Name: URL) HTTP request URL.
zCLIENTIP	XVCHAR	0 1024	(IBM Name: CLIENTIP) Remote client IP address.
zVERSION	INT	4	(IBM Name: VERSION) Version of the SMF record.
zJOBNAME	CHAR	8	(IBM Name: JOBNAME) Process job name.
zJOBID	CHAR	8	(IBM Name: JOBID) Process job ID or started task (STC) ID.
zASID	CHAR	2	(IBM Name: ASID) ASID.

zFLG	HEX	1	(IBM name: SMF104FLG) System indicator: Bit Meaning when set 0-2 Reserved. 3-6 Version indicators 7 Reserved.
zRTY	INT	1	(IBM name: SMF104RTY) Record type 104 (x'68')
zTME	TSTMP	8	(IBM name: SMF104TME) Date/Time that the record was moved into the SMF buffer.
zSID	CHAR	4	(IBM name: SMF104SID) System identification (from the SID parameter).
zSSID	CHAR	4	(IBM name: SMF104SSI) Sub system identification
zSTY	INT	2	(IBM name: SMF104STY) Record SubType.
zSTN	INT	2	(IBM name: SMF104TRN) Number of triplets in this record.

SMF104_RMF_Distributed_Platform_Performance.Self_Defining_Section.<fieldname>			
zPRS	INT	4	(IBM name: SMF104PRS) Offset to the RMF XP product section from the beginning of the record (including RDW).
zPRL	INT	2	(IBM name: SMF104PRL) Length of the RMF XP product section.
zPRN	INT	2	(IBM name: SMF104PRN) Number of the RMF XP product section.
zICS	INT	4	(IBM name: SMF104ICS) Offset to image control section from beginning of the record (including RDW).
zICL	INT	2	(IBM name: SMF104ICL) Length of the image control section.
zICN	INT	2	(IBM name: SMF104ICN) Number of the image control section.
zMES	INT	4	(IBM name: SMF104MES) Offset to metric section from beginning of the record (including RDW).
zMEL	INT	2	(IBM name: SMF104MEL) Length of the metric section.
zMEN	INT	2	(IBM name: SMF104MEN) Number of the metric section.

Secondary segment: SMF104_Product_Information

Field Name	Type	Len	Description
SMF104_Product_Information.<fieldname>			
zMFV	DEC	2 (2,0)	(IBM name: SMF104MFV) RMF version number.
zPRD	CHAR	8	(IBM name: SMF104PRD) Product name (RMF XP).
zIST	TIME	4	(IBM name: SMF104IST) Time that the RMF XP measurement interval started, in the form 0hhmmssF, where hh is the hours, mm is the minutes, ss is the seconds, and F is the sign.
zDAT	DATE	4	(IBM name: SMF104DAT) Date when the RMF measurement interval started, in the form 0ccyddF.
zINT	HEX	4	(IBM name: SMF104INT) Duration of RMF measurement interval, in the form mmsstttF, where mm is the minutes, ss is the seconds, ttt is the milliseconds, and F is the sign. The end of the measurement interval is the sum of the recorded start time and this field.
zLGO	TSTMP	8	(IBM name: SMF104LGO) Offset GMT to local time (STCK format).
zXPL	INT	2	(IBM name: SMF104XPL) RMF XP functionality level.
zCPX	CHAR	24	(IBM name: SMF104CPX) System complex name, specified with the COMPLEX parameter in the cfg4A X Z configuration file.
zOSL	CHAR	8	(IBM name: SMF104OSL) Operating system label served by RMF XP (AIX or LINUX).
zPLT	INT (ENUM)	2	(IBM name: SMF104PLT) Platform type served by RMF XP: 'AIX' => AIX on IBM Power Systems, 'xLinux' => Linux on System x, 'zLinux' => Linux on z Systems.
zMVS	CHAR	8	(IBM name: SMF104MVS) z/OS software level for the current system (consists of an acronym and the

			version, release, and modification level - ZVvvrmm).
zXNM	CHAR	8	(IBM name: SMF104XNM) Sysplex name of the current sysplex as defined in parmlib member COUPLExx.
zSNM	CHAR	8	(IBM name: SMF104SNM) System name for the current system as defined in parmlib member IEASYSxx SYSNAME parameter.

Secondary segment: SMF104_Image_Control

Field Name	Type	Len	Description
<i>SMF104_Image_Control.<fieldname></i>			
zTOF	CHAR	64	(IBM name: SMF104MIM) Name of this monitored image, extracted from the CIM metrics collection.
zTLN	CHAR	14	(IBM name: SMF104TIM) Timestamp in the format yyyyymmddhhmmss, extracted from the CIM metrics collection.
zTON	CHAR	14	(IBM name: SMF104DUR) Interval duration in the format yyyyymmddhhmmss, extracted from the CIM metrics collection.
zSSOF	CHAR	64	(IBM name: SMF104CIM) Name of the image where the CIM server is running, specified with the IMAGE parameter in the cfg4A X Z configuration file.
zSSLN	CHAR	4	(IBM name: SMF104OST) Operating system type where the CIM server is running, extracted from the OSType attribute of the CIM_Operating_System instance: 9 => AIX, 36 => Linux.
zSSON	CHAR	64	(IBM name: SMF104OSV) Operating system version where the CIM server is running, extracted from the version attribute of the CIM_Operating_System instance.
zPPOF	CHAR	4	(IBM name: SMF104CTZ) Current time zone, extracted from the CurrentTimeZone attribute of the CIM_Operating_System instance. This value represents the GMT offset in minutes.
zPPLN	INT	2	(IBM name: SMF104MIND) Index of first metric section associated with this monitored image.
zPPON	INT	2	(IBM name: SMF104MNUM) Number of metric sections associated with this monitored image.

Secondary segment: SMF104_01_AIX_ActiveMemoryExpansionMetrics

Field Name	Type	Len	Description
<i>SMF104_01_AIX_ActiveMemoryExpansionMetrics.<fieldname></i>			
zMNAME	CHAR	64	(IBM name: R10401MNAME) Name of measured element, extracted from the MeasuredElementName attribute of the CIM_BaseMetricValue instance.
zCMCP	FLOAT	8	(IBM name: R10401CMCP) Percentage of CPU consumed by memory compression. (CompressMemCPUPercentage)
zCMPPG	FLOAT	8	(IBM name: R10401CMPPG) Number of physical pages in the compressed pool. (CompressedMemPoolPages)
zCMPP	FLOAT	8	(IBM name: R10401CMPP) Percentage of true memory used for the compressed pool.

			(CompressedMemPoolPercentage)
zCMPS	FLOAT	8	(IBM name: R10401CMPS) Size of the compressed memory pool in megabytes. (CompressedMemPoolSize)
zCMEF	FLOAT	8	(IBM name: R10401CMEF) Current percentage of expanded memory in use for this LPAR. (CurrentMemExpFactor)
zDS	FLOAT	8	(IBM name: R10401DS) Deficit memory size between target size and actual size. (DeficitSize)
zEMS	FLOAT	8	(IBM name: R10401EMS) Size of expanded memory for this LPAR in megabytes. (ExpMemSize)
zMM	FLOAT	8	(IBM name: R10401MM) Current memory mode. The value can be: 0 => Shared, 1 => Dedicated, 2 => Expanded (MemoryMode)
zPIR	FLOAT	8	(IBM name: R10401PIR) Rate of page-in operations per second from the compressed pool to the uncompressed pool. (PageInRate)
zPOR	FLOAT	8	(IBM name: R10401POR) Rate of page-out operations per second from the uncompressed pool to the compressed pool. (PageOutRate)
zTMEF	FLOAT	8	(IBM name: R10401TMEF) Target percentage of expanded memory in use for this LPAR. (TargetMemExpFactor)
zTMS	FLOAT	8	(IBM name: R10401TMS) Size of true memory for this LPAR in megabytes. (TrueMemSize)

Secondary segment: SMF104_02_AIX_ProcessorMetrics

Field Name	Type	Len	Description
<i>SMF104_02_AIX_ProcessorMetrics.<fieldname></i>			
zMNAME	CHAR	64	(IBM Name: R10402MNAME) Name of measured element, extracted from the MeasuredElementName attribute of the CIM_BaseMetricValue instance.
zTCTP	FLOAT	8	(IBM Name: R10402TCTP) Percentage of time where the processor was active during the interval. (TotalCPUTimePercentage)
zTICTP	FLOAT	8	(IBM Name: R10402TICTP) Percentage of time where the processor was idle during the interval. (TotalIdleCPUTimePercentage)
zTKCTP	FLOAT	8	(IBM Name: R10402TKCTP) Percentage of time where the processor was active in kernel mode during the interval. (TotalKernCPUTimePercentage)
zTUCTP	FLOAT	8	(IBM Name: R10402TUCTP) Percentage of time where the processor was active in user mode during the interval. (TotalUserCPUTimePercentage)
zTWCTP	FLOAT	8	(IBM Name: R10402TWCTP) Percentage of time where the processor was in a wait condition during the interval. (TotalWaitCPUTimePercentage)

Secondary segment: SMF104_03_AIX_ComputerSystemMetrics

Field Name	Type	Len	Description
<i>SMF104_03_AIX_ComputerSystemMetrics.<fieldname></i>			
zMNAME	CHAR	64	

			(IBM Name: R10403MNAME) Name of measured element, extracted from the MeasuredElementName attribute of the CIM_BaseMetricValue instance.
zAVP	FLOAT	8	(IBM Name: R10403AVP) Number of active virtual processors. (ActiveVirtualProcessors)
zEVIP	FLOAT	8	(IBM Name: R10403EVIP) Percentage of the entitled processing capacity idle. (ExternalViewIdlePercentage)
zEVKMP	FLOAT	8	(IBM Name: R10403EVKMP) Percentage of the entitled processing capacity used while running in kernel mode. (ExternalViewKernelModePercentage)
zEVTCP	FLOAT	8	(IBM Name: R10403EVTCP) Percentage of the entitled processing capacity used. The value is the sum of ExternalViewUserModePercentage and ExternalViewKernelModePercentage. (ExternalViewTotalCPUPercentage)
zEVUMP	FLOAT	8	(IBM Name: R10403EVUMP) Percentage of the entitled processing capacity used while running in user mode. (ExternalViewUserModePercentage)
zNOPCU	FLOAT	8	(IBM Name: R10403NOPCU) Number of online physical CPUs used by this LPAR. (NumberOfPhysicalCPUsUtilized)
zPDCUP	FLOAT	8	(IBM Name: R10403PDCUP) Percentage of the entitled capacity consumed. Percentage of the CPU capacity defined to this operating system container that is actually used, not counting any idle time. (PartitionDefinedCapacityUsedPercentage)
zPCUP	FLOAT	8	(IBM Name: R10403PCUP) Percentage of the physical computation unit available to this LPAR. (PhysicalComputationUnitPercentage)
zTOLSC	FLOAT	8	(IBM Name: R10403TOLSC) Time since last boot operation in milliseconds. (TimeOfLastStateChange)
zUGCC	FLOAT	8	(IBM Name: R10403UGCC) CPU time not used on the lowest level of virtualization layer (nearest to the hardware) this operating system is running in and shareable between two or more OS containers. (UnusedGlobalCPUCapacity)
zUPCC	FLOAT	8	(IBM Name: R10403UPCC) CPU Time in milliseconds reserved exclusively for this OS container but not used. (UnusedPartitionCPUCapacity)

Secondary segment: **SMF104_04_AIX_DiskMetrics**

Field Name	Type	Len	Description
<i>SMF104_04_AIX_DiskMetrics.<fieldname></i>			
zMNAME	CHAR	64	(IBM Name: R10404MNAME) Name of measured element, extracted from the MeasuredElementName attribute of the CIM_BaseMetricValue instance.
zATP	FLOAT	8	(IBM Name: R10404ATP) Percentage of time the disk was processing requests. (ActiveTimePercentage)
zAS	FLOAT	8	(IBM Name: R10404AS) Free portion of the disk in megabytes. (AvailableSpace)
zADU	FLOAT	8	(IBM Name: R10404ADU) Percentage of time the disk spent servicing transfers in relation to the time the disk was active. (AverageDeviceUtilization)
zCAP	FLOAT	8	(IBM Name: R10404CAP) Total size of the disk in megabytes. (Capacity)
zIOI	FLOAT	8	(IBM Name: R10404IOI) Indicator for the disk utilization. The value represents the product of the ResponseTime multiplied with the RequestRate. (IOIntensity)

zQD	FLOAT	8	(IBM Name: R10404QD) Average number of requests on the instantaneous wait queue. (QueueDepth)
zRO	FLOAT	8	(IBM Name: R10404RO) Number of transfers from the disk. (ReadOperations)
zRT	FLOAT	8	(IBM Name: R10404RT) Average number of bytes read per second from the disk. (ReadThroughput)
zRR	FLOAT	8	(IBM Name: R10404RR) Number of I/O requests per second. (RequestRate)
zRTM	FLOAT	8	(IBM Name: R10404RTM) Average response time per I/O request including service time and wait time. (ResponseTime)
zTO	FLOAT	8	(IBM Name: R10404TO) Number of transfers. The value is the sum of ReadOperations and WriteOperations. (TransferredOperations)
zTT	FLOAT	8	(IBM Name: R10404TT) Average number of bytes transferred per second. The value is the sum of ReadThroughput and WriteThroughput. (TransferredThroughput) (WaitTime) (WriteOperations) (WriteThroughput)
zWT	FLOAT	8	(IBM Name: R10404WT) Average wait time per I/O request. (WaitTime)
zWO	FLOAT	8	(IBM Name: R10404WO) Number of transfers to the disk. (WriteOperations)
zWTP	FLOAT	8	(IBM Name: R10404WTP) Average number of bytes written to disk per second. (WriteThroughput)

Secondary segment: SMF104_05_AIX_NetworkPortMetrics

Field Name	Type	Len	Description
<i>SMF104_05_AIX_NetworkPortMetrics.<fieldname></i>			
zMNAME	CHAR	64	(IBM Name: R10405MNAME) Name of measured element, extracted from the MeasuredElementName attribute of the CIM_BaseMetricValue instance.
zBR	FLOAT	8	(IBM Name: R10405BR) Bytes received for this interface. (BytesReceived)
zBT	FLOAT	8	(IBM Name: R10405BT) Bytes transmitted for this interface. (BytesTransmitted)
zER	FLOAT	8	(IBM Name: R10405ER) Average number of errors per second for this interface. (ErrorRate)
zKRR	FLOAT	8	(IBM Name: R10405KRR) Kilobytes received per second for this interface. (KbsReceivedRate)
zKTHR	FLOAT	8	(IBM Name: R10405KTHR) Kilobytes transmitted and received per second for this interface. (KbsThroughoutRate)
zKTR	FLOAT	8	(IBM Name: R10405KTR) Kilobytes transmitted per second for this interface. (KbsTransmittedRate)
zNPUP	FLOAT	8	(IBM Name: R10405NPUP) The number of packets transmitted and received for this interface divided by the total number of packets transmitted and received by the system. (NetworkPortUtilizationPercentage)
zPR	FLOAT	8	(IBM Name: R10405PR) Number of packets received for this interface. (PacketsReceived)
zPRR	FLOAT	8	(IBM Name: R10405PRR) Number of packets received per second for this interface. (PacketsReceivedRate)

zPT	FLOAT	8	(IBM Name: R10405PT) Number of packets transmitted for this interface. (PacketsTransmitted)
zPTR	FLOAT	8	(IBM Name: R10405PTR) Number of packets transmitted per second for this interface. (PacketsTransmittedRate)

Secondary segment: SMF104_06_AIX_FileSystemMetrics

Field Name	Type	Len	Description
<i>SMF104_06_AIX_FileSystemMetrics.<fieldname></i>			
zMNAME	CHAR	64	(IBM Name: R10406MNAME) Name of measured element, extracted from the MeasuredElementName attribute of the CIM_BaseMetricValue instance.
zAS	FLOAT	8	(IBM Name: R10406AS) Available space for this filesystem in megabytes. (AvailableSpace)
zTS	FLOAT	8	(IBM Name: R10406TS) Total space for this filesystem in megabytes. (TotalSpace)
zUS	FLOAT	8	(IBM Name: R10406US) Used space for this filesystem in megabytes. (UsedSpace)

Secondary segment: SMF104_07_AIX_MemoryMetrics

Field Name	Type	Len	Description
<i>SMF104_07_AIX_MemoryMetrics.<fieldname></i>			
zMNAME	CHAR	64	(IBM Name: R10407MNAME) Name of measured element, extracted from the MeasuredElementName attribute of the CIM_BaseMetricValue instance.
zAVM	FLOAT	8	(IBM Name: R10407AVM) Current number of active pages in virtual memory. (ActiveVirtualMemory)
zFSPI	FLOAT	8	(IBM Name: R10407FSPI) Number of page-in operations per second from the filesystem. (FileSystemPageIn)
zFSPO	FLOAT	8	(IBM Name: R10407FSPO) Number of page-out operations per second to the filesystem. (FileSystemPageOut)
zMUP	FLOAT	8	(IBM Name: R10407MUP) Average percentage of memory utilized during the interval. (MemoryUtilizationPercentage)
zPFM	FLOAT	8	(IBM Name: R10407PFM) Number of page-faults per second. (PageFaultMemory)
zPSI	FLOAT	8	(IBM Name: R10407PSI) Number of page-in operations per second from the pagingspace. (PageSpaceIn)
zPSO	FLOAT	8	(IBM Name: R10407PSO) Number of page-out operations per second from the pagingspace. (PageSpaceOut)
zPSM	FLOAT	8	(IBM Name: R10407PSM) Number of page-stealing operations per second. (PageStealMemory)

Secondary segment: SMF104_08_AIX_OperatingSystemMetrics

Field Name	Type	Len	Description
<i>SMF104_08_AIX_OperatingSystemMetrics.<fieldname></i>			
zMNAME	CHAR	64	(IBM Name: R10408MNAME) Name of measured element, extracted from the MeasuredElementName attribute of the CIM_BaseMetricValue instance.
zCCI	FLOAT	8	(IBM Name: R10408CCI) CPU time consumed by this operating system divided by CPU time which could have been used by the operating system within the interval. The value of this metric is between 0 (no CPU time (CPUConsumptionIndex)
zCSR	FLOAT	8	(IBM Name: R10408CSR) Number of context switches per second. (ContextSwitchRate)
zEVKMP	FLOAT	8	(IBM Name: R10408EVKMP) Percentage of CPU resources used by this operating system in kernel mode in relation to the CPU capacity for the LPAR without account. (ExternalViewKernelModePercentage)
zEVTCP	FLOAT	8	(IBM Name: R10408EVTCP) Percentage of CPU resources used by this operating system. The value is the sum of ExternalViewUserModePercentage and ExternalViewKernelModePercentage. (ExternalViewTotalCPUPercentage)
zEVUMP	FLOAT	8	(IBM Name: R10408EVUMP) Percentage of CPU resources used by this operating system in user mode in relation to the CPU capacity for the LPAR without taking capping effects or competition with other workloads into (ExternalViewUserModePercentage)
zFPM	FLOAT	8	(IBM Name: R10408FPM) Amount of currently unused physical memory. (FreePhysicalMemory)
zFSIPF	FLOAT	8	(IBM Name: R10408FSIPF) Amount of virtual memory that can be swapped out into paging files or block devices. (FreeSpaceInPagingFiles)
zFVM	FLOAT	8	(IBM Name: R10408FVM) Amount of currently unused virtual memory. (FreeVirtualMemory)
zHIR	FLOAT	8	(IBM Name: R10408HIR) Number of hardware interrupts per second. (HardwareInterruptRate)
zIVIP	FLOAT	8	(IBM Name: R10408IVIP) Percentage of time the operating system was idle. (InternalViewIdlePercentage)
zIVKMP	FLOAT	8	(IBM Name: R10408IVKMP) Percentage of CPU time spent in kernel mode by the operating system. (InternalViewKernelModePercentage)
zIVTCP	FLOAT	8	(IBM Name: R10408IVTCP) Percentage of CPU time spent by the operating system. (InternalViewTotalCPUPercentage)
zIVUMP	FLOAT	8	(IBM Name: R10408IVUMP) Percentage of CPU time spent in user mode by the operating system. (InternalViewUserModePercentage)
zKMT	FLOAT	8	(IBM Name: R10408KMT) Total CPU time the operating system spent in kernel mode. (KernelModeTime)
zLA	FLOAT	8	(IBM Name: R10408LA) Average number of dispatchable units in the ready queue, not counting any idle tasks. A currently running unit is counted as dispatchable unit as well. (LoadAverage)
zNOP	FLOAT	8	(IBM Name: R10408NOP) Number of processes currently loaded or running in the operating system. Kernel threads are not taken into account. (NumberOfProcesses)
zNOU	FLOAT	8	(IBM Name: R10408NOU) Number of user sessions for which the operating system is currently storing state information. If the same user is logged in several times, each session is counted. (NumberOfUsers)
zPIR	FLOAT	8	

			(IBM Name: R10408PIR) Average number of pages paged in per second. (PageInRate)
zPOR	FLOAT	8	(IBM Name: R10408POR) Average number of pages paged out per second. (PageOutRate)
zSIR	FLOAT	8	(IBM Name: R10408SIR) Number of software interrupts per second. (SoftwareInterruptRate)
zTCT	FLOAT	8	(IBM Name: R10408TCT) Sum of KernelModeTime and UserModeTime, that is, the total CPU time spent in user mode or kernel mode. (TotalCPUTime)
zUMT	FLOAT	8	(IBM Name: R10408UMT) Total CPU time the operating system spent in user mode. (UserModeTime)

Secondary segment: SMF104_09_AIX_ProcessMetrics

Field Name	Type	Len	Description
<i>SMF104_09_AIX_ProcessMetrics.<fieldname></i>			
zMNAME	CHAR	64	(IBM Name: R10409MNAME) Name of measured element, extracted from the MeasuredElementName attribute of the CIM_BaseMetricValue instance.
zAKMT	FLOAT	8	(IBM Name: R10409AKMT) CPU time used by this process in kernel mode since process creation. (AccumulatedKernelModeTime)
zATCT	FLOAT	8	(IBM Name: R10409ATCT) Sum of AccumulatedUserModeTime and AccumulatedKernelModeTime for this process. (AccumulatedTotalCPUTime)
zAUMT	FLOAT	8	(IBM Name: R10409AUMT) CPU time used by this process in user mode since process creation. (AccumulatedUserModeTime)
zEVKMP	FLOAT	8	(IBM Name: R10409EVKMP) CPU resources used by this process in kernel mode in relation to the CPU capacity available on a higher level of virtualization. (ExternalViewKernelModePercentage)
zEVTCP	FLOAT	8	(IBM Name: R10409EVTCP) CPU resources used by this process in relation to the CPU capacity available on a higher level of virtualization. The value is the sum of ExternalViewUserModePercentage and (ExternalViewTotalCPUPercentage)
zEVUMP	FLOAT	8	(IBM Name: R10409EVUMP) CPU resources used by this process in user mode in relation to the CPU capacity available on a higher level of virtualization. (ExternalViewUserModePercentage)
zIVKMP	FLOAT	8	(IBM Name: R10409IVKMP) CPU time spent for this process in kernel mode in relation to the total CPU time spent for the system in kernel mode. (InternalViewKernelModePercentage)
zIVTCP	FLOAT	8	(IBM Name: R10409IVTCP) Total CPU time spent for this process in relation to the total CPU time spent for the system. The value is the sum of InternalViewUserModePercentage and (InternalViewTotalCPUPercentage)
zIVUMP	FLOAT	8	(IBM Name: R10409IVUMP) CPU time spent for this process in user mode in relation to the total CPU time spent for the system in user mode. (InternalViewUserModePercentage)
zKMT	FLOAT	8	(IBM Name: R10409KMT) CPU time spent in kernel mode by this process. (KernelModeTime)
zMNOOF	FLOAT	8	(IBM Name: R10409MNOOF) Maximum number of open files for this process. (MaxNumberOfOpenFiles)
zPIR	FLOAT	8	(IBM Name: R10409PIR) Average number of pages paged in per second on behalf of this process.

			(PageInRate)
zRSS	FLOAT	8	(IBM Name: R10409RSS) Physical memory size for this process. (ResidentSetSize)
zSS	FLOAT	8	(IBM Name: R10409SS) Integral shared memory size for this process. (SharedSize)
zTCT	FLOAT	8	(IBM Name: R10409TCT) Sum of UserModeTime and KernelModeTime for this process. (TotalCPUTime)
zUMT	FLOAT	8	(IBM Name: R10409UMT) CPU time spent in user mode by this process. (UserModeTime)
zVS	FLOAT	8	(IBM Name: R10409VS) Virtual memory size for this process. (VirtualSize)

Secondary segment: SMF104_10_AIX_SharedEthernetAdapterMetrics

Field Name	Type	Len	Description
<i>SMF104_10_AIX_SharedEthernetAdapterMetrics.<fieldname></i>			
zMNAME	CHAR	64	(IBM Name: R10410MNAME) Name of measured element, extracted from the MeasuredElementName attribute of the CIM_BaseMetricValue instance.
zBIR	FLOAT	8	(IBM Name: R10410BIR) Bytes received rate for this shared ethernet adapter. (ByteInRate)
zBOR	FLOAT	8	(IBM Name: R10410BOR) Bytes sent rate for this shared ethernet adapter. (ByteOutRate)
zPIR	FLOAT	8	(IBM Name: R10410PIR) Packets received rate for this shared ethernet adapter. (PacketInRate)
zPOR	FLOAT	8	(IBM Name: R10410POR) Packets sent rate for this shared ethernet adapter. (PacketOutRate)
zTR	FLOAT	8	(IBM Name: R10410TR) Transfer rate for this shared ethernet adapter. (TransferredRate)

Secondary segment: SMF104_11_AIX_ActiveMemorySharingMetrics

Field Name	Type	Len	Description
<i>SMF104_11_AIX_ActiveMemorySharingMetrics.<fieldname></i>			
zMNAME	CHAR	64	(IBM Name: R10411MNAME) Name of measured element, extracted from the MeasuredElementName attribute of the CIM_BaseMetricValue instance.
zAMSE	FLOAT	8	(IBM Name: R10411AMSE) Indicator if active memory sharing is enabled (1) or not (0). (ActiveMemorySharingEnabled)
zHPI	FLOAT	8	(IBM Name: R10411HPI) Number of hypervisor page-in operations. (HypervsrPageIn)
zHPIT	FLOAT	8	(IBM Name: R10411HPIT) Time waiting for hypervisor page-in operations in milliseconds. (HypervsrPageInTime)
zLP	FLOAT	8	(IBM Name: R10411LP) Policy of loan memory in response to hypervisor requests. The value can be off (0), default (1) or aggressive (2). (LoanPolicy)
zLMS	FLOAT	8	(IBM Name: R10411LMS) Amount of logical memory currently loaned to the hypervisor in megabytes. (LoanedMemSize)

zMPS	FLOAT	8	(IBM Name: R10411MPS) Amount of memory in the shared memory pool in megabytes. (MemPoolSize)
zMIOME	FLOAT	8	(IBM Name: R10411MIOME) Minimum I/O memory entitlement for this LPAR in megabytes. (MinIOMemEntitlement)
zTIOME	FLOAT	8	(IBM Name: R10411TIOME) Total I/O memory entitlement for this LPAR in megabytes. (TotalIOMemEntitlement)
zUIOME	FLOAT	8	(IBM Name: R10411UIOME) Used I/O memory entitlement for this LPAR in megabytes. (UsedIOMemEntitlement)

Secondary segment: SMF104_12_AIX_VirtualTargetDeviceMetrics

Field Name	Type	Len	Description
<i>SMF104_12_AIX_VirtualTargetDeviceMetrics.<fieldname></i>			
zMNAME	CHAR	64	(IBM Name: R10412MNAME) Name of measured element, extracted from the MeasuredElementName attribute of the CIM_BaseMetricValue instance.
zKRR	FLOAT	8	(IBM Name: R10412KRR) Read rate per second for this virtual target device. (KbsReadRate)
zKWR	FLOAT	8	(IBM Name: R10412KWR) Write rate per second for this virtual target device. (KbsWriteRate)
zTR	FLOAT	8	(IBM Name: R10412TR) Average number of transmissions per second for this virtual target device. (TransferRate)

Secondary segment: SMF104_20_Linux_IPProtocolEndpointMetrics

Field Name	Type	Len	Description
<i>SMF104_20_Linux_IPProtocolEndpointMetrics.<fieldname></i>			
zMNAME	CHAR	64	(IBM Name: R10420MNAME) Name of measured element, extracted from the MeasuredElementName attribute of the CIM_BaseMetricValue instance.
zBR	FLOAT	8	(IBM Name: R10420BR) Number of bytes received on this IP protocol endpoint during the interval. (BytesReceived)
zBT	FLOAT	8	(IBM Name: R10420BT) Number of bytes transmitted on this IP protocol endpoint during the interval. (BytesTransmitted)
zER	FLOAT	8	(IBM Name: R10420ER) Average number of errors per second during the interval. This includes errors that occurred during transmitting and receiving and recovered errors as well as unrecovered errors. (ErrorRate)
zPR	FLOAT	8	(IBM Name: R10420PR) Total number of packets received on this IP protocol endpoint during the interval. (PacketsReceived)
zPT	FLOAT	8	(IBM Name: R10420PT) Total number of packets transmitted on this IP protocol endpoint during the interval. (PacketsTransmitted)
zPRR	FLOAT	8	(IBM Name: R10420PRR) Average number of packets received per second on this IP protocol endpoint during the interval. (PacketReceiveRate)

zPTR	FLOAT	8	(IBM Name: R10420PTR) Average number of packets transmitted per second on this IP protocol endpoint during the interval. (PacketTransmitRate)
zBRR	FLOAT	8	(IBM Name: R10420BRR) Average number of bytes received per second on this IP protocol endpoint during the interval. (ByteReceiveRate)
zBTR	FLOAT	8	(IBM Name: R10420BTR) Average number of bytes transmitted per second on this IP protocol endpoint during the interval. (ByteTransmitRate)
zRDR	FLOAT	8	(IBM Name: R10420RDR) Average number of received packets dropped per second on this IP protocol endpoint during the interval. (ReceiveDropRate)
zRPD	FLOAT	8	(IBM Name: R10420RPD) Number of received packets dropped on this IP protocol endpoint during the interval. (ReceivePacketsDropped)
zTDR	FLOAT	8	(IBM Name: R10420TDR) Average number of transmitted packets dropped per second on this IP protocol endpoint during the interval. (TransmitDropRate) endpoint during the interval. (TransmitPacketsDropped)
zTPD	FLOAT	8	(IBM Name: R10420TPD) Number of transmitted packets dropped on this IP protocol endpoint during the interval. (TransmitPacketsDropped)

Secondary segment: SMF104_21_Linux_LocalFileSystemMetrics

Field Name	Type	Len	Description
<i>SMF104_21_Linux_LocalFileSystemMetrics.<fieldname></i>			
zMNAME	CHAR	64	(IBM Name: R10421MNAME) Name of measured element, extracted from the MeasuredElementName attribute of the CIM_BaseMetricValue instance.
zAS	FLOAT	8	(IBM Name: R10421AS) Amount of free space for the file system. (AvailableSpace)
zASP	FLOAT	8	(IBM Name: R10421ASP) Percentage of free space for the file system. (AvailableSpacePercentage)

Secondary segment: SMF104_22_Linux_NetworkPortMetrics

Field Name	Type	Len	Description
<i>SMF104_22_Linux_NetworkPortMetrics.<fieldname></i>			
zMNAME	CHAR	64	(IBM Name: R10422MNAME) Name of measured element, extracted from the MeasuredElementName attribute of the CIM_BaseMetricValue instance.
zBR	FLOAT	8	(IBM Name: R10422BR) Number of bytes received on this network port during the interval including any protocol overhead such as framing characters, headers and trailers. (BytesReceived)
zBT	FLOAT	8	(IBM Name: R10422BT) Number of bytes transmitted on this network port during the interval including any protocol overhead such as framing characters, headers and trailers. (BytesTransmitted)
zER	FLOAT	8	(IBM Name: R10422ER) Average number of network errors per second during the interval. This includes errors that occurred during transmitting and receiving, and recovered errors as well as unrecovered errors.

Secondary segment: **SMF104_23_Linux_OperatingSystemMetrics**

Field Name	Type	Len	Description
<i>SMF104_23_Linux_OperatingSystemMetrics.<fieldname></i>			
zMNAME	CHAR	64	(IBM Name: R10423MNAME) Name of measured element, extracted from the MeasuredElementName attribute of the CIM_BaseMetricValue instance.
zCCI	FLOAT	8	(IBM Name: R10423CCI) CPU time consumed by this operating system, divided by CPU time which could have been used by the operating system within the interval. The value of this metric is between 0 (no (CPUConsumptionIndex)
zCSR	FLOAT	8	(IBM Name: R10423CSR) Number of context switches per second. Scheduler efficiency is one major bottleneck for highly scalable server images. This metric shows how demanding a workload is with regard to the (ContextSwitchRate)
zEVKMP	FLOAT	8	(IBM Name: R10423EVKMP) Percentage of CPU resources used by this operating system in kernel mode in relation to the CPU capacity of the virtual server without taking capping effects or competition with other (ExternalViewKernelModePercentage)
zEVTCP	FLOAT	8	(IBM Name: R10423EVTCP) Percentage of CPU resources used by this operating system in relation to the CPU capacity of the virtual server without taking capping effects or competition with other partitions into (ExternalViewTotalCPUPercentage)
zEVUMP	FLOAT	8	(IBM Name: R10423EVUMP) Percentage of CPU resources used by this operating system in user mode in relation to the CPU capacity of the virtual server without taking capping effects or competition with other (ExternalViewUserModePercentage)
zFPM	FLOAT	8	(IBM Name: R10423FPM) Amount of physical memory currently unused and available. In a virtualized environment this is the free memory available to the operating system. (FreePhysicalMemory)
zFSIPF	FLOAT	8	(IBM Name: R10423FSIPF) Amount of virtual memory that can be mapped into the operating system's paging files without causing any used pages to be purged from the paging files. If an operating system does (FreeSpaceInPagingFiles)
zFVM	FLOAT	8	(IBM Name: R10423FVM) Amount of virtual memory currently unused and available. (FreeVirtualMemory)
zHIR	FLOAT	8	(IBM Name: R10423HIR) Number of hardware interrupts per second. (HardwareInterruptRate)
zIVIP	FLOAT	8	(IBM Name: R10423IVIP) Percentage of time this operating system was idle (OS view). Idle is the CPU time spent looking for work. In a virtual environment, idle time can be used by other operating systems (InternalViewIdlePercentage)
zIVKMP	FLOAT	8	(IBM Name: R10423IVKMP) Percentage of CPU resources used in kernel mode by this operating system. (InternalViewKernelModePercentage)
zIVTCP	FLOAT	8	(IBM Name: R10423IVTCP) Percentage of CPU resources used by this operating system. (InternalViewTotalCPUPercentage)
zIVUMP	FLOAT	8	(IBM Name: R10423IVUMP) Percentage of CPU resources used in user mode by this interval. (UserModeTime)
zKMT	FLOAT	8	(IBM Name: R10423KMT) CPU time the operating system spent in kernel mode during the interval. (KernelModeTime)
zLA	FLOAT	8	(IBM Name: R10423LA) Average number of dispatchable units in the ready queue, not counting any idle tasks. A currently running unit is counted as dispatchable unit as well. (LoadAverage)

zNOP	FLOAT	8	(IBM Name: R10423NOP) Number of process contexts currently loaded or running on the operating system. (NumberOfProcesses)
zNOU	FLOAT	8	(IBM Name: R10423NOU) Number of user sessions for which the operating system is currently storing state information. If the same user is logged on several times, each session is counted separately. (NumberOfUsers)
zPIR	FLOAT	8	(IBM Name: R10423PIR) Average number of pages paged in per second. (PageInRate)
zPOR	FLOAT	8	(IBM Name: R10423POR) Average number of pages paged out per second. (PageOutRate)
zSSIPF	FLOAT	8	(IBM Name: R10423SSIPF) Number of kilobytes that can be stored in the operating system's paging files. This number does not represent the actual physical size of the paging file on disk. A value of zero indicates that there are no paging files. (SizeStoredInPagingFiles)
zTCT	FLOAT	8	(IBM Name: R10423TCT) CPU time the operating system spent during the interval. The value is the sum of KernelModeTime and UserModeTime and does not include any idle time. (TotalCPUTime)
zTVIRMS	FLOAT	8	(IBM Name: R10423TVIRMS) Number of kilobytes of virtual memory. This value is the sum of total physical memory and the amount of paging space. (TotalVirtualMemorySize)
zTVISMS	FLOAT	8	(IBM Name: R10423TVISMS) Total amount of physical memory available to the operating system. This value does not necessarily indicate the true amount of physical memory, but indicates the amount that is reported as being available to the operating system. (TotalVisibleMemorySize)
zUMT	FLOAT	8	(IBM Name: R10423UMT) CPU time the operating system spent in user mode during the interval. (UserModeTime)
zUPM	FLOAT	8	(IBM Name: R10423UPM) Amount of physical memory currently in use. (UsedPhysicalMemory)
zUVM	FLOAT	8	(IBM Name: R10423UVM) Amount of virtual memory currently in use. (UsedVirtualMemory)
zIOWT	FLOAT	8	(IBM Name: R10423IOWT) CPU time the operating system spent waiting for I/O during the interval. (IOWaitTime)
zCSC	FLOAT	8	(IBM Name: R10423CSC) Accumulated number of context switches. Scheduler efficiency is one major bottleneck for highly scalable server images. This metric shows how demanding a workload is with regard to the (ContextSwitchCounter)
zHIC	FLOAT	8	(IBM Name: R10423HIC) Accumulated number of hardware interrupts. (HardwareInterruptCounter)
zLC	FLOAT	8	(IBM Name: R10423LC) Accumulated number of dispatchable units in the ready queue, not counting any idle tasks. A currently running unit is counted as dispatchable unit as well. (LoadCounter)
zPIC	FLOAT	8	(IBM Name: R10423PIC) Accumulated number of pages paged in. (PageInCounter)
zPOC	FLOAT	8	(IBM Name: R10423POC) Accumulated number of pages paged out. (PageOutCounter)

Secondary segment: SMF104_24_Linux_ProcessorMetrics

Field Name	Type	Len	Description
SMF104_24_Linux_ProcessorMetrics.<fieldname>			
zMNAME	CHAR	64	

			(IBM Name: R10424MNAME) Name of measured element, extracted from the MeasuredElementName attribute of the CIM_BaseMetricValue instance.
zTCTP	FLOAT	8	(IBM Name: R10424TCTP) Percentage of time where the CPU was not idle. (TotalCPUTimePercentage)

Secondary segment: SMF104_25_Linux_UnixProcessMetrics

Field Name	Type	Len	Description
<i>SMF104_25_Linux_UnixProcessMetrics.<fieldname></i>			
zMNAME	CHAR	64	(IBM Name: R10425MNAME) Name of measured element, extracted from the MeasuredElementName attribute of the CIM_BaseMetricValue instance.
zAKMT	FLOAT	8	(IBM Name: R10425AKMT) CPU time in kernel mode spent for this process since process creation. (AccumulatedKernelModeTime)
zATCT	FLOAT	8	(IBM Name: R10425ATCT) CPU time spent for this process since process creation. (AccumulatedTotalCPUTime)
zAUMT	FLOAT	8	(IBM Name: R10425AUMT) CPU time in user mode spent for this process since process creation. (AccumulatedUserModeTime)
zEVKMP	FLOAT	8	(IBM Name: R10425EVKMP) Percentage of CPU resources used in kernel mode by this process in relation to the CPU capacity available on a higher level of virtualization. (ExternalViewKernelModePercentage)
zEVTCP	FLOAT	8	(IBM Name: R10425EVTCP) Percentage of CPU resources used by this process in relation to the CPU capacity available on a higher level of virtualization. The value is the sum of ExternalViewUserModePercentage and ExternalViewTotalCPUPercentage)
zEVUMP	FLOAT	8	(IBM Name: R10425EVUMP) Percentage of CPU resources used by this process in user mode in relation to the CPU capacity available on a higher level of virtualization. (ExternalViewUserModePercentage)
zIVKMP	FLOAT	8	(IBM Name: R10425IVKMP) CPU time spent for this process in kernel mode in relation to the total CPU time spent for the system in kernel mode. (InternalViewKernelModePercentage)
zIVTCP	FLOAT	8	(IBM Name: R10425IVTCP) Total CPU time spent for this process in relation to the total CPU time spent for the system. The value is the sum of InternalViewUserModePercentage and (InternalViewTotalCPUPercentage)
zIVUMP	FLOAT	8	(IBM Name: R10425IVUMP) CPU time spent for this process in user mode in relation to the total CPU time spent for the system in user mode. (InternalViewUserModePercentage)
zKMT	FLOAT	8	(IBM Name: R10425KMT) CPU time the process consumed in kernel mode during the interval. (KernelModeTime)
zPIR	FLOAT	8	(IBM Name: R10425PIR) Number of pages paged in per second on behalf of this process. (PageInRate)
zPOR	FLOAT	8	(IBM Name: R10425POR) Number of pages paged out per second on behalf of this process. (PageOutRate)
zRSS	FLOAT	8	(IBM Name: R10425RSS) Amount of physical memory used by this process. Any memory (ResidentSetSize)

zSS	FLOAT	8	(IBM Name: R10425SS) Number of bytes this process shares with other processes like dynamic link libraries. (SharedSize)
zTCT	FLOAT	8	(IBM Name: R10425TCT) CPU time the process consumed during the interval. This value is the sum of KernelModeTime and UserModeTime and does not include any idle time. (TotalCPUTime)
zUMT	FLOAT	8	(IBM Name: R10425UMT) CPU time the process consumed in user mode during the interval. (UserModeTime)
zVS	FLOAT	8	(IBM Name: R10425VS) The size of the virtual memory used by this process. (VirtualSize)
zPIC	FLOAT	8	(IBM Name: R10425PIC) Accumulated number of pages paged in on behalf of this process. (PageInCounter)
zPOC	FLOAT	8	(IBM Name: R10425POC) Accumulated number of pages paged out on behalf of this process. (PageOutCounter)

Secondary segment: SMF104_26_Linux_StorageMetrics

Field Name	Type	Len	Description
<i>SMF104_26_Linux_StorageMetrics.<fieldname></i>			
zMNAME	CHAR	64	(IBM Name: R10426MNAME) Name of measured element, extracted from the MeasuredElementName attribute of the CIM_BaseMetricValue instance.
zCAP	FLOAT	8	(IBM Name: R10426CAP) Total Capacity of the device in bytes. (Capacity)
zRD	FLOAT	8	(IBM Name: R10426RD) Number of kilobytes read from the device during the interval. (Read)
zWR	FLOAT	8	(IBM Name: R10426WR) Number of kilobytes written to the device during the interval. (Write)

Secondary segment: SMF104_30_Linux_KVMMetrics

Field Name	Type	Len	Description
<i>SMF104_30_Linux_KVMMetrics.<fieldname></i>			
zMNAME	CHAR	64	(IBM Name: R10430MNAME) Name of measured element, extracted from the MeasuredElementName attribute of the CIM_BaseMetricValue instance.
zAVP	FLOAT	8	(IBM Name: R10430AVP) Number of active virtual processors for this domain. (ActiveVirtualProcessors)
zEVTCTP	FLOAT	8	(IBM Name: R10430EVTCTP) Percentage of CPU resources used by this domain during the interval. If power management or hyper-threading are used, the content of this metric may be wrong. The metric is derived from (ExternalViewTotalCPUTimePercentage)
zHFPM	FLOAT	8	(IBM Name: R10430HFPM) Host physical memory currently not claimed by any domain. (HostFreePhysicalMemory)
zHMP	FLOAT	8	(IBM Name: R10430HMP) Percentage of overall physical memory claimed by this domain. (HostMemoryPercentage)

zPMATVS	FLOAT	8	(IBM Name: R10430PMATVS) Memory currently claimed by this domain. Note that a domain may ask the hypervisor for more memory if under memory pressure. (PhysicalMemoryAllocatedToVirtualSystem)
zPMATVSP	FLOAT	8	(IBM Name: R10430PMATVSP) Percentage of memory currently claimed by this domain in relation to the defined maximum. (PhysicalMemoryAllocatedToVirtualSystemPercentage)
zTMEVTCTP	FLOAT	8	(IBM Name: R10430TMEVTCTP) Percentage of CPU resources used by this domain during the most recent 10 minute interval. (TenMinuteExternalViewTotalCPUTimePercentage)
zTMTCT	FLOAT	8	(IBM Name: R10430TMTCT) CPU time spent for this domain during the most recent 10 minute interval. (TenMinuteTotalCPUTime)
zTCT	FLOAT	8	(IBM Name: R10430TCT) CPU time spent for this domain during the interval. (TotalCPUTime)
zBC	FLOAT	8	(IBM Name: R10430BC) Total capacity of the first block device for this domain in bytes. (BlockCapacity)
zBR	FLOAT	8	(IBM Name: R10430BR) Number of kilobytes read from the first block device for this domain during the interval. (BlockRead)
zBW	FLOAT	8	(IBM Name: R10430BW) Number of kilobytes written to the first block device for this domain during the interval. (BlockWrite)
zCRTC	FLOAT	8	(IBM Name: R10430CRTC) Accumulated CPU idle time in microseconds for this domain.
zUTC	FLOAT	8	(IBM Name: R10430UTC) Accumulated CPU busy time in microseconds for this domain. (CPUUsedTimeCounter)
zVSS	FLOAT	8	(IBM Name: R10430VSS) Current state of this domain. 0 => nostate, 1 => running, 2 => blocked, 3 => paused, 4 => shutdown, 5 => shutoff, 6 => crashed, 7 => suspended. (VirtualSystemState)

Secondary segment: SMF104_31_Linux_XenMetrics

Field Name	Type	Len	Description
<i>SMF104_31_Linux_XenMetrics.<fieldname></i>			
zMNAME	CHAR	64	(IBM Name: R10431MNAME) Name of measured element, extracted from the MeasuredElementName attribute of the CIM_BaseMetricValue instance.
zAVP	FLOAT	8	(IBM Name: R10431AVP) Number of active virtual processors for this domain. (ActiveVirtualProcessors)
zEVTCTP	FLOAT	8	(IBM Name: R10431EVTCTP) Percentage of CPU resources used by this domain during the interval. If power management or hyper-threading are used, the content of this metric may be wrong. The metric is derived from (ExternalViewTotalCPUTimePercentage)
zHFPM	FLOAT	8	(IBM Name: R10431HFPM) Host physical memory currently not claimed by any domain. (HostFreePhysicalMemory)
zHMP	FLOAT	8	(IBM Name: R10431HMP) Percentage of overall physical memory claimed by this domain. (HostMemoryPercentage)
zPMATVS	FLOAT	8	(IBM Name: R10431PMATVS) Memory currently claimed by this domain. Note that a domain may ask the hypervisor for more memory if under memory pressure. (PhysicalMemoryAllocatedToVirtualSystem)

zPMATVSP	FLOAT	8	(IBM Name: R10431PMATVSP) Percentage of memory currently claimed by this domain in relation to the defined maximum. (PhysicalMemoryAllocatedToVirtualSystemPercentage)
zTMEVTCTP	FLOAT	8	(IBM Name: R10431TMEVTCTP) Percentage of CPU resources used by this domain during the most recent 10 minute interval. (TenMinuteExternalViewTotalCPUTimePercentage)
zTMTCT	FLOAT	8	(IBM Name: R10431TMTCT) CPU time spent for this domain during the most recent 10 minute interval. (TenMinuteTotalCPUTime)
zTCT	FLOAT	8	(IBM Name: R10431TCT) CPU time spent for this domain during the interval. (TotalCPUTime)

Secondary segment: SMF104_40_Linux_IPProtocolEndpointMetrics

Field Name	Type	Len	Description
<i>SMF104_40_Linux_IPProtocolEndpointMetrics.<fieldname></i>			
zMNAME	CHAR	64	(IBM Name: R10440MNAME) Name of measured element, extracted from the MeasuredElementName attribute of the CIM_BaseMetricValue instance.
zBR	FLOAT	8	(IBM Name: R10440BR) Number of bytes received on this IP protocol endpoint during the interval. (BytesReceived)
zBT	FLOAT	8	(IBM Name: R10440BT) Number of bytes transmitted on this IP protocol endpoint during the interval. (BytesTransmitted)
zER	FLOAT	8	(IBM Name: R10440ER) Average number of errors per second during the interval. This includes errors that occurred during transmitting and receiving and recovered errors as well as unrecovered errors. (ErrorRate)
zPR	FLOAT	8	(IBM Name: R10440PR) Total number of packets received on this IP protocol endpoint during the interval. (PacketsReceived)
zPT	FLOAT	8	(IBM Name: R10440PT) Total number of packets transmitted on this IP protocol endpoint during the interval. (PacketsTransmitted)
zPRR	FLOAT	8	(IBM Name: R10440PRR) Average number of packets received per second on this IP protocol endpoint during the interval. (PacketReceiveRate)
zPTR	FLOAT	8	(IBM Name: R10440PTR) Average number of packets transmitted per second on this IP protocol endpoint during the interval. (PacketTransmitRate)
zBRR	FLOAT	8	(IBM Name: R10440BRR) Average number of bytes received per second on this IP protocol endpoint during the interval. (ByteReceiveRate)
zBTR	FLOAT	8	(IBM Name: R10440BTR) Average number of bytes transmitted per second on this IP protocol endpoint during the interval. (ByteTransmitRate)
zRDR	FLOAT	8	(IBM Name: R10440RDR) Average number of received packets dropped per second on this IP protocol endpoint during the interval. (ReceiveDropRate)
zRPD	FLOAT	8	(IBM Name: R10440RPD) Number of received packets dropped on this IP protocol endpoint during the interval. (ReceivePacketsDropped)
zTDR	FLOAT	8	(IBM Name: R10440TDR) Average number of transmitted packets dropped per second on this IP protocol endpoint during the interval. (TransmitDropRate) endpoint during the interval. (TransmitPacketsDropped)
zTPD	FLOAT	8	(IBM Name: R10440TPD) Number of transmitted packets dropped on this IP protocol endpoint during

			the interval. (TransmitPacketsDropped)
--	--	--	--

Secondary segment: SMF104_41_Linux_LocalFileSystemMetrics

Field Name	Type	Len	Description
<i>SMF104_41_Linux_LocalFileSystemMetrics.<fieldname></i>			
zMNAME	CHAR	64	(IBM Name: R10441MNAME) Name of measured element, extracted from the MeasuredElementName attribute of the CIM_BaseMetricValue instance.
zAS	FLOAT	8	(IBM Name: R10441AS) Amount of free space for the file system. (AvailableSpace)
zASP	FLOAT	8	(IBM Name: R10441ASP) Percentage of free space for the file system. (AvailableSpacePercentage)

Secondary segment: SMF104_42_Linux_NetworkPortMetrics

Field Name	Type	Len	Description
<i>SMF104_42_Linux_NetworkPortMetrics.<fieldname></i>			
zMNAME	CHAR	64	(IBM Name: R10442MNAME) Name of measured element, extracted from the MeasuredElementName attribute of the CIM_BaseMetricValue instance.
zBR	FLOAT	8	(IBM Name: R10442BR) Number of bytes received on this network port during the interval including any protocol overhead such as framing characters, headers, and trailers. (BytesReceived)
zBT	FLOAT	8	(IBM Name: R10442BT) Number of bytes transmitted on this network port during the interval including any protocol overhead such as framing characters, headers, and trailers. (BytesTransmitted)
zER	FLOAT	8	(IBM Name: R10442ER) Average number of network errors per second during the interval. This includes errors that occurred during transmitting and receiving, and recovered errors as well as unrecovered errors.

Secondary segment: SMF104_43_Linux_OperatingSystemMetrics

Field Name	Type	Len	Description
<i>SMF104_43_Linux_OperatingSystemMetrics.<fieldname></i>			
zMNAME	CHAR	64	(IBM Name: R10443MNAME) Name of measured element, extracted from the MeasuredElementName attribute of the CIM_BaseMetricValue instance.
zCCI	FLOAT	8	(IBM Name: R10443CCI) CPU time consumed by this operating system divided by CPU time which could have been used by the operating system within the interval. The value of this metric is between 0 (no (CPUConsumptionIndex)
zCSR	FLOAT	8	(IBM Name: R10443CSR) Number of context switches per second. Scheduler efficiency is one major bottleneck for highly scalable server images. This metric shows how demanding a workload is with regard to the (ContextSwitchRate)
zEVKMP	FLOAT	8	(IBM Name: R10443EVKMP) Percentage of CPU resources used by this operating system in kernel mode in relation to the CPU capacity of the virtual server without taking

			capping effects or competition with other (ExternalViewKernelModePercentage)
zEVTCP	FLOAT	8	(IBM Name: R10443EVTCP) Percentage of CPU resources used by this operating system in relation to the CPU capacity of the virtual server without taking capping effects or competition with other partitions into (ExternalViewTotalCPUPercentage)
zEVUMP	FLOAT	8	(IBM Name: R10443EVUMP) Percentage of CPU resources used by this operating system in user mode in relation to the CPU capacity of the virtual server without taking capping effects or competition with other (ExternalViewUserModePercentage)
zFPM	FLOAT	8	(IBM Name: R10443FPM) Amount of physical memory currently unused and available. In a virtualized environment this is the free memory available to the operating system. (FreePhysicalMemory)
zFSIPF	FLOAT	8	(IBM Name: R10443FSIPF) Amount of virtual memory that can be mapped into the operating system's paging files without causing any used pages to be purged from the paging files. If an operating system does (FreeSpaceInPagingFiles)
zFVM	FLOAT	8	(IBM Name: R10443FVM) Amount of virtual memory currently unused and available. (FreeVirtualMemory)
zHIR	FLOAT	8	(IBM Name: R10443HIR) Number of hardware interrupts per second. (HardwareInterruptRate)
zIVIP	FLOAT	8	(IBM Name: R10443IVIP) Percentage of time this operating system was idle (OS view). Idle is the CPU time spent looking for work. In a virtual environment, idle time can be used by other operating systems (InternalViewIdlePercentage)
zIVKMP	FLOAT	8	(IBM Name: R10443IVKMP) Percentage of CPU resources used in kernel mode by this operating system. (InternalViewKernelModePercentage)
zIVTCP	FLOAT	8	(IBM Name: R10443IVTCP) Percentage of CPU resources used by this operating system. (InternalViewTotalCPUPercentage)
zIVUMP	FLOAT	8	(IBM Name: R10443IVUMP) Percentage of CPU resources used in user mode by this interval. (UserModeTime)
zKMT	FLOAT	8	(IBM Name: R10443KMT) CPU time the operating system spent in kernel mode during the interval. (KernelModeTime)
zLA	FLOAT	8	(IBM Name: R10443LA) Average number of dispatchable units in the ready queue, not counting any idle tasks. A currently running unit is counted as dispatchable unit as well. (LoadAverage)
zNOP	FLOAT	8	(IBM Name: R10443NOP) Number of process contexts currently loaded or running on the operating system. (NumberOfProcesses)
zNOU	FLOAT	8	(IBM Name: R10443NOU) Number of user sessions for which the operating system is currently storing state information. If the same user is logged on several times, each session is counted separately. (NumberOfUsers)
zPIR	FLOAT	8	(IBM Name: R10443PIR) Average number of pages paged in per second. (PageInRate)
zPOR	FLOAT	8	(IBM Name: R10443POR) Average number of pages paged out per second. (PageOutRate)
zSSIPF	FLOAT	8	(IBM Name: R10443SSIPF) Number of kilobytes that can be stored in the operating system's paging files. This number does not represent the actual physical size of the paging file on disk. A value of zero indicates that there are no paging files. (SizeStoredInPagingFiles)
zTCT	FLOAT	8	(IBM Name: R10443TCT) CPU Time the operating system spent during the interval. The value is the sum of KernelModeTime and UserModeTime and does not include any idle time. (TotalCPUTime)

zTVIRMS	FLOAT	8	(IBM Name: R10443TVIRMS) Number of kilobytes of virtual memory. This value is the sum of total physical memory and the amount of paging space. (TotalVirtualMemorySize)
zTVISMS	FLOAT	8	(IBM Name: R10443TVISMS) Total amount of physical memory available to the operating system. This value does not necessarily indicate the true amount of physical memory, but indicates the amount that is reported as being available to the operating system. (TotalVisibleMemorySize)
zUMT	FLOAT	8	(IBM Name: R10443UMT) CPU time the operating system spent in user mode during the interval. (UserModeTime)
zUPM	FLOAT	8	(IBM Name: R10443UPM) Amount of physical memory currently in use (UsedPhysicalMemory)
zUVM	FLOAT	8	(IBM Name: R10443UVM) Amount of virtual memory currently in use. (UsedVirtualMemory)
zIOWT	FLOAT	8	(IBM Name: R10443IOWT) CPU time the operating system spent waiting for I/O during the interval. (IOWaitTime)
zCSC	FLOAT	8	(IBM Name: R10443CSC) Accumulated number of context switches. Scheduler efficiency is one major bottleneck for highly scalable server images. This metric shows how demanding a workload is with regard to the (ContextSwitchCounter)
zHIC	FLOAT	8	(IBM Name: R10443HIC) Accumulated number of hardware interrupts.. (HardwareInterruptCounter)
zLC	FLOAT	8	(IBM Name: R10443LC) Accumulated number of dispatchable units in the ready queue, not counting any idle tasks. A currently running unit is counted as dispatchable unit as well. (LoadCounter)
zPIC	FLOAT	8	(IBM Name: R10443PIC) Accumulated number of pages paged in. (PageInCounter)
zPOC	FLOAT	8	(IBM Name: R10443POC) Accumulated number of pages paged out. (PageOutCounter)

Secondary segment: SMF104_44_Linux_ProcessorMetrics

Field Name	Type	Len	Description
<i>SMF104_44_Linux_ProcessorMetrics.<fieldname></i>			
zMNAME	CHAR	64	(IBM Name: R10444MNAME) Name of measured element, extracted from the MeasuredElementName attribute of the CIM_BaseMetricValue instance.
zTCTP	FLOAT	8	(IBM Name: R10444TCTP) Percentage of time where the CPU was not idle. (TotalCPUTimePercentage)

Secondary segment: SMF104_45_Linux_UnixProcessMetrics

Field Name	Type	Len	Description
<i>SMF104_45_Linux_UnixProcessMetrics.<fieldname></i>			
zMNAME	CHAR	64	(IBM Name: R10445MNAME) Name of measured element, extracted from the MeasuredElementName attribute of the CIM_BaseMetricValue instance.
zAKMT	FLOAT	8	(IBM Name: R10445AKMT) CPU time in kernel mode spent for this process since process creation. (AccumulatedKernelModeTime)

zATCT	FLOAT	8	(IBM Name: R10445ATCT) CPU time spent for this process since process creation. (AccumulatedTotalCPUTime)
zAUMT	FLOAT	8	(IBM Name: R10445AUMT) CPU time in user mode spent for this process since process creation. (AccumulatedUserModeTime)
zEVKMP	FLOAT	8	(IBM Name: R10445EVKMP) Percentage of CPU resources used in kernel mode by this process in relation to the CPU capacity available on a higher level of virtualization. (ExternalViewKernelModePercentage)
zEVTCP	FLOAT	8	(IBM Name: R10445EVTCP) Percentage of CPU resources used by this process in relation to the CPU capacity available on a higher level of virtualization. The value is the sum of ExternalViewUserModePercentage and ExternalViewTotalCPUPercentage)
zEVUMP	FLOAT	8	(IBM Name: R10445EVUMP) Percentage of CPU resources used by this process in user mode in relation to the CPU capacity available on a higher level of virtualization. (ExternalViewUserModePercentage)
zIVKMP	FLOAT	8	(IBM Name: R10445IVKMP) CPU time spent for this process in kernel mode in relation to the total CPU time spent for the system in kernel mode. (InternalViewKernelModePercentage)
zIVTCP	FLOAT	8	(IBM Name: R10445IVTCP) Total CPU time spent for this process in relation to the total CPU time spent for the system. The value is the sum of InternalViewUserModePercentage and (InternalViewTotalCPUPercentage)
zIVUMP	FLOAT	8	(IBM Name: R10445IVUMP) CPU time spent for this process in user mode in relation to the total CPU time spent for the system in user mode. (InternalViewUserModePercentage)
zKMT	FLOAT	8	(IBM Name: R10445KMT) CPU time the process consumed in kernel mode during the interval. (KernelModeTime)
zPIR	FLOAT	8	(IBM Name: R10445PIR) Number of pages paged in per second on behalf of this process. (PageInRate)
zPOR	FLOAT	8	(IBM Name: R10445POR) Number of pages paged out per second on behalf of this process. (PageOutRate)
zRSS	FLOAT	8	(IBM Name: R10445RSS) Amount of physical memory used by this process. Any memory (ResidentSetSize)
zSS	FLOAT	8	(IBM Name: R10445SS) Number of bytes this process shares with other processes like dynamic link libraries. (SharedSize)
zTCT	FLOAT	8	(IBM Name: R10445TCT) CPU time the process consumed during the interval. This value is the sum of KernelModeTime and UserModeTime and does not include any idle time. (TotalCPUTime)
zUMT	FLOAT	8	(IBM Name: R10445UMT) CPU time the process consumed in user mode during the interval. (UserModeTime)
zVS	FLOAT	8	(IBM Name: R10445VS) The size of the virtual memory used by this process. (VirtualSize)
zPIC	FLOAT	8	(IBM Name: R10445PIC) Accumulated number of pages paged in on behalf of this process. (PageInCounter)
zPOC	FLOAT	8	(IBM Name: R10445POC) Accumulated number of pages paged out on behalf of this process. (PageOutCounter)

Secondary segment: SMF104_46_Linux_StorageMetrics

Field Name	Type	Len	Description
<i>SMF104_46_Linux_StorageMetrics.<fieldname></i>			
zMNAME	CHAR	64	(IBM Name: R10446MNAME) Name of measured element, extracted from the MeasuredElementName attribute of the CIM_BaseMetricValue instance.
zCAP	FLOAT	8	(IBM Name: R10446CAP) Total Capacity of the device in bytes. (Capacity)
zRD	FLOAT	8	(IBM Name: R10446RD) Number of kilobytes read from the device during the interval. (Read)
zWR	FLOAT	8	(IBM Name: R10446WR) Number of kilobytes written to the device during the interval. (Write)

Secondary segment: SMF104_50_Linux_zCECMetrics

Field Name	Type	Len	Description
<i>SMF104_50_Linux_zCECMetrics.<fieldname></i>			
zMNAME	CHAR	64	(IBM Name: R10450MNAME) Name of measured element, extracted from the MeasuredElementName attribute of the CIM_BaseMetricValue instance.
zEVKMP	FLOAT	8	(IBM Name: R10450EVKMP) Capacity-based CPU percentage of CEC CPU resources used by PR/SM LPAR hypervisor to do the virtualization. (ExternalViewKernelModePercentage)
zEVTCP	FLOAT	8	(IBM Name: R10450EVTCP) Capacity-based total CPU percentage on CEC level. The percentage the physical CPU resources of the CEC were not idle. (ExternalViewTotalCPUPercentage)
zEVUMP	FLOAT	8	(IBM Name: R10450EVUMP) Capacity-based CPU percentage of CEC CPU resources used by the hosted virtual servers. (ExternalViewUserModePercentage)
zKMT	FLOAT	8	(IBM Name: R10450KMT) Sum of all LPAR management times for the CEC. (KernelModeTime)
zTCT	FLOAT	8	(IBM Name: R10450TCT) Total CPU time spent for all z Systems LPARs. (TotalCPUTime)
zUGCC	FLOAT	8	(IBM Name: R10450UGCC) Entitled CPU time not used on this CEC. (UnusedGlobalCPUTCapacity)
zUMT	FLOAT	8	(IBM Name: R10450UMT) Total CPU time spent in user mode for all z Systems LPARs. (UserModeTime)

Secondary segment: SMF104_51_Linux_zLPARMetrics

Field Name	Type	Len	Description
<i>SMF104_51_Linux_zLPARMetrics.<fieldname></i>			
zMNAME	CHAR	64	(IBM Name: R10451MNAME) Name of measured element, extracted from the MeasuredElementName attribute of the CIM_BaseMetricValue instance.
zAVP	FLOAT	8	(IBM Name: R10451AVP) Average number of virtual processors active in the interval for the LPAR. (ActiveVirtualProcessors)
zEVIP	FLOAT	8	

			(IBM Name: R10451EVIP) CPU idle time divided by the online time in the interval. (ExternalViewIdlePercentage)
zEVKMP	FLOAT	8	(IBM Name: R10451EVKMP) LPAR management time divided by the online time in the interval. (ExternalViewKernelModePercentage)
zEVTCP	FLOAT	8	(IBM Name: R10451EVTCP) Total CPU time divided by the online time in the interval. (ExternalViewTotalCPUPercentage)
zEVUMP	FLOAT	8	(IBM Name: R10451EVUMP) User mode time (CPU time without LPAR management time) divided by the online time in the interval. (ExternalViewUserModePercentage)
zKMT	FLOAT	8	(IBM Name: R10451KMT) Kernel mode time (LPAR management time) for this LPAR in milliseconds. (KernelModeTime)
zTCT	FLOAT	8	(IBM Name: R10451TCT) Total CPU time (dispatch time) for this LPAR in milliseconds. (TotalCPUTime)
zUPCC	FLOAT	8	(IBM Name: R10451UPCC) CPU time in milliseconds, exclusively reserved, but unused for this LPAR. (UnusedPartitionCPUCapacity)
zUMT	FLOAT	8	(IBM Name: R10451UMT) User mode time (effective dispatch time) for this LPAR in milliseconds. (UserModeTime)

Secondary segment: **SMF104_52_Linux_zChannelMetrics**

Field Name	Type	Len	Description
<i>SMF104_52_Linux_zChannelMetrics.<fieldname></i>			
zMNAME	CHAR	64	(IBM Name: R10452MNAME) Name of measured element, extracted from the MeasuredElementName attribute of the CIM_BaseMetricValue instance.
zBUP	FLOAT	8	(IBM Name: R10452BUP) Percentage of bus cycles where the bus has been found busy for this channel in relation to the theoretical limit. (BusUtilizationPercentage)
zPRT	FLOAT	8	(IBM Name: R10452PRT) Data transfer rates from the control unit to the channel for this partition. (PartitionReadThroughput)
zPUP	FLOAT	8	(IBM Name: R10452PUP) The channel path utilization percentage for this partition during the interval. (PartitionUtilizationPercentage)
zPWT	FLOAT	8	(IBM Name: R10452PWT) Data transfer rates from the channel to the control unit for this partition. (PartitionWriteThroughput)
zTRT	FLOAT	8	(IBM Name: R10452TRT) Data transfer rates from the control unit to the channel for the CEC. (TotalReadThroughput)
zTUP	FLOAT	8	(IBM Name: R10452TUP) The channel path utilization percentage for the CEC during the interval. (TotalUtilizationPercentage)
zTWT	FLOAT	8	(IBM Name: R10452TWT) Data transfer rates from the channel to the control unit for the CEC. (TotalWriteThroughput)

Secondary segment: SMF104_53_Linux_zECKDMetrics

Field Name	Type	Len	Description
SMF104_53_Linux_zECKDMetrics.<fieldname>			
zMNAME	CHAR	64	(IBM Name: R10453MNAME) Name of measured element, extracted from the MeasuredElementName attribute of the CIM_BaseMetricValue instance.
zADU	FLOAT	8	(IBM Name: R10453ADU) Percentage of time the device spent servicing transfers in relation to the time the device was active. (AverageDeviceUtilization)
zCT	FLOAT	8	(IBM Name: R10453CT) Average connect time in milliseconds per I/O request for this device. (ConnectTime)
zCUQT	FLOAT	8	(IBM Name: R10453CUQT) Average control unit queue time in milliseconds per I/O request for this device. (ControlUnitQueueTime)
zDT	FLOAT	8	(IBM Name: R10453DT) Average disconnect time in milliseconds per I/O request for this device. (DisconnectTime)
zIOI	FLOAT	8	(IBM Name: R10453IOI) Indicator for the device utilization. The value represents the product of the ResponseTime multiplied with the RequestRate. (IOIntensity)
zICRT	FLOAT	8	(IBM Name: R10453ICRT) Average initial command response time in milliseconds per I/O request for this device. (InitialCommandResponseTime)
zPT	FLOAT	8	(IBM Name: R10453PT) Average pending time in milliseconds per I/O request for this device. (PendingTime)
zRR	FLOAT	8	(IBM Name: R10453RR) Number of I/O requests per second for this device. (RequestRate)
zRTM	FLOAT	8	(IBM Name: R10453RTM) Average response time in milliseconds per I/O request for this device. (ResponseTime)

Record Type 105 - GDPS/Global Mirror

SMF Record 105 (GDPS/Global Mirror) is mapped by structure member "T105".

Primary Segment:

- [SMF105_GDPS_Global_Mirror](#)

Secondary Segment(s): 4 (in alphabetical order)

- [SMF105_Product_Information](#)
- [SMF105_01_Session_Control](#)
- [SMF105_02_Disk_SubSystem](#)
- [SMF105_02_Logical_SubSystem](#)

Primary segment: [SMF105_GDPS_Global_Mirror](#)

Field Name	Type	Len	Description
<i>SMF105_GDPS_Global_Mirror.<fieldname></i>			
<i>SMF105_GDPS_Global_Mirror.Header.<fieldname></i>			
zFLG	HEX	1	(IBM name: SMF104FLG) System indicator: Bit Meaning when set 0-2 Reserved. 3-6 Version indicators 7 Reserved.
zRTY	INT	1	(IBM Name: SMF105RTY) Record type 105 (X'69').
zTME	TSTMP	8	(IBM Name: SMF105TME) Dat and time that the record was moved into the SMF buffer.
zSID	CHAR	4	(IBM Name: SMF105IDS) System identification (from the SMFPRMxx SID parameter).
zSSID	CHAR	4	(IBM Name: SMF105SSI) Subsystem identification ('GDPS').
zSTY	INT	2	(IBM Name: SMF105STY) Record subtype.
zSTN	INT	2	(IBM Name: SMF105TRN) Number of triplets in this record.
<i>SMF105_GDPS_Global_Mirror.Self_Defining_Section.<fieldname></i>			
zPRO	INT	4	(IBM Name: SMF105PRO) Offset to GDPS product section.
zPRL	INT	2	(IBM Name: SMF105PRL) Length of GDPS product section.
zPRN	INT	2	(IBM Name: SMF105PRN) Number of GDPS product sections.
zDAO	INT	4	(IBM Name: SMF105SEO) offset to session control/disk subsystem section
zDAL	INT	2	(IBM Name: SMF105SEL) length of session control/disk subsystem section
zDAN	INT	2	(IBM Name: SMF105SEN) number of session control/disk subsystem sections
zLSO	INT	4	(IBM Name: SMF105LSO) Offset to Logical subsystem section
zLSL	INT	2	(IBM Name: SMF105LSL) Length of Logical subsystem section
zLSN	INT	2	(IBM Name: SMF105LSN) Number of Logical subsystem section

Secondary segment: SMF105_Product_Information

Field Name	Type	Len	Description
<i>SMF105_Product_Information.<fieldname></i>			
zPRV	DEC	2 (2,0)	(IBM Name: SMF105PRV) GDPS version number, with in packed format 'vrmF'. v=version number, r=release number, m=modification level
zPRD	CHAR	8	(IBM Name: SMF105PRD) Product name GDPSPGM = Global Mirror

Secondary segment: SMF105_01_Session_Control

Field Name	Type	Len	Description
<i>SMF105_01_Session_Control.<fieldname></i>			
zSDT	TSTMP	8	(IBM Name: SMF105SDT) Current date and time on MVS system
zSIN	DEC	3 (4,0)	(IBM Name: SMF105SIN) Duration of the interval
zSFL	HEX	1	(IBM Name: SMF105SFL) Record flags
zSNU	INT	1	(IBM Name: SMF105SNU) Session Number
zSDM	CHAR	8	(IBM Name: SMF105SDM) GDPS instance name
zSID	CHAR	16	(IBM Name: SMF105SID) Session name
zSMS	CHAR	10	(IBM Name: SMF105SMS) Master DSS Serial Number
zSTA	CHAR	8	(IBM Name: SMF105STA) Session status
zSSD	TSTMP	8	(IBM Name: SMF105SSD) Current date and time on DiskSubsystem
zSCD	TSTMP	8	(IBM Name: SMF105SCD) Last CG date and time on DSS
zSAR	INT	6	(IBM Name: SMF105SAR) Average RPO over interval
zSIR	INT	6	(IBM Name: SMF105SIR) Instantaneous RPO at end of interval
zSGC	INT	4	(IBM Name: SMF105SGC) Good CG in the interval
zSFC	INT	4	(IBM Name: SMF105SFC) Failed CG in the interval
zSCF	INT	4	(IBM Name: SMF105SCF) Failed CG since last success
zSLS	INT	2	(IBM Name: SMF105SLS) Number of LSS being monitored
zSTV	INT	2	(IBM Name: SMF105STV) Total volumes in GM session
zSOV	INT	2	(IBM Name: SMF105SOV) Number of volume with OOS tracks
zSPV	INT	2	

			(IBM Name: SMF105SPV) Number of volume in Duplex pending status
zSSV	INT	2	(IBM Name: SMF105SSV) Number of volume in Simplex status
zSUV	INT	2	(IBM Name: SMF105SUV) Number of volume in Suspended status
zSCV	INT	2	(IBM Name: SMF105SCV) Number of volume in Cascaded status
zSJV	INT	2	(IBM Name: SMF105SJV) Number of volume in Join pending status
zSFV	INT	2	(IBM Name: SMF105SFV) Number of volume in First pass status
zSOT	INT	8	(IBM Name: SMF105SOT) Total OOS tracks for all LSS in the range of 0 to FFFFFFFFFFFFFFFF. 16TB per volume and 256 volumes and 64KB per track times 255 LSS and 16 primary disk subsystems.
zSER	CHAR	4	(IBM Name: SMF105SER) Last Error Reason
zSES	CHAR	8	(IBM Name: SMF105SES) State at time of last error
zSLN	INT	2	(IBM Name: SMF105SLN) Number of LSS in Normal state
zSLR	INT	2	(IBM Name: SMF105SLR) Number of LSS in Consistency Group in progress state
zSLP	INT	2	(IBM Name: SMF105SLP) Number of LSS in not ready state
zSLO	INT	2	(IBM Name: SMF105SLO) Number of LSS in other states

Secondary segment: SMF105_02_Disk_SubSystem

Field Name	Type	Len	Description
<i>SMF105_02_Disk_SubSystem.<fieldname></i>			
zDDT	TSTMP	8	(IBM Name: SMF105DDT) Current date on MVS system
<i>SMF105_02_Disk_SubSystem.zDFL.<fieldname></i>			
zDFL1	BIT	1	(IBM Name: SMF105DFL1) Indicates SMF105LxVM fields are used in addition to the SMF105LxV in the LSS Data Section.
<i>SMF105_02_Disk_SubSystem.<fieldname></i>			
zDNU	INT	1	(IBM Name: SMF105DNU) Session Number
zDSA	CHAR	16	(IBM Name: SMF105DSA) Session name
zDSE	CHAR	10	(IBM Name: SMF105DSE) Master DSS Serial Number
zDNL	INT	1	(IBM Name: SMF105DNL) Number of LSS on this DSS

Secondary segment: SMF105_02_Logical_SubSystem

Field Name	Type	Len	Description
<i>SMF105_02_Logical_SubSystem.<fieldname></i>			
zLID	INT	2	(IBM Name: SMF105LID) LSS Identifier
zLST	CHAR	8	(IBM Name: SMF105LST) Status for this LSS
zLTV	INT	1	(IBM Name: SMF105LTV) Total volumes in this LSS
zLOV	INT	1	(IBM Name: SMF105LOV) Vol. with OOS tracks
zLPV	INT	1	(IBM Name: SMF105LPV) Vol. in Duplex pending status
zLSV	INT	1	(IBM Name: SMF105LSV) Vol. in Simplex status
zLUV	INT	1	(IBM Name: SMF105LUV) Vol. in Suspended status
zLCV	INT	1	(IBM Name: SMF105LCV) Vol. in Cascaded status
zLJV	INT	1	(IBM Name: SMF105LJV) Vol. in Join pending status
zLFV	INT	1	(IBM Name: SMF105LFV) Vol. in First pass status
zLOT	INT	6	(IBM Name: SMF105LOT) Total OOS tracks in LSS
zLTVM	INT	2	(IBM Name: SMF105LTVM) Total volumes in this LSS. Used when SMF105DFL1 flag is set.
zLOVM	INT	2	(IBM Name: SMF105LOVM) Vol. with OOS tracks. Used when SMF105DFL1 flag is set
zLPVM	INT	2	(IBM Name: SMF105LPVM) Vol. in Duplex pending status. Used when SMF105DFL1 flag is set.
zLSVM	INT	2	(IBM Name: SMF105LSVM) Vol. in Simplex status. Used when SMF105DFL1 flag is set.
zLUVM	INT	2	(IBM Name: SMF105LUVM) Vol. in Suspended status. Used when SMF105DFL1 flag is set.
zLCVM	INT	2	(IBM Name: SMF105LCVM) Vol. in Cascaded status. Used when SMF105DFL1 flag is set.
zLJVM	INT	2	(IBM Name: SMF105LJVM) Vol. in Join pending status. Used when SMF105DFL1 flag is set.
zLFVM	INT	2	(IBM Name: SMF105LFVM) Vol. in First pass status. Used when SMF105DFL1 flag is set.

Record Type 106 - BCPii Activity

SMF Record 106 (BCPii Activity) is mapped by structure member "T106".

Primary Segment:

- [SMF106_BCPii_Activity](#)

Secondary Segment(s): 5 (in alphabetical order)

- [SMF106_CMD](#)
- [SMF106_CMDData](#)
- [SMF106_CMSET](#)
- [SMF106_Execution_Environment](#)
- [SMF106_Product](#)

Primary segment: [SMF106_BCPii_Activity](#)

Field Name	Type	Len	Description
<i>SMF106_BCPii_Activity.<fieldname></i>			
<i>SMF106_BCPii_Activity.Header_Self_defining_Section.<fieldname></i>			
zFLG	HEX	1	(IBM name: SMF6AFLG) Header flag byte: Bit Meaning when set 0 SUBSYSTEM identification follows system identification 1 SubTypeS used 2 RESERVED 3-6 Version indicators 7 RESERVED
zRTY	INT	1	(IBM name: SMF6ARTY) Record type 106 (X'6A')
zTME	TSTMP	8	(IBM name: SMF6ATME) Date/Time when the record was moved into the SMF buffer.
zSID	CHAR	4	(IBM name: SMF6ASID) System identification (from the SID parameter).
zWID	CHAR	4	(IBM name: SMF6AWID) Subsystem identifier.
zSTY	INT	2	(IBM name: SMF6ASTP) Indicates the record SubType, based on the value of SMF6ASTP: 1 HARDWARE event counter deltas 2 HARDWARE event counters
zSDL	INT	4	(IBM name: SMF6ASDL) Length of self-defining section.
zPOF	INT	4	(IBM name: SMF6ASOF) Offset to product section from beginning of record type 113
zPLN	INT	2	(IBM name: SMF6ASLN) Length of product section
zPON	INT	2	(IBM name: SMF6ASON) Number of product sections
zEOF	INT	4	(IBM name: SMF6AIOF) Offset to execution environment section from beginning of record type 113
zELN	INT	2	(IBM name: SMF6AILN) Length of execution environment section
zEON	INT	2	(IBM name: SMF6AION) Number of execution environment sections
zDOF	INT	4	(IBM name: SMF6ADOF) Offset to CMSET/CMD section from beginning of record type 113
zDLN	INT	2	(IBM name: SMF6ADLN) Length of CMSET/CMD section
zDON	INT	2	(IBM name: SMF6ADON) Number of CMSET/CMD sections

Secondary segment: SMF106_Product

Field Name	Type	Len	Description
<i>SMF106_Product.<fieldname></i>			
zRVN	CHAR	2	(IBM name: SMF6ARVN) Record version number.
zPNM	CHAR	8	(IBM name: SMF6APNM) Product name (BCPII).
zOSL	CHAR	8	(IBM name: SMF6AOSL) MVS product level.
zSYN	CHAR	8	(IBM name: SMF6ASYN) Current system name (from SYSNAME parmlib option).

Secondary segment: SMF106_Execution_Environment

Field Name	Type	Len	Description
<i>SMF106_Execution_Environment.<fieldname></i>			
zCTP	INT (ENUM)	2	(IBM name: SMF6ACTP) Connect type from HWICONN: 'Target' => Connection to a target CPC, 'Image' => Connection to an image of a CPC, 'CapRec' => Connection to a capacity record of a CPC, 'ResetProf' => Connection to a reset activation profile associated with a CPC, 'ImageProf' => Connection to an image activation profile associated with a CPC, 'LoadProf' => Connection to a load activation profile associated with a CPC, 'User' => Connection to a user-defined image group on a CPC, 'GroupProf' => Connection to a group profile associated with a CPC, 'LPARCap' => Connection to an LPAR Capacity group associated with a CPC.
zCPC	CHAR	17	(IBM name: SMF6ACPC) CPC name.
zNLL	CHAR	1	(IBM name: SMF6ANLL) Word boundary use.
zRTN	CHAR	16	(IBM name: SMF6ARTN) Request parameter.
zASD	INT	2	(IBM name: SMF6AASD) Two-byte address space identifier (ASID).
zJOB	CHAR	8	(IBM name: SMF6AJOB) Job name.
zUSR	CHAR	8	(IBM name: SMF6AUSR) User name.

Secondary segment: SMF106_CMSET

Field Name	Type	Len	Description
<i>SMF106_CMSET.<fieldname></i>			
zTYP	INT	4	(IBM name: SMF6ATYP) SET type.
zTVL	INT	4	(IBM name: SMF6ATVL) SET type value length.
zTDA	XVCHAR	0 257	(IBM name: SMFSETDA) SET parameter data.

Secondary segment: SMF106_CMD

Field Name	Type	Len	Description
<i>SMF106_CMD.<fieldname></i>			
zCTY	INT	4	(IBM name: SMF6ACTY) Command type.
zAOS	INT	4	(IBM name: SMF6AAOS) CMD parameter data offset.
zCMDPM	CHAR	328	(IBM name: SMFCMDPM) CMD passed in parameter.

Secondary segment: SMF106_CMDData

Field Name	Type	Len	Description
<i>SMF106_CMDData.<fieldname></i>			
zCMDDL	INT	4	(IBM name: SMFCMDDL) XML or IPL token data length.
zCMDDA	XVCHAR	0 3483	(IBM name: SMFCMDDA) XML or IPL token data.

Record Type 108 - Domino Server Statistics

SMF Record 108 (Domino Server Statistics) has several subtypes, each mapped by a structure member name of the format "T108STnn".

Record Type 108 Subtype 1 - Server Load

Primary Segment:

- SMF108#01_Domino_Server

Secondary Segment(s): 5 (in alphabetical order)

- SMF108#01_Port_Activity
- SMF108#01_Product_Information
- SMF108#01_Self_Defining_Section
- SMF108#01_Server_Load
- SMF108#01_Transaction

Primary segment: SMF108#01_Domino_Server

Field Name	Type	Len	Description
<i>SMF108#01_Domino_Server.<fieldname></i>			
<i>SMF108#01_Domino_Server.Header_Self_Defining_Section.<fieldname></i>			
zFLG	HEX	1	(IBM name: SMF108FLG) System indicator: Bit Meaning when set 0-2 Reserved. 3-6 Version indicators 7 Reserved.
zRTY	INT	1	(IBM name: SMF108RTY) Record type 108
zTME	TSTMP	8	(IBM name: SMF108TME) Date/Time that the record was moved into the SMF buffer.
zSID	CHAR	4	(IBM name: SMF108SID) System identification (from the SID parameter).
zSSID	CHAR	4	(IBM name: SMF108SSI) Sub system identification
zSTY	INT	2	(IBM name: SMF108STP) Record SubType (must be at offset X'16' x).

<i>SMF108#01_Domino_Server.Self_Defining_Section.<fieldname></i>			
zPRO	INT	4	(IBM name: SMF108PRO) Offset to the product section from the beginning of the record (including RDW).
zPRL	INT	2	(IBM name: SMF108PRL) Length of the product section.
zPRN	INT	2	(IBM name: SMF108PRN) Number of the product section. (1)
zSSO	INT	4	(IBM name: SMF108SSO) Offset to self-defining section from beginning of the record (including RDW).
zSSL	INT	2	(IBM name: SMF108SSL) Length of the self-defining section.
zSSN	INT	2	(IBM name: SMF108SSN) Number of the self-defining section. (1)

Secondary segment: **SMF108#01_Product_Information**

Field Name	Type	Len	Description
<i>SMF108#01_Product_Information.<fieldname></i>			
zPRRVN	INT	4	(IBM name: SMF108PRRVN) Record version number. Set to 6 for Domino Release 6.0.0.
zPRPVN	CHAR	8	(IBM name: SMF108PRPVN) Product version number (6.0.0 for example). This is the first eight bytes of the product version string and may contain text or other characters after the number.
zPRSVN	CHAR	32	(IBM name: SMF108PRSVN) Server Name (used to identify partitioned servers)
zPRSPN	CHAR	8	(IBM name: SMF108PRSPN) Sysplex Name (general-use-programming-interface (gupi) field in cvt/ecvt)
zPRSYN	CHAR	8	(IBM name: SMF108PRSYN) System Name (gupi field in cvt/ecvt)
zPROSL	CHAR	8	(IBM name: SMF108PROSL) OS/390 System Level (gupi field in cvt/ecvt)
zPRISTARTT	TSTMP	8	(IBM name: SMF108PRISTARTT) Interval Start Time
zPRIENDT	TSTMP	8	(IBM name: SMF108PRIENDT) Interval End Time
zCVTTV	INT	4	(IBM name: SMF108CVTTV) CVTTV GMT offset time.
zPRPID	INT	4	(IBM name: SMF108PRPID) Process ID of the Domino server

Secondary segment: **SMF108#01_Self_Defining_Section**

Field Name	Type	Len	Description
<i>SMF108#01_Self_Defining_Section.<fieldname></i>			
zSLO	INT	4	(IBM name: SMF108SLO) Offset to Server Load Section
zSLL	INT	2	(IBM name: SMF108SLL) Length of Server Load Section
zSLN	INT	2	(IBM name: SMF108SLN) Number of Server Load Section (should be '1')
zTRO	INT	4	(IBM name: SMF108TRO) Offset to Transaction Section
zTRL	INT	2	(IBM name: SMF108TRL) Length of Transaction Section
zTRN	INT	2	(IBM name: SMF108TRN) Number of Transaction Section (1 per transaction type processed)
zPTO	INT	4	(IBM name: SMF108PTO) Offset to Port Activity Section
zPTL	INT	2	(IBM name: SMF108PTL) Length of Port Activity Section
zPTN	INT	2	(IBM name: SMF108PTN) Number of Port Activity Sections (1 per TCP/IP port)

Secondary segment: **SMF108#01_Server_Load**

Field Name	Type	Len	Description
<i>SMF108#01_Server_Load.<fieldname></i>			
zCU	INT	4	(IBM name: SMF108SLCU) Current number of users
zUA	INT	4	(IBM name: SMF108SLUA) Number of currently connected users that are currently active
zUA1M	INT	4	(IBM name: SMF108SLUA1M) Number of currently connected users that have been active within the last 1 minute
zUA3M	INT	4	(IBM name: SMF108SLUA3M) Number of currently connected users that have been active within the last 3 minutes
zUA5M	INT	4	(IBM name: SMF108SLUA5M) Number of currently connected users that have been active within the last 5 minutes
zUA15M	INT	4	(IBM name: SMF108SLUA15M) Number of currently connected users that have been active within the last 15 minutes
zUA30M	INT	4	(IBM name: SMF108SLUA30M) Number of currently connected users that have been active within the last 30 minutes
zDMSENTL	INT	4	(IBM name: SMF108SLDMSENTL) Number of Domino mail messages delivered to local users
zDMSENTLAS	INT	4	(IBM name: SMF108SLDMSENTLAS) Average size of Domino mail and SMTP messages delivered to local users
zDMSENTR	INT	4	(IBM name: SMF108SLDMSENTR) Number of Domino mail and SMTP messages sent to other servers
zDMSENTRAS	INT	4	(IBM name: SMF108SLDMSENTRAS) Average size of Domino mail messages sent to other servers
zSMREC	INT	4	(IBM name: SMF108SLSMREC) Number of SMTP messages received from other servers during interval
zSMRECCAS	INT	4	(IBM name: SMF108SLSMRECCAS) Average size of SMTP messages received from other servers during interval
zSMSSENT	INT	4	(IBM name: SMF108SLSMSSENT) Number of SMTP messages sent to other servers during interval
zSMSSENTAS	INT	4	(IBM name: SMF108SLSMSSENTAS) Average size of SMTP messages sent to other servers during interval
zTRANS	INT	4	(IBM name: SMF108SLTRANS) Total number of transactions processed during interval
zSVREPL	INT	4	(IBM name: SMF108SLSVREPL) Number of replications initiated by this server
zNWSESIN	INT	4	(IBM name: SMF108SLNWSESIN) Number of incoming (to the server from clients) sessions established during the interval. (Version 1 format only. For Release 5.01 or higher this field will be set to zero. This data is now recorded in the Port Activity Section).
zNWSESOUT	INT	4	(IBM name: SMF108SLNWSESOUT) Number of outgoing sessions established during the interval. (Version 1 format only. For Release 5.01 or higher this field will be set to zero. This data is now recorded in the Port Activity Section).
zNWBR	INT	4	(IBM name: SMF108SLNWBR) Number of network Bytes/1024 received during interval. (Version 1 format only. For Release 5.01 or higher this field will be set to zero. This data is now recorded in the Port Activity Section).

zNWBS	INT	4	(IBM name: SMF108SLNWBS) Number of network Bytes/1024 sent during interval. (Version 1 format only. For Release 5.01 or higher this field will be set to zero. This data is now recorded in the Port Activity Section).
zTT	INT	2	(IBM name: SMF108SLTT) Total number of physical thread pool threads, server_pool_tasks
zVTIU	INT	2	(IBM name: SMF108SLVTIU) Number of virtual thread pool threads currently in use
zAIOR	INT	4	(IBM name: SMF108SLAIOR) Number of async i/o reads during interval
zAIOW	INT	4	(IBM name: SMF108SLAIOW) Number of async i/o writes during interval
zPOP3R	INT	4	(IBM name: SMF108SLPOP3R) Number of POP3 reads during interval
zIMAPR	INT	4	(IBM name: SMF108SLIMAPR) Number of IMAP reads during interval
zHTTTPR	INT	4	(IBM name: SMF108SLHTTTPR) Number of HTTP reads during interval
zHTTTPW	INT	4	(IBM name: SMF108SLHTTTPW) Number of HTTP writes during interval
zVTIUMAX	INT	2	(IBM name: SMF108SLVTIUMAX) Maximum number of virtual thread pool threads in use during interval
zTASKS	INT	2	(IBM name: SMF108SLTASKS) Number of tasks currently in use
zTASKSMAX	INT	2	(IBM name: SMF108SLTASKSMAX) Maximum number of tasks in use during interval
zPTIU	INT	2	(IBM name: SMF108SLPTIU) Number of physical thread pool threads currently in use
zPTIUMAX	INT	2	(IBM name: SMF108SLPTIUMAX) Maximum number of physical thread pool threads in use during interval
zPPAD	INT	2	(IBM name: SMF108SLPPAD) The pad bytes to get to the next 32 byte boundary.
zDominoCacheCommandCount	INT	4	(IBM name: SMF108SLDominoCacheCommandCount) The change for this interval in the Domino statistic, Domino.Cache.Command.Count.
zDominoCacheDesignCount	INT	4	(IBM name: SMF108SLDominoCacheDesignCount) The change for this interval in the Domino statistic, Domino.Cache.Design.Count.
zDominoCacheSessionCount	INT	4	(IBM name: SMF108SLDominoCacheSessionCount) The change for this interval in the Domino statistic, Domino.Cache.Session.Count.
zDominoCacheUserCount	INT	4	(IBM name: SMF108SLDominoCacheUserCount) The change for this interval in the Domino statistic, Domino.Cache.User.Count.
zDominoRequestTotal	INT	4	(IBM name: SMF108SLDominoRequestTotal) The change for this interval in the Domino statistic, Domino.Cache.Requests.Total.

Secondary segment: **SMF108#01_Transaction**

Field Name	Type	Len	Description
SMF108#01_Transaction.<fieldname>			
zTYPE	INT	4	(IBM name: SMF108TRTYPE) Transaction type.

zTYPENP	INT	4	(IBM name: SMF108TRTYPENP) Number of transactions of type processed during interval
zTYPETA	INT	4	(IBM name: SMF108TRTYPETA) Total accumulated response time, in milliseconds, for all transactions of type that completed during interval
zTYPENW	INT	4	(IBM name: SMF108TRTYPENW) Total accumulated net wait time, in milliseconds, for all transactions of type that completed during interval. This is the time the server has been waiting for clients to respond.

Secondary segment: **SMF108#01_Port_Activity**

Field Name	Type	Len	Description
<i>SMF108#01_Port_Activity.<fieldname></i>			
zNAME	CHAR	8	(IBM name: SMF108PTNAME) First eight bytes of the TCP/IP port. ('TCPIP' for example)
zNWSESIN	INT	4	(IBM name: SMF108PTNWSESIN) Number of incoming sessions processed during the interval (client to server connection).
zNWSESOUT	INT	4	(IBM name: SMF108PTNWSESOUT) Number of outgoing sessions processed during the interval
zNWBR	INT	4	(IBM name: SMF108PTNWBR) Total number of bytes/1024 received for this port during the interval.
zNWBS	INT	4	(IBM name: SMF108PTNWBS) Total number of bytes/1024 sent for this port during the interval.

Record Type 108 Subtype 2 - User Activity**Primary Segment:**

- SMF108#02_Domino_Server

Secondary Segment(s): 3 (in alphabetical order)

- SMF108#02_Product_Information
- SMF108#02_Self_Defining_Section
- SMF108#02_User_Activity

Primary segment: SMF108#02_Domino_Server

Field Name	Type	Len	Description
<i>SMF108#02_Domino_Server.<fieldname></i>			
SMF108#02_Domino_Server.Header_Self_Defining_Section.<fieldname>			
zFLG	HEX	1	(IBM name: SMF108FLG) System indicator: Bit Meaning when set 0-2 Reserved. 3-6 Version indicators 7 Reserved.
zRTY	INT	1	(IBM name: SMF108RTY) Record type 108
zTME	TSTMP	8	(IBM name: SMF108TME) Date/Time that the record was moved into the SMF buffer.
zSID	CHAR	4	(IBM name: SMF108SID) System identification (from the SID parameter).
zSSID	CHAR	4	(IBM name: SMF108SSI) Sub system identification
zSTY	INT	2	(IBM name: SMF108STP) Record SubType (must be at offset X'16' x).
SMF108#02_Domino_Server.Self_Defining_Section.<fieldname>			
zPRO	INT	4	(IBM name: SMF108PRO) Offset to the product section from the beginning of the record (including RDW).
zPRL	INT	2	(IBM name: SMF108PRL) Length of the product section.
zPRN	INT	2	(IBM name: SMF108PRN) Number of the product section. (1)
zSSO	INT	4	(IBM name: SMF108SSO) Offset to self-defining section from beginning of the record (including RDW).
zSSL	INT	2	(IBM name: SMF108SSL) Length of the self-defining section.
zSSN	INT	2	(IBM name: SMF108SSN) Number of the self-defining section. (1)

Secondary segment: SMF108#02_Product_Information

Field Name	Type	Len	Description
<i>SMF108#02_Product_Information.<fieldname></i>			
zPRRVN	INT	4	(IBM name: SMF108PRRVN) Record version number. Set to 6 for Domino Release 6.0.0.
zPRPVN	CHAR	8	(IBM name: SMF108PRPVN) Product version number (6.0.0 for example). This is the first eight bytes of

			the product version string and may contain text or other characters after the number.
zPRSVN	CHAR	32	(IBM name: SMF108PRSVN) Server Name (used to identify partitioned servers)
zPRSPN	CHAR	8	(IBM name: SMF108PRSPN) Sysplex Name (general-use-programming-interface (gupi) field in cvt/ecvt)
zPRSYN	CHAR	8	(IBM name: SMF108PRSYN) System Name (gupi field in cvt/ecvt)
zPROSL	CHAR	8	(IBM name: SMF108PROSL) OS/390 System Level (gupi field in cvt/ecvt)
zPRISTARTT	TSTMP	8	(IBM name: SMF108PRISTARTT) Interval Start Time
zPRIENDT	TSTMP	8	(IBM name: SMF108PRIENDT) Interval End Time
zCVTTV	INT	4	(IBM name: SMF108CVTTV) CVTTV GMT offset time.
zPRPID	INT	4	(IBM name: SMF108PRPID) Process ID of the Domino server

Secondary segment: **SMF108#02_Self_Defining_Section**

Field Name	Type	Len	Description
<i>SMF108#02_Self_Defining_Section.<fieldname></i>			
zUDO	INT	4	(IBM name: SMF108UDO) Offset to Data Section
zUDL	INT	2	(IBM name: SMF108UDL) Length of Data Section
zUDN	INT	2	(IBM name: SMF108UDN) Number of Data Section (should be '1')

Secondary segment: **SMF108#02_User_Activity**

Field Name	Type	Len	Description
<i>SMF108#02_User_Activity.<fieldname></i>			
zIPA	CHAR	16	(IBM name: SMF108UIPA) IP address presenting the request for service.
zTYPE	CHAR	4	(IBM name: SMF108UTYPE) Type of connection to the Domino server. User Type description: NRPC => Notes Data base server, HTTP => Notes HTTP server, IMAP => IMAP mail server, POP3 => POP3 mail server, SMTP => SMTP mail server.
zNAME	CHAR	36	(IBM name: SMF108UNAME) Notes user name for NRPC clients.
zCPU	TSTMP	8	(IBM name: SMF108UCPU) CPU time used by this user.
zBR	INT	4	(IBM name: SMF108UBR) Number of bytes read by this interval.
zBW	INT	4	(IBM name: SMF108UBW) Number of bytes written by this interval.

zPRIENDT	TSTMP	8	(IBM name: SMF108PRIENDT) Interval End Time
zCVTTV	INT	4	(IBM name: SMF108CVTTV) CVTTV GMT offset time.
zPRPID	INT	4	(IBM name: SMF108PRPID) Process ID of the Domino server

Secondary segment: **SMF108#03_Self_Defining_Section**

Field Name	Type	Len	Description
<i>SMF108#03_Self_Defining_Section.<fieldname></i>			
zMTO	INT	4	(IBM name: SMF108MTO) Offset to Data Section
zMTL	INT	2	(IBM name: SMF108MTL) Length of Data Section
zMTN	INT	2	(IBM name: SMF108MTN) Number of Data Section (should be '1')

Secondary segment: **SMF108#03_Monitoring_and_Tuning**

Field Name	Type	Len	Description
<i>SMF108#03_Monitoring_and_Tuning.<fieldname></i>			
zMAXUSERS	INT	4	(IBM name: SMF108MTMAXUSERS) Maximum number of users
zMAXCONTR	INT	4	(IBM name: SMF108MTMAXCONTR) Limit for number of concurrent transactions
zMAXCONSES	INT	4	(IBM name: SMF108MTMAXCONSES) Maximum number of sessions to run concurrently
zSESTIMEOUT	INT	2	(IBM name: SMF108MTSESTIMEOUT) Number of minutes in timeout
zUPMAX	INT	2	(IBM name: SMF108MTUPMAX) Maximum number of concurrent update tasks
zMAILBOXES	INT	2	(IBM name: SMF108MTMAILBOXES) Maximum number of mail.box'es
zREPMAX	INT	2	(IBM name: SMF108MTREPMAX) Maximum number of replicators (concurrent)
zNSFPOOL	INT	4	

			(IBM name: SMF108MTNSFPOOL) Maximum size of nsf buffer pool (in bytes)
zSFPOOLIU	INT	4	(IBM name: SMF108MTSFPOOLIU) Number of bytes in nsf buffer pool (in use)
zDBCACHE	INT (ENUM)	1	(IBM name: SMF108MTDBCENAB) dbcache enabled = 1, 0 if disabled
zDBCMAXE	INT	4	(IBM name: SMF108MTDBCMAXE) Maximum number of dbcache entries
zDBCCE	INT	4	(IBM name: SMF108MTDBCCE) Number of dbcache (current entries)
zDBCIDBO	INT	4	(IBM name: SMF108MTDBCIDBO) Number of dbcache (initial db opens)
zDBCOCR	INT	4	(IBM name: SMF108MTDBCOCR) Number of dbcache (overcrowding rejections)
zDBCHITS	INT	4	(IBM name: SMF108MTDBCHITS) Number of dbcache (hits)
zDBCHWM	INT	4	(IBM name: SMF108MTDBCHWM) dbcache (high water mark)
zSATH	INT	2	(IBM name: SMF108MTSATH) Server availability threshold
zSAX	INT	2	(IBM name: SMF108MTSAX) Server availability index
zNIFS	INT	4	(IBM name: SMF108MTNIFS) Database.NIFPool.Size (in bytes)
zNIFN	INT	4	(IBM name: SMF108MTNIFN) Database.NIFPool.Used
zNSFS	INT	4	(IBM name: SMF108MTNSFS) Database.NSFPool.Size (in bytes)
zNSFN	INT	4	(IBM name: SMF108MTNSFN) Database.NSFPool.Used
zDBPR	INT	4	(IBM name: SMF108MTDBPR) Number of Database.BufferPool (Reads)
zDBPW	INT	4	(IBM name: SMF108MTDBPW) Number of Database.BufferPool (Writes)
zMMXFER	INT	2	(IBM name: SMF108MTMMXFER) Maximum number of mail transfer threads
zMMXDLV	INT	2	(IBM name: SMF108MTMMXDLV) Maximum number of mail delivery threads
zMMXCONXFR	INT	2	(IBM name: SMF108MTMMXCONXFR) Maximum number of concurrent mail transfer threads

Record Type 108 Subtype 6 - Database Activity**Primary Segment:**

- SMF108#06_Domino_Server

Secondary Segment(s): 3 (in alphabetical order)

- SMF108#06_Database_Activity
- SMF108#06_Product_Information
- SMF108#06_Self_Defining_Section

Primary segment: SMF108#06_Domino_Server

Field Name	Type	Len	Description
<i>SMF108#06_Domino_Server.<fieldname></i>			
SMF108#06_Domino_Server.Header_Self_Defining_Section.<fieldname>			
zFLG	HEX	1	(IBM name: SMF108FLG) System indicator: Bit Meaning when set 0-2 Reserved. 3-6 Version indicators 7 Reserved.
zRTY	INT	1	(IBM name: SMF108RTY) Record type 108
zTME	TSTMP	8	(IBM name: SMF108TME) Date/Time that the record was moved into the SMF buffer.
zSID	CHAR	4	(IBM name: SMF108SID) System identification (from the SID parameter).
zSSID	CHAR	4	(IBM name: SMF108SSI) Sub system identification
zSTY	INT	2	(IBM name: SMF108STP) Record SubType (must be at offset X'16' x).
SMF108#06_Domino_Server.Self_Defining_Section.<fieldname>			
zPRO	INT	4	(IBM name: SMF108PRO) Offset to the product section from the beginning of the record (including RDW).
zPRL	INT	2	(IBM name: SMF108PRL) Length of the product section.
zPRN	INT	2	(IBM name: SMF108PRN) Number of the product section. (1)
zSSO	INT	4	(IBM name: SMF108SSO) Offset to self-defining section from beginning of the record (including RDW).
zSSL	INT	2	(IBM name: SMF108SSL) Length of the self-defining section.
zSSN	INT	2	(IBM name: SMF108SSN) Number of the self-defining section. (1)

Secondary segment: SMF108#06_Product_Information

Field Name	Type	Len	Description
<i>SMF108#06_Product_Information.<fieldname></i>			
zPRRVN	INT	4	(IBM name: SMF108PRRVN) Record version number. Set to 6 for Domino Release 6.0.0.
zPRPVN	CHAR	8	(IBM name: SMF108PRPVN) Product version number (6.0.0 for example). This is the first eight bytes of

			the product version string and may contain text or other characters after the number.
zPRSVN	CHAR	32	(IBM name: SMF108PRSVN) Server Name (used to identify partitioned servers)
zPRSPN	CHAR	8	(IBM name: SMF108PRSPN) Sysplex Name (general-use-programming-interface (gupi) field in cvt/ecvt)
zPRSYN	CHAR	8	(IBM name: SMF108PRSYN) System Name (gupi field in cvt/ecvt)
zPROSL	CHAR	8	(IBM name: SMF108PROSL) OS/390 System Level (gupi field in cvt/ecvt)
zPRISTARTT	TSTMP	8	(IBM name: SMF108PRISTARTT) Interval Start Time
zPRIENDT	TSTMP	8	(IBM name: SMF108PRIENDT) Interval End Time
zCVTTV	INT	4	(IBM name: SMF108CVTTV) CVTTV GMT offset time.
zPRPID	INT	4	(IBM name: SMF108PRPID) Process ID of the Domino server

Secondary segment: **SMF108#06_Self_Defining_Section**

Field Name	Type	Len	Description
<i>SMF108#06_Self_Defining_Section.<fieldname></i>			
zDBO	INT	4	(IBM name: SMF108DBO) Offset to Data Section
zDBL	INT	2	(IBM name: SMF108DBL) Length of Data Section
zDBN	INT	2	(IBM name: SMF108DBN) Number of Data Section (should be '1')

Secondary segment: **SMF108#06_Database_Activity**

Field Name	Type	Len	Description
<i>SMF108#06_Database_Activity.<fieldname></i>			
zNAME	CHAR	64	(IBM name: SMF108DBNAME) Last 64 characters of the data base name.
zINDEX	INT	4	(IBM name: SMF108DBINDEX) Number of indexing operations started on this data base by the server.
zREPS	INT	4	(IBM name: SMF108DBREPS) Number of replications on this data base initiated by this server.
zDOCADDS	INT	4	(IBM name: SMF108DBDOCADDS) Number of documents added to this data base.
zDOCDELS	INT	4	(IBM name: SMF108DBDOCDELS) Number of documents deleted from this data base.

Record Type 109 - TCPIP SYSLOGD Messages

SMF Record 109 (TCPIP SYSLOGD Messages) is mapped by structure member "T109".

Primary Segment:

- [SMF109_TCPIP_SYSLOGD_Messages](#)

Secondary Segment(s): 0

Primary segment: [SMF109_TCPIP_SYSLOGD_Messages](#)

Field Name	Type	Len	Description
<i>SMF109_TCPIP_SYSLOGD_Messages.<fieldname></i>			
<i>SMF109_TCPIP_SYSLOGD_Messages.Header.<fieldname></i>			
zFLG	HEX	1	(IBM name: SMF109FLG) System indicator: Bit Meaning when set 0-2 Reserved 3-6 Version indicators 7 Reserved.
zRTY	INT	1	(IBM name: SMF109RTY) Record type 109 (X'6D').
zTME	TSTMP	8	(IBM name: SMF109TME) Date/Time that the record was moved into the SMF buffer.
zSID	CHAR	4	(IBM name: SMF109SID) System identification (from the SID parameter).
zLOG	CHAR	4096	(IBM name: SMF109LOG) System logging daemon (syslogd) message.

Record Type 110 - CICS Transaction Server for z/OS Statistics

SMF Record 110 (CICS Transaction Server for z/OS Statistics) has several subtypes, each mapped by a structure member name of the format "T110STnn".

Record Type 110 Subtype 0 - Journaling

Primary Segment:

- [SMF110#00_CICS_TS_Journaling](#)

Secondary Segment(s): 9 (in alphabetical order)

- [SMF110#00_FEPI](#)
- [SMF110#00_FLJB_File_Close](#)
- [SMF110#00_FLJB_File_TieUp_Record](#)
- [SMF110#00_FLJB_RW](#)
- [SMF110#00_FLJB_WriteDelete](#)
- [SMF110#00_Journal_Control](#)
- [SMF110#00_Product_Section](#)
- [SMF110#00_Start_of_Run](#)
- [SMF110#00_Term_Control](#)

Primary segment: [SMF110#00_CICS_TS_Journaling](#)

Field Name	Type	Len	Description
<i>SMF110#00_CICS_TS_Journaling.<fieldname></i>			
<i>SMF110#00_CICS_TS_Journaling.Header.<fieldname></i>			
zFLG	HEX	1	(IBM name: N/A) System indicator: Bit Meaning when set 0-2 Reserved 3-6 Version indicators.
zRTY	INT	1	(IBM name: N/A) Record type 110 (X'6E').
zTME	TSTMP	8	(IBM name: N/A) Date/Time that the record was moved into the SMF buffer.
zSID	CHAR	4	(IBM name: N/A) System identification (from the SID parameter).
zSSID	CHAR	4	(IBM name: N/A) Subsystem identification. CICS
zSTY	INT	2	(IBM name: N/A) Record subtype.

<i>SMF110#00_CICS_TS_Journaling.Self_defining_Section.<fieldname></i>			
zTRN	INT	2	(IBM name: N/A) Number of triplets.
zPOF	INT	4	(IBM name: N/A) Offset to product section.
zPLN	INT	2	(IBM name: N/A) Length of product section.
zPON	INT	2	(IBM name: N/A) Number of product sections.
zDOF	INT	4	(IBM name: N/A) Offset to DATA section.
zDLN	INT	2	(IBM name: N/A) Length of DATA section.
zDON	INT	2	(IBM name: N/A) Number of DATA sections.

Secondary segment: **SMF110#00_Product_Section**

Field Name	Type	Len	Description
<i>SMF110#00_Product_Section.<fieldname></i>			
zVRM	HEX	2	(IBM name: N/A) Record version (0x0VRM). Each letter represents a numeric digit from values 0 to 9. V = Version, R = Release, M = Maintenance.
zPRN	CHAR	8	(IBM name: N/A) Product name (Generic APPLID).
zSPN	CHAR	8	(IBM name: N/A) Product name (Specific APPLID).
zMFL	INT	2	(IBM name: N/A) Record maintenance indicator.
zDTK	HEX	4	(IBM name: N/A) Domain Token.
zDID	CHAR	2	(IBM name: N/A) Domain Id.
zRQT	CHAR	3	(IBM name: N/A) Statistics type - USS/EOD/REQ/INT.
zICD	CHAR	3	(IBM name: N/A) YES if incomplete data recorded.
zCDATE	CHAR	8	(IBM name: N/A) Collection date MMDDYYYY.
zCTIME	CHAR	6	(IBM name: N/A) Collection time HHMMSS.
zINT	CHAR	6	(IBM name: N/A) Interval HHMMSS.
zINO	INT	4	(IBM name: N/A) Interval number.
zRTK	CHAR	8	(IBM name: N/A) Request token.
zLRT	CHAR	6	(IBM name: N/A) Last reset time HHMMSS.
zCST	TSTMP	8	(IBM name: N/A) CICS start time.
zJOBNAME	CHAR	8	(IBM name: N/A) Jobname.
zJTM	TSTMP	8	(IBM name: N/A) Job timestamp.
zUSERID	CHAR	8	(IBM name: USERID) User identification.
zPDN	CHAR	8	(IBM name: N/A) Operating system product level.

Secondary segment: **SMF110#00_Start_of_Run**

Field Name	Type	Len	Description
<i>SMF110#00_Start_of_Run.<fieldname></i>			
zRecLen	INT	4	(IBM name: N/A) Length of record.

zHdrLen	INT	4	(IBM name: N/A) Length of header.
zDataL	INT	4	(IBM name: N/A) Length of data.
zTimeGMT	TSTMP	8	(IBM name: N/A) Time (GMT).
zTimeLocal	TSTMP	8	(IBM name: N/A) Time (Local).
zTran_id	CHAR	4	(IBM name: N/A) Transaction identifier.
zTask_id	CHAR	4	(IBM name: N/A) Task identifier.
zTerm_id	CHAR	4	(IBM name: N/A) Terminal identifier.
zType	INT (ENUM)	2	(IBM name: N/A) Record Type.
zComp_id	CHAR	2	(IBM name: N/A) CICS Component identifier. LG => Logger, UJ => Journal Control (in the case of a request issued by the user), FC => File Control, SZ => Front End Programming Interface (FEPI), TC => Terminal Control.
zJournal	CHAR	8	(IBM name: N/A) Journal Name.

SMF110#00_Start_of_Run.zFlags.<fieldname>

StartTask	BIT	1	Start of task.
StartUOW	BIT	1	Start of Unit of Work.

SMF110#00_Start_of_Run.<fieldname>

zRelease	CHAR	4	(IBM name: N/A) CICS Release.
zAppl_id	CHAR	8	(IBM name: N/A) CICS applid.
zUserName	CHAR	8	(IBM name: N/A) CICS username.

Secondary segment: SMF110#00_FLJB_RW

Field Name	Type	Len	Description
SMF110#00_FLJB_RW.<fieldname>			
zRecLen	INT	4	(IBM name: N/A) Length of record.
zHdrLen	INT	4	(IBM name: N/A) Length of header.
zDataL	INT	4	(IBM name: N/A) Length of data.
zTimeGMT	TSTMP	8	(IBM name: N/A) Time (GMT).
zTimeLocal	TSTMP	8	(IBM name: N/A) Time (Local).
zTran_id	CHAR	4	(IBM name: N/A) Transaction identifier.
zTask_id	CHAR	4	(IBM name: N/A) Task identifier.

zTerm_id	CHAR	4	(IBM name: N/A) Terminal identifier.
zType	INT (ENUM)	2	(IBM name: N/A) Record Type. NonStart => Any record other than Start-of-Run.
zComp_id	CHAR	2	(IBM name: N/A) CICS Component identifier. LG => Logger, UJ => Journal Control (in the case of a request issued by the user), FC => File Control, SZ => Front End Programming Interface (FEPI), TC => Terminal Control.
zJournal	CHAR	8	(IBM name: N/A) Journal Name.

SMF110#00_FLJB_RW.zFlags.<fieldname>

StartTask	BIT	1	Start of task.
StartUOW	BIT	1	Start of Unit of Work.

SMF110#00_FLJB_RW.<fieldname>

zFLJBType	INT (ENUM)	1	(IBM name: N/A) File Log and Journal block record type.
-----------	---------------	---	--

SMF110#00_FLJB_RW.zFLJBFlags.<fieldname>

FCAutoJ	BIT	1	File control autojournal record.
FwdRecov	BIT	1	Forward recovery log record.
System	BIT	1	System log record.
LogOfLog	BIT	1	Log-oflog record.
Backout	BIT	1	Written in backout.
XAESDS	BIT	1	Data set is extended addressing ESDS.

SMF110#00_FLJB_RW.<fieldname>

zFileName	CHAR	8	(IBM name: N/A) File name.
zRBA	HEX	4	(IBM name: N/A) Relative byte address of record in base data set for ESDS (0 if file does not refer to ESDS).
zKeyLen	INT	2	(IBM name: N/A) Length of user data key.
zDataLen	INT	4	(IBM name: N/A) Length of user data.

SMF110#00_FLJB_RW.zDataFlags.<fieldname>

UOWShunt	BIT	1	Unit Of Work has been shunted at least once.
WrMass	BIT	1	Write massinsert.
WrMass1st	BIT	1	First write-add-complete in massinsert sequence.
WrMassEnd	BIT	1	End of massinsert sequence.
FixedLen	BIT	1	Fixed length record.

SMF110#00_FLJB_RW.<fieldname>

zKey	XVCHAR	0 128	(IBM name: N/A) User data key (length given in zKeyLen).
zData	XVCHAR	0 32767	(IBM name: N/A) User data (length given in zDataLen).

Secondary segment: **SMF110#00_FLJB_WriteDelete**

Field Name	Type	Len	Description
<i>SMF110#00_FLJB_WriteDelete.<fieldname></i>			
zRecLen	INT	4	(IBM name: N/A) Length of record.
zHdrLen	INT	4	(IBM name: N/A) Length of header.
zDataL	INT	4	(IBM name: N/A) Length of data.
zTimeGMT	TSTMP	8	(IBM name: N/A) Time (GMT).
zTimeLocal	TSTMP	8	(IBM name: N/A) Time (Local).
zTran_id	CHAR	4	(IBM name: N/A) Transaction identifier.
zTask_id	CHAR	4	(IBM name: N/A) Task identifier.
zTerm_id	CHAR	4	(IBM name: N/A) Terminal identifier.
zType	INT (ENUM)	2	(IBM name: N/A) Record Type. NonStart => Any record other than Start-of-Run.
zComp_id	CHAR	2	(IBM name: N/A) CICS Component identifier. LG => Logger, UJ => Journal Control (in the case of a request issued by the user), FC => File Control, SZ => Front End Programming Interface (FEPI), TC => Terminal Control.
zJournal	CHAR	8	(IBM name: N/A) Journal Name.

SMF110#00_FLJB_WriteDelete.zFlags.<fieldname>

Primary segment: SMF110#01_CICS_TS_Monitoring

Field Name	Type	Len	Description
<i>SMF110#01_CICS_TS_Monitoring.<fieldname></i>			
<i>SMF110#01_CICS_TS_Monitoring.Header.<fieldname></i>			
zFLG	HEX	1	System indicator: Bit Meaning when set 0-2 Reserved 3-6 Version indicators.
zRTY	INT	1	Record type 110 (X'6E').
zTME	TSTMP	8	Time since midnight, in hundredths of a second, that the record was moved into the SMF buffer.
zSID	CHAR	4	System identification (from the SID parameter).
zSSID	CHAR	4	Subsystem identification. CICS
zSTY	INT	2	Record subtype.

<i>SMF110#01_CICS_TS_Monitoring.Self_defining_Section.<fieldname></i>			
zTRN	INT	2	Number of triplets.
zPOF	INT	4	Offset to product section.
zPLN	INT	2	Length of product section.
zPON	INT	2	Number of product sections.
zDOF	INT	4	Offset to DATA section.
zDLN	INT	2	Length of DATA section.
zDON	INT	2	Number of DATA sections.

Secondary segment: SMF110#01_Product_Section

Field Name	Type	Len	Description
<i>SMF110#01_Product_Section.<fieldname></i>			
zVRM	HEX	2	Record version (0x0VRM). Each letter represents a numeric digit from values 0 to 9. V = Version, R = Release, M = Maintenance.

zPRN	CHAR	8	Product name (Generic APPLID).
zSPN	CHAR	8	Product name (Specific APPLID).
zMFL	INT	2	Record maintenance indicator.
zCL	INT (ENUM)	2	Class of Data.
zDCA	INT	4	Offset to CICS field connectors. (Performance class only).
zDCL	INT	2	Length of each CICS field connector. (Performance class only).
zDCN	INT	2	Number of CICS field connectors. (Performance class only).
zDRA	INT	4	Offset to first CICS data record. (For dictionary class records, offset to the first dictionary entry. For performance and exception class records, offset to the first performance or exception class record. For transaction resource monitoring records, offset to the first transaction resource monitoring record.)
zDRL	INT	2	Length of each CICS data record.
zDRN	INT	2	Number of CICS data records.
zCRL	INT	2	Compressed record length.
zTAD	INT	4	Local TOD clock adjustment value.
zLSO	TIME	8	Leap second offset TOD format.
zDTO	TIME	8	Local time/date offset.

SMF110#01_Product_Section.zOPN.<fieldname>

APPLNAME	BIT	1	APPLNAME=YES specified.
RMI	BIT	1	RMI=YES specified.
COMPRESS	BIT	1	COMPRESS=YES specified in the MCT (default setting).

SMF110#01_Product_Section.<fieldname>

zJOBNAME	CHAR	8	Jobname.
zJTM	TSTMP	8	Job timestamp.
zUSERID	CHAR	8	User identification.
zPDN	CHAR	8	Operating system product level.

Secondary segment: SMF110#01_Performance_Connector

Field Name	Type	Len	Description
SMF110#01_Performance_Connector.<fieldname>			
zConnector	INT	2	Value to connect dictionary entries with fields in performance records.

Secondary segment: SMF110#01_Dictionary_Class

Field Name	Type	Len	Description
SMF110#01_Dictionary_Class.<fieldname>			
zName	CHAR	8	The identifier of the group to which the field belongs.
zType	CHAR	1	The field type.
zId	CHAR	3	The field identifier.
zLen	INT	2	The length of the field.

zConn	HEX	2	The connector value assigned to the field.
zOff	HEX	2	The offset of the field.
zHead	CHAR	8	The informal name of the field.

Secondary segment: SMF110#01_Performance_Class_ADP1_PCR1

Field Name	Type	Len	Description
<i>SMF110#01_Performance_Class_ADP1_PCR1.<fieldname></i>			
zTRAN	CHAR	4	ID=001 (DFHTASK) Transaction identification.
zTERM	CHAR	4	ID=002 (DFHTERM) Terminal or session identification. This field is null if the task is not associated with a terminal or session.
zUSERID	CHAR	8	ID=089 (DFHCICS) User identification at task creation. This identification can also be the remote user identifier for a task created as the result of receiving an ATTACH request across an MRO or APPC link with attach-time security enabled.
zTTYTYPE	CHAR	4	ID=004 (DFHTASK) Transaction start type. The high-order bytes (0 and 1) are set as follows: 'TO' => Attached from terminal input. 'S' => Attached by automatic transaction initiation (ATI) without data. 'SD' => Attached by automatic transaction initiation (ATI) with data. 'QD' => Attached by transient data trigger level. 'U' => Attached by user request. 'TP' => Attached from terminal TCTTE transaction ID. 'SZ' => Attached by front-end programming interface (FEPI).
zSTART	TSTMP	8	ID=005 (DFHCICS) Start time of measurement interval, which is one of the following times: - The time at which the user task was attached. - The time at which data recording was most recently reset in support of the MCT user event monitoring point DELIVER option or the monitoring options MNCONV, MNSYNC, or FREQUENCY.
zSTOP	TSTMP	8	ID=006 (DFHCICS) Finish time of measurement interval, which is one of the following times: - The time at which the user task was detached. - The time at which data recording was completed in support of the MCT user event monitoring point DELIVER option or the monitoring options MNCONV, MNSYNC, or FREQUENCY.
zTRANNUM	DEC	4 (7,0)	ID=031 (DFHTASK) Transaction identification number or ' III' for system initialisation, ' TCP' for terminal control.
zTRANPRI	INT	4	ID=109 (DFHTASK) Transaction priority when monitoring of the task was initialized.
zTCLSNAME	CHAR	8	ID=166 (DFHTASK) Transaction class name. This field is null if the transaction is not in a TRANCLASS.
zLUNAME	CHAR	8	ID=111 (DFHTERM) The z/OS Communications Server SNA logical unit name (if available) of the terminal that is associated with this transaction.
zPGMNAME	CHAR	8	ID=071 (DFHPROG) The name of the first program invoked at attach-time.
zNETUOWPX	CHAR	20	ID=097 (DFHTASK) Fully qualified name by which the originating system is known to the z/OS Communications Server network.
zNETUOWSX	CHAR	8	ID=098 (DFHTASK) Name by which the network unit of work ID is known in the originating system.
zRSYSID	CHAR	4	ID=130 (DFHCICS) The name (system ID) of the remote system to which this transaction was routed, either statically or dynamically.
zPERRECNT	INT	4	ID=131 (DFHCICS) The number of performance class records written by the CICS Monitoring Facility (CMF) for the user task.
zRMUOWID	CHAR	8	ID=132 (DFHTASK) The identifier of the unit of work (unit of recovery) for this task.
zSRVCLASS	CHAR	8	ID=167 (DFHCICS) The z/OS Workload Manager (WLM) service class for this transaction.
zRPTCLASS	CHAR	8	ID=168 (DFHCICS) The z/OS Workload Manager (WLM) report class for this transaction.

zFCTYNAME	CHAR	4	ID=163 (DFHTASK) Transaction facility name. This field is null if the transaction is not associated with a facility.
-----------	------	---	--

SMF110#01_Performance_Class_ADP1_PCR1.zTRANFLAG.<fieldname>

zTRAN_Facility	INT (ENUM)	1	Transaction facility type.
zTRAN_id	INT (ENUM)	1	Transaction identification.

SMF110#01_Performance_Class_ADP1_PCR1.zTRANFLAG.zTRAN_WLM.<fieldname>

zResponse	BIT	1	Report the total response time (begin-to-end phase) for completed work request (transaction).
zAllPhase	BIT	1	Notify that the entire execution phase of the work request is complete.
zSubPhase	BIT	1	Notify that a subset of the execution phase of the work request is complete.
zAbNormal	BIT	1	This transaction has been reported to the z/OS workload manager as completing abnormally because it has tried to access Db2 and a connection unavailable response has been returned. This abnormal completion occurs when all the following are true: 1. zResponse is set. 2. CICS is not connected to Db2. 3. The CICS-Db2 adapter is in standby mode (STANDBYMODE(RECONNECT) or STANDBYMODE(CONNECT)). 4. CONNECTERROR(SQLCODE) is specified, causing the application to receive a -923 SQL code.

SMF110#01_Performance_Class_ADP1_PCR1.zTRANFLAG.zTRAN_Def.<fieldname>

zTDLocBelow	BIT	1	1 => TASKDATALOC=BELOW
zTDKeyCICS	BIT	1	1 => TASKDATAKEY=CICS
zIsolateNo	BIT	1	1 => ISOLATE=NO
zDynamic	BIT	1	1 => DYNAMIC=YES

SMF110#01_Performance_Class_ADP1_PCR1.zTRANFLAG.<fieldname>

zTRAN_Origin	INT (ENUM)	1	Transaction Origin Type.
--------------	---------------	---	--------------------------

SMF110#01_Performance_Class_ADP1_PCR1.zTRANFLAG.zTRAN_Status.<fieldname>

zOrigin	BIT	1	The transaction origin.
zResource	BIT	1	Resource class record, or records, for this task.
zIdentity	BIT	1	Identity class record, or records, for this task.
zPurge	BIT	1	Task purge or runaway resulted in the open TCB the task was executing on being terminated.
zAbend	BIT	1	Task abnormally terminated.

SMF110#01_Performance_Class_ADP1_PCR1.zTRANFLAG.<fieldname>

zTRAN_Track	INT	1	Transaction tracking origin data tag.
-------------	-----	---	---------------------------------------

SMF110#01_Performance_Class_ADP1_PCR1.zTRANFLAG.zRecovery_Manager.<fieldname>

zInDWaitNo	BIT	1	Indoubt WAIT=NO.
zInDCommit	BIT	1	Indoubt ACTION=COMMIT.
zUOWInD	BIT	1	Recovery manager, UOW resolved with indoubt action.
zUOWShunt	BIT	1	Recovery manager, Shunt.
zUOWUnShunt	BIT	1	Recovery manager, Unshunt.
zInDFail	BIT	1	Recovery manager, Indoubt failure.
zROFail	BIT	1	Recovery manager, Resource owner failure.

SMF110#01_Performance_Class_ADP1_PCR1.zTERMINFO.<fieldname>			
zTERM_Assoc	INT (ENUM)	1	Task associated with terminal or session.
zTERM_SessType	INT (ENUM)	1	If the principal facility for this task is a session, this field identifies the session type.
zTERM_AM	INT (ENUM)	1	Identifies the access method defined for the terminal ID or session ID in field TERM.
zTERM_Type	INT (ENUM)	1	Identifies the terminal or session type for the terminal id or session id in TERM.

SMF110#01_Performance_Class_ADP1_PCR1.<fieldname>			
zTERMCNNM	CHAR	4	ID=169 (DFHTERM) Terminal session connection name. If the terminal facility associated with this transaction is a session, this field is the name of the owning connection (sysid).
zBRDGTRAN	CHAR	4	ID=124 (DFHTASK) Bridge listener transaction identifier. For CICS 3270 Bridge transactions, this field is the name of the Bridge listener transaction that attached the user task.
zRRMSURID	CHAR	16	ID=190 (DFHTASK) RRMS/MVS unit-of-recovery ID (URID).
zPRCSNAME	CHAR	36	ID=200 (DFHCBTS) The name of the CICS business transaction service (BTS) process of which the user task formed part.
zPRCSTYPE	CHAR	8	ID=201 (DFHCBTS) The process-type of the CICS BTS process of which the user task formed part.
zPRCSID	CHAR	52	ID=202 (DFHCBTS) The CICS-assigned identifier of the CICS BTS root activity that the user task implemented.
zACTVTYID	CHAR	52	ID=203 (DFHCBTS) The CICS-assigned identifier of the CICS BTS root activity that the user task implemented.
zACTVTYNM	CHAR	16	ID=204 (DFHCBTS) The name of the CICS BTS activity that the user task implemented.
zCLIPADDR	CHAR	40	ID=318 (DFH SOCK) The IP address of the client or Telnet client.
zTRNGRPID	CHAR	28	ID=082 (DFHTASK) The transaction group ID is assigned at transaction attach time, and can be used to correlate the transactions that CICS runs for the same incoming work request. For example, the CWXN and CWBA transactions for Web requests.
zNETID	CHAR	8	ID=197 (DFHTERM) NETID if a network qualified name has been received from the Communications Server. If it is a resource and the network qualified name has not yet been received, NETID is 8 blanks. In all other cases, it is nulls.
zRLUNAME	CHAR	8	ID=198 (DFHTERM) Real network name if a network qualified name has been received from the Communications Server.
zTCPSRVCE	CHAR	8	ID=245 (DFH SOCK) The TCP/IP service name that attached the user task.
zPORTNUM	INT	4	ID=246 (DFH SOCK) The TCP/IP port number of the TCP/IP service that attached the user task.
zOTSTID	CHAR	128	ID=194 (DFHTASK) This field is the first 128 bytes of the Object Transaction Service (OTS) Transaction ID (TID).
zCLIPPORT	INT	4	ID=330 (DFH SOCK) The TCP/IP port number of the originating client or Telnet client.
zISIPICNM	CHAR	8	ID=305 (DFH SOCK) The name of the IPIC (IPCONN) entry of the TCP/IP service that attached the user task.
zONETWKID	CHAR	8	ID=359 (DFHCICS) The network identifier from which this work request (transaction) originated.
zOAPPLID	CHAR	8	ID=360 (DFHCICS) The APPLID of the CICS region in which this work request (transaction) originated. For example, the region in which the CWXN task ran.
zOSTART	TSTMP	8	ID=361 (DFHCICS) The time at which the originating task, for example the CWXN task, was started.
zOTRANNUM	DEC	4 (7,0)	ID=362 (DFHCICS) The number of the originating task. For example, the CWXN task.

zOTRAN	CHAR	4	ID=363 (DFHCICS) The transaction ID (TRANSID) of the originating task. For example, the CWXN task.
zOUSERID	CHAR	8	ID=364 (DFHCICS) The originating Userid-2 or Userid-1, for example from CWBA, depending on the originating task.
zOUSERCOR	CHAR	64	ID=365 (DFHCICS) The originating user correlator.
zOTCPSVCE	CHAR	8	ID=366 (DFHCICS) The name of the originating TCPIP SERVICE.
zOPORTNUM	INT	4	ID=367 (DFHCICS) The port number used by the originating TCPIP SERVICE.
zOCLIPADR	CHAR	40	ID=372 (DFHCICS) The IP address of the originating client or Telnet client.
zOCLIPORT	INT	4	ID=369 (DFHCICS) The TCP/IP port number of the originating client or Telnet client.

SMF110#01_Performance_Class_ADP1_PCR1.zOTRANFLG.<fieldname>

zOTRAN_Facility	INT (ENUM)	1	Originating Transaction facility type.
zOTRAN_id	INT (ENUM)	1	Originating Transaction identification.

SMF110#01_Performance_Class_ADP1_PCR1.zOTRANFLG.zOTRAN_WLM.<fieldname>

zResponse	BIT	1	Report the total response time (begin-to-end phase) for completed work request (transaction).
zAllPhase	BIT	1	Notify that the entire execution phase of the work request is complete.
zSubPhase	BIT	1	Notify that a subset of the execution phase of the work request is complete.
zAbNormal	BIT	1	This transaction has been reported to the z/OS workload manager as completing abnormally because it has tried to access Db2 and a connection unavailable response has been returned. This abnormal completion occurs when all the following are true: 1. zResponse is set. 2. CICS is not connected to Db2. 3. The CICS-Db2 adapter is in standby mode (STANDBYMODE(RECONNECT) or STANDBYMODE(CONNECT)). 4. CONNECTERROR(SQLCODE) is specified, causing the application to receive a -923 SQL code.

zInDWaitNo	BIT	1	Indoubt WAIT=NO.
zInDCommit	BIT	1	Indoubt ACTION=COMMIT.
zUOWInD	BIT	1	Recovery manager, UOW resolved with indoubt action.
zUOWShunt	BIT	1	Recovery manager, Shunt.
zUOWUnShunt	BIT	1	Recovery manager, Unshunt.
zInDFail	BIT	1	Recovery manager, Indoubt failure.
zROFail	BIT	1	Recovery manager, Resource owner failure.

SMF110#01_Performance_Class_ADP1_PCR1.zOTRANFLG.<fieldname>			
zOFCTYNME	CHAR	8	ID=371 (DFHCICS) The facility name of the originating transaction.
zWBURIMNM	CHAR	8	ID=380 (DFHWEBB) For CICS web support, Atom feeds, and web service applications, the name of the URIMAP resource definition that was mapped to the URI of the inbound request that was processed by this task.
zWBPIPLNM	CHAR	8	ID=381 (DFHWEBB) For web service applications, the name of the PIPELINE resource definition that was used to provide information about the message handlers that act on the service request processed by this task.
zWBATMSNM	CHAR	8	ID=382 (DFHWEBB) For Atom feeds, the name of the ATOMSERVICE resource definition that was used to process this task.
zWBSVCENM	CHAR	32	ID=383 (DFHWEBB) For web service applications, the name of the WEBSERVICE resource definition that was used to process this task.
zWBSVOPNM	CHAR	64	ID=384 (DFHWEBB) For web service applications, the first 64 bytes of the web service operation name.
zWBPROGNM	CHAR	8	ID=385 (DFHWEBB) For CICS web support, the name of the program from the URIMAP resource definition that was used to provide the application-generated response to the HTTP request processed by this task.
zPHNTWKID	CHAR	8	ID=373 (DFHCICS) The network identifier of the CICS system of an immediately previous task in another CICS system with which this task is associated.
zPHAPPLID	CHAR	8	ID=374 (DFHCICS) The APPLID from previous hop data. This is the APPLID of the CICS system of a previous task in another CICS system with which this task is associated.
zPHSTART	TSTMP	8	ID=375 (DFHCICS) The start time of the immediately previous task in another CICS system with which this task is associated.
zPHTRANNO	DEC	4 (7,0)	ID=376 (DFHCICS) The task number of the immediately previous task in another CICS system with which this task is associated.
zPHTRAN	CHAR	4	ID=377 (DFHCICS) The transaction ID (TRANSID) of the immediately previous task in another CICS system with which this task is associated.
zPHCOUNT	INT	4	ID=378 (DFHCICS) The number of times there has been a request from one CICS system to another CICS system to initiate a task with which this task is associated.
zOADID	CHAR	64	ID=351 (DFHCICS) The adapter identifier added to the origin data by the adapter.
zOADATA1	CHAR	64	ID=352 (DFHCICS) The data added to the origin data by the adapter.
zOADATA2	CHAR	64	ID=353 (DFHCICS) The data added to the origin data by using the adapter.
zOADATA3	CHAR	64	ID=354 (DFHCICS) The data added to the origin data by the adapter.
zSOCIPHER	HEX	4	ID=320 (DFH SOCK) Identifies the code for the cipher suite that was selected during the SSL handshake for use on the inbound connection, for example X'0000002F'.
zCECMCHTP	CHAR	4	ID=430 (DFHTASK) The CEC machine type, in EBCDIC, for the physical hardware environment where the CICS region is running.
zCECMDLID	CHAR	16	ID=431 (DFHTASK) The CEC model number, in EBCDIC, for the physical hardware environment where the CICS region is running.
zMAXTASKS	INT	4	

			ID=433 (DFHTASK) The MXT or MAXTASKS value, expressed as a number of tasks, for the CICS region at the time the user task was attached.
zCURTASKS	INT	4	ID=434 (DFHTASK) The current number of active user transactions in the system at the time the user task was attached.
zACAPPLNM	CHAR	64	ID=451 (DFHTASK) The 64-character name of the application in the application context data.
zACPLATNM	CHAR	64	ID=452 (DFHTASK) The 64-character name of the platform in the application context data.
zACMAJVER	INT	4	ID=453 (DFHTASK) The major version of the application in the application context data, expressed as a 4-byte binary value.
zACMINVER	INT	4	ID=454 (DFHTASK) The minor version of the application in the application context data, expressed as a 4-byte binary value.
zACMICVER	INT	4	ID=455 (DFHTASK) The micro version of the application in the application context data, expressed as a 4-byte binary value.
zACOPERNM	CHAR	64	ID=456 (DFHTASK) The 64-character name of the operation in the application context data.

SMF110#01_Performance_Class_ADP1_PCR1.zTASKFLAG.<fieldname>

zClockErr	BIT	1	Detected an attempt either to start a user clock that was already running or to stop one that was not running.
-----------	-----	---	--

SMF110#01_Performance_Class_ADP1_PCR1.<fieldname>

zABCODEO	CHAR	4	ID=113 (DFHPROG) Original abend code.
zABCODEC	CHAR	4	ID=114 (DFHPROG) Current abend code.
zRTYPE	CHAR	4	ID=112 (DFHCICS) Performance record type: C => Record output for a terminal converse, D => Record output for a user EMP DELIVER request, F => Record output for a long-running transaction, S => Record output for a sync point, T => Record output for the end of a task.
zTCMSGIN1	INT	4	ID=034 (DFHTERM) Number of messages received from the principal terminal facility of the task, including LUTYPE6.1 and LUTYPE6.2 (APPC) but not MRO (IRC).
zTCCHRIN1	INT	4	ID=083 (DFHTERM) Number of characters received from the principal terminal facility of the task, including LUTYPE6.1 and LUTYPE6.2 (APPC) but not MRO (IRC).
zTCMSGOU1	INT	4	ID=035 (DFHTERM) Number of messages sent to the principal terminal facility of the task, including LUTYPE6.1 and LUTYPE6.2 (APPC) but not MRO (IRC).
zTCCHROU1	INT	4	ID=084 (DFHTERM) Number of characters sent to the principal terminal facility of the task, including LUTYPE6.1 and LUTYPE6.2 (APPC) but not MRO (IRC).
zTCMSGIN2	INT	4	ID=067 (DFHTERM) Number of messages received from the LUTYPE6.1 alternate terminal facilities by the user task.
zTCCHRIN2	INT	4	ID=085 (DFHTERM) Number of characters received from the LUTYPE6.1 alternate terminal facilities by the user task. (Not applicable to ISC APPC.)
zTCMSGOU2	INT	4	ID=068 (DFHTERM) Number of messages sent to the LUTYPE6.1 alternate terminal facilities by the user task.
zTCCHROU2	INT	4	ID=086 (DFHTERM) Number of characters sent to the LUTYPE6.1 alternate terminal facilities by the user task. (Not applicable to ISC APPC.)
zTCM62IN2	INT	4	ID=135 (DFHTERM) Number of messages received from the alternate facility by the user task for LUTYPE6.2 (APPC) sessions.
zTCC62IN2	INT	4	ID=137 (DFHTERM) Number of characters received from the alternate facility by the user task for LUTYPE6.2 (APPC) sessions.
zTCM62OU2	INT	4	ID=136 (DFHTERM) Number of messages sent to the alternate facility by the user task for LUTYPE6.2 (APPC) sessions.
zTCC62OU2	INT	4	ID=138 (DFHTERM) Number of characters sent to the alternate facility by the user task for LUTYPE6.2 (APPC) sessions.

zTCALLOCT	INT	4	ID=069 (DFHTERM) Number of TCTTE ALLOCATE requests issued by the user task for LUTYPE6.2 (APPC), LUTYPE6.1, and IRC sessions.
zSCUGETCT_Below	INT	4	ID=054 (DFHSTOR) Number of user-storage GETMAIN requests issued by the user task for storage below the 16 MB line, in the UDSA.
zSCUGETCT_Above	INT	4	ID=105 (DFHSTOR) Number of user-storage GETMAIN requests issued by the user task for storage above the 16 MB line, in the extended user dynamic storage area (EUDSA).
zSCCGETCT_Below	INT	4	ID=117 (DFHSTOR) Number of user-storage GETMAIN requests issued by the user task for storage below the 16 MB line, in the CDSA.
zSCCGETCT_Above	INT	4	ID=120 (DFHSTOR) Number of user-storage GETMAIN requests issued by the user task for storage above the 16 MB line, in the ECDSA.
zSCUSRHWM_Below	INT	4	ID=033 (DFHSTOR) Maximum amount (high-water mark) of user storage allocated to the user task below the 16 MB line, in the user dynamic storage area (UDSA).
zSCUSRHWM_Above	INT	4	ID=106 (DFHSTOR) Maximum amount (high-water mark) of user storage allocated to the user task above the 16 MB line, in the EUDSA.
zSC24CHWM	INT	4	ID=116 (DFHSTOR) Maximum amount (high-water mark) of user storage allocated to the user task below the 16 MB line, in the CICS dynamic storage area (CDSA).
zSC31CHWM	INT	4	ID=119 (DFHSTOR) Maximum amount (high-water mark) of user storage allocated to the user task above the 16 MB line, in the extended CICS dynamic storage area (ECDSA).
zSCUSRSTG_Below	INT	8	ID=095 (DFHSTOR) Storage occupancy of the user task below the 16 MB line, in the UDSA. This measures the area under the curve of storage in use against elapsed time.
zSCUSRSTG_Above	INT	8	ID=107 (DFHSTOR) Storage occupancy of the user task above the 16 MB line, in the EUDSA. This measures the area under the curve of storage in use against elapsed time.
zSC24COCC	INT	8	ID=118 (DFHSTOR) Storage occupancy of the user task below the 16 MB line, in the CDSA. This measures the area under the curve of storage in use against elapsed time.
zSC31COCC	INT	8	ID=121 (DFHSTOR) Storage occupancy of the user task above the 16 MB line, in the ECDSA. This measures the area under the curve of storage in use against elapsed time.
zSC24SGCT	INT	4	ID=144 (DFHSTOR) Number of storage GETMAIN requests issued by the user task for shared storage below the 16 MB line, in the CDSA or SDSA.
zSC24GSHR	INT	4	ID=145 (DFHSTOR) Number of bytes of shared storage obtained by the user task by using a GETMAIN request below the 16 MB line, in the CDSA or SDSA.
zSC24FSHR	INT	4	ID=146 (DFHSTOR) Number of bytes of shared storage released by the user task by using a FREEMAIN request below the 16 MB line, in the CDSA or SDSA.
zSC31SGCT	INT	4	ID=147 (DFHSTOR) Number of storage GETMAIN requests issued by the user task for shared storage above the 16 MB line, in the ECDSA or ESDSA.
zSC31GSHR	INT	4	ID=148 (DFHSTOR) Number of bytes of shared storage obtained by the user task by using a GETMAIN request above the 16 MB line, in the ECDSA or ESDSA.
zSC31FSHR	INT	4	ID=149 (DFHSTOR) Number of bytes of shared storage released by the user task by using a FREEMAIN request above the 16 MB line, in the ECDSA or ESDSA.
zSC64CGCT	INT	4	ID=441 (DFHSTOR) Number of user-storage GETMAIN requests issued by the user task for storage above the bar, in the CICS dynamic storage area (GCDSA).
zSC64CHWM	INT	4	ID=442 (DFHSTOR) Maximum amount (high-water mark) of user storage, rounded up to the next 4K, allocated to the user task above the bar, in the CICS dynamic storage area (GCDSA).
zSC64UGCT	INT	4	ID=443 (DFHSTOR) Number of user-storage GETMAIN requests issued by the user task for storage above the bar, in the user dynamic storage area (GUDSA).

zSC64UHWM	INT	4	ID=444 (DFHSTOR) Maximum amount (high-water mark) of user storage, rounded up to the next 4K, allocated to the user task above the bar, in the user dynamic storage area (GUDSA).
zSC64SGCT	INT	4	ID=445 (DFHSTOR) Number of storage GETMAIN requests issued by the user task for shared storage above the bar, in the GCDSA or GSDSA.
zSC64GSHR	INT	4	ID=446 (DFHSTOR) Amount of shared storage obtained by the user task by using a GETMAIN request above the bar, in the GCDSA or GSDSA. The total number of bytes obtained is rounded up to the next 4096 bytes, and the resulting number of 4K pages is displayed.
zSC64FSHR	INT	4	ID=447 (DFHSTOR) Amount of shared storage released by the user task by using a FREEMAIN request above the bar, in the GCDSA or GSDSA. The total number of bytes obtained is rounded up to the next 4096 bytes, and the resulting number of 4K pages is displayed.
zPCSTGHWM	INT	4	ID=087 (DFHSTOR) Maximum amount (high-water mark) of program storage in use by the user task both above and below the 16 MB line.
zPC31AHWM	INT	4	ID=139 (DFHSTOR) Maximum amount (high-water mark) of program storage in use by the user task above the 16 MB line.
zPC24BHWM	INT	4	ID=108 (DFHSTOR) Maximum amount (high-water mark) of program storage in use by the user task below the 16 MB line.
zPC31CHWM	INT	4	ID=142 (DFHSTOR) Maximum amount (high-water mark) of program storage in use by the user task above the 16 MB line, in the extended CICS dynamic storage area (ECDSA).
zPC24CHWM	INT	4	ID=143 (DFHSTOR) Maximum amount (high-water mark) of program storage in use by the user task below the 16 MB line, in the CICS dynamic storage area (CDSA).
zPC31RHWM	INT	4	ID=122 (DFHSTOR) Maximum amount (high-water mark) of program storage in use by the user task above the 16 MB line, in the extended read-only dynamic storage area (ERDSA).
zPC24RHWM	INT	4	ID=162 (DFHSTOR) Maximum amount (high-water mark) of program storage in use by the user task below the 16 MB line, in the read-only dynamic storage area (RDSA).
zPC31SHWM	INT	4	ID=161 (DFHSTOR) Maximum amount (high-water mark) of program storage in use by the user task above the 16 MB line, in the extended shared dynamic storage area (ESDSA).
zPC24SHWM	INT	4	ID=160 (DFHSTOR) Maximum amount (high-water mark) of program storage in use by the user task below the 16 MB line, in the shared dynamic storage area (SDSA).
zFCGETCT	INT	4	ID=036 (DFHFILE) Number of file GET requests issued by the user task.
zFCPUTCT	INT	4	ID=037 (DFHFILE) Number of file PUT requests issued by the user task.
zFCBRWCT	INT	4	ID=038 (DFHFILE) Number of file browse requests issued by the user task. This number excludes the START and END browse requests.
zFCADDCT	INT	4	ID=039 (DFHFILE) Number of file ADD requests issued by the user task.
zFCDELCT	INT	4	ID=040 (DFHFILE) Number of file DELETE requests issued by the user task.
zFCTOTCT	INT	4	ID=093 (DFHFILE) Total number of file control requests issued by the user task. This number excludes any request for OPEN, CLOSE, ENABLE, or DISABLE of a file.
zFCAMCT	INT	4	ID=070 (DFHFILE) Number of times the user task invoked file access-method interfaces. This number excludes requests for OPEN and CLOSE.
zTDGETCT	INT	4	ID=041 (DFHDEST) Number of transient data GET requests issued by the user task.
zTDPUTCT	INT	4	ID=042 (DFHDEST) Number of transient data PUT requests issued by the user task.
zTDPURCT	INT	4	ID=043 (DFHDEST) Number of transient data PURGE requests issued by the user task.
zTDTOTCT	INT	4	ID=091 (DFHDEST) Total number of transient data requests issued by the user task.
zTSGETCT	INT	4	

			ID=044 (DFHTEMP) Number of temporary storage GET requests to auxiliary or main temporary storage issued by the user task.
zTSPUTACT	INT	4	ID=046 (DFHTEMP) Number of PUT requests to auxiliary temporary storage issued by the user task.
zTSPUTMCT	INT	4	ID=047 (DFHTEMP) Number of PUT requests to main temporary storage issued by the user task.
zTSGETSCT	INT	4	ID=460 (DFHTEMP) Number of temporary storage GET requests from shared temporary storage issued by the user task.
zTSPUTSCT	INT	4	ID=461 (DFHTEMP) Number of temporary storage PUT requests to shared temporary storage issued by the user task.
zTSTOTCT	INT	4	ID=092 (DFHTEMP) Total number of temporary storage requests issued by the user task.
zBMSMAPCT	INT	4	ID=050 (DFHMAPP) Number of BMS MAP requests issued by the user task. This field corresponds to the number of RECEIVE MAP requests that did not incur a terminal I/O, and the number of RECEIVE MAP FROM requests.
zBMSINCT	INT	4	ID=051 (DFHMAPP) Number of BMS IN requests issued by the user task. This field corresponds to the number of RECEIVE MAP requests that incurred a terminal I/O.
zBMSOUTCT	INT	4	ID=052 (DFHMAPP) Number of BMS OUT requests issued by the user task. This field corresponds to the number of SEND MAP requests.
zBMSTOTCT	INT	4	ID=090 (DFHMAPP) Total number of BMS requests issued by the user task.
zPCLINKCT	INT	4	ID=055 (DFHPROG) Number of program LINK and INVOKE APPLICATION requests issued by the user task, including the link to the first program of the user task.
zPCXCTLCT	INT	4	ID=056 (DFHPROG) Number of program XCTL requests issued by the user task.
zPCLOADCT	INT	4	ID=057 (DFHPROG) Number of program LOAD requests issued by the user task.
zPCLURMCT	INT	4	ID=072 (DFHPROG) Number of program LINK URM (user-replaceable module) requests issued by, or on behalf of, the user task.
zPCDPLCT	INT	4	ID=073 (DFHPROG) Number of distributed program link (DPL) requests issued by the user task.
zPCDLCSDL	INT	4	ID=286 (DFHPROG) The total length, in bytes, of the data in the containers of all the distributed program link (DPL) requests issued with the CHANNEL option by the user task.
zPCDLRDL	INT	4	ID=287 (DFHPROG) The total length, in bytes, of the data in the containers of all DPL RETURN CHANNEL commands issued by the user task.
zPCLNKCCT	INT	4	ID=306 (DFHPROG) Number of local program LINK and INVOKE APPLICATION requests, with the CHANNEL option, issued by the user task.
zPCXCLCCT	INT	4	ID=307 (DFHPROG) Number of program XCTL requests issued with the CHANNEL option by the user task.
zPCDPLCCT	INT	4	ID=308 (DFHPROG) Number of program distributed program link (DPL) requests issued with the CHANNEL option by the user task.
zPCRTNCCT	INT	4	ID=309 (DFHPROG) Number of remote pseudoconversational RETURN requests, with the CHANNEL option, issued by the user task.
zPCRTNCDL	INT	4	ID=310 (DFHPROG) The total length, in bytes, of the data in the containers of all the remote pseudoconversational RETURN CHANNEL commands issued by the user task.
zJNLWRTCT	INT	4	ID=058 (DFHJOUR) Number of journal write requests issued by the user task.
zLOGWRTCT	INT	4	ID=172 (DFHJOUR) Number of CICS log stream write requests issued by the user task.
zICPUINCT	INT	4	ID=059 (DFHTASK) Number of interval control START or INITIATE requests during the user task.
zICTOTCT	INT	4	

			ID=066 (DFHTASK) Total number of Interval Control Start, Cancel, Delay, and Retrieve requests issued by the user task.
zICSTACCT	INT	4	ID=065 (DFHTASK) Total number of local interval control START requests, with the CHANNEL option, issued by the user task.
zICSTACDL	INT	4	ID=345 (DFHTASK) Total length, in bytes, of the data in the containers of all the locally executed START CHANNEL requests issued by the user task.
zICSTRCCT	INT	4	ID=346 (DFHTASK) Total number of interval control START CHANNEL requests, to be run on remote systems, issued by the user task.
zICSTRCDL	INT	4	ID=347 (DFHTASK) Total length, in bytes, of the data in the containers of all the remotely executed START CHANNEL requests issued by the user task.
zSPSYNCCT	INT	4	ID=060 (DFHSYNC) Number of SYNCPOINT requests issued during the user task.
zCFCAPICT	INT	4	ID=025 (DFHCICS) Number of CICS OO foundation class requests, including the Java API for CICS (JCICS) classes, issued by the user task.
zSZALLOCT	INT	4	ID=150 (DFHFEPI) Number of conversations allocated by the user task. This number is incremented for each FEPI ALLOCATE POOL or FEPI CONVERSE POOL.
zSZRCVCT	INT	4	ID=151 (DFHFEPI) Number of FEPI RECEIVE requests made by the user task. This number is also incremented for each FEPI CONVERSE request.
zSZSENDCT	INT	4	ID=152 (DFHFEPI) Number of FEPI SEND requests made by the user task. This number is also incremented for each FEPI CONVERSE request.
zSZSTRCT	INT	4	ID=153 (DFHFEPI) Number of FEPI START requests made by the user task.
zSZCHROUT	INT	4	ID=154 (DFHFEPI) Number of characters sent through FEPI by the user task.
zSZCHRIN	INT	4	ID=155 (DFHFEPI) Number of characters received through FEPI by the user task.
zSZALLCTO	INT	4	ID=157 (DFHFEPI) Number of times the user task timed out while waiting to allocate a conversation.
zSZRCVTO	INT	4	ID=158 (DFHFEPI) Number of times the user task timed out while waiting to receive data.
zSZTOTCT	INT	4	ID=159 (DFHFEPI) Total number of all FEPI API and SPI requests made by the user task.
zBARSYNCT	INT	4	ID=205 (DFHCBTS) The number of CICS BTS run process, or run activity, requests that the user task made in order to execute a process or activity synchronously.
zBARASYCT	INT	4	ID=206 (DFHCBTS) The number of CICS BTS run process, or run activity, requests that the user task made in order to execute a process or activity asynchronously.
zBALKPACT	INT	4	ID=207 (DFHCBTS) The number of CICS BTS link process, or link activity, requests that the user task issued.
zBADPROCT	INT	4	ID=208 (DFHCBTS) The number of CICS BTS define process requests issued by the user task.
zBADACTCT	INT	4	ID=209 (DFHCBTS) The number of CICS BTS define activity requests issued by the user task.
zBARSPACT	INT	4	ID=210 (DFHCBTS) The number of CICS BTS reset process and reset activity requests issued by the user task.
zBASUPACT	INT	4	ID=211 (DFHCBTS) The number of CICS BTS suspend process, or suspend activity, requests issued by the user task.
zBARMPACT	INT	4	ID=212 (DFHCBTS) The number of CICS BTS resume process, or resume activity, requests issued by the user task.
zBADCPACT	INT	4	ID=213 (DFHCBTS) The number of CICS BTS delete activity, cancel process, or cancel activity, requests issued by the user task.
zBAACQPCT	INT	4	ID=214 (DFHCBTS) The number of CICS BTS acquire process, or acquire activity, requests issued by the user task.

zBATOTPCT	INT	4	ID=215 (DFHCBTS) Total number of CICS BTS process and activity requests issued by the user task.
zBAPRDCCT	INT	4	ID=216 (DFHCBTS) The number of CICS BTS delete, get, move, or put, container requests for process data containers issued by the user task.
zBAACDCCT	INT	4	ID=217 (DFHCBTS) The number of CICS BTS delete, get, move, or put, container requests for current activity data containers issued by the user task.
zBATOTCCT	INT	4	ID=218 (DFHCBTS) Total number of CICS BTS delete, get, move, or put, process container and activity container requests issued by the user task.
zBARATECT	INT	4	ID=219 (DFHCBTS) The number of CICS BTS retrieve-reattach event requests issued by the user task.
zBADFIECT	INT	4	ID=220 (DFHCBTS) The number of CICS BTS define-input event requests issued by the user task.
zBATIAECT	INT	4	ID=221 (DFHCBTS) The number of CICS BTS DEFINE TIMER EVENT, CHECK TIMER EVENT, DELETE TIMER EVENT, and FORCE TIMER EVENT requests issued by the user task.
zBATOTECT	INT	4	ID=222 (DFHCBTS) Total number of CICS BTS event-related requests issued by the user task.
zWBRCVCT	INT	4	ID=231 (DFHWEBB) The number of CICS web support RECEIVE requests issued by the user task.
zWBCHRIN	INT	4	ID=232 (DFHWEBB) The number of bytes received by the CICS web support RECEIVE requests issued by the user task.
zWBSENDCT	INT	4	ID=233 (DFHWEBB) The number of CICS web support SEND requests issued by the user task.
zWBCHROUT	INT	4	ID=234 (DFHWEBB) The number of bytes sent by the CICS web support SEND requests issued by the user task.
zWBTOTCT	INT	4	ID=235 (DFHWEBB) The total number of CICS web support requests issued by the user task.
zWBREPRCT	INT	4	ID=236 (DFHWEBB) The number of reads from the repository in temporary storage issued by the user task.
zWBREPWCT	INT	4	ID=237 (DFHWEBB) The number of writes to the repository in temporary storage issued by the user task.
zWBEXTRCT	INT	4	ID=238 (DFHWEBB) The number of CICS web support EXTRACT requests issued by the user task.
zWBRRWCT	INT	4	ID=239 (DFHWEBB) The number of CICS web support browsing requests for HTTPHEADER, FORMFIELD, and QUERYPARM (STARTBROWSE, READNEXT, and ENDBROWSE) issued by the user task.
zWBREADCT	INT	4	ID=224 (DFHWEBB) The number of CICS web support READ HTTPHEADER, READ FORMFIELD, and READ QUERYPARM requests issued by the user task.
zWBWRITCT	INT	4	ID=225 (DFHWEBB) The number of CICS web support WRITE HTTPHEADER requests issued by the user task.
zDHCRECT	INT	4	ID=226 (DFHDOCH) The number of document handler CREATE requests issued by the user task.
zDHINSCT	INT	4	ID=227 (DFHDOCH) The number of document handler INSERT requests issued by the user task.
zDHSETCT	INT	4	ID=228 (DFHDOCH) The number of document handler SET requests issued by the user task.
zDHRETCT	INT	4	ID=229 (DFHDOCH) The number of document handler RETRIEVE requests issued by the user task.
zDHDELCT	INT	4	ID=223 (DFHDOCH) The number of document handler DELETE requests issued by the user task.
zDHTOTCT	INT	4	ID=230 (DFHDOCH) The total number of document handler requests issued by the user task.
zDHTOTDCL	INT	4	ID=240 (DFHDOCH) The total length of all documents created by the user task.
zSOBYENCT	INT	4	

			ID=242 (DFH SOCK) The number of bytes encrypted by the secure sockets layer for the user task.
zSOBYDECT	INT	4	ID=243 (DFH SOCK) The number of bytes decrypted by the secure sockets layer for the user task.
zSOEXTRCT	INT	4	ID=289 (DFH SOCK) The number of EXTRACT TCPIP and EXTRACT CERTIFICATE requests issued by the user task.
zSOCNPSCT	INT	4	ID=290 (DFH SOCK) The total number of requests made by the user task to create a nonpersistent outbound socket.
zSOCPSCT	INT	4	ID=291 (DFH SOCK) The total number of requests made by the user task to create a persistent outbound socket.
zSONPSHWM	INT	4	ID=292 (DFH SOCK) The peak number of nonpersistent outbound sockets owned by the user task.
zSOPSHWM	INT	4	ID=293 (DFH SOCK) The peak number of persistent outbound sockets owned by the user task.
zSORCVCT	INT	4	ID=294 (DFH SOCK) The total number of receive requests issued for outbound sockets (persistent and nonpersistent) by the user task.
zSOCHRIN	INT	4	ID=295 (DFH SOCK) The total number of bytes received on outbound sockets by the user task
zSOSENDCT	INT	4	ID=296 (DFH SOCK) The total number of send requests issued for outbound sockets (persistent and nonpersistent) by the user task.
zSOCHROUT	INT	4	ID=297 (DFH SOCK) The total number of bytes sent on outbound sockets by the user task.
zSOTOTCT	INT	4	ID=298 (DFH SOCK) The total number of socket requests issued by the user task.
zSOMSGIN1	INT	4	ID=301 (DFH SOCK) The number of inbound socket receive requests issued by the user task.
zSOCHRIN1	INT	4	ID=302 (DFH SOCK) The number of characters received by inbound socket receive requests issued by the user task.
zSOMSGOU1	INT	4	ID=303 (DFH SOCK) The number of inbound socket send requests issued by the user task.
zSOCHROU1	INT	4	ID=304 (DFH SOCK) The number of characters sent by inbound socket send requests issued by the user task.
zIMSREQCT	INT	4	ID=179 (DFH DATA) The number of IMS (DBCTL) requests issued by the user task.
zDB2REQCT	INT	4	ID=180 (DFH DATA) The total number of Db2 EXEC SQL and Instrumentation Facility Interface (IFI) requests issued by the user task.
zWWMQREQCT	INT	4	ID=395 (DFH DATA) The total number of WebSphere MQ requests issued by the user task.
zTCBATTCT	INT	4	ID=251 (DFH TASK) The number of CICS TCBS attached by or on behalf of the user task.
zDSTCBHWM	INT	4	ID=252 (DFH TASK) The peak number of CICS open TCBS (in TCB modes L8, L9, S8, T8, X8, and X9) that have been concurrently allocated to the user task.
zWBREDOCT	INT	4	ID=331 (DFH WEBB) The number of CICS web support READ HTTPHEADER requests issued by the user task when CICS is an HTTP client.
zWBWRTOCT	INT	4	ID=332 (DFH WEBB) The number of CICS web support WRITE HTTPHEADER requests issued by the user task when CICS is an HTTP client.
zWBRCVIN1	INT	4	ID=333 (DFH WEBB) The number of CICS web support RECEIVE and CONVERSE requests issued by the user task when CICS is an HTTP client.
zWBCHRIN1	INT	4	ID=334 (DFH WEBB) The number of bytes received by the CICS web support RECEIVE and CONVERSE requests issued by the user task when CICS is an HTTP client.
zWBSNDOU1	INT	4	ID=335 (DFH WEBB) The number of CICS web support SEND and CONVERSE requests issued by the user task when CICS is an HTTP client.

zWBCHROU1	INT	4	ID=336 (DFHWEBB) The number of bytes sent by the CICS web support SEND and CONVERSE requests issued by the user task when CICS is an HTTP client.
zWBPARSCT	INT	4	ID=337 (DFHWEBB) The number of CICS web support PARSE URL requests issued by the user task.
zWBBRWOCCT	INT	4	ID=338 (DFHWEBB) The number of CICS web support BROWSE HTTPHEADER requests (STARTBROWSE, READNEXT, and ENDBROWSE) issued by the user task when CICS is an HTTP client.
zWBIWBSCT	INT	4	ID=340 (DFHWEBB) The number of EXEC CICS INVOKE SERVICE and EXEC CICS INVOKE WEBSERVICE requests issued by the user task.
zWBREPRDL	INT	4	ID=341 (DFHWEBB) The total length, in bytes, of the data read from the repository in temporary storage by the user task.
zWBREPWDL	INT	4	ID=342 (DFHWEBB) The total length, in bytes, of the data written to the repository in temporary storage by the user task.
zPGTOTCCT	INT	4	ID=321 (DFHCHNL) The number of CICS requests for channel containers issued by the user task.
zPGBRWOCCT	INT	4	ID=322 (DFHCHNL) The number of CICS browse requests for channel containers issued by the user task.
zPGGETCCT	INT	4	ID=323 (DFHCHNL) The number of GET CONTAINER and GET64 CONTAINER requests for channel containers issued by the user task.
zPGPUTCCT	INT	4	ID=324 (DFHCHNL) The number of PUT CONTAINER and PUT64 CONTAINER requests for channel containers issued by the user task.
zPGMOVCCT	INT	4	ID=325 (DFHCHNL) The number of MOVE CONTAINER requests for channel containers issued by the user task.
zPGGETCDL	INT	4	ID=326 (DFHCHNL) The total length, in bytes, of the data in the containers of all the GET CONTAINER CHANNEL and GET64 CONTAINER CHANNEL commands issued by the user task.
zPGPUTCDL	INT	4	ID=327 (DFHCHNL) The total length, in bytes, of the data in the containers of all the PUT CONTAINER CHANNEL and PUT64 CONTAINER CHANNEL commands issued by the user task.
zPGCRECCT	INT	4	ID=328 (DFHCHNL) The number of containers created by MOVE, PUT CONTAINER, and PUT64 CONTAINER requests for channel containers issued by the user task.
zPGCSTHWM	INT	4	ID=329 (DFHCHNL) Maximum amount (high-water mark), in bytes, of container storage allocated to the user task.
zISALLOCT	INT	4	ID=288 (DFH SOCK) The number of allocate session requests issued by the user task for sessions using IPIC.
zEICTOTCT	INT	4	ID=402 (DFHCICS) Total number of Interval Control Start, Cancel, Delay, and Retrieve requests issued by the user task.
zECSIGECT	INT	4	ID=415 (DFHCICS) The number of EXEC CICS SIGNAL EVENT commands issued by the user task.
zECEFOPT	INT	4	ID=416 (DFHCICS) The number of event filter operations performed by the user task.
zECEVTCT	INT	4	ID=417 (DFHCICS) The number of events captured by the user task.
zECSEVCCT	INT	4	ID=418 (DFHCICS) The number of synchronous emission events captured by the user task.
zTIASKTCT	INT	4	ID=405 (DFHCICS) The number of EXEC CICS ASKTIME commands issued by the user task.
zTITOTCT	INT	4	ID=406 (DFHCICS) The total number of EXEC CICS ASKTIME, CONVERTTIME, and FORMATTIME commands issued by the user task.
zBFDGSTCT	INT	4	ID=408 (DFHCICS) The total number of EXEC CICS BIF DIGEST commands issued by the user task.
zBFTOTCT	INT	4	ID=409 (DFHCICS) The total number of EXEC CICS BIF DEEDIT and BIF DIGEST commands issued by the user task.
zMLXSSTD	INT	4	ID=412 (DFHWEBB) The total length of the documents that were parsed using the z/OS XML System Services parser.
zMLXMLTCT	INT	4	

			ID=413 (DFHWEBB) The number of EXEC CICS TRANSFORM commands issued by the user task.
zWSACBLCT	INT	4	ID=420 (DFHWEBB) The number of EXEC CICS WSACONTEXT BUILD commands issued by the user task.
zWSACGTCT	INT	4	ID=421 (DFHWEBB) The number of EXEC CICS WSACONTEXT GET commands issued by the user task.
zWSAEPCT	INT	4	ID=422 (DFHWEBB) The number of EXEC CICS WSAEPR CREATE commands issued by the user task.
zWSATOTCT	INT	4	ID=423 (DFHWEBB) The total number of EXEC CICS WS-Addressing commands issued by the user task.
zWBSFCRCT	INT	4	ID=386 (DFHWEBB) The number of EXEC CICS SOAPFAULT CREATE commands issued by the user task.
zWBSFTOCT	INT	4	ID=387 (DFHWEBB) The total number of EXEC CICS SOAPFAULT ADD, CREATE, and DELETE commands issued by the user task.
zWBISSFCT	INT	4	ID=388 (DFHWEBB) The total number of SOAP faults received in response to the EXEC CICS INVOKE SERVICE and EXEC CICS INVOKE WEBSERVICE commands issued by the user task.
zWBSREQBL	INT	4	ID=390 (DFHWEBB) For web service applications, the SOAP request body length.
zWBSRSPBL	INT	4	ID=392 (DFHWEBB) For web service applications, the SOAP response body length.
zWBJSNRQL	INT	4	ID=424 (DFHWEBB) For JSON web service applications, the JSON message request length.
zWBJSNRPL	INT	4	ID=425 (DFHWEBB) For JSON web service applications, the JSON message response length.
zMPPRTXCD	INT	4	ID=449 (DFHCICS) The number of policy task rule thresholds that this task has exceeded.
zNCGETCT	INT	4	ID=464 (DFHCICS) The total number of requests to a named counter server to satisfy EXEC CICS GET COUNTER and EXEC CICS GET DCOUNTER commands issued by the user task.

SMF110#01_Performance_Class_ADP1_PCR1.zUSRDISPT.<fieldname>

zUSRDISPT_S	TIME	8	Total elapsed time during which the user task was dispatched on each CICS TCB under which the task ran.
zUSRDISPT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCR1.zUSRCPUT.<fieldname>

zUSRCPUT_S	TIME	8	Processor time for which the user task was dispatched on each CICS TCB under which the task ran.
zUSRCPUT_N	INT	3	Count of the number of time periods contributing to the total processor time.

SMF110#01_Performance_Class_ADP1_PCR1.zCPUTONCP.<fieldname>

zCPUTONCP_S	TIME	8	The total task processor time on a standard processor for which the user task was dispatched on each CICS TCB under which the task ran.
zCPUTONCP_N	INT	3	Count of the number of time periods contributing to the total processor time.

SMF110#01_Performance_Class_ADP1_PCR1.zOFFLCPUT.<fieldname>

zOFFLCPUT_S	TIME	8	The total task processor time that was spent on a standard processor but was eligible for offload to a specialty processor (zIIP or zAAP).
zOFFLCPUT_N	INT	3	Count of the number of time periods contributing to the total processor time.

SMF110#01_Performance_Class_ADP1_PCR1.zSUSPTIME.<fieldname>

zSUSPTIME_S	TIME	8	Total elapsed wait time for which the user task was suspended by the dispatcher.
-------------	------	---	--

zSUSPTIME_N	INT	3	Count of the number of time periods contributing to the total elapsed time.
-------------	-----	---	---

SMF110#01_Performance_Class_ADP1_PCR1.zDISPWTT.<fieldname>

zDISPWTT_S	TIME	8	Elapsed time for which the user task waited for redispach. This time is the aggregate of the wait times between each event completion and user-task redispach.
zDISPWTT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCR1.zQRDISPT.<fieldname>

zQRDISPT_S	TIME	8	The elapsed time for which the user task was dispatched on the CICS QR TCB.
zQRDISPT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCR1.zQRCPUT.<fieldname>

zQRCPUT_S	TIME	8	The processor time for which the user task was dispatched on the CICS QR TCB.
zQRCPUT_N	INT	3	Count of the number of time periods contributing to the total processor time.

SMF110#01_Performance_Class_ADP1_PCR1.zMSDISPT.<fieldname>

zMSDISPT_S	TIME	8	Elapsed time for which the user task was dispatched on each CICS TCB.
zMSDISPT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCR1.zMSCPUT.<fieldname>

zMSCPUT_S	TIME	8	The processor time for which the user task was dispatched on each CICS TCB.
zMSCPUT_N	INT	3	Count of the number of time periods contributing to the total processor time.

SMF110#01_Performance_Class_ADP1_PCR1.zRODISPT.<fieldname>

zRODISPT_S	TIME	8	The elapsed time during which the user task was dispatched by the CICS dispatcher on the CICS RO mode TCB. The RO TCB is used for loading programs, unless the command to load the program (EXEC CICS LOAD, XCTL, or LINK) is issued by an application that is currently running on an open TCB.
zRODISPT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCR1.zROCPUT.<fieldname>

zROCPUT_S	TIME	8	The processor time during which the user task was dispatched by the CICS dispatcher on the CICS RO mode TCB. The RO TCB is used for loading programs, unless the command to load the program (EXEC CICS LOAD, XCTL, or LINK) is issued by an application that is currently running on an open TCB.
zROCPUT_N	INT	3	Count of the number of time periods contributing to the total processor time.

SMF110#01_Performance_Class_ADP1_PCR1.zKY8DISPT.<fieldname>

zKY8DISPT_S	TIME	8	The total elapsed time during which the user task was dispatched by the CICS dispatcher on a CICS Key 8 mode TCB.
zKY8DISPT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCR1.zKY8CPUT.<fieldname>

zKY8CPUT_S	TIME	8	The processor time during which the user task was dispatched by the CICS dispatcher on a CICS Key 8 mode TCB.
zKY8CPUT_N	INT	3	Count of the number of time periods contributing to the total processor time.

SMF110#01_Performance_Class_ADP1_PCR1.zKY9DISPT.<fieldname>			
zKY9DISPT_S	TIME	8	The total elapsed time during which the user task was dispatched by the CICS dispatcher on a CICS Key 9 mode TCB.
zKY9DISPT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCR1.zKY9CPUT.<fieldname>			
zKY9CPUT_S	TIME	8	The processor time during which the user task was dispatched by the CICS dispatcher on a CICS Key 9 mode TCB.
zKY9CPUT_N	INT	3	Count of the number of time periods contributing to the total processor time.

SMF110#01_Performance_Class_ADP1_PCR1.zL8CPUT.<fieldname>			
zL8CPUT_S	TIME	8	The processor time during which the user task was dispatched by the CICS dispatcher domain on a CICS L8 mode TCB.
zL8CPUT_N	INT	3	Count of the number of time periods contributing to the total processor time.

SMF110#01_Performance_Class_ADP1_PCR1.zL9CPUT.<fieldname>			
zL9CPUT_S	TIME	8	The processor time during which the user task was dispatched by the CICS dispatcher domain on a CICS L9 mode TCB.
zL9CPUT_N	INT	3	Count of the number of time periods contributing to the total processor time.

SMF110#01_Performance_Class_ADP1_PCR1.zS8CPUT.<fieldname>			
zS8CPUT_S	TIME	8	The processor time during which the user task was dispatched by the CICS dispatcher domain on a CICS S8 mode TCB.
zS8CPUT_N	INT	3	Count of the number of time periods contributing to the total processor time.

SMF110#01_Performance_Class_ADP1_PCR1.zX8CPUT.<fieldname>			
zX8CPUT_S	TIME	8	The processor time during which the user task was dispatched by the CICS dispatcher domain on a CICS X8 mode TCB.
zX8CPUT_N	INT	3	Count of the number of time periods contributing to the total processor time.

SMF110#01_Performance_Class_ADP1_PCR1.zX9CPUT.<fieldname>			
zX9CPUT_S	TIME	8	The processor time during which the user task was dispatched by the CICS dispatcher domain on a CICS X9 mode TCB.
zX9CPUT_N	INT	3	Count of the number of time periods contributing to the total processor time.

SMF110#01_Performance_Class_ADP1_PCR1.zT8CPUT.<fieldname>			
zT8CPUT_S	TIME	8	The processor time during which the user task was dispatched by the CICS dispatcher domain on a CICS T8 mode TCB.
zT8CPUT_N	INT	3	Count of the number of time periods contributing to the total processor time.

SMF110#01_Performance_Class_ADP1_PCR1.zQRMODDLY.<fieldname>			
zQRMODDLY_S	TIME	8	The elapsed time for which the user task waited for redispach on the CICS QR mode TCB.
zQRMODDLY_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCR1.zMXTOTDLY.<fieldname>			
zMXTOTDLY_S	TIME	8	The elapsed time in which the user task waited to obtain a CICS L8 or L9 mode open TCB, because the region had reached the limit set by CICS for these TCBs.

zMXTOTDLY_N	INT	3	Count of the number of time periods contributing to the total elapsed time.
-------------	-----	---	---

SMF110#01_Performance_Class_ADP1_PCR1.zMAXXTDLY.<fieldname>

zMAXXTDLY_S	TIME	8	The elapsed time for which the user task waited to obtain a CICS XP TCB (X8 or X9 mode), because the CICS system reached the limit set by CICS for these types of TCB.
zMAXXTDLY_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCR1.zMAXSTDLY.<fieldname>

zMAXSTDLY_S	TIME	8	The elapsed time for which the user task waited to obtain a CICS SSL TCB (S8 mode), because the CICS system reached the limit set by the system initialization parameter MAXSSLTCBS.
zMAXSTDLY_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCR1.zMAXTTDLY.<fieldname>

zMAXTTDLY_S	TIME	8	The elapsed time for which the user task waited to obtain a T8 TCB, because the CICS system reached the limit of available threads.
zMAXTTDLY_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCR1.zDSTCBMWT.<fieldname>

zDSTCBMWT_S	TIME	8	The elapsed time that the user task spent in TCB mismatch waits. That is, waiting because no available TCB matched the request, but at least one non matching TCB was free.
zDSTCBMWT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCR1.zDSCHMDLY.<fieldname>

zDSCHMDLY_S	TIME	8	The elapsed time in which the user task waited for redispach after a CICS Dispatcher change-TCB mode request was issued by or on behalf of the user task.
zDSCHMDLY_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCR1.zEXWTTIME.<fieldname>

zEXWTTIME_S	TIME	8	The total elapsed time for which the user waited on exception conditions.
zEXWTTIME_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCR1.zTCIOWTT.<fieldname>

zTCIOWTT_S	TIME	8	Elapsed time for which the user task waited for input from the terminal operator after issuing a RECEIVE request.
zTCIOWTT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCR1.zFCIOWTT.<fieldname>

zFCIOWTT_S	TIME	8	Elapsed time in which the user task waited for file I/O.
zFCIOWTT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCR1.zFCXCWTT.<fieldname>

zFCXCWTT_S	TIME	8	The elapsed time in which the user task waited for exclusive control of a VSAM control interval.
zFCXCWTT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCR1.zFCVSWTT.<fieldname>

zFCVSWTT_S	TIME	8	The elapsed time in which the user task waited for a VSAM string.
zFCVSWTT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCR1.zJCIOWTT.<fieldname>

zJCIOWTT_S	TIME	8	Elapsed time for which the user task waited for journal (logstream) I/O.
zJCIOWTT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCR1.zTSIOWTT.<fieldname>

zTSIOWTT_S	TIME	8	Elapsed time for which the user task waited for VSAM temporary storage I/O.
zTSIOWTT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCR1.zIRIOWTT.<fieldname>

zIRIOWTT_S	TIME	8	Elapsed time for which the user task waited for control at this end of an MRO link.
zIRIOWTT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCR1.zTDIOWTT.<fieldname>

zTDIOWTT_S	TIME	8	Elapsed time in which the user waited for VSAM transient data I/O.
zTDIOWTT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCR1.zPCLOADTM.<fieldname>

zPCLOADTM_S	TIME	8	Elapsed time in which the user task waited for fetches from DFHRPL or dynamic LIBRARY concatenations.
zPCLOADTM_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCR1.zDSPDELAY.<fieldname>

zDSPDELAY_S	TIME	8	The elapsed time waiting for first dispatch.
zDSPDELAY_N	INT	3	Number of waits.

SMF110#01_Performance_Class_ADP1_PCR1.zTCLDELAY.<fieldname>

zTCLDELAY_S	TIME	8	The elapsed time waiting for first dispatch, which was delayed because of the limits set for the transaction class of this transaction (zTCLNAME) being reached.
zTCLDELAY_N	INT	3	Number of waits.

SMF110#01_Performance_Class_ADP1_PCR1.zMXTDELAY.<fieldname>

zMXTDELAY_S	TIME	8	The elapsed time waiting for the first dispatch, which was delayed because of the limits set by the system parameter, MXT, being reached.
zMXTDELAY_N	INT	3	Number of waits.

SMF110#01_Performance_Class_ADP1_PCR1.zENQDELAY.<fieldname>

zENQDELAY_S	TIME	8	The elapsed time waiting for a CICS task control local enqueue.
zENQDELAY_N	INT	3	The number of local enqueues.

SMF110#01_Performance_Class_ADP1_PCR1.zGNQDELAY.<fieldname>

zGNQDELAY_S	TIME	8	The elapsed time waiting for a CICS task control global enqueue.
zGNQDELAY_N	INT	3	The number of global enqueues.

SMF110#01_Performance_Class_ADP1_PCR1.zLU61WTT.<fieldname>

zLU61WTT_S	TIME	8	The elapsed time for which the user task waited for I/O on a LUTYPE6.1 connection or session.
zLU61WTT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCR1.zLU62WTT.<fieldname>

zLU62WTT_S	TIME	8	
------------	------	---	--

			The elapsed time for which the user task waited for I/O on a LUTYPE6.2 (APPC) connection or session.
zLU62WTT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.
SMF110#01_Performance_Class_ADP1_PCR1.zSZWAIT.<fieldname>			
zSZWAIT_S	TIME	8	Elapsed time in which the user task waited for all FEPI services.
zSZWAIT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.
SMF110#01_Performance_Class_ADP1_PCR1.zRMITIME.<fieldname>			
zRMITIME_S	TIME	8	The total elapsed time spent in the CICS Resource Manager Interface (RMI).
zRMITIME_N	INT	3	Count of the number of time periods contributing to the total elapsed time.
SMF110#01_Performance_Class_ADP1_PCR1.zRMISUSP.<fieldname>			
zRMISUSP_S	TIME	8	The total elapsed time that the task was suspended by the CICS dispatcher while in the CICS Resource Manager Interface (RMI).
zRMISUSP_N	INT	3	Count of the number of time periods contributing to the total elapsed time.
SMF110#01_Performance_Class_ADP1_PCR1.zSYNCTIME.<fieldname>			
zSYNCTIME_S	TIME	8	Total elapsed time for which the user task was dispatched and was processing syncpoint requests.
zSYNCTIME_N	INT	3	Count of the number of time periods contributing to the total elapsed time.
SMF110#01_Performance_Class_ADP1_PCR1.zRLSWAIT.<fieldname>			
zRLSWAIT_S	TIME	8	Elapsed time in which the user task waited for RLS file I/O.
zRLSWAIT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.
SMF110#01_Performance_Class_ADP1_PCR1.zRLSCPUT.<fieldname>			
zRLSCPUT_S	TIME	8	For RLS requests issued only from the QR TCB, this value is the RLS File Request SRB CPU time that this transaction spent processing RLS file requests.
zRLSCPUT_N	INT	3	Count of the number of time periods contributing to the total CPU SRB processor time.
SMF110#01_Performance_Class_ADP1_PCR1.zLMDELAY.<fieldname>			
zLMDELAY_S	TIME	8	The elapsed time that the user task waited to acquire a lock on a resource.
zLMDELAY_N	INT	3	Count of the number of time periods contributing to the total elapsed time.
SMF110#01_Performance_Class_ADP1_PCR1.zWTTEXWAIT.<fieldname>			
zWTTEXWAIT_S	TIME	8	The elapsed time that the user task waited for one or more ECBs, passed to CICS by the user task using the EXEC CICS WAIT EXTERNAL ECBLIST command, to be posted by the MVS POST command.
zWTTEXWAIT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.
SMF110#01_Performance_Class_ADP1_PCR1.zWTCEWAIT.<fieldname>			
zWTCEWAIT_S	TIME	8	The elapsed time that the user task waited for one of these events: 1. One or more ECBs, passed to CICS by the user task using the EXEC CICS WAITCICS ECBLIST command, to be posted by the MVS POST command. 2. Completion of an event initiated by the same or by another user task.
zWTCEWAIT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.
SMF110#01_Performance_Class_ADP1_PCR1.zICDELAY.<fieldname>			
zICDELAY_S	TIME	8	The elapsed time that the user task waited as a result of issuing one of the following commands: 1. An interval control EXEC CICS DELAY command

			for a specified time interval. 2. An interval control EXEC CICS DELAY command for a specified time of day to expire. 3. An interval control EXEC CICS RETRIEVE command with the WAIT option specified.
zICDELAY_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCR1.zGVUPWAIT.<fieldname>

zGVUPWAIT_S	TIME	8	The elapsed time that the user task waited as a result of giving up control to another task.
zGVUPWAIT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCR1.zTSSHWAIT.<fieldname>

zTSSHWAIT_S	TIME	8	Elapsed time that the user task waited for an asynchronous shared temporary storage request to a temporary storage data server to complete.
zTSSHWAIT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCR1.zCFDTPWAIT.<fieldname>

zCFDTPWAIT_S	TIME	8	The elapsed time in which the user task waited for a data table access request to the Coupling Facility Data Table server to complete.
zCFDTPWAIT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCR1.zSRVSYWTT.<fieldname>

zSRVSYWTT_S	TIME	8	Total elapsed time in which the user task waited for syncpoint or resynchronization processing using the Coupling Facility data tables server to complete.
zSRVSYWTT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCR1.zRRMSWAIT.<fieldname>

zRRMSWAIT_S	TIME	8	The elapsed time in which the user task waited indoubt using resource recovery services for EXCI.
zRRMSWAIT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCR1.zRUNTRWTT.<fieldname>

zRUNTRWTT_S	TIME	8	The elapsed time in which the user task waited for completion of a transaction that ran as a result of the user task issuing a CICS BTS run process request and a run activity request synchronously.
zRUNTRWTT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCR1.zSYNCDLY.<fieldname>

zSYNCDLY_S	TIME	8	The elapsed time in which the user task waited for a syncpoint request to be issued by its parent transaction.
zSYNCDLY_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCR1.zSOIOWTT.<fieldname>

zSOIOWTT_S	TIME	8	The elapsed time for which the user task waited for inbound socket I/O.
zSOIOWTT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCR1.zIMSWAIT.<fieldname>

zIMSWAIT_S	TIME	8	The elapsed time during which the user task waited for DBCTL to service the IMS requests issued by the user task.
zIMSWAIT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCR1.zDB2RDYQW.<fieldname>

zDB2RDYQW_S	TIME	8	The elapsed time during which the user task waited for a Db2 thread to become available.
-------------	------	---	--

zDB2RDYQW_N	INT	3	Count of the number of time periods contributing to the total elapsed time.
-------------	-----	---	---

SMF110#01_Performance_Class_ADP1_PCR1.zDB2CONWT.<fieldname>

zDB2CONWT_S	TIME	8	The elapsed time during which the user task waited for a Db2 connection to become available for use with the user task's open TCB.
zDB2CONWT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCR1.zWMQGETWT.<fieldname>

zWMQGETWT_S	TIME	8	The elapsed time during which the user task waited for WebSphere MQ to service the user task's GETWAIT request.
zWMQGETWT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCR1.zJVMTIME.<fieldname>

zJVMTIME_S	TIME	8	The total elapsed time spent in the JVM by the user task.
zJVMTIME_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCR1.zJVMSUSP.<fieldname>

zJVMSUSP_S	TIME	8	The elapsed time for which the user task was suspended by the CICS dispatcher while running in the JVM.
zJVMSUSP_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCR1.zSOOIOWTT.<fieldname>

zSOOIOWTT_S	TIME	8	The total elapsed time that the user task waited on outbound sockets.
zSOOIOWTT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCR1.zRQRWAIT.<fieldname>

zRQRWAIT_S	TIME	8	The elapsed time during which the request receiver user task CIRR (or user specified transaction ID) waited for any outstanding replies to be satisfied.
zRQRWAIT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCR1.zRQPWAIT.<fieldname>

zRQPWAIT_S	TIME	8	The elapsed time during which the request processor user task CIRP waited for any outstanding replies to be satisfied.
zRQPWAIT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCR1.zOTSINDWT.<fieldname>

zOTSINDWT_S	TIME	8	The elapsed time in which the user task was dispatched or suspended indoubt (or both) while processing a syncpoint for an Object Transaction Service (OTS) syncpoint request.
zOTSINDWT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCR1.zJVMITIME.<fieldname>

zJVMITIME_S	TIME	8	The elapsed time spent initializing the JVM environment.
zJVMITIME_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCR1.zJVMRTIME.<fieldname>

zJVMRTIME_S	TIME	8	Reserved field, returns zero.
zJVMRTIME_N	INT	3	Reserved field, returns zero.

SMF110#01_Performance_Class_ADP1_PCR1.zPTPWAIT.<fieldname>

zPTPWAIT_S	TIME	8	The elapsed time for which the user task waited for the 3270 bridge partner transaction to complete.
------------	------	---	--

zPTPWAIT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.
------------	-----	---	---

SMF110#01_Performance_Class_ADP1_PCR1.zDSMMSCWT.<fieldname>

zDSMMSCWT_S	TIME	8	The elapsed time that the user task spent waiting because no TCB was available and a TCB was not created because of MVS storage constraints.
zDSMMSCWT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCR1.zISIWTT.<fieldname>

zISIWTT_S	TIME	8	The elapsed time for which a user task waited for control at this end of an IPICT connection.
zISIWTT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCR1.zJVMTHDWT.<fieldname>

zJVMTHDWT_S	TIME	8	The elapsed time that the user task waited to obtain a JVM server thread because the CICS system had reached the thread limit for a JVM server in the CICS region.
zJVMTHDWT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCR1.zWMQASRBT.<fieldname>

zWMQASRBT_S	TIME	8	The WebSphere MQ SRB time this transaction spent processing WebSphere MQ API requests.
zWMQASRBT_N	INT	3	Count of the number of time periods contributing to the total SRB time.

SMF110#01_Performance_Class_ADP1_PCR1.zTDILWTT.<fieldname>

zTDILWTT_S	TIME	8	The elapsed time for which the user task waited for an intrapartition transient data lock (TDIPLOCK).
zTDILWTT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCR1.zTDELWTT.<fieldname>

zTDELWTT_S	TIME	8	The elapsed time for which the user task waited for an extrapartition transient data lock (TDEPLOCK).
zTDELWTT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCR1.zROMODDLY.<fieldname>

zROMODDLY_S	TIME	8	The elapsed time for which the user task waited for redispach on the CICS RO TCB.
zROMODDLY_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCR1.zSOMODDLY.<fieldname>

zSOMODDLY_S	TIME	8	The elapsed time for which the user task waited for redispach on the CICS SO TCB.
zSOMODDLY_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCR1.zISALWTT.<fieldname>

zISALWTT_S	TIME	8	The elapsed time for which a user task waited for an allocate request for an IPICT session.
zISALWTT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCR1.zTCALWTT.<fieldname>

zTCALWTT_S	TIME	8	The elapsed time for which a user task waited for an allocate request for an MRO (Inter-Region Communication), LU6.1, or LU6.2 session.
zTCALWTT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCR1.zDSAPTHWT.<fieldname>

zDSAPTHWT_S	TIME	8	The dispatcher allocated pthread wait time. This is the time that the transaction had to wait for a Liberty pthread to be allocated during links to Liberty programs.
zDSAPTHWT_N	INT	3	Count of the number of time periods contributing to the total wait time.

SMF110#01_Performance_Class_ADP1_PCR1.zRMITOTAL.<fieldname>

zRMITOTAL_S	TIME	8	The total elapsed time spent in the CICS Resource Manager Interface (RMI).
zRMITOTAL_N	INT	3	Count of the number of time periods contributing to the total elapsed time spent in the CICS Resource Manager Interface (RMI).

SMF110#01_Performance_Class_ADP1_PCR1.zRMIOOTHER.<fieldname>

zRMIOOTHER_S	TIME	8	The total elapsed time spent in the CICS RMI for resource manager requests other than Db2, DBCTL, EXEC DLI, IBM MQ, CICSplex SM and CICS TCP/IP socket requests.
zRMIOOTHER_N	INT	3	Count of the number of time periods contributing to the total elapsed time spent in the CICS RMI for resource manager requests other than Db2, DBCTL, EXEC DLI, IBM MQ, CICSplex SM and CICS TCP/IP socket requests.

SMF110#01_Performance_Class_ADP1_PCR1.zRMIDB2.<fieldname>

zRMIDB2_S	TIME	8	The total elapsed time spent in the CICS RMI for Db2 requests.
zRMIDB2_N	INT	3	Count of the number of time periods contributing to the total elapsed time spent in the CICS RMI for Db2 requests.

SMF110#01_Performance_Class_ADP1_PCR1.zRMIDBCTL.<fieldname>

zRMIDBCTL_S	TIME	8	The total elapsed time spent in the CICS RMI for DBCTL requests.
zRMIDBCTL_N	INT	3	Count of the number of time periods contributing to the total elapsed time spent in the CICS RMI for DBCTL requests.

SMF110#01_Performance_Class_ADP1_PCR1.zRMIEXDLI.<fieldname>

zRMIEXDLI_S	TIME	8	The total elapsed time spent in the CICS RMI for EXEC DLI requests.
zRMIEXDLI_N	INT	3	Count of the number of time periods contributing to the total elapsed time spent in the CICS RMI for EXEC DLI requests.

SMF110#01_Performance_Class_ADP1_PCR1.zRMIMQM.<fieldname>

zRMIMQM_S	TIME	8	The total elapsed time spent in the CICS RMI for IBM MQ requests.
zRMIMQM_N	INT	3	Count of the number of time periods contributing to the total elapsed time spent in the CICS RMI for IBM MQ requests.

SMF110#01_Performance_Class_ADP1_PCR1.zRMICPSM.<fieldname>

zRMICPSM_S	TIME	8	The total elapsed time spent in the CICS RMI for CICSplex SM requests.
zRMICPSM_N	INT	3	Count of the number of time periods contributing to the total elapsed time spent in the CICS RMI for CICSplex SM requests.

SMF110#01_Performance_Class_ADP1_PCR1.zRMITCPIP.<fieldname>

zRMITCPIP_S	TIME	8	The total elapsed time spent in the CICS RMI for CICS TCP/IP socket requests.
zRMITCPIP_N	INT	3	Count of the number of time periods contributing to the total elapsed time spent in the CICS RMI for CICS TCP/IP socket requests.

Secondary segment: **SMF110#01_Performance_Class_ADP1_PCR2**

Field Name	Type	Len	Description
------------	------	-----	-------------

<i>SMF110#01_Performance_Class_ADP1_PCR2.<fieldname></i>			
zTRAN	CHAR	4	ID=001 (DFHTASK) Transaction identification.
zTERM	CHAR	4	ID=002 (DFHTERM) Terminal or session identification. This field is null if the task is not associated with a terminal or session.
zUSERID	CHAR	8	ID=089 (DFHCICS) User identification at task creation. This identification can also be the remote user identifier for a task created as the result of receiving an ATTACH request across an MRO or APPC link with attach-time security enabled.
zTTYTYPE	CHAR	4	ID=004 (DFHTASK) Transaction start type. The high-order bytes (0 and 1) are set as follows: 'TO' => Attached from terminal input. 'S' => Attached by automatic transaction initiation (ATI) without data. 'SD' => Attached by automatic transaction initiation (ATI) with data. 'QD' => Attached by transient data trigger level. 'U' => Attached by user request. 'TP' => Attached from terminal TCTTE transaction ID. 'SZ' => Attached by front-end programming interface (FEPI).
zSTART	TSTMP	8	ID=005 (DFHCICS) Start time of measurement interval, which is one of the following times: - The time at which the user task was attached. - The time at which data recording was most recently reset in support of the MCT user event monitoring point DELIVER option or the monitoring options MNCONV, MNSYNC, or FREQUENCY.
zSTOP	TSTMP	8	ID=006 (DFHCICS) Finish time of measurement interval, which is one of the following times: - The time at which the user task was detached. - The time at which data recording was completed in support of the MCT user event monitoring point DELIVER option or the monitoring options MNCONV, MNSYNC, or FREQUENCY.
zTRANNUM	DEC	4 (7,0)	ID=031 (DFHTASK) Transaction identification number or 'III' for system initialisation, 'TCP' for terminal control.
zTRANPRI	INT	4	ID=109 (DFHTASK) Transaction priority when monitoring of the task was initialized.
zTCLSNAME	CHAR	8	ID=166 (DFHTASK) Transaction class name. This field is null if the transaction is not in a TRANCLASS.
zLUNAME	CHAR	8	ID=111 (DFHTERM) The z/OS Communications Server SNA logical unit name (if available) of the terminal that is associated with this transaction.
zPGMNAME	CHAR	8	ID=071 (DFHPROG) The name of the first program invoked at attach-time.
zNETUOWPX	CHAR	20	ID=097 (DFHTASK) Fully qualified name by which the originating system is known to the z/OS Communications Server network.
zNETUOWSX	CHAR	8	ID=098 (DFHTASK) Name by which the network unit of work ID is known in the originating system.
zRSYSID	CHAR	4	ID=130 (DFHCICS) The name (system ID) of the remote system to which this transaction was routed, either statically or dynamically.
zPERRECNT	INT	4	ID=131 (DFHCICS) The number of performance class records written by the CICS Monitoring Facility (CMF) for the user task.
zRMUOWID	CHAR	8	ID=132 (DFHTASK) The identifier of the unit of work (unit of recovery) for this task.
zSRVCLASS	CHAR	8	ID=167 (DFHCICS) The z/OS Workload Manager (WLM) service class for this transaction.
zRPTCLASS	CHAR	8	ID=168 (DFHCICS) The z/OS Workload Manager (WLM) report class for this transaction.
zFCTYNAME	CHAR	4	ID=163 (DFHTASK) Transaction facility name. This field is null if the transaction is not associated with a facility.

<i>SMF110#01_Performance_Class_ADP1_PCR2.zTRANFLAG.<fieldname></i>			
zTRAN_Facility	INT (ENUM)	1	Transaction facility type.
zTRAN_id	INT (ENUM)	1	Transaction identification.

<i>SMF110#01_Performance_Class_ADP1_PCR2.zTRANFLAG.zTRAN_WLM.<fieldname></i>			
zResponse	BIT	1	

			Report the total response time (begin-to-end phase) for completed work request (transaction).
zAllPhase	BIT	1	Notify that the entire execution phase of the work request is complete.
zSubPhase	BIT	1	Notify that a subset of the execution phase of the work request is complete.
zAbNormal	BIT	1	This transaction has been reported to the z/OS workload manager as completing abnormally because it has tried to access Db2 and a connection unavailable response has been returned. This abnormal completion occurs when all the following are true: 1. zResponse is set. 2. CICS is not connected to Db2. 3. The CICS-Db2 adapter is in standby mode (STANDBYMODE(RECONNECT) or STANDBYMODE(CONNECT)). 4. CONNECTERROR(SQLCODE) is specified, causing the application to receive a -923 SQL code.

SMF110#01_Performance_Class_ADP1_PCR2.zTRANFLAG.zTRAN_Def.<fieldname>

zTDLocBelow	BIT	1	1 => TASKDATALOC=BELOW
zTDKeyCICS	BIT	1	1 => TASKDATAKEY=CICS
zIsolateNo	BIT	1	1 => ISOLATE=NO
zDynamic	BIT	1	1 => DYNAMIC=YES

SMF110#01_Performance_Class_ADP1_PCR2.zTRANFLAG.<fieldname>

zTRAN_Origin	INT (ENUM)	1	Transaction Origin Type.
--------------	---------------	---	--------------------------

SMF110#01_Performance_Class_ADP1_PCR2.zTRANFLAG.zTRAN_Status.<fieldname>

zOrigin	BIT	1	The transaction origin.
zResource	BIT	1	Resource class record, or records, for this task.
zIdentity	BIT	1	Identity class record, or records, for this task.
zPurge	BIT	1	Task purge or runaway resulted in the open TCB the task was executing on being terminated.
zAbend	BIT	1	Task abnormally terminated.

SMF110#01_Performance_Class_ADP1_PCR2.zTRANFLAG.<fieldname>

zTRAN_Track	INT	1	Transaction tracking origin data tag.
-------------	-----	---	---------------------------------------

SMF110#01_Performance_Class_ADP1_PCR2.zTRANFLAG.zRecovery_Manager.<fieldname>

zInDWaitNo	BIT	1	Indoubt WAIT=NO.
zInDCommit	BIT	1	Indoubt ACTION=COMMIT.
zUOWInD	BIT	1	Recovery manager, UOW resolved with indoubt action.
zUOWShunt	BIT	1	Recovery manager, Shunt.
zUOWUnShunt	BIT	1	Recovery manager, Unshunt.
zInDFail	BIT	1	Recovery manager, Indoubt failure.
zROFail	BIT	1	Recovery manager, Resource owner failure.

SMF110#01_Performance_Class_ADP1_PCR2.zTERMINFO.<fieldname>

zTERM_Assoc	INT (ENUM)	1	Task associated with terminal or session.
zTERM_SessType	INT (ENUM)	1	If the principal facility for this task is a session, this field identifies the session type.
zTERM_AM	INT (ENUM)	1	Identifies the access method defined for the terminal ID or session ID in field TERM.
zTERM_Type	INT (ENUM)	1	Identifies the terminal or session type for the terminal id or session id in TERM.

SMF110#01_Performance_Class_ADP1_PCR2.<fieldname>			
zTERMCNNM	CHAR	4	ID=169 (DFHTERM) Terminal session connection name. If the terminal facility associated with this transaction is a session, this field is the name of the owning connection (sysid).
zBRDGTRAN	CHAR	4	ID=124 (DFHTASK) Bridge listener transaction identifier. For CICS 3270 Bridge transactions, this field is the name of the Bridge listener transaction that attached the user task.
zRRMSURID	CHAR	16	ID=190 (DFHTASK) RRMS/MVS unit-of-recovery ID (URID).
zPRCSNAME	CHAR	36	ID=200 (DFHCBTS) The name of the CICS business transaction service (BTS) process of which the user task formed part.
zPRCSTYPE	CHAR	8	ID=201 (DFHCBTS) The process-type of the CICS BTS process of which the user task formed part.
zPRCSID	CHAR	52	ID=202 (DFHCBTS) The CICS-assigned identifier of the CICS BTS root activity that the user task implemented.
zACTVTYID	CHAR	52	ID=203 (DFHCBTS) The CICS-assigned identifier of the CICS BTS root activity that the user task implemented.
zACTVTYNM	CHAR	16	ID=204 (DFHCBTS) The name of the CICS BTS activity that the user task implemented.
zCLIPADDR	CHAR	40	ID=318 (DFH SOCK) The IP address of the client or Telnet client.
zTRNGRPID	CHAR	28	ID=082 (DFHTASK) The transaction group ID is assigned at transaction attach time, and can be used to correlate the transactions that CICS runs for the same incoming work request. For example, the CWXN and CWBA transactions for Web requests.
zNETID	CHAR	8	ID=197 (DFHTERM) NETID if a network qualified name has been received from the Communications Server. If it is a resource and the network qualified name has not yet been received, NETID is 8 blanks. In all other cases, it is nulls.
zRLUNAME	CHAR	8	ID=198 (DFHTERM) Real network name if a network qualified name has been received from the Communications Server.
zTCPSRVCE	CHAR	8	ID=245 (DFH SOCK) The TCP/IP service name that attached the user task.
zPORTNUM	INT	4	ID=246 (DFH SOCK) The TCP/IP port number of the TCP/IP service that attached the user task.
zOTSTID	CHAR	128	ID=194 (DFHTASK) This field is the first 128 bytes of the Object Transaction Service (OTS) Transaction ID (TID).
zCLIPPORT	INT	4	ID=330 (DFH SOCK) The TCP/IP port number of the originating client or Telnet client.
zISIPICNM	CHAR	8	ID=305 (DFH SOCK) The name of the IPIC (IPCONN) entry of the TCP/IP service that attached the user task.
zONETWKID	CHAR	8	ID=359 (DFHCICS) The network identifier from which this work request (transaction) originated.
zOAPPLID	CHAR	8	ID=360 (DFHCICS) The APPLID of the CICS region in which this work request (transaction) originated. For example, the region in which the CWXN task ran.
zOSTART	TSTMP	8	ID=361 (DFHCICS) The time at which the originating task, for example the CWXN task, was started.
zOTRANNUM	DEC	4 (7,0)	ID=362 (DFHCICS) The number of the originating task. For example, the CWXN task.
zOTRAN	CHAR	4	ID=363 (DFHCICS) The transaction ID (TRANSID) of the originating task. For example, the CWXN task.
zOUSERID	CHAR	8	ID=364 (DFHCICS) The originating Userid-2 or Userid-1, for example from CWBA, depending on the originating task.
zOUSERCOR	CHAR	64	ID=365 (DFHCICS) The originating user correlator.
zOTCPSVCE	CHAR	8	ID=366 (DFHCICS) The name of the originating TCPIP SERVICE.
zOPORTNUM	INT	4	ID=367 (DFHCICS) The port number used by the originating TCPIP SERVICE.
zOCLIPADR	CHAR	40	ID=372 (DFHCICS) The IP address of the originating client or Telnet client.

zOCLIPORT	INT	4	ID=369 (DFHCICS) The TCP/IP port number of the originating client or Telnet client.
-----------	-----	---	---

SMF110#01_Performance_Class_ADP1_PCR2.zOTRANFLG.<fieldname>

zOTRAN_Facility	INT (ENUM)	1	Originating Transaction facility type.
zOTRAN_id	INT (ENUM)	1	Originating Transaction identification.

SMF110#01_Performance_Class_ADP1_PCR2.zOTRANFLG.zOTRAN_WLM.<fieldname>

zResponse	BIT	1	Report the total response time (begin-to-end phase) for completed work request (transaction).
zAllPhase	BIT	1	Notify that the entire execution phase of the work request is complete.
zSubPhase	BIT	1	Notify that a subset of the execution phase of the work request is complete.
zAbNormal	BIT	1	This transaction has been reported to the z/OS workload manager as completing abnormally because it has tried to access Db2 and a connection unavailable response has been returned. This abnormal completion occurs when all the following are true: 1. zResponse is set. 2. CICS is not connected to Db2. 3. The CICS-Db2 adapter is in standby mode (STANDBYMODE(RECONNECT) or STANDBYMODE(CONNECT)). 4. CONNECTERROR(SQLCODE) is specified, causing the application to receive a -923 SQL code.

SMF110#01_Performance_Class_ADP1_PCR2.zOTRANFLG.zOTRAN_Def.<fieldname>

zTDLocBelow	BIT	1	1 => TASKDATALOC=BELOW
zTDKeyCICS	BIT	1	1 => TASKDATAKEY=CICS
zIsolateNo	BIT	1	1 => ISOLATE=NO
zDynamic	BIT	1	1 => DYNAMIC=YES

SMF110#01_Performance_Class_ADP1_PCR2.zOTRANFLG.<fieldname>

zOTRAN_Origin	INT (ENUM)	1	Originating Transaction Type.
---------------	---------------	---	-------------------------------

SMF110#01_Performance_Class_ADP1_PCR2.zOTRANFLG.zOTRAN_Status.<fieldname>

zOrigin	BIT	1	The transaction origin.
zResource	BIT	1	Resource class record, or records, for this task.
zIdentity	BIT	1	Identity class record, or records, for this task.
zPurge	BIT	1	Task purge or runaway resulted in the open TCB the task was executing on being terminated.
zAbend	BIT	1	Task abnormally terminated.

SMF110#01_Performance_Class_ADP1_PCR2.zOTRANFLG.<fieldname>

zOTRAN_Track	INT	1	Originating Transaction tracking origin data tag.
--------------	-----	---	---

SMF110#01_Performance_Class_ADP1_PCR2.zOTRANFLG.zORecovery_Manager.<fieldname>

zInDWaitNo	BIT	1	Indoubt WAIT=NO.
zInDCommit	BIT	1	Indoubt ACTION=COMMIT.
zUOWInD	BIT	1	Recovery manager, UOW resolved with indoubt action.
zUOWShunt	BIT	1	Recovery manager, Shunt.
zUOWUnShunt	BIT	1	Recovery manager, Unshunt.
zInDFail	BIT	1	Recovery manager, Indoubt failure.
zROFail	BIT	1	Recovery manager, Resource owner failure.

SMF110#01_Performance_Class_ADP1_PCR2.zOTRANFLG.<fieldname>			
zOFCTYNME	CHAR	8	ID=371 (DFHCICS) The facility name of the originating transaction.
zWBURIMNM	CHAR	8	ID=380 (DFHWEBB) For CICS web support, Atom feeds, and web service applications, the name of the URIMAP resource definition that was mapped to the URI of the inbound request that was processed by this task.
zWBPIPLNM	CHAR	8	ID=381 (DFHWEBB) For web service applications, the name of the PIPELINE resource definition that was used to provide information about the message handlers that act on the service request processed by this task.
zWBATMSNM	CHAR	8	ID=382 (DFHWEBB) For Atom feeds, the name of the ATOMSERVICE resource definition that was used to process this task.
zWBSVCENM	CHAR	32	ID=383 (DFHWEBB) For web service applications, the name of the WEBSERVICE resource definition that was used to process this task.
zWBSVOPNM	CHAR	64	ID=384 (DFHWEBB) For web service applications, the first 64 bytes of the web service operation name.
zWBPROGNM	CHAR	8	ID=385 (DFHWEBB) For CICS web support, the name of the program from the URIMAP resource definition that was used to provide the application-generated response to the HTTP request processed by this task.
zPHNTWKID	CHAR	8	ID=373 (DFHCICS) The network identifier of the CICS system of an immediately previous task in another CICS system with which this task is associated.
zPHAPPLID	CHAR	8	ID=374 (DFHCICS) The APPLID from previous hop data. This is the APPLID of the CICS system of a previous task in another CICS system with which this task is associated.
zPHSTART	TSTMP	8	ID=375 (DFHCICS) The start time of the immediately previous task in another CICS system with which this task is associated.
zPHTRANNO	DEC	4 (7,0)	ID=376 (DFHCICS) The task number of the immediately previous task in another CICS system with which this task is associated.
zPHTRAN	CHAR	4	ID=377 (DFHCICS) The transaction ID (TRANSID) of the immediately previous task in another CICS system with which this task is associated.
zPHCOUNT	INT	4	ID=378 (DFHCICS) The number of times there has been a request from one CICS system to another CICS system to initiate a task with which this task is associated.
zOADID	CHAR	64	ID=351 (DFHCICS) The adapter identifier added to the origin data by the adapter.
zOADATA1	CHAR	64	ID=352 (DFHCICS) The data added to the origin data by the adapter.
zOADATA2	CHAR	64	ID=353 (DFHCICS) The data added to the origin data by using the adapter.
zOADATA3	CHAR	64	ID=354 (DFHCICS) The data added to the origin data by the adapter.
zSOCIPHER	HEX	4	ID=320 (DFH SOCK) Identifies the code for the cipher suite that was selected during the SSL handshake for use on the inbound connection, for example X'0000002F'.
zCECMCHTP	CHAR	4	ID=430 (DFHTASK) The CEC machine type, in EBCDIC, for the physical hardware environment where the CICS region is running.
zCECMDLID	CHAR	16	ID=431 (DFHTASK) The CEC model number, in EBCDIC, for the physical hardware environment where the CICS region is running.
zMAXTASKS	INT	4	ID=433 (DFHTASK) The MXT or MAXTASKS value, expressed as a number of tasks, for the CICS region at the time the user task was attached.
zCURTASKS	INT	4	ID=434 (DFHTASK) The current number of active user transactions in the system at the time the user task was attached.
zACAPPLNM	CHAR	64	ID=451 (DFHTASK) The 64-character name of the application in the application context data.
zACPLATNM	CHAR	64	ID=452 (DFHTASK) The 64-character name of the platform in the application context data.
zACMAJVER	INT	4	ID=453 (DFHTASK) The major version of the application in the application context data, expressed as a 4-byte binary value.

zACMINVER	INT	4	ID=454 (DFHTASK) The minor version of the application in the application context data, expressed as a 4-byte binary value.
zACMICVER	INT	4	ID=455 (DFHTASK) The micro version of the application in the application context data, expressed as a 4-byte binary value.
zACOPERNM	CHAR	64	ID=456 (DFHTASK) The 64-character name of the operation in the application context data.

SMF110#01_Performance_Class_ADP1_PCR2.zTASKFLAG.<fieldname>

zClockErr	BIT	1	Detected an attempt either to start a user clock that was already running or to stop one that was not running.
-----------	-----	---	--

SMF110#01_Performance_Class_ADP1_PCR2.<fieldname>

zABCODEO	CHAR	4	ID=113 (DFHPROG) Original abend code.
zABCODEC	CHAR	4	ID=114 (DFHPROG) Current abend code.
zRTYPE	CHAR	4	ID=112 (DFHCICS) Performance record type: C => Record output for a terminal converse, D => Record output for a user EMP DELIVER request, F => Record output for a long-running transaction, S => Record output for a sync point, T => Record output for the end of a task.
zTCMSGIN1	INT	4	ID=034 (DFHTERM) Number of messages received from the principal terminal facility of the task, including LUTYPE6.1 and LUTYPE6.2 (APPC) but not MRO (IRC).
zTCCHRIN1	INT	4	ID=083 (DFHTERM) Number of characters received from the principal terminal facility of the task, including LUTYPE6.1 and LUTYPE6.2 (APPC) but not MRO (IRC).
zTCMSGOU1	INT	4	ID=035 (DFHTERM) Number of messages sent to the principal terminal facility of the task, including LUTYPE6.1 and LUTYPE6.2 (APPC) but not MRO (IRC).
zTCCHROU1	INT	4	ID=084 (DFHTERM) Number of characters sent to the principal terminal facility of the task, including LUTYPE6.1 and LUTYPE6.2 (APPC) but not MRO (IRC).
zTCMSGIN2	INT	4	ID=067 (DFHTERM) Number of messages received from the LUTYPE6.1 alternate terminal facilities by the user task.
zTCCHRIN2	INT	4	ID=085 (DFHTERM) Number of characters received from the LUTYPE6.1 alternate terminal facilities by the user task. (Not applicable to ISC APPC.)
zTCMSGOU2	INT	4	ID=068 (DFHTERM) Number of messages sent to the LUTYPE6.1 alternate terminal facilities by the user task.
zTCCHROU2	INT	4	ID=086 (DFHTERM) Number of characters sent to the LUTYPE6.1 alternate terminal facilities by the user task. (Not applicable to ISC APPC.)
zTCM62IN2	INT	4	ID=135 (DFHTERM) Number of messages received from the alternate facility by the user task for LUTYPE6.2 (APPC) sessions.
zTCC62IN2	INT	4	ID=137 (DFHTERM) Number of characters received from the alternate facility by the user task for LUTYPE6.2 (APPC) sessions.
zTCM62OU2	INT	4	ID=136 (DFHTERM) Number of messages sent to the alternate facility by the user task for LUTYPE6.2 (APPC) sessions.
zTCC62OU2	INT	4	ID=138 (DFHTERM) Number of characters sent to the alternate facility by the user task for LUTYPE6.2 (APPC) sessions.
zTCALLOCT	INT	4	ID=069 (DFHTERM) Number of TCTTE ALLOCATE requests issued by the user task for LUTYPE6.2 (APPC), LUTYPE6.1, and IRC sessions.
zSCUGETCT_Below	INT	4	ID=054 (DFHSTOR) Number of user-storage GETMAIN requests issued by the user task for storage below the 16 MB line, in the UDSA.
zSCUGETCT_Above	INT	4	ID=105 (DFHSTOR) Number of user-storage GETMAIN requests issued by the user task for storage above the 16 MB line, in the extended user dynamic storage area (EUDSA).
zSCCGETCT_Below	INT	4	ID=117 (DFHSTOR) Number of user-storage GETMAIN requests issued by the user task for storage below the 16 MB line, in the CDSA.
zSCCGETCT_Above	INT	4	ID=120 (DFHSTOR) Number of user-storage GETMAIN requests issued by the user task for storage above the 16 MB line, in the ECDSA.

zSCUSRHWM_Below	INT	4	ID=033 (DFHSTOR) Maximum amount (high-water mark) of user storage allocated to the user task below the 16 MB line, in the user dynamic storage area (UDSA).
zSCUSRHWM_Above	INT	4	ID=106 (DFHSTOR) Maximum amount (high-water mark) of user storage allocated to the user task above the 16 MB line, in the EUDSA.
zSC24CHWM	INT	4	ID=116 (DFHSTOR) Maximum amount (high-water mark) of user storage allocated to the user task below the 16 MB line, in the CICS dynamic storage area (CDSA).
zSC31CHWM	INT	4	ID=119 (DFHSTOR) Maximum amount (high-water mark) of user storage allocated to the user task above the 16 MB line, in the extended CICS dynamic storage area (ECDSA).
zSCUSRSTG_Below	INT	8	ID=095 (DFHSTOR) Storage occupancy of the user task below the 16 MB line, in the UDSA. This measures the area under the curve of storage in use against elapsed time.
zSCUSRSTG_Above	INT	8	ID=107 (DFHSTOR) Storage occupancy of the user task above the 16 MB line, in the EUDSA. This measures the area under the curve of storage in use against elapsed time.
zSC24COCC	INT	8	ID=118 (DFHSTOR) Storage occupancy of the user task below the 16 MB line, in the CDSA. This measures the area under the curve of storage in use against elapsed time.
zSC31COCC	INT	8	ID=121 (DFHSTOR) Storage occupancy of the user task above the 16 MB line, in the ECDSA. This measures the area under the curve of storage in use against elapsed time.
zSC24SGCT	INT	4	ID=144 (DFHSTOR) Number of storage GETMAIN requests issued by the user task for shared storage below the 16 MB line, in the CDSA or SDSA.
zSC24GSHR	INT	4	ID=145 (DFHSTOR) Number of bytes of shared storage obtained by the user task by using a GETMAIN request below the 16 MB line, in the CDSA or SDSA.
zSC24FSHR	INT	4	ID=146 (DFHSTOR) Number of bytes of shared storage released by the user task by using a FREEMAIN request below the 16 MB line, in the CDSA or SDSA.
zSC31SGCT	INT	4	ID=147 (DFHSTOR) Number of storage GETMAIN requests issued by the user task for shared storage above the 16 MB line, in the ECDSA or ESDSA.
zSC31GSHR	INT	4	ID=148 (DFHSTOR) Number of bytes of shared storage obtained by the user task by using a GETMAIN request above the 16 MB line, in the ECDSA or ESDSA.
zSC31FSHR	INT	4	ID=149 (DFHSTOR) Number of bytes of shared storage released by the user task by using a FREEMAIN request above the 16 MB line, in the ECDSA or ESDSA.
zSC64CGCT	INT	4	ID=441 (DFHSTOR) Number of user-storage GETMAIN requests issued by the user task for storage above the bar, in the CICS dynamic storage area (GCDSA).
zSC64CHWM	INT	4	ID=442 (DFHSTOR) Maximum amount (high-water mark) of user storage, rounded up to the next 4K, allocated to the user task above the bar, in the CICS dynamic storage area (GCDSA).
zSC64UGCT	INT	4	ID=443 (DFHSTOR) Number of user-storage GETMAIN requests issued by the user task for storage above the bar, in the user dynamic storage area (GUDSA).
zSC64UHWM	INT	4	ID=444 (DFHSTOR) Maximum amount (high-water mark) of user storage, rounded up to the next 4K, allocated to the user task above the bar, in the user dynamic storage area (GUDSA).
zSC64SGCT	INT	4	ID=445 (DFHSTOR) Number of storage GETMAIN requests issued by the user task for shared storage above the bar, in the GCDSA or GSDSA.
zSC64GSHR	INT	4	ID=446 (DFHSTOR) Amount of shared storage obtained by the user task by using a GETMAIN request above the bar, in the GCDSA or GSDSA. The total number of bytes obtained is rounded up to the next 4096 bytes, and the resulting number of 4K pages is displayed.
zSC64FSHR	INT	4	ID=447 (DFHSTOR) Amount of shared storage released by the user task by using a FREEMAIN request above the bar, in the GCDSA or GSDSA. The total number of bytes obtained is rounded up to the next 4096 bytes, and the resulting number of 4K pages is displayed.

zPCSTGHWM	INT	4	ID=087 (DFHSTOR) Maximum amount (high-water mark) of program storage in use by the user task both above and below the 16 MB line.
zPC31AHWM	INT	4	ID=139 (DFHSTOR) Maximum amount (high-water mark) of program storage in use by the user task above the 16 MB line.
zPC24BHWM	INT	4	ID=108 (DFHSTOR) Maximum amount (high-water mark) of program storage in use by the user task below the 16 MB line.
zPC31CHWM	INT	4	ID=142 (DFHSTOR) Maximum amount (high-water mark) of program storage in use by the user task above the 16 MB line, in the extended CICS dynamic storage area (ECDSA).
zPC24CHWM	INT	4	ID=143 (DFHSTOR) Maximum amount (high-water mark) of program storage in use by the user task below the 16 MB line, in the CICS dynamic storage area (CDSA).
zPC31RHWM	INT	4	ID=122 (DFHSTOR) Maximum amount (high-water mark) of program storage in use by the user task above the 16 MB line, in the extended read-only dynamic storage area (ERDSA).
zPC24RHWM	INT	4	ID=162 (DFHSTOR) Maximum amount (high-water mark) of program storage in use by the user task below the 16 MB line, in the read-only dynamic storage area (RDSA).
zPC31SHWM	INT	4	ID=161 (DFHSTOR) Maximum amount (high-water mark) of program storage in use by the user task above the 16 MB line, in the extended shared dynamic storage area (ESDSA).
zPC24SHWM	INT	4	ID=160 (DFHSTOR) Maximum amount (high-water mark) of program storage in use by the user task below the 16 MB line, in the shared dynamic storage area (SDSA).
zFCGETCT	INT	4	ID=036 (DFHFILE) Number of file GET requests issued by the user task.
zFCPUTCT	INT	4	ID=037 (DFHFILE) Number of file PUT requests issued by the user task.
zFCBRWCT	INT	4	ID=038 (DFHFILE) Number of file browse requests issued by the user task. This number excludes the START and END browse requests.
zFCADDCT	INT	4	ID=039 (DFHFILE) Number of file ADD requests issued by the user task.
zFCDELCT	INT	4	ID=040 (DFHFILE) Number of file DELETE requests issued by the user task.
zFCTOTCT	INT	4	ID=093 (DFHFILE) Total number of file control requests issued by the user task. This number excludes any request for OPEN, CLOSE, ENABLE, or DISABLE of a file.
zFCAMCT	INT	4	ID=070 (DFHFILE) Number of times the user task invoked file access-method interfaces. This number excludes requests for OPEN and CLOSE.
zTDGETCT	INT	4	ID=041 (DFHDEST) Number of transient data GET requests issued by the user task.
zTDPUTCT	INT	4	ID=042 (DFHDEST) Number of transient data PUT requests issued by the user task.
zTDPURCT	INT	4	ID=043 (DFHDEST) Number of transient data PURGE requests issued by the user task.
zTDTOTCT	INT	4	ID=091 (DFHDEST) Total number of transient data requests issued by the user task.
zTSGETCT	INT	4	ID=044 (DFHTEMP) Number of temporary storage GET requests to auxiliary or main temporary storage issued by the user task.
zTSPUACT	INT	4	ID=046 (DFHTEMP) Number of PUT requests to auxiliary temporary storage issued by the user task.
zTSPUMCT	INT	4	ID=047 (DFHTEMP) Number of PUT requests to main temporary storage issued by the user task.
zTSGETSCT	INT	4	ID=460 (DFHTEMP) Number of temporary storage GET requests from shared temporary storage issued by the user task.
zTSPUSCT	INT	4	ID=461 (DFHTEMP) Number of temporary storage PUT requests to shared temporary storage issued by the user task.
zTSTOTCT	INT	4	ID=092 (DFHTEMP) Total number of temporary storage requests issued by the user task.

zBMSMAPCT	INT	4	ID=050 (DFHMAPP) Number of BMS MAP requests issued by the user task. This field corresponds to the number of RECEIVE MAP requests that did not incur a terminal I/O, and the number of RECEIVE MAP FROM requests.
zBMSINCT	INT	4	ID=051 (DFHMAPP) Number of BMS IN requests issued by the user task. This field corresponds to the number of RECEIVE MAP requests that incurred a terminal I/O.
zBMSOUTCT	INT	4	ID=052 (DFHMAPP) Number of BMS OUT requests issued by the user task. This field corresponds to the number of SEND MAP requests.
zBMSTOTCT	INT	4	ID=090 (DFHMAPP) Total number of BMS requests issued by the user task.
zPCLINKCT	INT	4	ID=055 (DFHPROG) Number of program LINK and INVOKE APPLICATION requests issued by the user task, including the link to the first program of the user task.
zPCXCTLCT	INT	4	ID=056 (DFHPROG) Number of program XCTL requests issued by the user task.
zPCLOADCT	INT	4	ID=057 (DFHPROG) Number of program LOAD requests issued by the user task.
zPCLURMCT	INT	4	ID=072 (DFHPROG) Number of program LINK URM (user-replaceable module) requests issued by, or on behalf of, the user task.
zPCDPLCT	INT	4	ID=073 (DFHPROG) Number of distributed program link (DPL) requests issued by the user task.
zPCDLCSDL	INT	4	ID=286 (DFHPROG) The total length, in bytes, of the data in the containers of all the distributed program link (DPL) requests issued with the CHANNEL option by the user task.
zPCDLCRDL	INT	4	ID=287 (DFHPROG) The total length, in bytes, of the data in the containers of all DPL RETURN CHANNEL commands issued by the user task.
zPCLNKCCT	INT	4	ID=306 (DFHPROG) Number of local program LINK and INVOKE APPLICATION requests, with the CHANNEL option, issued by the user task.
zPCXCLCCT	INT	4	ID=307 (DFHPROG) Number of program XCTL requests issued with the CHANNEL option by the user task.
zPCDPLCCT	INT	4	ID=308 (DFHPROG) Number of program distributed program link (DPL) requests issued with the CHANNEL option by the user task.
zPCRTNCCT	INT	4	ID=309 (DFHPROG) Number of remote pseudoconversational RETURN requests, with the CHANNEL option, issued by the user task.
zPCRTNCDL	INT	4	ID=310 (DFHPROG) The total length, in bytes, of the data in the containers of all the remote pseudoconversational RETURN CHANNEL commands issued by the user task.
zJNLWRTCT	INT	4	ID=058 (DFHJOUR) Number of journal write requests issued by the user task.
zLOGWRTCT	INT	4	ID=172 (DFHJOUR) Number of CICS log stream write requests issued by the user task.
zICPUINCT	INT	4	ID=059 (DFHTASK) Number of interval control START or INITIATE requests during the user task.
zICTOTCT	INT	4	ID=066 (DFHTASK) Total number of Interval Control Start, Cancel, Delay, and Retrieve requests issued by the user task.
zICSTACCT	INT	4	ID=065 (DFHTASK) Total number of local interval control START requests, with the CHANNEL option, issued by the user task.
zICSTACDL	INT	4	ID=345 (DFHTASK) Total length, in bytes, of the data in the containers of all the locally executed START CHANNEL requests issued by the user task.
zICSTRCCT	INT	4	ID=346 (DFHTASK) Total number of interval control START CHANNEL requests, to be run on remote systems, issued by the user task.
zICSTRCDL	INT	4	ID=347 (DFHTASK) Total length, in bytes, of the data in the containers of all the remotely executed START CHANNEL requests issued by the user task.
zSPSYNCCT	INT	4	ID=060 (DFHSYNC) Number of SYNCPOINT requests issued during the user task.

zCFCAPICT	INT	4	ID=025 (DFHCICS) Number of CICS OO foundation class requests, including the Java API for CICS (JCICS) classes, issued by the user task.
zSZALLOCT	INT	4	ID=150 (DFHFEPI) Number of conversations allocated by the user task. This number is incremented for each FEPI ALLOCATE POOL or FEPI CONVERSE POOL.
zSZRCVCT	INT	4	ID=151 (DFHFEPI) Number of FEPI RECEIVE requests made by the user task. This number is also incremented for each FEPI CONVERSE request.
zSZSENDCT	INT	4	ID=152 (DFHFEPI) Number of FEPI SEND requests made by the user task. This number is also incremented for each FEPI CONVERSE request.
zSZSTRCT	INT	4	ID=153 (DFHFEPI) Number of FEPI START requests made by the user task.
zSZCHROUT	INT	4	ID=154 (DFHFEPI) Number of characters sent through FEPI by the user task.
zSZCHRIN	INT	4	ID=155 (DFHFEPI) Number of characters received through FEPI by the user task.
zSZALLCTO	INT	4	ID=157 (DFHFEPI) Number of times the user task timed out while waiting to allocate a conversation.
zSZRCVTO	INT	4	ID=158 (DFHFEPI) Number of times the user task timed out while waiting to receive data.
zSZTOTCT	INT	4	ID=159 (DFHFEPI) Total number of all FEPI API and SPI requests made by the user task.
zBARSYNCT	INT	4	ID=205 (DFHCBTS) The number of CICS BTS run process, or run activity, requests that the user task made in order to execute a process or activity synchronously.
zBARASYCT	INT	4	ID=206 (DFHCBTS) The number of CICS BTS run process, or run activity, requests that the user task made in order to execute a process or activity asynchronously.
zBALKPACT	INT	4	ID=207 (DFHCBTS) The number of CICS BTS link process, or link activity, requests that the user task issued.
zBADPROCT	INT	4	ID=208 (DFHCBTS) The number of CICS BTS define process requests issued by the user task.
zBADACTCT	INT	4	ID=209 (DFHCBTS) The number of CICS BTS define activity requests issued by the user task.
zBARSPACT	INT	4	ID=210 (DFHCBTS) The number of CICS BTS reset process and reset activity requests issued by the user task.
zBASUPACT	INT	4	ID=211 (DFHCBTS) The number of CICS BTS suspend process, or suspend activity, requests issued by the user task.
zBARMPACT	INT	4	ID=212 (DFHCBTS) The number of CICS BTS resume process, or resume activity, requests issued by the user task.
zBADCPACT	INT	4	ID=213 (DFHCBTS) The number of CICS BTS delete activity, cancel process, or cancel activity, requests issued by the user task.
zBAACQPCT	INT	4	ID=214 (DFHCBTS) The number of CICS BTS acquire process, or acquire activity, requests issued by the user task.
zBATOTPCT	INT	4	ID=215 (DFHCBTS) Total number of CICS BTS process and activity requests issued by the user task.
zBAPRDCCT	INT	4	ID=216 (DFHCBTS) The number of CICS BTS delete, get, move, or put, container requests for process data containers issued by the user task.
zBAACDCCT	INT	4	ID=217 (DFHCBTS) The number of CICS BTS delete, get, move, or put, container requests for current activity data containers issued by the user task.
zBATOTCCT	INT	4	ID=218 (DFHCBTS) Total number of CICS BTS delete, get, move, or put, process container and activity container requests issued by the user task.
zBARATECT	INT	4	ID=219 (DFHCBTS) The number of CICS BTS retrieve-reattach event requests issued by the user task.
zBADFIECT	INT	4	ID=220 (DFHCBTS) The number of CICS BTS define-input event requests issued by the user task.
zBATIAECT	INT	4	

			ID=221 (DFHCBTS) The number of CICS BTS DEFINE TIMER EVENT, CHECK TIMER EVENT, DELETE TIMER EVENT, and FORCE TIMER EVENT requests issued by the user task.
zBATOTECT	INT	4	ID=222 (DFHCBTS) Total number of CICS BTS event-related requests issued by the user task.
zWBRCVCT	INT	4	ID=231 (DFHWEBB) The number of CICS web support RECEIVE requests issued by the user task.
zWBCHRIN	INT	4	ID=232 (DFHWEBB) The number of bytes received by the CICS web support RECEIVE requests issued by the user task.
zWBSENDCT	INT	4	ID=233 (DFHWEBB) The number of CICS web support SEND requests issued by the user task.
zWBCHROUT	INT	4	ID=234 (DFHWEBB) The number of bytes sent by the CICS web support SEND requests issued by the user task.
zWBTOTCT	INT	4	ID=235 (DFHWEBB) The total number of CICS web support requests issued by the user task.
zWBREPRCT	INT	4	ID=236 (DFHWEBB) The number of reads from the repository in temporary storage issued by the user task.
zWBREPWCT	INT	4	ID=237 (DFHWEBB) The number of writes to the repository in temporary storage issued by the user task.
zWBEXTRCT	INT	4	ID=238 (DFHWEBB) The number of CICS web support EXTRACT requests issued by the user task.
zWBBRWCT	INT	4	ID=239 (DFHWEBB) The number of CICS web support browsing requests for HTTPHEADER, FORMFIELD, and QUERYPARM (STARTBROWSE, READNEXT, and ENDBROWSE) issued by the user task.
zWBREADCT	INT	4	ID=224 (DFHWEBB) The number of CICS web support READ HTTPHEADER, READ FORMFIELD, and READ QUERYPARM requests issued by the user task.
zWBWRITCT	INT	4	ID=225 (DFHWEBB) The number of CICS web support WRITE HTTPHEADER requests issued by the user task.
zDHCRECT	INT	4	ID=226 (DFHDOCH) The number of document handler CREATE requests issued by the user task.
zDHINSCT	INT	4	ID=227 (DFHDOCH) The number of document handler INSERT requests issued by the user task.
zDHSETCT	INT	4	ID=228 (DFHDOCH) The number of document handler SET requests issued by the user task.
zDHRETCT	INT	4	ID=229 (DFHDOCH) The number of document handler RETRIEVE requests issued by the user task.
zDHDELCT	INT	4	ID=223 (DFHDOCH) The number of document handler DELETE requests issued by the user task.
zDHTOTCT	INT	4	ID=230 (DFHDOCH) The total number of document handler requests issued by the user task.
zDHTOTDCL	INT	4	ID=240 (DFHDOCH) The total length of all documents created by the user task.
zSOBYENCT	INT	4	ID=242 (DFH SOCK) The number of bytes encrypted by the secure sockets layer for the user task.
zSOBYDECT	INT	4	ID=243 (DFH SOCK) The number of bytes decrypted by the secure sockets layer for the user task.
zSOEXTRCT	INT	4	ID=289 (DFH SOCK) The number of EXTRACT TCP/IP and EXTRACT CERTIFICATE requests issued by the user task.
zSOCNPST	INT	4	ID=290 (DFH SOCK) The total number of requests made by the user task to create a nonpersistent outbound socket.
zSOCPSCT	INT	4	ID=291 (DFH SOCK) The total number of requests made by the user task to create a persistent outbound socket.
zSONPSHWM	INT	4	ID=292 (DFH SOCK) The peak number of nonpersistent outbound sockets owned by the user task.
zSOPSHWM	INT	4	ID=293 (DFH SOCK) The peak number of persistent outbound sockets owned by the user task.

zSORCVCT	INT	4	ID=294 (DFH SOCK) The total number of receive requests issued for outbound sockets (persistent and nonpersistent) by the user task.
zSOCHRIN	INT	4	ID=295 (DFH SOCK) The total number of bytes received on outbound sockets by the user task
zSOSENDCT	INT	4	ID=296 (DFH SOCK) The total number of send requests issued for outbound sockets (persistent and nonpersistent) by the user task.
zSOCHROUT	INT	4	ID=297 (DFH SOCK) The total number of bytes sent on outbound sockets by the user task.
zSOTOTCT	INT	4	ID=298 (DFH SOCK) The total number of socket requests issued by the user task.
zSOMSGIN1	INT	4	ID=301 (DFH SOCK) The number of inbound socket receive requests issued by the user task.
zSOCHRIN1	INT	4	ID=302 (DFH SOCK) The number of characters received by inbound socket receive requests issued by the user task.
zSOMSGOU1	INT	4	ID=303 (DFH SOCK) The number of inbound socket send requests issued by the user task.
zSOCHROU1	INT	4	ID=304 (DFH SOCK) The number of characters sent by inbound socket send requests issued by the user task.
zIMSREQCT	INT	4	ID=179 (DFH DATA) The number of IMS (DBCTL) requests issued by the user task.
zDB2REQCT	INT	4	ID=180 (DFH DATA) The total number of Db2 EXEC SQL and Instrumentation Facility Interface (IFI) requests issued by the user task.
zWMQREQCT	INT	4	ID=395 (DFH DATA) The total number of WebSphere MQ requests issued by the user task.
zTCBATTCT	INT	4	ID=251 (DFH TASK) The number of CICS TCBS attached by or on behalf of the user task.
zDSTCBHWM	INT	4	ID=252 (DFH TASK) The peak number of CICS open TCBS (in TCB modes L8, L9, S8, T8, X8, and X9) that have been concurrently allocated to the user task.
zWBREDOCT	INT	4	ID=331 (DFH WEBB) The number of CICS web support READ HTTPHEADER requests issued by the user task when CICS is an HTTP client.
zWBWRTOCT	INT	4	ID=332 (DFH WEBB) The number of CICS web support WRITE HTTPHEADER requests issued by the user task when CICS is an HTTP client.
zWBRCVIN1	INT	4	ID=333 (DFH WEBB) The number of CICS web support RECEIVE and CONVERSE requests issued by the user task when CICS is an HTTP client.
zWBCHRIN1	INT	4	ID=334 (DFH WEBB) The number of bytes received by the CICS web support RECEIVE and CONVERSE requests issued by the user task when CICS is an HTTP client.
zWBSNDOU1	INT	4	ID=335 (DFH WEBB) The number of CICS web support SEND and CONVERSE requests issued by the user task when CICS is an HTTP client.
zWBCHROU1	INT	4	ID=336 (DFH WEBB) The number of bytes sent by the CICS web support SEND and CONVERSE requests issued by the user task when CICS is an HTTP client.
zWBPARSCT	INT	4	ID=337 (DFH WEBB) The number of CICS web support PARSE URL requests issued by the user task.
zWBRRWOCT	INT	4	ID=338 (DFH WEBB) The number of CICS web support BROWSE HTTPHEADER requests (STARTBROWSE, READNEXT, and ENDBROWSE) issued by the user task when CICS is an HTTP client.
zWBIWBSCT	INT	4	ID=340 (DFH WEBB) The number of EXEC CICS INVOKE SERVICE and EXEC CICS INVOKE WEBSERVICE requests issued by the user task.
zWBREPRDL	INT	4	ID=341 (DFH WEBB) The total length, in bytes, of the data read from the repository in temporary storage by the user task.
zWBREPWDL	INT	4	ID=342 (DFH WEBB) The total length, in bytes, of the data written to the repository in temporary storage by the user task.

zPGTOTCCT	INT	4	ID=321 (DFHCHNL) The number of CICS requests for channel containers issued by the user task.
zPGBRWCCT	INT	4	ID=322 (DFHCHNL) The number of CICS browse requests for channel containers issued by the user task.
zPGGETCCT	INT	4	ID=323 (DFHCHNL) The number of GET CONTAINER and GET64 CONTAINER requests for channel containers issued by the user task.
zPGPUTCCT	INT	4	ID=324 (DFHCHNL) The number of PUT CONTAINER and PUT64 CONTAINER requests for channel containers issued by the user task.
zPGMOVCCT	INT	4	ID=325 (DFHCHNL) The number of MOVE CONTAINER requests for channel containers issued by the user task.
zPGGETCDL	INT	4	ID=326 (DFHCHNL) The total length, in bytes, of the data in the containers of all the GET CONTAINER CHANNEL and GET64 CONTAINER CHANNEL commands issued by the user task.
zPGPUTCDL	INT	4	ID=327 (DFHCHNL) The total length, in bytes, of the data in the containers of all the PUT CONTAINER CHANNEL and PUT64 CONTAINER CHANNEL commands issued by the user task.
zPGCRECCT	INT	4	ID=328 (DFHCHNL) The number of containers created by MOVE, PUT CONTAINER, and PUT64 CONTAINER requests for channel containers issued by the user task.
zPGCSTHWM	INT	4	ID=329 (DFHCHNL) Maximum amount (high-water mark), in bytes, of container storage allocated to the user task.
zISALLOCT	INT	4	ID=288 (DFH SOCK) The number of allocate session requests issued by the user task for sessions using IPIC.
zEICTOTCT	INT	4	ID=402 (DFHCICS) Total number of Interval Control Start, Cancel, Delay, and Retrieve requests issued by the user task.
zECSIGECT	INT	4	ID=415 (DFHCICS) The number of EXEC CICS SIGNAL EVENT commands issued by the user task.
zECEFOPT	INT	4	ID=416 (DFHCICS) The number of event filter operations performed by the user task.
zECEVNTCT	INT	4	ID=417 (DFHCICS) The number of events captured by the user task.
zECSEVCCT	INT	4	ID=418 (DFHCICS) The number of synchronous emission events captured by the user task.
zTIASKTCT	INT	4	ID=405 (DFHCICS) The number of EXEC CICS ASKTIME commands issued by the user task.
zTITOTCT	INT	4	ID=406 (DFHCICS) The total number of EXEC CICS ASKTIME, CONVERTTIME, and FORMATTIME commands issued by the user task.
zBFDGSTCT	INT	4	ID=408 (DFHCICS) The total number of EXEC CICS BIF DIGEST commands issued by the user task.
zBFTOTCT	INT	4	ID=409 (DFHCICS) The total number of EXEC CICS BIF DEEDIT and BIF DIGEST commands issued by the user task.
zMLXSSTDL	INT	4	ID=412 (DFHWEBB) The total length of the documents that were parsed using the z/OS XML System Services parser.
zMLXMLTCT	INT	4	ID=413 (DFHWEBB) The number of EXEC CICS TRANSFORM commands issued by the user task.
zWSACBLCT	INT	4	ID=420 (DFHWEBB) The number of EXEC CICS WSACONTEXT BUILD commands issued by the user task.
zWSACGTCT	INT	4	ID=421 (DFHWEBB) The number of EXEC CICS WSACONTEXT GET commands issued by the user task.
zWSAEPCT	INT	4	ID=422 (DFHWEBB) The number of EXEC CICS WSAEPR CREATE commands issued by the user task.
zWSATOTCT	INT	4	ID=423 (DFHWEBB) The total number of EXEC CICS WS-Addressing commands issued by the user task.
zWBSFCRCT	INT	4	ID=386 (DFHWEBB) The number of EXEC CICS SOAPFAULT CREATE commands issued by the user task.
zWBSFTOCT	INT	4	ID=387 (DFHWEBB) The total number of EXEC CICS SOAPFAULT ADD, CREATE, and DELETE commands issued by the user task.

zWBISSFCT	INT	4	ID=388 (DFHWEBB) The total number of SOAP faults received in response to the EXEC CICS INVOKE SERVICE and EXEC CICS INVOKE WEBSERVICE commands issued by the user task.
zWBSREQBL	INT	4	ID=390 (DFHWEBB) For web service applications, the SOAP request body length.
zWBSRSPBL	INT	4	ID=392 (DFHWEBB) For web service applications, the SOAP response body length.
zWBJSNRQL	INT	4	ID=424 (DFHWEBB) For JSON web service applications, the JSON message request length.
zWBJSNRPL	INT	4	ID=425 (DFHWEBB) For JSON web service applications, the JSON message response length.
zMPPRTXCD	INT	4	ID=449 (DFHCICS) The number of policy task rule thresholds that this task has exceeded.
zNCGETCT	INT	4	ID=464 (DFHCICS) The total number of requests to a named counter server to satisfy EXEC CICS GET COUNTER and EXEC CICS GET DCOUNTER commands issued by the user task.

SMF110#01_Performance_Class_ADP1_PCR2.zUSRDISPT.<fieldname>

zUSRDISPT_S	TIME	8	Total elapsed time during which the user task was dispatched on each CICS TCB under which the task ran.
zUSRDISPT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCR2.zUSRCPUT.<fieldname>

zUSRCPUT_S	TIME	8	Processor time for which the user task was dispatched on each CICS TCB under which the task ran.
zUSRCPUT_N	INT	3	Count of the number of time periods contributing to the total processor time.

SMF110#01_Performance_Class_ADP1_PCR2.zCPUTONCP.<fieldname>

zCPUTONCP_S	TIME	8	The total task processor time on a standard processor for which the user task was dispatched on each CICS TCB under which the task ran.
zCPUTONCP_N	INT	3	Count of the number of time periods contributing to the total processor time.

SMF110#01_Performance_Class_ADP1_PCR2.zOFFLCPUT.<fieldname>

zOFFLCPUT_S	TIME	8	The total task processor time that was spent on a standard processor but was eligible for offload to a specialty processor (zIIP or zAAP).
zOFFLCPUT_N	INT	3	Count of the number of time periods contributing to the total processor time.

SMF110#01_Performance_Class_ADP1_PCR2.zSUSPTIME.<fieldname>

zSUSPTIME_S	TIME	8	Total elapsed wait time for which the user task was suspended by the dispatcher.
zSUSPTIME_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCR2.zDISPWTT.<fieldname>

zDISPWTT_S	TIME	8	Elapsed time for which the user task waited for redispach. This time is the aggregate of the wait times between each event completion and user-task redispach.
zDISPWTT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCR2.zQRDISPT.<fieldname>

zQRDISPT_S	TIME	8	The elapsed time for which the user task was dispatched on the CICS QR TCB.
zQRDISPT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCR2.zQRCPUT.<fieldname>			
zQRCPUT_S	TIME	8	The processor time for which the user task was dispatched on the CICS QR TCB.
zQRCPUT_N	INT	3	Count of the number of time periods contributing to the total processor time.

SMF110#01_Performance_Class_ADP1_PCR2.zMSDISPT.<fieldname>			
zMSDISPT_S	TIME	8	Elapsed time for which the user task was dispatched on each CICS TCB.
zMSDISPT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCR2.zMSCPUT.<fieldname>			
zMSCPUT_S	TIME	8	The processor time for which the user task was dispatched on each CICS TCB.
zMSCPUT_N	INT	3	Count of the number of time periods contributing to the total processor time.

SMF110#01_Performance_Class_ADP1_PCR2.zRODISPT.<fieldname>			
zRODISPT_S	TIME	8	The elapsed time during which the user task was dispatched by the CICS dispatcher on the CICS RO mode TCB. The RO TCB is used for loading programs, unless the command to load the program (EXEC CICS LOAD, XCTL, or LINK) is issued by an application that is currently running on an open TCB.
zRODISPT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCR2.zROCPUT.<fieldname>			
zROCPUT_S	TIME	8	The processor time during which the user task was dispatched by the CICS dispatcher on the CICS RO mode TCB. The RO TCB is used for loading programs, unless the command to load the program (EXEC CICS LOAD, XCTL, or LINK) is issued by an application that is currently running on an open TCB.
zROCPUT_N	INT	3	Count of the number of time periods contributing to the total processor time.

SMF110#01_Performance_Class_ADP1_PCR2.zKY8DISPT.<fieldname>			
zKY8DISPT_S	TIME	8	The total elapsed time during which the user task was dispatched by the CICS dispatcher on a CICS Key 8 mode TCB.
zKY8DISPT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCR2.zKY8CPUT.<fieldname>			
zKY8CPUT_S	TIME	8	The processor time during which the user task was dispatched by the CICS dispatcher on a CICS Key 8 mode TCB.
zKY8CPUT_N	INT	3	Count of the number of time periods contributing to the total processor time.

SMF110#01_Performance_Class_ADP1_PCR2.zKY9DISPT.<fieldname>			
zKY9DISPT_S	TIME	8	The total elapsed time during which the user task was dispatched by the CICS dispatcher on a CICS Key 9 mode TCB.
zKY9DISPT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCR2.zKY9CPUT.<fieldname>			
zKY9CPUT_S	TIME	8	The processor time during which the user task was dispatched by the CICS dispatcher on a CICS Key 9 mode TCB.
zKY9CPUT_N	INT	3	Count of the number of time periods contributing to the total processor time.

SMF110#01_Performance_Class_ADP1_PCR2.zL8CPUT.<fieldname>			
--	--	--	--

zL8CPUT_S	TIME	8	The processor time during which the user task was dispatched by the CICS dispatcher domain on a CICS L8 mode TCB.
zL8CPUT_N	INT	3	Count of the number of time periods contributing to the total processor time.

SMF110#01_Performance_Class_ADP1_PCR2.zL9CPUT.<fieldname>

zL9CPUT_S	TIME	8	The processor time during which the user task was dispatched by the CICS dispatcher domain on a CICS L9 mode TCB.
zL9CPUT_N	INT	3	Count of the number of time periods contributing to the total processor time.

SMF110#01_Performance_Class_ADP1_PCR2.zS8CPUT.<fieldname>

zS8CPUT_S	TIME	8	The processor time during which the user task was dispatched by the CICS dispatcher domain on a CICS S8 mode TCB.
zS8CPUT_N	INT	3	Count of the number of time periods contributing to the total processor time.

SMF110#01_Performance_Class_ADP1_PCR2.zX8CPUT.<fieldname>

zX8CPUT_S	TIME	8	The processor time during which the user task was dispatched by the CICS dispatcher domain on a CICS X8 mode TCB.
zX8CPUT_N	INT	3	Count of the number of time periods contributing to the total processor time.

SMF110#01_Performance_Class_ADP1_PCR2.zX9CPUT.<fieldname>

zX9CPUT_S	TIME	8	The processor time during which the user task was dispatched by the CICS dispatcher domain on a CICS X9 mode TCB.
zX9CPUT_N	INT	3	Count of the number of time periods contributing to the total processor time.

SMF110#01_Performance_Class_ADP1_PCR2.zT8CPUT.<fieldname>

zT8CPUT_S	TIME	8	The processor time during which the user task was dispatched by the CICS dispatcher domain on a CICS T8 mode TCB.
zT8CPUT_N	INT	3	Count of the number of time periods contributing to the total processor time.

SMF110#01_Performance_Class_ADP1_PCR2.zQRMODDLY.<fieldname>

zQRMODDLY_S	TIME	8	The elapsed time for which the user task waited for redispach on the CICS QR mode TCB.
zQRMODDLY_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCR2.zMXTOTDLY.<fieldname>

zMXTOTDLY_S	TIME	8	The elapsed time in which the user task waited to obtain a CICS L8 or L9 mode open TCB, because the region had reached the limit set by CICS for these TCBs.
zMXTOTDLY_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCR2.zMAXXTDLY.<fieldname>

zMAXXTDLY_S	TIME	8	The elapsed time for which the user task waited to obtain a CICS XP TCB (X8 or X9 mode), because the CICS system reached the limit set by CICS for these types of TCB.
zMAXXTDLY_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCR2.zMAXSTDLY.<fieldname>

zMAXSTDLY_S	TIME	8	The elapsed time for which the user task waited to obtain a CICS SSL TCB (S8 mode), because the CICS system reached the limit set by the system initialization parameter MAXSSLTCBS.
-------------	------	---	--

zMAXSTDLY_N	INT	3	Count of the number of time periods contributing to the total elapsed time.
-------------	-----	---	---

SMF110#01_Performance_Class_ADP1_PCR2.zMAXTTDLY.<fieldname>

zMAXTTDLY_S	TIME	8	The elapsed time for which the user task waited to obtain a T8 TCB, because the CICS system reached the limit of available threads.
zMAXTTDLY_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCR2.zDSTCBMWT.<fieldname>

zDSTCBMWT_S	TIME	8	The elapsed time that the user task spent in TCB mismatch waits. That is, waiting because no available TCB matched the request, but at least one non matching TCB was free.
zDSTCBMWT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCR2.zDSCHMDLY.<fieldname>

zDSCHMDLY_S	TIME	8	The elapsed time in which the user task waited for redispach after a CICS Dispatcher change-TCB mode request was issued by or on behalf of the user task.
zDSCHMDLY_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCR2.zEXWTTIME.<fieldname>

zEXWTTIME_S	TIME	8	The total elapsed time for which the user waited on exception conditions.
zEXWTTIME_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCR2.zTCIOWTT.<fieldname>

zTCIOWTT_S	TIME	8	Elapsed time for which the user task waited for input from the terminal operator after issuing a RECEIVE request.
zTCIOWTT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCR2.zFCIOWTT.<fieldname>

zFCIOWTT_S	TIME	8	Elapsed time in which the user task waited for file I/O.
zFCIOWTT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCR2.zFCXCWTT.<fieldname>

zFCXCWTT_S	TIME	8	The elapsed time in which the user task waited for exclusive control of a VSAM control interval.
zFCXCWTT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCR2.zFCVSWTT.<fieldname>

zFCVSWTT_S	TIME	8	The elapsed time in which the user task waited for a VSAM string.
zFCVSWTT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCR2.zJCIOWTT.<fieldname>

zJCIOWTT_S	TIME	8	Elapsed time for which the user task waited for journal (logstream) I/O.
zJCIOWTT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCR2.zTSIOWTT.<fieldname>

zTSIOWTT_S	TIME	8	Elapsed time for which the user task waited for VSAM temporary storage I/O.
zTSIOWTT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCR2.zIRIOWTT.<fieldname>

zIRIOWTT_S	TIME	8	Elapsed time for which the user task waited for control at this end of an MRO link.
------------	------	---	---

zIRIOWTT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.
------------	-----	---	---

SMF110#01_Performance_Class_ADP1_PCR2.zTDIOWTT.<fieldname>

zTDIOWTT_S	TIME	8	Elapsed time in which the user waited for VSAM transient data I/O.
zTDIOWTT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCR2.zPCLOADTM.<fieldname>

zPCLOADTM_S	TIME	8	Elapsed time in which the user task waited for fetches from DFHRPL or dynamic LIBRARY concatenations.
zPCLOADTM_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCR2.zDSPDELAY.<fieldname>

zDSPDELAY_S	TIME	8	The elapsed time waiting for first dispatch.
zDSPDELAY_N	INT	3	Number of waits.

SMF110#01_Performance_Class_ADP1_PCR2.zTCLDELAY.<fieldname>

zTCLDELAY_S	TIME	8	The elapsed time waiting for first dispatch, which was delayed because of the limits set for the transaction class of this transaction (zTCLSNM) being reached.
zTCLDELAY_N	INT	3	Number of waits.

SMF110#01_Performance_Class_ADP1_PCR2.zMXTDELAY.<fieldname>

zMXTDELAY_S	TIME	8	The elapsed time waiting for the first dispatch, which was delayed because of the limits set by the system parameter, MXT, being reached.
zMXTDELAY_N	INT	3	Number of waits.

SMF110#01_Performance_Class_ADP1_PCR2.zENQDELAY.<fieldname>

zENQDELAY_S	TIME	8	The elapsed time waiting for a CICS task control local enqueue.
zENQDELAY_N	INT	3	The number of local enqueues.

SMF110#01_Performance_Class_ADP1_PCR2.zGNQDELAY.<fieldname>

zGNQDELAY_S	TIME	8	The elapsed time waiting for a CICS task control global enqueue.
zGNQDELAY_N	INT	3	The number of global enqueues.

SMF110#01_Performance_Class_ADP1_PCR2.zLU61WTT.<fieldname>

zLU61WTT_S	TIME	8	The elapsed time for which the user task waited for I/O on a LUTYPE6.1 connection or session.
zLU61WTT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCR2.zLU62WTT.<fieldname>

zLU62WTT_S	TIME	8	The elapsed time for which the user task waited for I/O on a LUTYPE6.2 (APPC) connection or session.
zLU62WTT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCR2.zSZWAIT.<fieldname>

zSZWAIT_S	TIME	8	Elapsed time in which the user task waited for all FEPI services.
zSZWAIT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCR2.zRMITIME.<fieldname>

zRMITIME_S	TIME	8	The total elapsed time spent in the CICS Resource Manager Interface (RMI).
zRMITIME_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCR2.zRMISUSP.<fieldname>			
zRMISUSP_S	TIME	8	The total elapsed time that the task was suspended by the CICS dispatcher while in the CICS Resource Manager Interface (RMI).
zRMISUSP_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCR2.zSYNCTIME.<fieldname>			
zSYNCTIME_S	TIME	8	Total elapsed time for which the user task was dispatched and was processing syncpoint requests.
zSYNCTIME_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCR2.zRLSWAIT.<fieldname>			
zRLSWAIT_S	TIME	8	Elapsed time in which the user task waited for RLS file I/O.
zRLSWAIT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCR2.zRLSCLPUT.<fieldname>			
zRLSCLPUT_S	TIME	8	For RLS requests issued only from the QR TCB, this value is the RLS File Request SRB CPU time that this transaction spent processing RLS file requests.
zRLSCLPUT_N	INT	3	Count of the number of time periods contributing to the total CPU SRB processor time.

SMF110#01_Performance_Class_ADP1_PCR2.zLMDELAY.<fieldname>			
zLMDELAY_S	TIME	8	The elapsed time that the user task waited to acquire a lock on a resource.
zLMDELAY_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCR2.zWTXWAIT.<fieldname>			
zWTXWAIT_S	TIME	8	The elapsed time that the user task waited for one or more ECBs, passed to CICS by the user task using the EXEC CICS WAIT EXTERNAL ECBLIST command, to be posted by the MVS POST command.
zWTXWAIT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCR2.zWTCEWAIT.<fieldname>			
zWTCEWAIT_S	TIME	8	The elapsed time that the user task waited for one of these events: 1. One or more ECBs, passed to CICS by the user task using the EXEC CICS WAITCICS ECBLIST command, to be posted by the MVS POST command. 2. Completion of an event initiated by the same or by another user task.
zWTCEWAIT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCR2.zICDELAY.<fieldname>			
zICDELAY_S	TIME	8	The elapsed time that the user task waited as a result of issuing one of the following commands: 1. An interval control EXEC CICS DELAY command for a specified time interval. 2. An interval control EXEC CICS DELAY command for a specified time of day to expire. 3. An interval control EXEC CICS RETRIEVE command with the WAIT option specified.
zICDELAY_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCR2.zGVUPWAIT.<fieldname>			
zGVUPWAIT_S	TIME	8	The elapsed time that the user task waited as a result of giving up control to another task.
zGVUPWAIT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCR2.zTSSHWAIT.<fieldname>			
zTSSHWAIT_S	TIME	8	Elapsed time that the user task waited for an asynchronous shared temporary storage request to a temporary storage data server to complete.

zTSSHWAIT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.
-------------	-----	---	---

SMF110#01_Performance_Class_ADP1_PCR2.zCFDWAIT.<fieldname>

zCFDWAIT_S	TIME	8	The elapsed time in which the user task waited for a data table access request to the Coupling Facility Data Table server to complete.
zCFDWAIT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCR2.zSRVSYWTT.<fieldname>

zSRVSYWTT_S	TIME	8	Total elapsed time in which the user task waited for syncpoint or resynchronization processing using the Coupling Facility data tables server to complete.
zSRVSYWTT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCR2.zRRMSWAIT.<fieldname>

zRRMSWAIT_S	TIME	8	The elapsed time in which the user task waited indoubt using resource recovery services for EXCI.
zRRMSWAIT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCR2.zRUNTRWTT.<fieldname>

zRUNTRWTT_S	TIME	8	The elapsed time in which the user task waited for completion of a transaction that ran as a result of the user task issuing a CICS BTS run process request and a run activity request synchronously.
zRUNTRWTT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCR2.zSYNCDLY.<fieldname>

zSYNCDLY_S	TIME	8	The elapsed time in which the user task waited for a syncpoint request to be issued by its parent transaction.
zSYNCDLY_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCR2.zSOIOWTT.<fieldname>

zSOIOWTT_S	TIME	8	The elapsed time for which the user task waited for inbound socket I/O.
zSOIOWTT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCR2.zIMSWAIT.<fieldname>

zIMSWAIT_S	TIME	8	The elapsed time during which the user task waited for DBCTL to service the IMS requests issued by the user task.
zIMSWAIT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCR2.zDB2RDYQW.<fieldname>

zDB2RDYQW_S	TIME	8	The elapsed time during which the user task waited for a Db2 thread to become available.
zDB2RDYQW_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCR2.zDB2CONWT.<fieldname>

zDB2CONWT_S	TIME	8	The elapsed time during which the user task waited for a Db2 connection to become available for use with the user task's open TCB.
zDB2CONWT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCR2.zWMQGETWT.<fieldname>

zWMQGETWT_S	TIME	8	The elapsed time during which the user task waited for WebSphere MQ to service the user task's GETWAIT request.
zWMQGETWT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCR2.zJVMTIME.<fieldname>

zJVMTIME_S	TIME	8	The total elapsed time spent in the JVM by the user task.
zJVMTIME_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCR2.zJVMSUSP.<fieldname>

zJVMSUSP_S	TIME	8	The elapsed time for which the user task was suspended by the CICS dispatcher while running in the JVM.
zJVMSUSP_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCR2.zSOOIOWTT.<fieldname>

zSOOIOWTT_S	TIME	8	The total elapsed time that the user task waited on outbound sockets.
zSOOIOWTT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCR2.zRQRWAIT.<fieldname>

zRQRWAIT_S	TIME	8	The elapsed time during which the request receiver user task CIRR (or user specified transaction ID) waited for any outstanding replies to be satisfied.
zRQRWAIT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCR2.zRQPWAIT.<fieldname>

zRQPWAIT_S	TIME	8	The elapsed time during which the request processor user task CIRP waited for any outstanding replies to be satisfied.
zRQPWAIT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCR2.zOTSINDWT.<fieldname>

zOTSINDWT_S	TIME	8	The elapsed time in which the user task was dispatched or suspended indoubt (or both) while processing a syncpoint for an Object Transaction Service (OTS) syncpoint request.
zOTSINDWT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCR2.zJVMITIME.<fieldname>

zJVMITIME_S	TIME	8	The elapsed time spent initializing the JVM environment.
zJVMITIME_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCR2.zJVMRTIME.<fieldname>

zJVMRTIME_S	TIME	8	Reserved field, returns zero.
zJVMRTIME_N	INT	3	Reserved field, returns zero.

SMF110#01_Performance_Class_ADP1_PCR2.zPTPWAIT.<fieldname>

zPTPWAIT_S	TIME	8	The elapsed time for which the user task waited for the 3270 bridge partner transaction to complete.
zPTPWAIT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCR2.zDSMMSWWT.<fieldname>

zDSMMSWWT_S	TIME	8	The elapsed time that the user task spent waiting because no TCB was available and a TCB was not created because of MVS storage constraints.
zDSMMSWWT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCR2.zISIWTT.<fieldname>

zISIWTT_S	TIME	8	The elapsed time for which a user task waited for control at this end of an IPIC connection.
zISIWTT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCR2.zJVMTHDWT.<fieldname>

zJVMTHDWT_S	TIME	8	The elapsed time that the user task waited to obtain a JVM server thread because the CICS system had reached the thread limit for a JVM server in the CICS region.
zJVMTHDWT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCR2.zWMQASRBT.<fieldname>

zWMQASRBT_S	TIME	8	The WebSphere MQ SRB time this transaction spent processing WebSphere MQ API requests.
zWMQASRBT_N	INT	3	Count of the number of time periods contributing to the total SRB time.

SMF110#01_Performance_Class_ADP1_PCR2.zTDILWTT.<fieldname>

zTDILWTT_S	TIME	8	The elapsed time for which the user task waited for an intrapartition transient data lock (TDIPLOCK).
zTDILWTT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCR2.zTDELWTT.<fieldname>

zTDELWTT_S	TIME	8	The elapsed time for which the user task waited for an extrapartition transient data lock (TDEPLOCK).
zTDELWTT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCR2.zROMODDLY.<fieldname>

zROMODDLY_S	TIME	8	The elapsed time for which the user task waited for redispach on the CICS RO TCB.
zROMODDLY_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCR2.zSOMODDLY.<fieldname>

zSOMODDLY_S	TIME	8	The elapsed time for which the user task waited for redispach on the CICS SO TCB.
zSOMODDLY_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCR2.zISALWTT.<fieldname>

zISALWTT_S	TIME	8	The elapsed time for which a user task waited for an allocate request for an IPIC session.
zISALWTT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCR2.zTCALWTT.<fieldname>

zTCALWTT_S	TIME	8	The elapsed time for which a user task waited for an allocate request for an MRO (Inter-Region Communication), LU6.1, or LU6.2 session.
zTCALWTT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCR2.zDSAPTHWT.<fieldname>

zDSAPTHWT_S	TIME	8	The dispatcher allocated pthread wait time. This is the time that the transaction had to wait for a Liberty pthread to be allocated during links to Liberty programs.
zDSAPTHWT_N	INT	3	Count of the number of time periods contributing to the total wait time.

SMF110#01_Performance_Class_ADP1_PCR2.zRMITOTAL.<fieldname>

zRMITOTAL_S	TIME	8	The total elapsed time spent in the CICS Resource Manager Interface (RMI).
zRMITOTAL_N	INT	3	Count of the number of time periods contributing to the total elapsed time spent in the CICS Resource Manager Interface (RMI).

SMF110#01_Performance_Class_ADP1_PCR2.zRMIOOTHER.<fieldname>

zRMIOOTHER_S	TIME	8	The total elapsed time spent in the CICS RMI for resource manager requests other than Db2, DBCTL, EXEC DLI, IBM MQ, CICSplex SM and
--------------	------	---	---

			CICS TCP/IP socket requests.
zRMIOther_N	INT	3	Count of the number of time periods contributing to the total elapsed time spent in the CICS RMI for resource manager requests other than Db2, DBCTL, EXEC DLI, IBM MQ, CICSplex SM and CICS TCP/IP socket requests.

SMF110#01_Performance_Class_ADP1_PCR2.zRMIDB2.<fieldname>

zRMIDB2_S	TIME	8	The total elapsed time spent in the CICS RMI for Db2 requests.
zRMIDB2_N	INT	3	Count of the number of time periods contributing to the total elapsed time spent in the CICS RMI for Db2 requests.

SMF110#01_Performance_Class_ADP1_PCR2.zRMIDBCTL.<fieldname>

zRMIDBCTL_S	TIME	8	The total elapsed time spent in the CICS RMI for DBCTL requests.
zRMIDBCTL_N	INT	3	Count of the number of time periods contributing to the total elapsed time spent in the CICS RMI for DBCTL requests.

SMF110#01_Performance_Class_ADP1_PCR2.zRMIEXDLI.<fieldname>

zRMIEXDLI_S	TIME	8	The total elapsed time spent in the CICS RMI for EXEC DLI requests.
zRMIEXDLI_N	INT	3	Count of the number of time periods contributing to the total elapsed time spent in the CICS RMI for EXEC DLI requests.

SMF110#01_Performance_Class_ADP1_PCR2.zRMIMQM.<fieldname>

zRMIMQM_S	TIME	8	The total elapsed time spent in the CICS RMI for IBM MQ requests.
zRMIMQM_N	INT	3	Count of the number of time periods contributing to the total elapsed time spent in the CICS RMI for IBM MQ requests.

SMF110#01_Performance_Class_ADP1_PCR2.zRMICPSM.<fieldname>

zRMICPSM_S	TIME	8	The total elapsed time spent in the CICS RMI for CICSplex SM requests.
zRMICPSM_N	INT	3	Count of the number of time periods contributing to the total elapsed time spent in the CICS RMI for CICSplex SM requests.

SMF110#01_Performance_Class_ADP1_PCR2.zRMITCPIP.<fieldname>

zRMITCPIP_S	TIME	8	The total elapsed time spent in the CICS RMI for CICS TCP/IP socket requests.
zRMITCPIP_N	INT	3	Count of the number of time periods contributing to the total elapsed time spent in the CICS RMI for CICS TCP/IP socket requests.

Secondary segment: SMF110#01_Performance_Class_ADP1_PCO3

Field Name	Type	Len	Description
SMF110#01_Performance_Class_ADP1_PCO3.<fieldname>			
zTRAN	CHAR	4	ID=001 (DFHTASK) Transaction identification.
zTERM	CHAR	4	ID=002 (DFHTERM) Terminal or session identification. This field is null if the task is not associated with a terminal or session.
zUSERID	CHAR	8	ID=089 (DFHCICS) User identification at task creation. This identification can also be the remote user identifier for a task created as the result of receiving an ATTACH request across an MRO or APPC link with attach-time security enabled.
zTTYTYPE	CHAR	4	ID=004 (DFHTASK) Transaction start type. The high-order bytes (0 and 1) are set as follows: 'TO' => Attached from terminal input. 'S' => Attached by automatic transaction initiation (ATI) without data. 'SD' => Attached by automatic transaction initiation (ATI) with data. 'QD' => Attached by transient data trigger level. 'U' => Attached by user request. 'TP' => Attached from terminal TCTTE transaction ID. 'SZ' => Attached by front-end programming interface (FEPI).

zSTART	TSTMP	8	ID=005 (DFHCICS) Start time of measurement interval, which is one of the following times: - The time at which the user task was attached. - The time at which data recording was most recently reset in support of the MCT user event monitoring point DELIVER option or the monitoring options MNCONV, MNSYNC, or FREQUENCY.
zSTOP	TSTMP	8	ID=006 (DFHCICS) Finish time of measurement interval, which is one of the following times: - The time at which the user task was detached. - the time at which data recording was completed in support of the MCT user event monitoring point DELIVER option or the monitoring options MNCONV, MNSYNC, or FREQUENCY.
zTRANNUM	DEC	4 (7,0)	ID=031 (DFHTASK) Transaction identification number or ' III' for system initialisation, ' TCP' for terminal control.
zTRANPRI	INT	4	ID=109 (DFHTASK) Transaction priority when monitoring of the task was initialized.
zTCLSNAME	CHAR	8	ID=166 (DFHTASK) Transaction class name. This field is null if the transaction is not in a TRANCLASS.
zLUNAME	CHAR	8	ID=111 (DFHTERM) The z/OS Communications Server SNA logical unit name (if available) of the terminal that is associated with this transaction.
zPGMNAME	CHAR	8	ID=071 (DFHPROG) The name of the first program invoked at attach-time.
zNETUOWPX	CHAR	20	ID=097 (DFHTASK) Fully qualified name by which the originating system is known to the z/OS Communications Server network.
zNETUOWSX	CHAR	8	ID=098 (DFHTASK) Name by which the network unit of work ID is known in the originating system.
zRSYSID	CHAR	4	ID=130 (DFHCICS) The name (system ID) of the remote system to which this transaction was routed, either statically or dynamically.
zPERRECNT	INT	4	ID=131 (DFHCICS) The number of performance class records written by the CICS Monitoring Facility (CMF) for the user task.
zRMUOWID	CHAR	8	ID=132 (DFHTASK) The identifier of the unit of work (unit of recovery) for this task.
zSRVCLASS	CHAR	8	ID=167 (DFHCICS) The z/OS Workload Manager (WLM) service class for this transaction.
zRPTCLASS	CHAR	8	ID=168 (DFHCICS) The z/OS Workload Manager (WLM) report class for this transaction.
zFCTYNAME	CHAR	4	ID=163 (DFHTASK) Transaction facility name. This field is null if the transaction is not associated with a facility.

SMF110#01_Performance_Class_ADP1_PCO3.zTRANFLAG.<fieldname>

zTRAN_Facility	INT (ENUM)	1	Transaction facility type.
zTRAN_id	INT (ENUM)	1	Transaction identification.

SMF110#01_Performance_Class_ADP1_PCO3.zTRANFLAG.zTRAN_WLM.<fieldname>

zResponse	BIT	1	Report the total response time (begin-to-end phase) for completed work request (transaction).
zAllPhase	BIT	1	Notify that the entire execution phase of the work request is complete.
zSubPhase	BIT	1	Notify that a subset of the execution phase of the work request is complete.
zAbNormal	BIT	1	This transaction has been reported to the z/OS workload manager as completing abnormally because it has tried to access Db2 and a connection unavailable response has been returned. This abnormal completion occurs when all the following are true: 1. zResponse is set. 2. CICS is not connected to Db2. 3. The CICS-Db2 adapter is in standby mode (STANDBYMODE(RECONNECT) or STANDBYMODE(CONNECT)). 4. CONNECTERROR(SQLCODE) is specified, causing the application to receive a -923 SQL code.

SMF110#01_Performance_Class_ADP1_PCO3.zTRANFLAG.zTRAN_Def.<fieldname>

zTDLocBelow	BIT	1	1 => TASKDATALOC=BELOW
-------------	-----	---	------------------------

zTDKeyCICS	BIT	1	1 => TASKDATAKEY=CICS
zIsolateNo	BIT	1	1 => ISOLATE=NO
zDynamic	BIT	1	1 => DYNAMIC=YES

SMF110#01_Performance_Class_ADP1_PCO3.zTRANFLAG.<fieldname>

zTRAN_Origin	INT (ENUM)	1	Transaction Origin Type.
--------------	---------------	---	--------------------------

SMF110#01_Performance_Class_ADP1_PCO3.zTRANFLAG.zTRAN_Status.<fieldname>

zOrigin	BIT	1	The transaction origin.
zResource	BIT	1	Resource class record, or records, for this task.
zIdentity	BIT	1	Identity class record, or records, for this task.
zPurge	BIT	1	Task purge or runaway resulted in the open TCB the task was executing on being terminated.
zAbend	BIT	1	Task abnormally terminated.

SMF110#01_Performance_Class_ADP1_PCO3.zTRANFLAG.<fieldname>

zTRAN_Track	INT	1	Transaction tracking origin data tag.
-------------	-----	---	---------------------------------------

SMF110#01_Performance_Class_ADP1_PCO3.zTRANFLAG.zRecovery_Manager.<fieldname>

zInDWaitNo	BIT	1	Indoubt WAIT=NO.
zInDCommit	BIT	1	Indoubt ACTION=COMMIT.
zUOWInD	BIT	1	Recovery manager, UOW resolved with indoubt action.
zUOWShunt	BIT	1	Recovery manager, Shunt.
zUOWUnShunt	BIT	1	Recovery manager, Unshunt.
zInDFail	BIT	1	Recovery manager, Indoubt failure.
zROFail	BIT	1	Recovery manager, Resource owner failure.

SMF110#01_Performance_Class_ADP1_PCO3.zTERMINFO.<fieldname>

zTERM_Assoc	INT (ENUM)	1	Task associated with terminal or session.
zTERM_SessType	INT (ENUM)	1	If the principal facility for this task is a session, this field identifies the session type.
zTERM_AM	INT (ENUM)	1	Identifies the access method defined for the terminal ID or session ID in field TERM.
zTERM_Type	INT (ENUM)	1	Identifies the terminal or session type for the terminal id or session id in TERM.

SMF110#01_Performance_Class_ADP1_PCO3.<fieldname>

zTERMCNNM	CHAR	4	ID=169 (DFHTERM) Terminal session connection name. If the terminal facility associated with this transaction is a session, this field is the name of the owning connection (sysid).
zBRDGTRAN	CHAR	4	ID=124 (DFHTASK) Bridge listener transaction identifier. For CICS 3270 Bridge transactions, this field is the name of the Bridge listener transaction that attached the user task.
zRRMSURID	CHAR	16	ID=190 (DFHTASK) RRMS/MVS unit-of-recovery ID (URID).
zPRCSNAME	CHAR	36	ID=200 (DFHCBTS) The name of the CICS business transaction service (BTS) process of which the user task formed part.
zPRCSTYPE	CHAR	8	ID=201 (DFHCBTS) The process-type of the CICS BTS process of which the user task formed part.
zPRCSID	CHAR	52	ID=202 (DFHCBTS) The CICS-assigned identifier of the CICS BTS root activity that the user task implemented.

zACTVTYID	CHAR	52	ID=203 (DFHCBTS) The CICS-assigned identifier of the CICS BTS root activity that the user task implemented.
zACTVTYNM	CHAR	16	ID=204 (DFHCBTS) The name of the CICS BTS activity that the user task implemented.
zCLIPADDR	CHAR	40	ID=318 (DFH SOCK) The IP address of the client or Telnet client.
zTRNGRPID	CHAR	28	ID=082 (DFHTASK) The transaction group ID is assigned at transaction attach time, and can be used to correlate the transactions that CICS runs for the same incoming work request. For example, the CWXN and CWBA transactions for Web requests.
zNETID	CHAR	8	ID=197 (DFHTERM) NETID if a network qualified name has been received from the Communications Server. If it is a resource and the network qualified name has not yet been received, NETID is 8 blanks. In all other cases, it is nulls.
zRLUNAME	CHAR	8	ID=198 (DFHTERM) Real network name if a network qualified name has been received from the Communications Server.
zTCPSRVCE	CHAR	8	ID=245 (DFH SOCK) The TCP/IP service name that attached the user task.
zPORTNUM	INT	4	ID=246 (DFH SOCK) The TCP/IP port number of the TCP/IP service that attached the user task.
zOTSTID	CHAR	128	ID=194 (DFHTASK) This field is the first 128 bytes of the Object Transaction Service (OTS) Transaction ID (TID).
zCLIPPORT	INT	4	ID=330 (DFH SOCK) The TCP/IP port number of the originating client or Telnet client.
zISIPICNM	CHAR	8	ID=305 (DFH SOCK) The name of the IPIC (IPCONN) entry of the TCP/IP service that attached the user task.
zONETWKID	CHAR	8	ID=359 (DFHCICS) The network identifier from which this work request (transaction) originated.
zOAPPLID	CHAR	8	ID=360 (DFHCICS) The APPLID of the CICS region in which this work request (transaction) originated. For example, the region in which the CWXN task ran.
zOSTART	TSTMP	8	ID=361 (DFHCICS) The time at which the originating task, for example the CWXN task, was started.
zOTRANNUM	DEC	4 (7,0)	ID=362 (DFHCICS) The number of the originating task. For example, the CWXN task.
zOTRAN	CHAR	4	ID=363 (DFHCICS) The transaction ID (TRANSID) of the originating task. For example, the CWXN task.
zOUSERID	CHAR	8	ID=364 (DFHCICS) The originating Userid-2 or Userid-1, for example from CWBA, depending on the originating task.
zOUSERCOR	CHAR	64	ID=365 (DFHCICS) The originating user correlator.
zOTCPSVCE	CHAR	8	ID=366 (DFHCICS) The name of the originating TCPIP SERVICE.
zOPORTNUM	INT	4	ID=367 (DFHCICS) The port number used by the originating TCPIP SERVICE.
zOCLIPADR	CHAR	40	ID=372 (DFHCICS) The IP address of the originating client or Telnet client.
zOCLIPORT	INT	4	ID=369 (DFHCICS) The TCP/IP port number of the originating client or Telnet client.

SMF110#01_Performance_Class_ADP1_PCO3.zOTRANFLG.<fieldname>

zOTRAN_Facility	INT (ENUM)	1	Originating Transaction facility type.
zOTRAN_id	INT (ENUM)	1	Originating Transaction identification.

SMF110#01_Performance_Class_ADP1_PCO3.zOTRANFLG.zOTRAN_WLM.<fieldname>

zResponse	BIT	1	Report the total response time (begin-to-end phase) for completed work request (transaction).
zAllPhase	BIT	1	Notify that the entire execution phase of the work request is complete.

zSubPhase	BIT	1	Notify that a subset of the execution phase of the work request is complete.
zAbNormal	BIT	1	This transaction has been reported to the z/OS workload manager as completing abnormally because it has tried to access Db2 and a connection unavailable response has been returned. This abnormal completion occurs when all the following are true: 1. zResponse is set. 2. CICS is not connected to Db2. 3. The CICS-Db2 adapter is in standby mode (STANDBYMODE(RECONNECT) or STANDBYMODE(CONNECT)). 4. CONNECTERROR(SQLCODE) is specified, causing the application to receive a -923 SQL code.

SMF110#01_Performance_Class_ADP1_PCO3.zOTRANFLG.zOTRAN_Def.<fieldname>

zTDLocBelow	BIT	1	1 => TASKDATALOC=BELOW
zTDKeyCICS	BIT	1	1 => TASKDATAKEY=CICS
zIsolateNo	BIT	1	1 => ISOLATE=NO
zDynamic	BIT	1	1 => DYNAMIC=YES

SMF110#01_Performance_Class_ADP1_PCO3.zOTRANFLG.<fieldname>

zOTRAN_Origin	INT (ENUM)	1	Originating Transaction Type.
---------------	---------------	---	-------------------------------

SMF110#01_Performance_Class_ADP1_PCO3.zOTRANFLG.zOTRAN_Status.<fieldname>

zOrigin	BIT	1	The transaction origin.
zResource	BIT	1	Resource class record, or records, for this task.
zIdentity	BIT	1	Identity class record, or records, for this task.
zPurge	BIT	1	Task purge or runaway resulted in the open TCB the task was executing on being terminated.
zAbend	BIT	1	Task abnormally terminated.

SMF110#01_Performance_Class_ADP1_PCO3.zOTRANFLG.<fieldname>

zOTRAN_Track	INT	1	Originating Transaction tracking origin data tag.
--------------	-----	---	---

SMF110#01_Performance_Class_ADP1_PCO3.zOTRANFLG.zORecovery_Manager.<fieldname>

zInDWaitNo	BIT	1	Indoubt WAIT=NO.
zInDCommit	BIT	1	Indoubt ACTION=COMMIT.
zUOWInD	BIT	1	Recovery manager, UOW resolved with indoubt action.
zUOWShunt	BIT	1	Recovery manager, Shunt.
zUOWUnShunt	BIT	1	Recovery manager, Unshunt.
zInDFail	BIT	1	Recovery manager, Indoubt failure.
zROFail	BIT	1	Recovery manager, Resource owner failure.

SMF110#01_Performance_Class_ADP1_PCO3.zOTRANFLG.<fieldname>

zOFCTYNME	CHAR	8	ID=371 (DFHCICS) The facility name of the originating transaction.
zWBURIMNM	CHAR	8	ID=380 (DFHWEBB) For CICS web support, Atom feeds, and web service applications, the name of the URIMAP resource definition that was mapped to the URI of the inbound request that was processed by this task.
zWBPIPLNM	CHAR	8	ID=381 (DFHWEBB) For web service applications, the name of the PIPELINE resource definition that was used to provide information about the message handlers that act on the service request processed by this task.
zWBATMSNM	CHAR	8	ID=382 (DFHWEBB) For Atom feeds, the name of the ATOMSERVICE resource definition that was used to process this task.
zWBSVCENM	CHAR	32	ID=383 (DFHWEBB) For web service applications, the name of the WEBSERVICE resource definition that was used to process this task.

zWBSVOPNM	CHAR	64	ID=384 (DFHWEBB) For web service applications, the first 64 bytes of the web service operation name.
zWBPROGNM	CHAR	8	ID=385 (DFHWEBB) For CICS web support, the name of the program from the URIMAP resource definition that was used to provide the application-generated response to the HTTP request processed by this task.
zPHNTWKID	CHAR	8	ID=373 (DFHCICS) The network identifier of the CICS system of an immediately previous task in another CICS system with which this task is associated.
zPHAPPLID	CHAR	8	ID=374 (DFHCICS) The APPLID from previous hop data. This is the APPLID of the CICS system of a previous task in another CICS system with which this task is associated.
zPHSTART	TSTMP	8	ID=375 (DFHCICS) The start time of the immediately previous task in another CICS system with which this task is associated.
zPHTRANNO	DEC	4 (7,0)	ID=376 (DFHCICS) The task number of the immediately previous task in another CICS system with which this task is associated.
zPHTRAN	CHAR	4	ID=377 (DFHCICS) The transaction ID (TRANSID) of the immediately previous task in another CICS system with which this task is associated.
zPHCOUNT	INT	4	ID=378 (DFHCICS) The number of times there has been a request from one CICS system to another CICS system to initiate a task with which this task is associated.
zOADID	CHAR	64	ID=351 (DFHCICS) The adapter identifier added to the origin data by the adapter.
zOADATA1	CHAR	64	ID=352 (DFHCICS) The data added to the origin data by the adapter.
zOADATA2	CHAR	64	ID=353 (DFHCICS) The data added to the origin data by using the adapter.
zOADATA3	CHAR	64	ID=354 (DFHCICS) The data added to the origin data by the adapter.
zSOCIPHER	HEX	4	ID=320 (DFH SOCK) Identifies the code for the cipher suite that was selected during the SSL handshake for use on the inbound connection, for example X'0000002F'.
zCECMCHTP	CHAR	4	ID=430 (DFHTASK) The CEC machine type, in EBCDIC, for the physical hardware environment where the CICS region is running.
zCECMDLID	CHAR	16	ID=431 (DFHTASK) The CEC model number, in EBCDIC, for the physical hardware environment where the CICS region is running.
zMAXTASKS	INT	4	ID=433 (DFHTASK) The MXT or MAXTASKS value, expressed as a number of tasks, for the CICS region at the time the user task was attached.
zCURTASKS	INT	4	ID=434 (DFHTASK) The current number of active user transactions in the system at the time the user task was attached.
zACAPPLNM	CHAR	64	ID=451 (DFHTASK) The 64-character name of the application in the application context data.
zACPLATNM	CHAR	64	ID=452 (DFHTASK) The 64-character name of the platform in the application context data.
zACMAJVER	INT	4	ID=453 (DFHTASK) The major version of the application in the application context data, expressed as a 4-byte binary value.
zACMINVER	INT	4	ID=454 (DFHTASK) The minor version of the application in the application context data, expressed as a 4-byte binary value.
zACMICVER	INT	4	ID=455 (DFHTASK) The micro version of the application in the application context data, expressed as a 4-byte binary value.
zACOPERNM	CHAR	64	ID=456 (DFHTASK) The 64-character name of the operation in the application context data.

SMF110#01_Performance_Class_ADP1_PCO3.zTASKFLAG.<fieldname>

zClockErr	BIT	1	Detected an attempt either to start a user clock that was already running or to stop one that was not running.
-----------	-----	---	--

SMF110#01_Performance_Class_ADP1_PCO3.<fieldname>

zABCODEO	CHAR	4	ID=113 (DFHPROG) Original abend code.
----------	------	---	---------------------------------------

zABCODEC	CHAR	4	ID=114 (DFHPROG) Current abend code.
zRTYPE	CHAR	4	ID=112 (DFHCICS) Performance record type: C => Record output for a terminal converse, D => Record output for a user EMP DELIVER request, F => Record output for a long-running transaction, S => Record output for a sync point, T => Record output for the end of a task.
zTCMSGIN1	INT	4	ID=034 (DFHTERM) Number of messages received from the principal terminal facility of the task, including LUTYPE6.1 and LUTYPE6.2 (APPC) but not MRO (IRC).
zTCCHRIN1	INT	4	ID=083 (DFHTERM) Number of characters received from the principal terminal facility of the task, including LUTYPE6.1 and LUTYPE6.2 (APPC) but not MRO (IRC).
zTCMSGOU1	INT	4	ID=035 (DFHTERM) Number of messages sent to the principal terminal facility of the task, including LUTYPE6.1 and LUTYPE6.2 (APPC) but not MRO (IRC).
zTCCHROU1	INT	4	ID=084 (DFHTERM) Number of characters sent to the principal terminal facility of the task, including LUTYPE6.1 and LUTYPE6.2 (APPC) but not MRO (IRC).
zTCMSGIN2	INT	4	ID=067 (DFHTERM) Number of messages received from the LUTYPE6.1 alternate terminal facilities by the user task.
zTCCHRIN2	INT	4	ID=085 (DFHTERM) Number of characters received from the LUTYPE6.1 alternate terminal facilities by the user task. (Not applicable to ISC APPC.)
zTCMSGOU2	INT	4	ID=068 (DFHTERM) Number of messages sent to the LUTYPE6.1 alternate terminal facilities by the user task.
zTCCHROU2	INT	4	ID=086 (DFHTERM) Number of characters sent to the LUTYPE6.1 alternate terminal facilities by the user task. (Not applicable to ISC APPC.)
zTCM62IN2	INT	4	ID=135 (DFHTERM) Number of messages received from the alternate facility by the user task for LUTYPE6.2 (APPC) sessions.
zTCC62IN2	INT	4	ID=137 (DFHTERM) Number of characters received from the alternate facility by the user task for LUTYPE6.2 (APPC) sessions.
zTCM62OU2	INT	4	ID=136 (DFHTERM) Number of messages sent to the alternate facility by the user task for LUTYPE6.2 (APPC) sessions.
zTCC62OU2	INT	4	ID=138 (DFHTERM) Number of characters sent to the alternate facility by the user task for LUTYPE6.2 (APPC) sessions.
zTCALLOCT	INT	4	ID=069 (DFHTERM) Number of TCTTE ALLOCATE requests issued by the user task for LUTYPE6.2 (APPC), LUTYPE6.1, and IRC sessions.
zSCUGETCT_Below	INT	4	ID=054 (DFHSTOR) Number of user-storage GETMAIN requests issued by the user task for storage below the 16 MB line, in the UDSA.
zSCUGETCT_Above	INT	4	ID=105 (DFHSTOR) Number of user-storage GETMAIN requests issued by the user task for storage above the 16 MB line, in the extended user dynamic storage area (EUDSA).
zSCCGETCT_Below	INT	4	ID=117 (DFHSTOR) Number of user-storage GETMAIN requests issued by the user task for storage below the 16 MB line, in the CDSA.
zSCCGETCT_Above	INT	4	ID=120 (DFHSTOR) Number of user-storage GETMAIN requests issued by the user task for storage above the 16 MB line, in the ECDSA.
zSCUSRHWM_Below	INT	4	ID=033 (DFHSTOR) Maximum amount (high-water mark) of user storage allocated to the user task below the 16 MB line, in the user dynamic storage area (UDSA).
zSCUSRHWM_Above	INT	4	ID=106 (DFHSTOR) Maximum amount (high-water mark) of user storage allocated to the user task above the 16 MB line, in the EUDSA.
zSC24CHWM	INT	4	ID=116 (DFHSTOR) Maximum amount (high-water mark) of user storage allocated to the user task below the 16 MB line, in the CICS dynamic storage area (CDSA).
zSC31CHWM	INT	4	ID=119 (DFHSTOR) Maximum amount (high-water mark) of user storage allocated to the user task above the 16 MB line, in the extended CICS dynamic storage area (ECDSA).
zSCUSRSTG_Below	INT	8	ID=095 (DFHSTOR) Storage occupancy of the user task below the 16 MB line, in the UDSA. This measures the area under the curve of storage in use against elapsed time.
zSCUSRSTG_Above	INT	8	

			ID=107 (DFHSTOR) Storage occupancy of the user task above the 16 MB line, in the EUDSA. This measures the area under the curve of storage in use against elapsed time.
zSC24COCC	INT	8	ID=118 (DFHSTOR) Storage occupancy of the user task below the 16 MB line, in the CDSA. This measures the area under the curve of storage in use against elapsed time.
zSC31COCC	INT	8	ID=121 (DFHSTOR) Storage occupancy of the user task above the 16 MB line, in the ECDSA. This measures the area under the curve of storage in use against elapsed time.
zSC24SGCT	INT	4	ID=144 (DFHSTOR) Number of storage GETMAIN requests issued by the user task for shared storage below the 16 MB line, in the CDSA or SDSA.
zSC24GSHR	INT	4	ID=145 (DFHSTOR) Number of bytes of shared storage obtained by the user task by using a GETMAIN request below the 16 MB line, in the CDSA or SDSA.
zSC24FSHR	INT	4	ID=146 (DFHSTOR) Number of bytes of shared storage released by the user task by using a FREEMAIN request below the 16 MB line, in the CDSA or SDSA.
zSC31SGCT	INT	4	ID=147 (DFHSTOR) Number of storage GETMAIN requests issued by the user task for shared storage above the 16 MB line, in the ECDSA or ESDSA.
zSC31GSHR	INT	4	ID=148 (DFHSTOR) Number of bytes of shared storage obtained by the user task by using a GETMAIN request above the 16 MB line, in the ECDSA or ESDSA.
zSC31FSHR	INT	4	ID=149 (DFHSTOR) Number of bytes of shared storage released by the user task by using a FREEMAIN request above the 16 MB line, in the ECDSA or ESDSA.
zSC64CGCT	INT	4	ID=441 (DFHSTOR) Number of user-storage GETMAIN requests issued by the user task for storage above the bar, in the CICS dynamic storage area (GCDSA).
zSC64CHWM	INT	4	ID=442 (DFHSTOR) Maximum amount (high-water mark) of user storage, rounded up to the next 4K, allocated to the user task above the bar, in the CICS dynamic storage area (GCDSA).
zSC64UGCT	INT	4	ID=443 (DFHSTOR) Number of user-storage GETMAIN requests issued by the user task for storage above the bar, in the user dynamic storage area (GUDSA).
zSC64UHWM	INT	4	ID=444 (DFHSTOR) Maximum amount (high-water mark) of user storage, rounded up to the next 4K, allocated to the user task above the bar, in the user dynamic storage area (GUDSA).
zSC64SGCT	INT	4	ID=445 (DFHSTOR) Number of storage GETMAIN requests issued by the user task for shared storage above the bar, in the GCDSA or GSDSA.
zSC64GSHR	INT	4	ID=446 (DFHSTOR) Amount of shared storage obtained by the user task by using a GETMAIN request above the bar, in the GCDSA or GSDSA. The total number of bytes obtained is rounded up to the next 4096 bytes, and the resulting number of 4K pages is displayed.
zSC64FSHR	INT	4	ID=447 (DFHSTOR) Amount of shared storage released by the user task by using a FREEMAIN request above the bar, in the GCDSA or GSDSA. The total number of bytes obtained is rounded up to the next 4096 bytes, and the resulting number of 4K pages is displayed.
zPCSTGHWM	INT	4	ID=087 (DFHSTOR) Maximum amount (high-water mark) of program storage in use by the user task both above and below the 16 MB line.
zPC31AHWM	INT	4	ID=139 (DFHSTOR) Maximum amount (high-water mark) of program storage in use by the user task above the 16 MB line.
zPC24BHWM	INT	4	ID=108 (DFHSTOR) Maximum amount (high-water mark) of program storage in use by the user task below the 16 MB line.
zPC31CHWM	INT	4	ID=142 (DFHSTOR) Maximum amount (high-water mark) of program storage in use by the user task above the 16 MB line, in the extended CICS dynamic storage area (ECDSA).
zPC24CHWM	INT	4	ID=143 (DFHSTOR) Maximum amount (high-water mark) of program storage in use by the user task below the 16 MB line, in the CICS dynamic storage area (CDSA).
zPC31RHWM	INT	4	

			ID=122 (DFHSTOR) Maximum amount (high-water mark) of program storage in use by the user task above the 16 MB line, in the extended read-only dynamic storage area (ERDSA).
zPC24RHWM	INT	4	ID=162 (DFHSTOR) Maximum amount (high-water mark) of program storage in use by the user task below the 16 MB line, in the read-only dynamic storage area (RDSA).
zPC31SHWM	INT	4	ID=161 (DFHSTOR) Maximum amount (high-water mark) of program storage in use by the user task above the 16 MB line, in the extended shared dynamic storage area (ESDSA).
zPC24SHWM	INT	4	ID=160 (DFHSTOR) Maximum amount (high-water mark) of program storage in use by the user task below the 16 MB line, in the shared dynamic storage area (SDSA).
zFCGETCT	INT	4	ID=036 (DFHFILE) Number of file GET requests issued by the user task.
zFCPUTCT	INT	4	ID=037 (DFHFILE) Number of file PUT requests issued by the user task.
zFCBRWCT	INT	4	ID=038 (DFHFILE) Number of file browse requests issued by the user task. This number excludes the START and END browse requests.
zFCADDCT	INT	4	ID=039 (DFHFILE) Number of file ADD requests issued by the user task.
zFCDELCT	INT	4	ID=040 (DFHFILE) Number of file DELETE requests issued by the user task.
zFCTOTCT	INT	4	ID=093 (DFHFILE) Total number of file control requests issued by the user task. This number excludes any request for OPEN, CLOSE, ENABLE, or DISABLE of a file.
zFCAMCT	INT	4	ID=070 (DFHFILE) Number of times the user task invoked file access-method interfaces. This number excludes requests for OPEN and CLOSE.
zTDGETCT	INT	4	ID=041 (DFHDEST) Number of transient data GET requests issued by the user task.
zTDPUTCT	INT	4	ID=042 (DFHDEST) Number of transient data PUT requests issued by the user task.
zTDPURCT	INT	4	ID=043 (DFHDEST) Number of transient data PURGE requests issued by the user task.
zTDTOTCT	INT	4	ID=091 (DFHDEST) Total number of transient data requests issued by the user task.
zTSGETCT	INT	4	ID=044 (DFHTEMP) Number of temporary storage GET requests to auxiliary or main temporary storage issued by the user task.
zTSPUTACT	INT	4	ID=046 (DFHTEMP) Number of PUT requests to auxiliary temporary storage issued by the user task.
zTSPUTMCT	INT	4	ID=047 (DFHTEMP) Number of PUT requests to main temporary storage issued by the user task.
zTSGETSCT	INT	4	ID=460 (DFHTEMP) Number of temporary storage GET requests from shared temporary storage issued by the user task.
zTSPUTSCT	INT	4	ID=461 (DFHTEMP) Number of temporary storage PUT requests to shared temporary storage issued by the user task.
zTSTOTCT	INT	4	ID=092 (DFHTEMP) Total number of temporary storage requests issued by the user task.
zBMSMAPCT	INT	4	ID=050 (DFHMAPP) Number of BMS MAP requests issued by the user task. This field corresponds to the number of RECEIVE MAP requests that did not incur a terminal I/O, and the number of RECEIVE MAP FROM requests.
zBMSINCT	INT	4	ID=051 (DFHMAPP) Number of BMS IN requests issued by the user task. This field corresponds to the number of RECEIVE MAP requests that incurred a terminal I/O.
zBMSOUTCT	INT	4	ID=052 (DFHMAPP) Number of BMS OUT requests issued by the user task. This field corresponds to the number of SEND MAP requests.
zBMSTOTCT	INT	4	ID=090 (DFHMAPP) Total number of BMS requests issued by the user task.
zPCLINKCT	INT	4	ID=055 (DFHPROG) Number of program LINK and INVOKE APPLICATION requests issued by the user task, including the link to the

			first program of the user task.
zPCXCTLCT	INT	4	ID=056 (DFHPROG) Number of program XCTL requests issued by the user task.
zPCLOADCT	INT	4	ID=057 (DFHPROG) Number of program LOAD requests issued by the user task.
zPCLURMCT	INT	4	ID=072 (DFHPROG) Number of program LINK URM (user-replaceable module) requests issued by, or on behalf of, the user task.
zPCDPLCT	INT	4	ID=073 (DFHPROG) Number of distributed program link (DPL) requests issued by the user task.
zPCDLCSDL	INT	4	ID=286 (DFHPROG) The total length, in bytes, of the data in the containers of all the distributed program link (DPL) requests issued with the CHANNEL option by the user task.
zPCDLCRDL	INT	4	ID=287 (DFHPROG) The total length, in bytes, of the data in the containers of all DPL RETURN CHANNEL commands issued by the user task.
zPCLNKCCT	INT	4	ID=306 (DFHPROG) Number of local program LINK and INVOKE APPLICATION requests, with the CHANNEL option, issued by the user task.
zPCXCLCCT	INT	4	ID=307 (DFHPROG) Number of program XCTL requests issued with the CHANNEL option by the user task.
zPCDPLCCT	INT	4	ID=308 (DFHPROG) Number of program distributed program link (DPL) requests issued with the CHANNEL option by the user task.
zPCRTNCCT	INT	4	ID=309 (DFHPROG) Number of remote pseudoconversational RETURN requests, with the CHANNEL option, issued by the user task.
zPCRTNCDL	INT	4	ID=310 (DFHPROG) The total length, in bytes, of the data in the containers of all the remote pseudoconversational RETURN CHANNEL commands issued by the user task.
zJNLWRTCT	INT	4	ID=058 (DFHJOUR) Number of journal write requests issued by the user task.
zLOGWRTCT	INT	4	ID=172 (DFHJOUR) Number of CICS log stream write requests issued by the user task.
zICPUINCT	INT	4	ID=059 (DFHTASK) Number of interval control START or INITIATE requests during the user task.
zICTOTCT	INT	4	ID=066 (DFHTASK) Total number of Interval Control Start, Cancel, Delay, and Retrieve requests issued by the user task.
zICSTACCT	INT	4	ID=065 (DFHTASK) Total number of local interval control START requests, with the CHANNEL option, issued by the user task.
zICSTACDL	INT	4	ID=345 (DFHTASK) Total length, in bytes, of the data in the containers of all the locally executed START CHANNEL requests issued by the user task.
zICSTRCCT	INT	4	ID=346 (DFHTASK) Total number of interval control START CHANNEL requests, to be run on remote systems, issued by the user task.
zICSTRCDL	INT	4	ID=347 (DFHTASK) Total length, in bytes, of the data in the containers of all the remotely executed START CHANNEL requests issued by the user task.
zSPSYNCCT	INT	4	ID=060 (DFHSYNC) Number of SYNCPOINT requests issued during the user task.
zCFCAPICT	INT	4	ID=025 (DFHCICS) Number of CICS OO foundation class requests, including the Java API for CICS (JCICS) classes, issued by the user task.
zSZALLOCT	INT	4	ID=150 (DFHFEPI) Number of conversations allocated by the user task. This number is incremented for each FEPI ALLOCATE POOL or FEPI CONVERSE POOL.
zSZRCVCT	INT	4	ID=151 (DFHFEPI) Number of FEPI RECEIVE requests made by the user task. This number is also incremented for each FEPI CONVERSE request.
zSZSENDCT	INT	4	ID=152 (DFHFEPI) Number of FEPI SEND requests made by the user task. This number is also incremented for each FEPI CONVERSE request.
zSZSTRTCT	INT	4	ID=153 (DFHFEPI) Number of FEPI START requests made by the user task.

zSZCHROUT	INT	4	ID=154 (DFHFEPI) Number of characters sent through FEPI by the user task.
zSZCHRIN	INT	4	ID=155 (DFHFEPI) Number of characters received through FEPI by the user task.
zSZALLCTO	INT	4	ID=157 (DFHFEPI) Number of times the user task timed out while waiting to allocate a conversation.
zSZRCVTO	INT	4	ID=158 (DFHFEPI) Number of times the user task timed out while waiting to receive data.
zSZTOTCT	INT	4	ID=159 (DFHFEPI) Total number of all FEPI API and SPI requests made by the user task.
zBARSYNCT	INT	4	ID=205 (DFHCBTS) The number of CICS BTS run process, or run activity, requests that the user task made in order to execute a process or activity synchronously.
zBARASYCT	INT	4	ID=206 (DFHCBTS) The number of CICS BTS run process, or run activity, requests that the user task made in order to execute a process or activity asynchronously.
zBALKPACT	INT	4	ID=207 (DFHCBTS) The number of CICS BTS link process, or link activity, requests that the user task issued.
zBADPROCT	INT	4	ID=208 (DFHCBTS) The number of CICS BTS define process requests issued by the user task.
zBADACTCT	INT	4	ID=209 (DFHCBTS) The number of CICS BTS define activity requests issued by the user task.
zBARSPACT	INT	4	ID=210 (DFHCBTS) The number of CICS BTS reset process and reset activity requests issued by the user task.
zBASUPACT	INT	4	ID=211 (DFHCBTS) The number of CICS BTS suspend process, or suspend activity, requests issued by the user task.
zBARMPACT	INT	4	ID=212 (DFHCBTS) The number of CICS BTS resume process, or resume activity, requests issued by the user task.
zBADCPACT	INT	4	ID=213 (DFHCBTS) The number of CICS BTS delete activity, cancel process, or cancel activity, requests issued by the user task.
zBAACQPCT	INT	4	ID=214 (DFHCBTS) The number of CICS BTS acquire process, or acquire activity, requests issued by the user task.
zBATOTPCT	INT	4	ID=215 (DFHCBTS) Total number of CICS BTS process and activity requests issued by the user task.
zBAPRDCCT	INT	4	ID=216 (DFHCBTS) The number of CICS BTS delete, get, move, or put, container requests for process data containers issued by the user task.
zBAACDCCT	INT	4	ID=217 (DFHCBTS) The number of CICS BTS delete, get, move, or put, container requests for current activity data containers issued by the user task.
zBATOTCCT	INT	4	ID=218 (DFHCBTS) Total number of CICS BTS delete, get, move, or put, process container and activity container requests issued by the user task.
zBARATECT	INT	4	ID=219 (DFHCBTS) The number of CICS BTS retrieve-reattach event requests issued by the user task.
zBADFIECT	INT	4	ID=220 (DFHCBTS) The number of CICS BTS define-input event requests issued by the user task.
zBATIAECT	INT	4	ID=221 (DFHCBTS) The number of CICS BTS DEFINE TIMER EVENT, CHECK TIMER EVENT, DELETE TIMER EVENT, and FORCE TIMER EVENT requests issued by the user task.
zBATOTECT	INT	4	ID=222 (DFHCBTS) Total number of CICS BTS event-related requests issued by the user task.
zWBRCVCT	INT	4	ID=231 (DFHWEBB) The number of CICS web support RECEIVE requests issued by the user task.
zWBCHRIN	INT	4	ID=232 (DFHWEBB) The number of bytes received by the CICS web support RECEIVE requests issued by the user task.
zWBSENDCT	INT	4	ID=233 (DFHWEBB) The number of CICS web support SEND requests issued by the user task.
zWBCHROUT	INT	4	

			ID=234 (DFHWEBB) The number of bytes sent by the CICS web support SEND requests issued by the user task.
zWBTOTCT	INT	4	ID=235 (DFHWEBB) The total number of CICS web support requests issued by the user task.
zWBREPRCT	INT	4	ID=236 (DFHWEBB) The number of reads from the repository in temporary storage issued by the user task.
zWBREPWCT	INT	4	ID=237 (DFHWEBB) The number of writes to the repository in temporary storage issued by the user task.
zWBEXTRCT	INT	4	ID=238 (DFHWEBB) The number of CICS web support EXTRACT requests issued by the user task.
zWBBRWCT	INT	4	ID=239 (DFHWEBB) The number of CICS web support browsing requests for HTTPHEADER, FORMFIELD, and QUERYPARM (STARTBROWSE, READNEXT, and ENDBROWSE) issued by the user task.
zWBREADCT	INT	4	ID=224 (DFHWEBB) The number of CICS web support READ HTTPHEADER, READ FORMFIELD, and READ QUERYPARM requests issued by the user task.
zWBWRITCT	INT	4	ID=225 (DFHWEBB) The number of CICS web support WRITE HTTPHEADER requests issued by the user task.
zDHCRECT	INT	4	ID=226 (DFHDOCH) The number of document handler CREATE requests issued by the user task.
zDHINSCT	INT	4	ID=227 (DFHDOCH) The number of document handler INSERT requests issued by the user task.
zDHSETCT	INT	4	ID=228 (DFHDOCH) The number of document handler SET requests issued by the user task.
zDHRETCT	INT	4	ID=229 (DFHDOCH) The number of document handler RETRIEVE requests issued by the user task.
zDHDELCT	INT	4	ID=223 (DFHDOCH) The number of document handler DELETE requests issued by the user task.
zDHTOTCT	INT	4	ID=230 (DFHDOCH) The total number of document handler requests issued by the user task.
zDHTOTDCL	INT	4	ID=240 (DFHDOCH) The total length of all documents created by the user task.
zSOBYENCT	INT	4	ID=242 (DFH SOCK) The number of bytes encrypted by the secure sockets layer for the user task.
zSOBYDECT	INT	4	ID=243 (DFH SOCK) The number of bytes decrypted by the secure sockets layer for the user task.
zSOEXTRCT	INT	4	ID=289 (DFH SOCK) The number of EXTRACT TCP/IP and EXTRACT CERTIFICATE requests issued by the user task.
zSOCNPSCT	INT	4	ID=290 (DFH SOCK) The total number of requests made by the user task to create a nonpersistent outbound socket.
zSOCPSCT	INT	4	ID=291 (DFH SOCK) The total number of requests made by the user task to create a persistent outbound socket.
zSONPSHWM	INT	4	ID=292 (DFH SOCK) The peak number of nonpersistent outbound sockets owned by the user task.
zSOPSHWM	INT	4	ID=293 (DFH SOCK) The peak number of persistent outbound sockets owned by the user task.
zSORCVCT	INT	4	ID=294 (DFH SOCK) The total number of receive requests issued for outbound sockets (persistent and nonpersistent) by the user task.
zSOCHRIN	INT	4	ID=295 (DFH SOCK) The total number of bytes received on outbound sockets by the user task.
zSOSENDCT	INT	4	ID=296 (DFH SOCK) The total number of send requests issued for outbound sockets (persistent and nonpersistent) by the user task.
zSOCHROUT	INT	4	ID=297 (DFH SOCK) The total number of bytes sent on outbound sockets by the user task.
zSOTOTCT	INT	4	ID=298 (DFH SOCK) The total number of socket requests issued by the user task.

zSOMSGIN1	INT	4	ID=301 (DFH SOCK) The number of inbound socket receive requests issued by the user task.
zSOCHRIN1	INT	4	ID=302 (DFH SOCK) The number of characters received by inbound socket receive requests issued by the user task.
zSOMSGOU1	INT	4	ID=303 (DFH SOCK) The number of inbound socket send requests issued by the user task.
zSOCHROU1	INT	4	ID=304 (DFH SOCK) The number of characters sent by inbound socket send requests issued by the user task.
zIMSREQCT	INT	4	ID=179 (DFH DATA) The number of IMS (DBCTL) requests issued by the user task.
zDB2REQCT	INT	4	ID=180 (DFH DATA) The total number of Db2 EXEC SQL and Instrumentation Facility Interface (IFI) requests issued by the user task.
zWMQREQCT	INT	4	ID=395 (DFH DATA) The total number of WebSphere MQ requests issued by the user task.
zTCBATTCT	INT	4	ID=251 (DFH TASK) The number of CICS TCBS attached by or on behalf of the user task.
zDSTCBHWM	INT	4	ID=252 (DFH TASK) The peak number of CICS open TCBS (in TCB modes L8, L9, S8, T8, X8, and X9) that have been concurrently allocated to the user task.
zWBREDOCT	INT	4	ID=331 (DFH WEBB) The number of CICS web support READ HTTPHEADER requests issued by the user task when CICS is an HTTP client.
zWBWRTOCT	INT	4	ID=332 (DFH WEBB) The number of CICS web support WRITE HTTPHEADER requests issued by the user task when CICS is an HTTP client.
zWBRCVIN1	INT	4	ID=333 (DFH WEBB) The number of CICS web support RECEIVE and CONVERSE requests issued by the user task when CICS is an HTTP client.
zWBCHRIN1	INT	4	ID=334 (DFH WEBB) The number of bytes received by the CICS web support RECEIVE and CONVERSE requests issued by the user task when CICS is an HTTP client.
zWBSNDOU1	INT	4	ID=335 (DFH WEBB) The number of CICS web support SEND and CONVERSE requests issued by the user task when CICS is an HTTP client.
zWBCHROU1	INT	4	ID=336 (DFH WEBB) The number of bytes sent by the CICS web support SEND and CONVERSE requests issued by the user task when CICS is an HTTP client.
zWBPARSCT	INT	4	ID=337 (DFH WEBB) The number of CICS web support PARSE URL requests issued by the user task.
zWBRRWOCT	INT	4	ID=338 (DFH WEBB) The number of CICS web support BROWSE HTTPHEADER requests (STARTBROWSE, READNEXT, and ENDBROWSE) issued by the user task when CICS is an HTTP client.
zWBIWBSCT	INT	4	ID=340 (DFH WEBB) The number of EXEC CICS INVOKE SERVICE and EXEC CICS INVOKE WEBSERVICE requests issued by the user task.
zWBREPRDL	INT	4	ID=341 (DFH WEBB) The total length, in bytes, of the data read from the repository in temporary storage by the user task.
zWBREPWDL	INT	4	ID=342 (DFH WEBB) The total length, in bytes, of the data written to the repository in temporary storage by the user task.
zPGTOTCCT	INT	4	ID=321 (DFH CHNL) The number of CICS requests for channel containers issued by the user task.
zPGBRWCT	INT	4	ID=322 (DFH CHNL) The number of CICS browse requests for channel containers issued by the user task.
zPGGETCCT	INT	4	ID=323 (DFH CHNL) The number of GET CONTAINER and GET64 CONTAINER requests for channel containers issued by the user task.
zPGPUTCCT	INT	4	ID=324 (DFH CHNL) The number of PUT CONTAINER and PUT64 CONTAINER requests for channel containers issued by the user task.
zPGMOVCCT	INT	4	ID=325 (DFH CHNL) The number of MOVE CONTAINER requests for channel containers issued by the user task.

zPGGETCDL	INT	4	ID=326 (DFHCHNL) The total length, in bytes, of the data in the containers of all the GET CONTAINER CHANNEL and GET64 CONTAINER CHANNEL commands issued by the user task.
zPGPUTCDL	INT	4	ID=327 (DFHCHNL) The total length, in bytes, of the data in the containers of all the PUT CONTAINER CHANNEL and PUT64 CONTAINER CHANNEL commands issued by the user task.
zPGCRECCT	INT	4	ID=328 (DFHCHNL) The number of containers created by MOVE, PUT CONTAINER, and PUT64 CONTAINER requests for channel containers issued by the user task.
zPGCSTHWM	INT	4	ID=329 (DFHCHNL) Maximum amount (high-water mark), in bytes, of container storage allocated to the user task.
zISALLOCT	INT	4	ID=288 (DFH SOCK) The number of allocate session requests issued by the user task for sessions using IPIC.
zEICTOTCT	INT	4	ID=402 (DFHCICS) Total number of Interval Control Start, Cancel, Delay, and Retrieve requests issued by the user task.
zECSIGECT	INT	4	ID=415 (DFHCICS) The number of EXEC CICS SIGNAL EVENT commands issued by the user task.
zECEFOPT	INT	4	ID=416 (DFHCICS) The number of event filter operations performed by the user task.
zECEVTCT	INT	4	ID=417 (DFHCICS) The number of events captured by the user task.
zECSEVCCT	INT	4	ID=418 (DFHCICS) The number of synchronous emission events captured by the user task.
zTIASKTCT	INT	4	ID=405 (DFHCICS) The number of EXEC CICS ASKTIME commands issued by the user task.
zTITOTCT	INT	4	ID=406 (DFHCICS) The total number of EXEC CICS ASKTIME, CONVERTTIME, and FORMATTIME commands issued by the user task.
zBFDGSTCT	INT	4	ID=408 (DFHCICS) The total number of EXEC CICS BIF DIGEST commands issued by the user task.
zBFTOTCT	INT	4	ID=409 (DFHCICS) The total number of EXEC CICS BIF DEEDIT and BIF DIGEST commands issued by the user task.
zMLXSSTD	INT	4	ID=412 (DFHWEBB) The total length of the documents that were parsed using the z/OS XML System Services parser.
zMLXMLTCT	INT	4	ID=413 (DFHWEBB) The number of EXEC CICS TRANSFORM commands issued by the user task.
zWSACBLCT	INT	4	ID=420 (DFHWEBB) The number of EXEC CICS WSACONTEXT BUILD commands issued by the user task.
zWSACGTCT	INT	4	ID=421 (DFHWEBB) The number of EXEC CICS WSACONTEXT GET commands issued by the user task.
zWSAEPCT	INT	4	ID=422 (DFHWEBB) The number of EXEC CICS WSAEPR CREATE commands issued by the user task.
zWSATOTCT	INT	4	ID=423 (DFHWEBB) The total number of EXEC CICS WS-Addressing commands issued by the user task.
zWBSFCRCT	INT	4	ID=386 (DFHWEBB) The number of EXEC CICS SOAPFAULT CREATE commands issued by the user task.
zWBSFTOCT	INT	4	ID=387 (DFHWEBB) The total number of EXEC CICS SOAPFAULT ADD, CREATE, and DELETE commands issued by the user task.
zWBISSFCT	INT	4	ID=388 (DFHWEBB) The total number of SOAP faults received in response to the EXEC CICS INVOKE SERVICE and EXEC CICS INVOKE WEBSERVICE commands issued by the user task.
zWBSREQBL	INT	4	ID=390 (DFHWEBB) For web service applications, the SOAP request body length.
zWBSRSPBL	INT	4	ID=392 (DFHWEBB) For web service applications, the SOAP response body length.
zWBJSNRQL	INT	4	ID=424 (DFHWEBB) For JSON web service applications, the JSON message request length.
zWBJSNRPL	INT	4	ID=425 (DFHWEBB) For JSON web service applications, the JSON message response length.

zMPRTXCD	INT	4	ID=449 (DFHCICS) The number of policy task rule thresholds that this task has exceeded.
zNCGETCT	INT	4	ID=464 (DFHCICS) The total number of requests to a named counter server to satisfy EXEC CICS GET COUNTER and EXEC CICS GET DCOUNTER commands issued by the user task.

SMF110#01_Performance_Class_ADP1_PCO3.zUSRDISPT.<fieldname>

zUSRDISPT_S	TIME	8	Total elapsed time during which the user task was dispatched on each CICS TCB under which the task ran.
zUSRDISPT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCO3.zUSRCPUT.<fieldname>

zUSRCPUT_S	TIME	8	Processor time for which the user task was dispatched on each CICS TCB under which the task ran.
zUSRCPUT_N	INT	3	Count of the number of time periods contributing to the total processor time.

SMF110#01_Performance_Class_ADP1_PCO3.zCPUTONCP.<fieldname>

zCPUTONCP_S	TIME	8	The total task processor time on a standard processor for which the user task was dispatched on each CICS TCB under which the task ran.
zCPUTONCP_N	INT	3	Count of the number of time periods contributing to the total processor time.

SMF110#01_Performance_Class_ADP1_PCO3.zOFFLCPUT.<fieldname>

zOFFLCPUT_S	TIME	8	The total task processor time that was spent on a standard processor but was eligible for offload to a specialty processor (zIIP or zAAP).
zOFFLCPUT_N	INT	3	Count of the number of time periods contributing to the total processor time.

SMF110#01_Performance_Class_ADP1_PCO3.zSUSPTIME.<fieldname>

zSUSPTIME_S	TIME	8	Total elapsed wait time for which the user task was suspended by the dispatcher.
zSUSPTIME_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCO3.zDISPWTT.<fieldname>

zDISPWTT_S	TIME	8	Elapsed time for which the user task waited for redispach. This time is the aggregate of the wait times between each event completion and user-task redispach.
zDISPWTT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCO3.zQRDISPT.<fieldname>

zQRDISPT_S	TIME	8	The elapsed time for which the user task was dispatched on the CICS QR TCB.
zQRDISPT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCO3.zQRCPUT.<fieldname>

zQRCPUT_S	TIME	8	The processor time for which the user task was dispatched on the CICS QR TCB.
zQRCPUT_N	INT	3	Count of the number of time periods contributing to the total processor time.

SMF110#01_Performance_Class_ADP1_PCO3.zMSDISPT.<fieldname>

zMSDISPT_S	TIME	8	Elapsed time for which the user task was dispatched on each CICS TCB.
zMSDISPT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCO3.zMSCPUT.<fieldname>

zMSCPUT_S	TIME	8	The processor time for which the user task was dispatched on each CICS TCB.
zMSCPUT_N	INT	3	Count of the number of time periods contributing to the total processor time.

SMF110#01_Performance_Class_ADP1_PCO3.zRODISPT.<fieldname>

zRODISPT_S	TIME	8	The elapsed time during which the user task was dispatched by the CICS dispatcher on the CICS RO mode TCB. The RO TCB is used for loading programs, unless the command to load the program (EXEC CICS LOAD, XCTL, or LINK) is issued by an application that is currently running on an open TCB.
zRODISPT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCO3.zROCPUT.<fieldname>

zROCPUT_S	TIME	8	The processor time during which the user task was dispatched by the CICS dispatcher on the CICS RO mode TCB. The RO TCB is used for loading programs, unless the command to load the program (EXEC CICS LOAD, XCTL, or LINK) is issued by an application that is currently running on an open TCB.
zROCPUT_N	INT	3	Count of the number of time periods contributing to the total processor time.

SMF110#01_Performance_Class_ADP1_PCO3.zKY8DISPT.<fieldname>

zKY8DISPT_S	TIME	8	The total elapsed time during which the user task was dispatched by the CICS dispatcher on a CICS Key 8 mode TCB.
zKY8DISPT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCO3.zKY8CPUT.<fieldname>

zKY8CPUT_S	TIME	8	The processor time during which the user task was dispatched by the CICS dispatcher on a CICS Key 8 mode TCB.
zKY8CPUT_N	INT	3	Count of the number of time periods contributing to the total processor time.

SMF110#01_Performance_Class_ADP1_PCO3.zKY9DISPT.<fieldname>

zKY9DISPT_S	TIME	8	The total elapsed time during which the user task was dispatched by the CICS dispatcher on a CICS Key 9 mode TCB.
zKY9DISPT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCO3.zKY9CPUT.<fieldname>

zKY9CPUT_S	TIME	8	The processor time during which the user task was dispatched by the CICS dispatcher on a CICS Key 9 mode TCB.
zKY9CPUT_N	INT	3	Count of the number of time periods contributing to the total processor time.

SMF110#01_Performance_Class_ADP1_PCO3.zL8CPUT.<fieldname>

zL8CPUT_S	TIME	8	The processor time during which the user task was dispatched by the CICS dispatcher domain on a CICS L8 mode TCB.
zL8CPUT_N	INT	3	Count of the number of time periods contributing to the total processor time.

SMF110#01_Performance_Class_ADP1_PCO3.zL9CPUT.<fieldname>

zL9CPUT_S	TIME	8	The processor time during which the user task was dispatched by the CICS dispatcher domain on a CICS L9 mode TCB.
zL9CPUT_N	INT	3	Count of the number of time periods contributing to the total processor time.

SMF110#01_Performance_Class_ADP1_PCO3.zS8CPUT.<fieldname>

zS8CPUT_S	TIME	8	The processor time during which the user task was dispatched by the CICS dispatcher domain on a CICS S8 mode TCB.
zS8CPUT_N	INT	3	Count of the number of time periods contributing to the total processor time.

SMF110#01_Performance_Class_ADP1_PCO3.zX8CPUT.<fieldname>

zX8CPUT_S	TIME	8	The processor time during which the user task was dispatched by the CICS dispatcher domain on a CICS X8 mode TCB.
zX8CPUT_N	INT	3	Count of the number of time periods contributing to the total processor time.

SMF110#01_Performance_Class_ADP1_PCO3.zX9CPUT.<fieldname>

zX9CPUT_S	TIME	8	The processor time during which the user task was dispatched by the CICS dispatcher domain on a CICS X9 mode TCB.
zX9CPUT_N	INT	3	Count of the number of time periods contributing to the total processor time.

SMF110#01_Performance_Class_ADP1_PCO3.zT8CPUT.<fieldname>

zT8CPUT_S	TIME	8	The processor time during which the user task was dispatched by the CICS dispatcher domain on a CICS T8 mode TCB.
zT8CPUT_N	INT	3	Count of the number of time periods contributing to the total processor time.

SMF110#01_Performance_Class_ADP1_PCO3.zQRMODDLY.<fieldname>

zQRMODDLY_S	TIME	8	The elapsed time for which the user task waited for redispach on the CICS QR mode TCB.
zQRMODDLY_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCO3.zMXTOTDLY.<fieldname>

zMXTOTDLY_S	TIME	8	The elapsed time in which the user task waited to obtain a CICS L8 or L9 mode open TCB, because the region had reached the limit set by CICS for these TCBs.
zMXTOTDLY_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCO3.zMAXXTDLY.<fieldname>

zMAXXTDLY_S	TIME	8	The elapsed time for which the user task waited to obtain a CICS XP TCB (X8 or X9 mode), because the CICS system reached the limit set by CICS for these types of TCB.
zMAXXTDLY_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCO3.zMAXSTDLY.<fieldname>

zMAXSTDLY_S	TIME	8	The elapsed time for which the user task waited to obtain a CICS SSL TCB (S8 mode), because the CICS system reached the limit set by the system initialization parameter MAXSSLTCBS.
zMAXSTDLY_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCO3.zMAXTTDLY.<fieldname>

zMAXTTDLY_S	TIME	8	The elapsed time for which the user task waited to obtain a T8 TCB, because the CICS system reached the limit of available threads.
zMAXTTDLY_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCO3.zDSTCBMWT.<fieldname>

zDSTCBMWT_S	TIME	8	The elapsed time that the user task spent in TCB mismatch waits. That is, waiting because no available TCB matched the request, but at least one non matching TCB was free.
zDSTCBMWT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCO3.zDSCHMDLY.<fieldname>			
zDSCHMDLY_S	TIME	8	The elapsed time in which the user task waited for redispach after a CICS Dispatcher change-TCB mode request was issued by or on behalf of the user task.
zDSCHMDLY_N	INT	3	Count of the number of time periods contributing to the total elapsed time.
SMF110#01_Performance_Class_ADP1_PCO3.zEXWTTIME.<fieldname>			
zEXWTTIME_S	TIME	8	The total elapsed time for which the user waited on exception conditions.
zEXWTTIME_N	INT	3	Count of the number of time periods contributing to the total elapsed time.
SMF110#01_Performance_Class_ADP1_PCO3.zTCIOWTT.<fieldname>			
zTCIOWTT_S	TIME	8	Elapsed time for which the user task waited for input from the terminal operator after issuing a RECEIVE request.
zTCIOWTT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.
SMF110#01_Performance_Class_ADP1_PCO3.zFCIOWTT.<fieldname>			
zFCIOWTT_S	TIME	8	Elapsed time in which the user task waited for file I/O.
zFCIOWTT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.
SMF110#01_Performance_Class_ADP1_PCO3.zFCXCWTT.<fieldname>			
zFCXCWTT_S	TIME	8	The elapsed time in which the user task waited for exclusive control of a VSAM control interval.
zFCXCWTT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.
SMF110#01_Performance_Class_ADP1_PCO3.zFCVSWTT.<fieldname>			
zFCVSWTT_S	TIME	8	The elapsed time in which the user task waited for a VSAM string.
zFCVSWTT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.
SMF110#01_Performance_Class_ADP1_PCO3.zJCIOWTT.<fieldname>			
zJCIOWTT_S	TIME	8	Elapsed time for which the user task waited for journal (logstream) I/O.
zJCIOWTT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.
SMF110#01_Performance_Class_ADP1_PCO3.zTSIOWTT.<fieldname>			
zTSIOWTT_S	TIME	8	Elapsed time for which the user task waited for VSAM temporary storage I/O.
zTSIOWTT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.
SMF110#01_Performance_Class_ADP1_PCO3.zIRIOWTT.<fieldname>			
zIRIOWTT_S	TIME	8	Elapsed time for which the user task waited for control at this end of an MRO link.
zIRIOWTT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.
SMF110#01_Performance_Class_ADP1_PCO3.zTDIOWTT.<fieldname>			
zTDIOWTT_S	TIME	8	Elapsed time in which the user waited for VSAM transient data I/O.
zTDIOWTT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.
SMF110#01_Performance_Class_ADP1_PCO3.zPCLOADTM.<fieldname>			
zPCLOADTM_S	TIME	8	Elapsed time in which the user task waited for fetches from DFHRPL or dynamic LIBRARY concatenations.
zPCLOADTM_N	INT	3	Count of the number of time periods contributing to the total elapsed time.
SMF110#01_Performance_Class_ADP1_PCO3.zDSPDELAY.<fieldname>			

zDSPDELAY_S	TIME	8	The elapsed time waiting for first dispatch.
zDSPDELAY_N	INT	3	Number of waits.

SMF110#01_Performance_Class_ADP1_PCO3.zTCLDELAY.<fieldname>

zTCLDELAY_S	TIME	8	The elapsed time waiting for first dispatch, which was delayed because of the limits set for the transaction class of this transaction (zTCLSNAME) being reached.
zTCLDELAY_N	INT	3	Number of waits.

SMF110#01_Performance_Class_ADP1_PCO3.zMXTDELAY.<fieldname>

zMXTDELAY_S	TIME	8	The elapsed time waiting for the first dispatch, which was delayed because of the limits set by the system parameter, MXT, being reached.
zMXTDELAY_N	INT	3	Number of waits.

SMF110#01_Performance_Class_ADP1_PCO3.zENQDELAY.<fieldname>

zENQDELAY_S	TIME	8	The elapsed time waiting for a CICS task control local enqueue.
zENQDELAY_N	INT	3	The number of local enqueues.

SMF110#01_Performance_Class_ADP1_PCO3.zGNQDELAY.<fieldname>

zGNQDELAY_S	TIME	8	The elapsed time waiting for a CICS task control global enqueue.
zGNQDELAY_N	INT	3	The number of global enqueues.

SMF110#01_Performance_Class_ADP1_PCO3.zLU61WTT.<fieldname>

zLU61WTT_S	TIME	8	The elapsed time for which the user task waited for I/O on a LUTYPE6.1 connection or session.
zLU61WTT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCO3.zLU62WTT.<fieldname>

zLU62WTT_S	TIME	8	The elapsed time for which the user task waited for I/O on a LUTYPE6.2 (APPC) connection or session.
zLU62WTT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCO3.zSZWAIT.<fieldname>

zSZWAIT_S	TIME	8	Elapsed time in which the user task waited for all FEPI services.
zSZWAIT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCO3.zRMITIME.<fieldname>

zRMITIME_S	TIME	8	The total elapsed time spent in the CICS Resource Manager Interface (RMI).
zRMITIME_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCO3.zRMISUSP.<fieldname>

zRMISUSP_S	TIME	8	The total elapsed time that the task was suspended by the CICS dispatcher while in the CICS Resource Manager Interface (RMI).
zRMISUSP_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCO3.zSYNCTIME.<fieldname>

zSYNCTIME_S	TIME	8	Total elapsed time for which the user task was dispatched and was processing syncpoint requests.
zSYNCTIME_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCO3.zRLSWAIT.<fieldname>

zRLSWAIT_S	TIME	8	Elapsed time in which the user task waited for RLS file I/O.
zRLSWAIT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCO3.zRLSFCPUT.<fieldname>

zRLSFCPUT_S	TIME	8	For RLS requests issued only from the QR TCB, this value is the RLS File Request SRB CPU time that this transaction spent processing RLS file requests.
zRLSFCPUT_N	INT	3	Count of the number of time periods contributing to the total CPU SRB processor time.

SMF110#01_Performance_Class_ADP1_PCO3.zLMDELAY.<fieldname>

zLMDELAY_S	TIME	8	The elapsed time that the user task waited to acquire a lock on a resource.
zLMDELAY_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCO3.zWTXWAIT.<fieldname>

zWTXWAIT_S	TIME	8	The elapsed time that the user task waited for one or more ECBs, passed to CICS by the user task using the EXEC CICS WAIT EXTERNAL ECBLIST command, to be posted by the MVS POST command.
zWTXWAIT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCO3.zWTCEWAIT.<fieldname>

zWTCEWAIT_S	TIME	8	The elapsed time that the user task waited for one of these events: 1. One or more ECBs, passed to CICS by the user task using the EXEC CICS WAITCICS ECBLIST command, to be posted by the MVS POST command. 2. Completion of an event initiated by the same or by another user task.
zWTCEWAIT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCO3.zICDELAY.<fieldname>

zICDELAY_S	TIME	8	The elapsed time that the user task waited as a result of issuing one of the following commands: 1. An interval control EXEC CICS DELAY command for a specified time interval. 2. An interval control EXEC CICS DELAY command for a specified time of day to expire. 3. An interval control EXEC CICS RETRIEVE command with the WAIT option specified.
zICDELAY_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCO3.zGVUPWAIT.<fieldname>

zGVUPWAIT_S	TIME	8	The elapsed time that the user task waited as a result of giving up control to another task.
zGVUPWAIT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCO3.zTSSHWAIT.<fieldname>

zTSSHWAIT_S	TIME	8	Elapsed time that the user task waited for an asynchronous shared temporary storage request to a temporary storage data server to complete.
zTSSHWAIT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCO3.zCFDTPWAIT.<fieldname>

zCFDTPWAIT_S	TIME	8	The elapsed time in which the user task waited for a data table access request to the Coupling Facility Data Table server to complete.
zCFDTPWAIT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCO3.zSRVSYWTT.<fieldname>

zSRVSYWTT_S	TIME	8	Total elapsed time in which the user task waited for syncpoint or resynchronization processing using the Coupling Facility data tables server to complete.
zSRVSYWTT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCO3.zRRMSWAIT.<fieldname>			
zRRMSWAIT_S	TIME	8	The elapsed time in which the user task waited indoubt using resource recovery services for EXCI.
zRRMSWAIT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCO3.zRUNTRWTT.<fieldname>			
zRUNTRWTT_S	TIME	8	The elapsed time in which the user task waited for completion of a transaction that ran as a result of the user task issuing a CICS BTS run process request and a run activity request synchronously.
zRUNTRWTT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCO3.zSYNCDLY.<fieldname>			
zSYNCDLY_S	TIME	8	The elapsed time in which the user task waited for a syncpoint request to be issued by its parent transaction.
zSYNCDLY_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCO3.zSOIOWTT.<fieldname>			
zSOIOWTT_S	TIME	8	The elapsed time for which the user task waited for inbound socket I/O.
zSOIOWTT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCO3.zIMSWAIT.<fieldname>			
zIMSWAIT_S	TIME	8	The elapsed time during which the user task waited for DBCTL to service the IMS requests issued by the user task.
zIMSWAIT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCO3.zDB2RDYQW.<fieldname>			
zDB2RDYQW_S	TIME	8	The elapsed time during which the user task waited for a Db2 thread to become available.
zDB2RDYQW_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCO3.zDB2CONWT.<fieldname>			
zDB2CONWT_S	TIME	8	The elapsed time during which the user task waited for a Db2 connection to become available for use with the user task's open TCB.
zDB2CONWT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCO3.zWMQGETWT.<fieldname>			
zWMQGETWT_S	TIME	8	The elapsed time during which the user task waited for WebSphere MQ to service the user task's GETWAIT request.
zWMQGETWT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCO3.zJVMTIME.<fieldname>			
zJVMTIME_S	TIME	8	The total elapsed time spent in the JVM by the user task.
zJVMTIME_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCO3.zJVMSUSP.<fieldname>			
zJVMSUSP_S	TIME	8	The elapsed time for which the user task was suspended by the CICS dispatcher while running in the JVM.
zJVMSUSP_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCO3.zSOOIOWTT.<fieldname>			
zSOOIOWTT_S	TIME	8	The total elapsed time that the user task waited on outbound sockets.
zSOOIOWTT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCO3.zRQRWAIT.<fieldname>			
zRQRWAIT_S	TIME	8	The elapsed time during which the request receiver user task CIRR (or user specified transaction ID) waited for any outstanding replies to be satisfied.
zRQRWAIT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCO3.zRQPWAIT.<fieldname>			
zRQPWAIT_S	TIME	8	The elapsed time during which the request processor user task CIRP waited for any outstanding replies to be satisfied.
zRQPWAIT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCO3.zOTSINDWT.<fieldname>			
zOTSINDWT_S	TIME	8	The elapsed time in which the user task was dispatched or suspended indoubt (or both) while processing a syncpoint for an Object Transaction Service (OTS) syncpoint request.
zOTSINDWT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCO3.zJVMITIME.<fieldname>			
zJVMITIME_S	TIME	8	The elapsed time spent initializing the JVM environment.
zJVMITIME_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCO3.zJVMRTIME.<fieldname>			
zJVMRTIME_S	TIME	8	Reserved field, returns zero.
zJVMRTIME_N	INT	3	Reserved field, returns zero.

SMF110#01_Performance_Class_ADP1_PCO3.zPTPWAIT.<fieldname>			
zPTPWAIT_S	TIME	8	The elapsed time for which the user task waited for the 3270 bridge partner transaction to complete.
zPTPWAIT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCO3.zDSMMSCWT.<fieldname>			
zDSMMSCWT_S	TIME	8	The elapsed time that the user task spent waiting because no TCB was available and a TCB was not created because of MVS storage constraints.
zDSMMSCWT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCO3.zISIWTT.<fieldname>			
zISIWTT_S	TIME	8	The elapsed time for which a user task waited for control at this end of an IPIIC connection.
zISIWTT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCO3.zJVMTHDWT.<fieldname>			
zJVMTHDWT_S	TIME	8	The elapsed time that the user task waited to obtain a JVM server thread because the CICS system had reached the thread limit for a JVM server in the CICS region.
zJVMTHDWT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCO3.zWMQASRBT.<fieldname>			
zWMQASRBT_S	TIME	8	The WebSphere MQ SRB time this transaction spent processing WebSphere MQ API requests.
zWMQASRBT_N	INT	3	Count of the number of time periods contributing to the total SRB time.

SMF110#01_Performance_Class_ADP1_PCO3.zTDILWTT.<fieldname>			
zTDILWTT_S	TIME	8	

			The elapsed time for which the user task waited for an intrapartition transient data lock (TDIPLOCK).
zTDILWTT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCO3.zTDELWTT.<fieldname>

zTDELWTT_S	TIME	8	The elapsed time for which the user task waited for an extrapartition transient data lock (TDEPLOCK).
zTDELWTT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCO3.zROMODDLY.<fieldname>

zROMODDLY_S	TIME	8	The elapsed time for which the user task waited for redispach on the CICS RO TCB.
zROMODDLY_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCO3.zSOMODDLY.<fieldname>

zSOMODDLY_S	TIME	8	The elapsed time for which the user task waited for redispach on the CICS SO TCB.
zSOMODDLY_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCO3.zISALWTT.<fieldname>

zISALWTT_S	TIME	8	The elapsed time for which a user task waited for an allocate request for an IPIC session.
zISALWTT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCO3.zTCALWTT.<fieldname>

zTCALWTT_S	TIME	8	The elapsed time for which a user task waited for an allocate request for an MRO (Inter-Region Communication), LU6.1, or LU6.2 session.
zTCALWTT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCO3.zDSAPTHWT.<fieldname>

zDSAPTHWT_S	TIME	8	The dispatcher allocated pthread wait time. This is the time that the transaction had to wait for a Liberty pthread to be allocated during links to Liberty programs.
zDSAPTHWT_N	INT	3	Count of the number of time periods contributing to the total wait time.

SMF110#01_Performance_Class_ADP1_PCO3.zRMITOTAL.<fieldname>

zRMITOTAL_S	TIME	8	The total elapsed time spent in the CICS Resource Manager Interface (RMI).
zRMITOTAL_N	INT	3	Count of the number of time periods contributing to the total elapsed time spent in the CICS Resource Manager Interface (RMI).

SMF110#01_Performance_Class_ADP1_PCO3.zRMIOOTHER.<fieldname>

zRMIOOTHER_S	TIME	8	The total elapsed time spent in the CICS RMI for resource manager requests other than Db2, DBCTL, EXEC DLI, IBM MQ, CICSplex SM and CICS TCP/IP socket requests.
zRMIOOTHER_N	INT	3	Count of the number of time periods contributing to the total elapsed time spent in the CICS RMI for resource manager requests other than Db2, DBCTL, EXEC DLI, IBM MQ, CICSplex SM and CICS TCP/IP socket requests.

SMF110#01_Performance_Class_ADP1_PCO3.zRMIDB2.<fieldname>

zRMIDB2_S	TIME	8	The total elapsed time spent in the CICS RMI for Db2 requests.
zRMIDB2_N	INT	3	Count of the number of time periods contributing to the total elapsed time spent in the CICS RMI for Db2 requests.

SMF110#01_Performance_Class_ADP1_PCO3.zRMIDBCTL.<fieldname>

zRMIDBCTL_S	TIME	8	The total elapsed time spent in the CICS RMI for DBCTL requests.
zRMIDBCTL_N	INT	3	Count of the number of time periods contributing to the total elapsed time spent in the CICS RMI for DBCTL requests.

SMF110#01_Performance_Class_ADP1_PCO3.zRMIEXDLI.<fieldname>

zRMIEXDLI_S	TIME	8	The total elapsed time spent in the CICS RMI for EXEC DLI requests.
zRMIEXDLI_N	INT	3	Count of the number of time periods contributing to the total elapsed time spent in the CICS RMI for EXEC DLI requests.

SMF110#01_Performance_Class_ADP1_PCO3.zRMIMQM.<fieldname>

zRMIMQM_S	TIME	8	The total elapsed time spent in the CICS RMI for IBM MQ requests.
zRMIMQM_N	INT	3	Count of the number of time periods contributing to the total elapsed time spent in the CICS RMI for IBM MQ requests.

SMF110#01_Performance_Class_ADP1_PCO3.zRMICPSM.<fieldname>

zRMICPSM_S	TIME	8	The total elapsed time spent in the CICS RMI for CICSplex SM requests.
zRMICPSM_N	INT	3	Count of the number of time periods contributing to the total elapsed time spent in the CICS RMI for CICSplex SM requests.

SMF110#01_Performance_Class_ADP1_PCO3.zRMITCPIP.<fieldname>

zRMITCPIP_S	TIME	8	The total elapsed time spent in the CICS RMI for CICS TCP/IP socket requests.
zRMITCPIP_N	INT	3	Count of the number of time periods contributing to the total elapsed time spent in the CICS RMI for CICS TCP/IP socket requests.

Secondary segment: SMF110#01_Performance_Class_ADP1_PCT1

Field Name	Type	Len	Description
SMF110#01_Performance_Class_ADP1_PCT1.<fieldname>			
zTRAN	CHAR	4	ID=001 (DFHTASK) Transaction identification.
zTERM	CHAR	4	ID=002 (DFHTERM) Terminal or session identification. This field is null if the task is not associated with a terminal or session.
zUSERID	CHAR	8	ID=089 (DFHCICS) User identification at task creation. This identification can also be the remote user identifier for a task created as the result of receiving an ATTACH request across an MRO or APPC link with attach-time security enabled.
zTTYTYPE	CHAR	4	ID=004 (DFHTASK) Transaction start type. The high-order bytes (0 and 1) are set as follows: 'TO' => Attached from terminal input. 'S' => Attached by automatic transaction initiation (ATI) without data. 'SD' => Attached by automatic transaction initiation (ATI) with data. 'QD' => Attached by transient data trigger level. 'U' => Attached by user request. 'TP' => Attached from terminal TCTTE transaction ID. 'SZ' => Attached by front-end programming interface (FEPI).
zSTART	TSTMP	8	ID=005 (DFHCICS) Start time of measurement interval, which is one of the following times: - The time at which the user task was attached. - The time at which data recording was most recently reset in support of the MCT user event monitoring point DELIVER option or the monitoring options MNCONV, MNSYNC, or FREQUENCY.
zSTOP	TSTMP	8	ID=006 (DFHCICS) Finish time of measurement interval, which is one of the following times: - The time at which the user task was detached. - The time at which data recording was completed in support of the MCT user event monitoring point DELIVER option or the monitoring options MNCONV, MNSYNC, or FREQUENCY.
zTRANNUM	DEC	4 (7,0)	ID=031 (DFHTASK) Transaction identification number or 'III' for system initialisation, 'TCP' for terminal control.
zTRANPRI	INT	4	

			ID=109 (DFHTASK) Transaction priority when monitoring of the task was initialized.
zTCLSNAM	CHAR	8	ID=166 (DFHTASK) Transaction class name. This field is null if the transaction is not in a TRANCLASS.
zLUNAME	CHAR	8	ID=111 (DFHTERM) The z/OS Communications Server SNA logical unit name (if available) of the terminal that is associated with this transaction.
zPGMNAME	CHAR	8	ID=071 (DFHPROG) The name of the first program invoked at attach-time.
zNETUOWPX	CHAR	20	ID=097 (DFHTASK) Fully qualified name by which the originating system is known to the z/OS Communications Server network.
zNETUOWSX	CHAR	8	ID=098 (DFHTASK) Name by which the network unit of work ID is known in the originating system.
zRSYSID	CHAR	4	ID=130 (DFHCICS) The name (system ID) of the remote system to which this transaction was routed, either statically or dynamically.
zPERRECNT	INT	4	ID=131 (DFHCICS) The number of performance class records written by the CICS Monitoring Facility (CMF) for the user task.
zRMUOWID	CHAR	8	ID=132 (DFHTASK) The identifier of the unit of work (unit of recovery) for this task.
zSRVCLASS	CHAR	8	ID=167 (DFHCICS) The z/OS Workload Manager (WLM) service class for this transaction.
zRPTCLASS	CHAR	8	ID=168 (DFHCICS) The z/OS Workload Manager (WLM) report class for this transaction.
zFCTYNAME	CHAR	4	ID=163 (DFHTASK) Transaction facility name. This field is null if the transaction is not associated with a facility.

SMF110#01_Performance_Class_ADP1_PCT1.zTRANFLAG.<fieldname>

zTRAN_Facility	INT (ENUM)	1	Transaction facility type.
zTRAN_id	INT (ENUM)	1	Transaction identification.

SMF110#01_Performance_Class_ADP1_PCT1.zTRANFLAG.zTRAN_WLM.<fieldname>

zResponse	BIT	1	Report the total response time (begin-to-end phase) for completed work request (transaction).
zAllPhase	BIT	1	Notify that the entire execution phase of the work request is complete.
zSubPhase	BIT	1	Notify that a subset of the execution phase of the work request is complete.
zAbNormal	BIT	1	This transaction has been reported to the z/OS workload manager as completing abnormally because it has tried to access Db2 and a connection unavailable response has been returned. This abnormal completion occurs when all the following are true: 1. zResponse is set. 2. CICS is not connected to Db2. 3. The CICS-Db2 adapter is in standby mode (STANDBYMODE(RECONNECT) or STANDBYMODE(CONNECT)). 4. CONNECTERROR(SQLCODE) is specified, causing the application to receive a -923 SQL code.

SMF110#01_Performance_Class_ADP1_PCT1.zTRANFLAG.zTRAN_Def.<fieldname>

zTDLocBelow	BIT	1	1 => TASKDATALOC=BELOW
zTDKeyCICS	BIT	1	1 => TASKDATAKEY=CICS
zIsolateNo	BIT	1	1 => ISOLATE=NO
zDynamic	BIT	1	1 => DYNAMIC=YES

SMF110#01_Performance_Class_ADP1_PCT1.zTRANFLAG.<fieldname>

zTRAN_Origin	INT (ENUM)	1	Transaction Origin Type.
--------------	---------------	---	--------------------------

SMF110#01_Performance_Class_ADP1_PCT1.zTRANFLAG.zTRAN_Status.<fieldname>

zOrigin	BIT	1	The transaction origin.
---------	-----	---	-------------------------

zResource	BIT	1	Resource class record, or records, for this task.
zIdentity	BIT	1	Identity class record, or records, for this task.
zPurge	BIT	1	Task purge or runaway resulted in the open TCB the task was executing on being terminated.
zAbend	BIT	1	Task abnormally terminated.

SMF110#01_Performance_Class_ADP1_PCT1.zTRANFLAG.<fieldname>

zTRAN_Track	INT	1	Transaction tracking origin data tag.
-------------	-----	---	---------------------------------------

SMF110#01_Performance_Class_ADP1_PCT1.zTRANFLAG.zRecovery_Manager.<fieldname>

zInDWaitNo	BIT	1	Indoubt WAIT=NO.
zInDCommit	BIT	1	Indoubt ACTION=COMMIT.
zUOWInD	BIT	1	Recovery manager, UOW resolved with indoubt action.
zUOWShunt	BIT	1	Recovery manager, Shunt.
zUOWUnShunt	BIT	1	Recovery manager, Unshunt.
zInDFail	BIT	1	Recovery manager, Indoubt failure.
zROFail	BIT	1	Recovery manager, Resource owner failure.

SMF110#01_Performance_Class_ADP1_PCT1.zTERMINFO.<fieldname>

zTERM_Assoc	INT (ENUM)	1	Task associated with terminal or session.
zTERM_SessType	INT (ENUM)	1	If the principal facility for this task is a session, this field identifies the session type.
zTERM_AM	INT (ENUM)	1	Identifies the access method defined for the terminal ID or session ID in field TERM.
zTERM_Type	INT (ENUM)	1	Identifies the terminal or session type for the terminal id or session id in TERM.

SMF110#01_Performance_Class_ADP1_PCT1.<fieldname>

zTERMCNNM	CHAR	4	ID=169 (DFHTERM) Terminal session connection name. If the terminal facility associated with this transaction is a session, this field is the name of the owning connection (sysid).
zBRDGTRAN	CHAR	4	ID=124 (DFHTASK) Bridge listener transaction identifier. For CICS 3270 Bridge transactions, this field is the name of the Bridge listener transaction that attached the user task.
zRRMSURID	CHAR	16	ID=190 (DFHTASK) RRMS/MVS unit-of-recovery ID (URID).
zPRCSNAME	CHAR	36	ID=200 (DFHCBTS) The name of the CICS business transaction service (BTS) process of which the user task formed part.
zPRCSTYPE	CHAR	8	ID=201 (DFHCBTS) The process-type of the CICS BTS process of which the user task formed part.
zPRCSID	CHAR	52	ID=202 (DFHCBTS) The CICS-assigned identifier of the CICS BTS root activity that the user task implemented.
zACTVTYID	CHAR	52	ID=203 (DFHCBTS) The CICS-assigned identifier of the CICS BTS root activity that the user task implemented.
zACTVTYNM	CHAR	16	ID=204 (DFHCBTS) The name of the CICS BTS activity that the user task implemented.
zCLIPADDR	CHAR	40	ID=318 (DFH SOCK) The IP address of the client or Telnet client.
zTRNGRPID	CHAR	28	ID=082 (DFHTASK) The transaction group ID is assigned at transaction attach time, and can be used to correlate the transactions that CICS runs for the same incoming work request. For example, the CWXN and CWBA transactions for Web requests.
zNETID	CHAR	8	ID=197 (DFHTERM) NETID if a network qualified name has been received from the Communications Server. If it is a resource and the network qualified name has not yet been received, NETID is 8 blanks. In all other

			cases, it is nulls.
zRLUNAME	CHAR	8	ID=198 (DFHTERM) Real network name if a network qualified name has been received from the Communications Server.
zTCPSRVCE	CHAR	8	ID=245 (DFH SOCK) The TCP/IP service name that attached the user task.
zPORTNUM	INT	4	ID=246 (DFH SOCK) The TCP/IP port number of the TCP/IP service that attached the user task.
zOTSTID	CHAR	128	ID=194 (DFHTASK) This field is the first 128 bytes of the Object Transaction Service (OTS) Transaction ID (TID).
zCLIPPORT	INT	4	ID=330 (DFH SOCK) The TCP/IP port number of the originating client or Telnet client.
zISIPICNM	CHAR	8	ID=305 (DFH SOCK) The name of the IPIC (IPCONN) entry of the TCP/IP service that attached the user task.
zONETWKID	CHAR	8	ID=359 (DFHCICS) The network identifier from which this work request (transaction) originated.
zOAPPLID	CHAR	8	ID=360 (DFHCICS) The APPLID of the CICS region in which this work request (transaction) originated. For example, the region in which the CWXN task ran.
zOSTART	TSTMP	8	ID=361 (DFHCICS) The time at which the originating task, for example the CWXN task, was started.
zOTRANNUM	DEC	4 (7,0)	ID=362 (DFHCICS) The number of the originating task. For example, the CWXN task.
zOTRAN	CHAR	4	ID=363 (DFHCICS) The transaction ID (TRANSID) of the originating task. For example, the CWXN task.
zOUSERID	CHAR	8	ID=364 (DFHCICS) The originating Userid-2 or Userid-1, for example from CWBA, depending on the originating task.
zOUSERCOR	CHAR	64	ID=365 (DFHCICS) The originating user correlator.
zOTCPSVCE	CHAR	8	ID=366 (DFHCICS) The name of the originating TCPIP SERVICE.
zOPORTNUM	INT	4	ID=367 (DFHCICS) The port number used by the originating TCPIP SERVICE.
zOCLIPADR	CHAR	40	ID=372 (DFHCICS) The IP address of the originating client or Telnet client.
zOCLIPORT	INT	4	ID=369 (DFHCICS) The TCP/IP port number of the originating client or Telnet client.

SMF110#01_Performance_Class_ADP1_PCT1.zOTRANFLG.<fieldname>

zOTRAN_Facility	INT (ENUM)	1	Originating Transaction facility type.
zOTRAN_id	INT (ENUM)	1	Originating Transaction identification.

SMF110#01_Performance_Class_ADP1_PCT1.zOTRANFLG.zOTRAN_WLM.<fieldname>

zResponse	BIT	1	Report the total response time (begin-to-end phase) for completed work request (transaction).
zAllPhase	BIT	1	Notify that the entire execution phase of the work request is complete.
zSubPhase	BIT	1	Notify that a subset of the execution phase of the work request is complete.
zAbNormal	BIT	1	This transaction has been reported to the z/OS workload manager as completing abnormally because it has tried to access Db2 and a connection unavailable response has been returned. This abnormal completion occurs when all the following are true: 1. zResponse is set. 2. CICS is not connected to Db2. 3. The CICS-Db2 adapter is in standby mode (STANDBYMODE(RECONNECT) or STANDBYMODE(CONNECT)). 4. CONNECTERROR(SQLCODE) is specified, causing the application to receive a -923 SQL code.

SMF110#01_Performance_Class_ADP1_PCT1.zOTRANFLG.zOTRAN_Def.<fieldname>

zTDLocBelow	BIT	1	1 => TASKDATALOC=BELOW
zTDKeyCICS	BIT	1	1 => TASKDATAKEY=CICS

zIsolateNo	BIT	1	1 => ISOLATE=NO
zDynamic	BIT	1	1 => DYNAMIC=YES

SMF110#01_Performance_Class_ADP1_PCT1.zOTRANFLG.<fieldname>

zOTRAN_Origin	INT (ENUM)	1	Originating Transaction Type.
---------------	---------------	---	-------------------------------

SMF110#01_Performance_Class_ADP1_PCT1.zOTRANFLG.zOTRAN_Status.<fieldname>

zOrigin	BIT	1	The transaction origin.
zResource	BIT	1	Resource class record, or records, for this task.
zIdentity	BIT	1	Identity class record, or records, for this task.
zPurge	BIT	1	Task purge or runaway resulted in the open TCB the task was executing on being terminated.
zAbend	BIT	1	Task abnormally terminated.

SMF110#01_Performance_Class_ADP1_PCT1.zOTRANFLG.<fieldname>

zOTRAN_Track	INT	1	Originating Transaction tracking origin data tag.
--------------	-----	---	---

SMF110#01_Performance_Class_ADP1_PCT1.zOTRANFLG.zORecovery_Manager.<fieldname>

zInDWaitNo	BIT	1	Indoubt WAIT=NO.
zInDCommit	BIT	1	Indoubt ACTION=COMMIT.
zUOWInD	BIT	1	Recovery manager, UOW resolved with indoubt action.
zUOWShunt	BIT	1	Recovery manager, Shunt.
zUOWUnShunt	BIT	1	Recovery manager, Unshunt.
zInDFail	BIT	1	Recovery manager, Indoubt failure.
zROFail	BIT	1	Recovery manager, Resource owner failure.

SMF110#01_Performance_Class_ADP1_PCT1.zOTRANFLG.<fieldname>

zOFCTYNME	CHAR	8	ID=371 (DFHCICS) The facility name of the originating transaction.
zWBURIMNM	CHAR	8	ID=380 (DFHWEBB) For CICS web support, Atom feeds, and web service applications, the name of the URIMAP resource definition that was mapped to the URI of the inbound request that was processed by this task.
zWBPIPLNM	CHAR	8	ID=381 (DFHWEBB) For web service applications, the name of the PIPELINE resource definition that was used to provide information about the message handlers that act on the service request processed by this task.
zWBATMSNM	CHAR	8	ID=382 (DFHWEBB) For Atom feeds, the name of the ATOMSERVICE resource definition that was used to process this task.
zWBSVCENM	CHAR	32	ID=383 (DFHWEBB) For web service applications, the name of the WEBSERVICE resource definition that was used to process this task.
zWBSVOPNM	CHAR	64	ID=384 (DFHWEBB) For web service applications, the first 64 bytes of the web service operation name.
zWBPROGNM	CHAR	8	ID=385 (DFHWEBB) For CICS web support, the name of the program from the URIMAP resource definition that was used to provide the application-generated response to the HTTP request processed by this task.
zPHNTWKID	CHAR	8	ID=373 (DFHCICS) The network identifier of the CICS system of an immediately previous task in another CICS system with which this task is associated.
zPHAPPLID	CHAR	8	ID=374 (DFHCICS) The APPLID from previous hop data. This is the APPLID of the CICS system of a previous task in another CICS system with which this task is associated.
zPHSTART	TSTMP	8	ID=375 (DFHCICS) The start time of the immediately previous task in another CICS system with which this task is associated.

zPHTRANNO	DEC	4 (7,0)	ID=376 (DFHCICS) The task number of the immediately previous task in another CICS system with which this task is associated.
zPHTRAN	CHAR	4	ID=377 (DFHCICS) The transaction ID (TRANSID) of the immediately previous task in another CICS system with which this task is associated.
zPHCOUNT	INT	4	ID=378 (DFHCICS) The number of times there has been a request from one CICS system to another CICS system to initiate a task with which this task is associated.
zOADID	CHAR	64	ID=351 (DFHCICS) The adapter identifier added to the origin data by the adapter.
zOADATA1	CHAR	64	ID=352 (DFHCICS) The data added to the origin data by the adapter.
zOADATA2	CHAR	64	ID=353 (DFHCICS) The data added to the origin data by using the adapter.
zOADATA3	CHAR	64	ID=354 (DFHCICS) The data added to the origin data by the adapter.
zSOCIPHER	HEX	4	ID=320 (DFH SOCK) Identifies the code for the cipher suite that was selected during the SSL handshake for use on the inbound connection, for example X'0000002F'.
zCECMCHTP	CHAR	4	ID=430 (DFHTASK) The CEC machine type, in EBCDIC, for the physical hardware environment where the CICS region is running.
zCECMDLID	CHAR	16	ID=431 (DFHTASK) The CEC model number, in EBCDIC, for the physical hardware environment where the CICS region is running.
zMAXTASKS	INT	4	ID=433 (DFHTASK) The MXT or MAXTASKS value, expressed as a number of tasks, for the CICS region at the time the user task was attached.
zCURTASKS	INT	4	ID=434 (DFHTASK) The current number of active user transactions in the system at the time the user task was attached.
zACAPPLNM	CHAR	64	ID=451 (DFHTASK) The 64-character name of the application in the application context data.
zACPLATNM	CHAR	64	ID=452 (DFHTASK) The 64-character name of the platform in the application context data.
zACMAJVER	INT	4	ID=453 (DFHTASK) The major version of the application in the application context data, expressed as a 4-byte binary value.
zACMINVER	INT	4	ID=454 (DFHTASK) The minor version of the application in the application context data, expressed as a 4-byte binary value.
zACMICVER	INT	4	ID=455 (DFHTASK) The micro version of the application in the application context data, expressed as a 4-byte binary value.
zACOPERNM	CHAR	64	ID=456 (DFHTASK) The 64-character name of the operation in the application context data.

SMF110#01_Performance_Class_ADP1_PCT1.zTASKFLAG.<fieldname>

zClockErr	BIT	1	Detected an attempt either to start a user clock that was already running or to stop one that was not running.
-----------	-----	---	--

SMF110#01_Performance_Class_ADP1_PCT1.<fieldname>

zABCODEO	CHAR	4	ID=113 (DFHPROG) Original abend code.
zABCODEC	CHAR	4	ID=114 (DFHPROG) Current abend code.
zRTYPE	CHAR	4	ID=112 (DFHCICS) Performance record type: C => Record output for a terminal converse, D => Record output for a user EMP DELIVER request, F => Record output for a long-running transaction, S => Record output for a sync point, T => Record output for the end of a task.
zTCMSGIN1	INT	4	ID=034 (DFHTERM) Number of messages received from the principal terminal facility of the task, including LUTYPE6.1 and LUTYPE6.2 (APPC) but not MRO (IRC).
zTCCHRIN1	INT	4	ID=083 (DFHTERM) Number of characters received from the principal terminal facility of the task, including LUTYPE6.1 and LUTYPE6.2 (APPC) but not MRO (IRC).
zTCMSGOU1	INT	4	ID=035 (DFHTERM) Number of messages sent to the principal terminal facility of the task, including LUTYPE6.1 and LUTYPE6.2 (APPC) but not MRO (IRC).

zTCCHROU1	INT	4	ID=084 (DFHTERM) Number of characters sent to the principal terminal facility of the task, including LUTYPE6.1 and LUTYPE6.2 (APPC) but not MRO (IRC).
zTCMSGIN2	INT	4	ID=067 (DFHTERM) Number of messages received from the LUTYPE6.1 alternate terminal facilities by the user task.
zTCCHRIN2	INT	4	ID=085 (DFHTERM) Number of characters received from the LUTYPE6.1 alternate terminal facilities by the user task. (Not applicable to ISC APPC.)
zTCMSGOU2	INT	4	ID=068 (DFHTERM) Number of messages sent to the LUTYPE6.1 alternate terminal facilities by the user task.
zTCCHROU2	INT	4	ID=086 (DFHTERM) Number of characters sent to the LUTYPE6.1 alternate terminal facilities by the user task. (Not applicable to ISC APPC.)
zTCM62IN2	INT	4	ID=135 (DFHTERM) Number of messages received from the alternate facility by the user task for LUTYPE6.2 (APPC) sessions.
zTCC62IN2	INT	4	ID=137 (DFHTERM) Number of characters received from the alternate facility by the user task for LUTYPE6.2 (APPC) sessions.
zTCM62OU2	INT	4	ID=136 (DFHTERM) Number of messages sent to the alternate facility by the user task for LUTYPE6.2 (APPC) sessions.
zTCC62OU2	INT	4	ID=138 (DFHTERM) Number of characters sent to the alternate facility by the user task for LUTYPE6.2 (APPC) sessions.
zTCALLOCT	INT	4	ID=069 (DFHTERM) Number of TCTTE ALLOCATE requests issued by the user task for LUTYPE6.2 (APPC), LUTYPE6.1, and IRC sessions.
zSCUGETCT_Below	INT	4	ID=054 (DFHSTOR) Number of user-storage GETMAIN requests issued by the user task for storage below the 16 MB line, in the UDSA.
zSCUGETCT_Above	INT	4	ID=105 (DFHSTOR) Number of user-storage GETMAIN requests issued by the user task for storage above the 16 MB line, in the extended user dynamic storage area (EUDSA).
zSCCGETCT_Below	INT	4	ID=117 (DFHSTOR) Number of user-storage GETMAIN requests issued by the user task for storage below the 16 MB line, in the CDSA.
zSCCGETCT_Above	INT	4	ID=120 (DFHSTOR) Number of user-storage GETMAIN requests issued by the user task for storage above the 16 MB line, in the ECDSA.
zSCUSRHWM_Below	INT	4	ID=033 (DFHSTOR) Maximum amount (high-water mark) of user storage allocated to the user task below the 16 MB line, in the user dynamic storage area (UDSA).
zSCUSRHWM_Above	INT	4	ID=106 (DFHSTOR) Maximum amount (high-water mark) of user storage allocated to the user task above the 16 MB line, in the EUDSA.
zSC24CHWM	INT	4	ID=116 (DFHSTOR) Maximum amount (high-water mark) of user storage allocated to the user task below the 16 MB line, in the CICS dynamic storage area (CDSA).
zSC31CHWM	INT	4	ID=119 (DFHSTOR) Maximum amount (high-water mark) of user storage allocated to the user task above the 16 MB line, in the extended CICS dynamic storage area (ECDSA).
zSCUSRSTG_Below	INT	8	ID=095 (DFHSTOR) Storage occupancy of the user task below the 16 MB line, in the UDSA. This measures the area under the curve of storage in use against elapsed time.
zSCUSRSTG_Above	INT	8	ID=107 (DFHSTOR) Storage occupancy of the user task above the 16 MB line, in the EUDSA. This measures the area under the curve of storage in use against elapsed time.
zSC24COCC	INT	8	ID=118 (DFHSTOR) Storage occupancy of the user task below the 16 MB line, in the CDSA. This measures the area under the curve of storage in use against elapsed time.
zSC31COCC	INT	8	ID=121 (DFHSTOR) Storage occupancy of the user task above the 16 MB line, in the ECDSA. This measures the area under the curve of storage in use against elapsed time.
zSC24SGCT	INT	4	ID=144 (DFHSTOR) Number of storage GETMAIN requests issued by the user task for shared storage below the 16 MB line, in the CDSA or SDSA.
zSC24GSHR	INT	4	ID=145 (DFHSTOR) Number of bytes of shared storage obtained by the user task by using a GETMAIN request below the 16 MB line, in the CDSA or SDSA.
zSC24FSHR	INT	4	

			ID=146 (DFHSTOR) Number of bytes of shared storage released by the user task by using a FREEMAIN request below the 16 MB line, in the CDSA or SDSA.
zSC31SGCT	INT	4	ID=147 (DFHSTOR) Number of storage GETMAIN requests issued by the user task for shared storage above the 16 MB line, in the ECDSA or ESDSA.
zSC31GSHR	INT	4	ID=148 (DFHSTOR) Number of bytes of shared storage obtained by the user task by using a GETMAIN request above the 16 MB line, in the ECDSA or ESDSA.
zSC31FSHR	INT	4	ID=149 (DFHSTOR) Number of bytes of shared storage released by the user task by using a FREEMAIN request above the 16 MB line, in the ECDSA or ESDSA.
zSC64CGCT	INT	4	ID=441 (DFHSTOR) Number of user-storage GETMAIN requests issued by the user task for storage above the bar, in the CICS dynamic storage area (GCDSA).
zSC64CHWM	INT	4	ID=442 (DFHSTOR) Maximum amount (high-water mark) of user storage, rounded up to the next 4K, allocated to the user task above the bar, in the CICS dynamic storage area (GCDSA).
zSC64UGCT	INT	4	ID=443 (DFHSTOR) Number of user-storage GETMAIN requests issued by the user task for storage above the bar, in the user dynamic storage area (GUDSA).
zSC64UHWM	INT	4	ID=444 (DFHSTOR) Maximum amount (high-water mark) of user storage, rounded up to the next 4K, allocated to the user task above the bar, in the user dynamic storage area (GUDSA).
zSC64SGCT	INT	4	ID=445 (DFHSTOR) Number of storage GETMAIN requests issued by the user task for shared storage above the bar, in the GCDSA or GSDSA.
zSC64GSHR	INT	4	ID=446 (DFHSTOR) Amount of shared storage obtained by the user task by using a GETMAIN request above the bar, in the GCDSA or GSDSA. The total number of bytes obtained is rounded up to the next 4096 bytes, and the resulting number of 4K pages is displayed.
zSC64FSHR	INT	4	ID=447 (DFHSTOR) Amount of shared storage released by the user task by using a FREEMAIN request above the bar, in the GCDSA or GSDSA. The total number of bytes obtained is rounded up to the next 4096 bytes, and the resulting number of 4K pages is displayed.
zPCSTGHWM	INT	4	ID=087 (DFHSTOR) Maximum amount (high-water mark) of program storage in use by the user task both above and below the 16 MB line.
zPC31AHWM	INT	4	ID=139 (DFHSTOR) Maximum amount (high-water mark) of program storage in use by the user task above the 16 MB line.
zPC24BHWM	INT	4	ID=108 (DFHSTOR) Maximum amount (high-water mark) of program storage in use by the user task below the 16 MB line.
zPC31CHWM	INT	4	ID=142 (DFHSTOR) Maximum amount (high-water mark) of program storage in use by the user task above the 16 MB line, in the extended CICS dynamic storage area (ECDSA).
zPC24CHWM	INT	4	ID=143 (DFHSTOR) Maximum amount (high-water mark) of program storage in use by the user task below the 16 MB line, in the CICS dynamic storage area (CDSA).
zPC31RHWM	INT	4	ID=122 (DFHSTOR) Maximum amount (high-water mark) of program storage in use by the user task above the 16 MB line, in the extended read-only dynamic storage area (ERDSA).
zPC24RHWM	INT	4	ID=162 (DFHSTOR) Maximum amount (high-water mark) of program storage in use by the user task below the 16 MB line, in the read-only dynamic storage area (RDSA).
zPC31SHWM	INT	4	ID=161 (DFHSTOR) Maximum amount (high-water mark) of program storage in use by the user task above the 16 MB line, in the extended shared dynamic storage area (ESDSA).
zPC24SHWM	INT	4	ID=160 (DFHSTOR) Maximum amount (high-water mark) of program storage in use by the user task below the 16 MB line, in the shared dynamic storage area (SDSA).
zFCGETCT	INT	4	ID=036 (DFHFILE) Number of file GET requests issued by the user task.
zFCPUTCT	INT	4	ID=037 (DFHFILE) Number of file PUT requests issued by the user task.

zFCBRWCT	INT	4	ID=038 (DFHFILE) Number of file browse requests issued by the user task. This number excludes the START and END browse requests.
zFCADDCT	INT	4	ID=039 (DFHFILE) Number of file ADD requests issued by the user task.
zFCDELCT	INT	4	ID=040 (DFHFILE) Number of file DELETE requests issued by the user task.
zFCTOTCT	INT	4	ID=093 (DFHFILE) Total number of file control requests issued by the user task. This number excludes any request for OPEN, CLOSE, ENABLE, or DISABLE of a file.
zFCAMCT	INT	4	ID=070 (DFHFILE) Number of times the user task invoked file access-method interfaces. This number excludes requests for OPEN and CLOSE.
zTDGETCT	INT	4	ID=041 (DFHDEST) Number of transient data GET requests issued by the user task.
zTDPUTCT	INT	4	ID=042 (DFHDEST) Number of transient data PUT requests issued by the user task.
zTDPURCT	INT	4	ID=043 (DFHDEST) Number of transient data PURGE requests issued by the user task.
zTDTOTCT	INT	4	ID=091 (DFHDEST) Total number of transient data requests issued by the user task.
zTSGETCT	INT	4	ID=044 (DFHTEMP) Number of temporary storage GET requests to auxiliary or main temporary storage issued by the user task.
zTSPUACT	INT	4	ID=046 (DFHTEMP) Number of PUT requests to auxiliary temporary storage issued by the user task.
zTSPUMCT	INT	4	ID=047 (DFHTEMP) Number of PUT requests to main temporary storage issued by the user task.
zTSGETSCT	INT	4	ID=460 (DFHTEMP) Number of temporary storage GET requests from shared temporary storage issued by the user task.
zTSPUSCT	INT	4	ID=461 (DFHTEMP) Number of temporary storage PUT requests to shared temporary storage issued by the user task.
zTSTOTCT	INT	4	ID=092 (DFHTEMP) Total number of temporary storage requests issued by the user task.
zBMSMAPCT	INT	4	ID=050 (DFHMAPP) Number of BMS MAP requests issued by the user task. This field corresponds to the number of RECEIVE MAP requests that did not incur a terminal I/O, and the number of RECEIVE MAP FROM requests.
zBMSINCT	INT	4	ID=051 (DFHMAPP) Number of BMS IN requests issued by the user task. This field corresponds to the number of RECEIVE MAP requests that incurred a terminal I/O.
zBMSOUTCT	INT	4	ID=052 (DFHMAPP) Number of BMS OUT requests issued by the user task. This field corresponds to the number of SEND MAP requests.
zBMSTOTCT	INT	4	ID=090 (DFHMAPP) Total number of BMS requests issued by the user task.
zPCLINKCT	INT	4	ID=055 (DFHPROG) Number of program LINK and INVOKE APPLICATION requests issued by the user task, including the link to the first program of the user task.
zPCXCTLCT	INT	4	ID=056 (DFHPROG) Number of program XCTL requests issued by the user task.
zPCLOADCT	INT	4	ID=057 (DFHPROG) Number of program LOAD requests issued by the user task.
zPCLURMCT	INT	4	ID=072 (DFHPROG) Number of program LINK URM (user-replaceable module) requests issued by, or on behalf of, the user task.
zPCDPLCT	INT	4	ID=073 (DFHPROG) Number of distributed program link (DPL) requests issued by the user task.
zPCDLCSDL	INT	4	ID=286 (DFHPROG) The total length, in bytes, of the data in the containers of all the distributed program link (DPL) requests issued with the CHANNEL option by the user task.
zPCDLCRDL	INT	4	ID=287 (DFHPROG) The total length, in bytes, of the data in the containers of all DPL RETURN CHANNEL commands issued by the user task.

zPCLNKCCT	INT	4	ID=306 (DFHPROG) Number of local program LINK and INVOKE APPLICATION requests, with the CHANNEL option, issued by the user task.
zPCXCLCCT	INT	4	ID=307 (DFHPROG) Number of program XCTL requests issued with the CHANNEL option by the user task.
zPCDPLCCT	INT	4	ID=308 (DFHPROG) Number of program distributed program link (DPL) requests issued with the CHANNEL option by the user task.
zPCRTNCCT	INT	4	ID=309 (DFHPROG) Number of remote pseudoconversational RETURN requests, with the CHANNEL option, issued by the user task.
zPCRTNCDL	INT	4	ID=310 (DFHPROG) The total length, in bytes, of the data in the containers of all the remote pseudoconversational RETURN CHANNEL commands issued by the user task.
zJNLWRTCT	INT	4	ID=058 (DFHJOUR) Number of journal write requests issued by the user task.
zLOGWRTCT	INT	4	ID=172 (DFHJOUR) Number of CICS log stream write requests issued by the user task.
zICPUINCT	INT	4	ID=059 (DFHTASK) Number of interval control START or INITIATE requests during the user task.
zICTOTCT	INT	4	ID=066 (DFHTASK) Total number of Interval Control Start, Cancel, Delay, and Retrieve requests issued by the user task.
zICSTACCT	INT	4	ID=065 (DFHTASK) Total number of local interval control START requests, with the CHANNEL option, issued by the user task.
zICSTACDL	INT	4	ID=345 (DFHTASK) Total length, in bytes, of the data in the containers of all the locally executed START CHANNEL requests issued by the user task.
zICSTRCCT	INT	4	ID=346 (DFHTASK) Total number of interval control START CHANNEL requests, to be run on remote systems, issued by the user task.
zICSTRCDL	INT	4	ID=347 (DFHTASK) Total length, in bytes, of the data in the containers of all the remotely executed START CHANNEL requests issued by the user task.
zSPSYNCCT	INT	4	ID=060 (DFHSYNC) Number of SYNCPOINT requests issued during the user task.
zCFCAPICT	INT	4	ID=025 (DFHCICS) Number of CICS OO foundation class requests, including the Java API for CICS (JCICS) classes, issued by the user task.
zSZALLOCT	INT	4	ID=150 (DFHFEPI) Number of conversations allocated by the user task. This number is incremented for each FEPI ALLOCATE POOL or FEPI CONVERSE POOL.
zSZRCVCT	INT	4	ID=151 (DFHFEPI) Number of FEPI RECEIVE requests made by the user task. This number is also incremented for each FEPI CONVERSE request.
zSZSENDCT	INT	4	ID=152 (DFHFEPI) Number of FEPI SEND requests made by the user task. This number is also incremented for each FEPI CONVERSE request.
zSZSTRTCT	INT	4	ID=153 (DFHFEPI) Number of FEPI START requests made by the user task.
zSZCHROUT	INT	4	ID=154 (DFHFEPI) Number of characters sent through FEPI by the user task.
zSZCHRIN	INT	4	ID=155 (DFHFEPI) Number of characters received through FEPI by the user task.
zSZALLCTO	INT	4	ID=157 (DFHFEPI) Number of times the user task timed out while waiting to allocate a conversation.
zSZRCVTO	INT	4	ID=158 (DFHFEPI) Number of times the user task timed out while waiting to receive data.
zSZTOTCT	INT	4	ID=159 (DFHFEPI) Total number of all FEPI API and SPI requests made by the user task.
zBARSYNCT	INT	4	ID=205 (DFHCBTS) The number of CICS BTS run process, or run activity, requests that the user task made in order to execute a process or activity synchronously.
zBARASYCT	INT	4	ID=206 (DFHCBTS) The number of CICS BTS run process, or run activity, requests that the user task made in order to execute a process or activity

			asynchronously.
zBALKPACT	INT	4	ID=207 (DFHCBTS) The number of CICS BTS link process, or link activity, requests that the user task issued.
zBADPROCT	INT	4	ID=208 (DFHCBTS) The number of CICS BTS define process requests issued by the user task.
zBADACTCT	INT	4	ID=209 (DFHCBTS) The number of CICS BTS define activity requests issued by the user task.
zBARSPACT	INT	4	ID=210 (DFHCBTS) The number of CICS BTS reset process and reset activity requests issued by the user task.
zBASUPACT	INT	4	ID=211 (DFHCBTS) The number of CICS BTS suspend process, or suspend activity, requests issued by the user task.
zBARMPACT	INT	4	ID=212 (DFHCBTS) The number of CICS BTS resume process, or resume activity, requests issued by the user task.
zBADCPACT	INT	4	ID=213 (DFHCBTS) The number of CICS BTS delete activity, cancel process, or cancel activity, requests issued by the user task.
zBAACQPCT	INT	4	ID=214 (DFHCBTS) The number of CICS BTS acquire process, or acquire activity, requests issued by the user task.
zBATOTPCT	INT	4	ID=215 (DFHCBTS) Total number of CICS BTS process and activity requests issued by the user task.
zBAPRDCCT	INT	4	ID=216 (DFHCBTS) The number of CICS BTS delete, get, move, or put, container requests for process data containers issued by the user task.
zBAACDCCT	INT	4	ID=217 (DFHCBTS) The number of CICS BTS delete, get, move, or put, container requests for current activity data containers issued by the user task.
zBATOTCCT	INT	4	ID=218 (DFHCBTS) Total number of CICS BTS delete, get, move, or put, process container and activity container requests issued by the user task.
zBARATECT	INT	4	ID=219 (DFHCBTS) The number of CICS BTS retrieve-reattach event requests issued by the user task.
zBADFIECT	INT	4	ID=220 (DFHCBTS) The number of CICS BTS define-input event requests issued by the user task.
zBATIAECT	INT	4	ID=221 (DFHCBTS) The number of CICS BTS DEFINE TIMER EVENT, CHECK TIMER EVENT, DELETE TIMER EVENT, and FORCE TIMER EVENT requests issued by the user task.
zBATOTECT	INT	4	ID=222 (DFHCBTS) Total number of CICS BTS event-related requests issued by the user task.
zWBRCVCT	INT	4	ID=231 (DFHWEBB) The number of CICS web support RECEIVE requests issued by the user task.
zWBCHRIN	INT	4	ID=232 (DFHWEBB) The number of bytes received by the CICS web support RECEIVE requests issued by the user task.
zWBSENDCT	INT	4	ID=233 (DFHWEBB) The number of CICS web support SEND requests issued by the user task.
zWBCHROUT	INT	4	ID=234 (DFHWEBB) The number of bytes sent by the CICS web support SEND requests issued by the user task.
zWBTOTCT	INT	4	ID=235 (DFHWEBB) The total number of CICS web support requests issued by the user task.
zWBREPRCT	INT	4	ID=236 (DFHWEBB) The number of reads from the repository in temporary storage issued by the user task.
zWBREPWCT	INT	4	ID=237 (DFHWEBB) The number of writes to the repository in temporary storage issued by the user task.
zWBEXTRCT	INT	4	ID=238 (DFHWEBB) The number of CICS web support EXTRACT requests issued by the user task.
zWBRRWCT	INT	4	ID=239 (DFHWEBB) The number of CICS web support browsing requests for HTTPHEADER, FORMFIELD, and QUERYPARM (STARTBROWSE, READNEXT, and ENDBROWSE) issued by the user task.
zWBREADCT	INT	4	ID=224 (DFHWEBB) The number of CICS web support READ HTTPHEADER, READ FORMFIELD, and READ QUERYPARM requests issued by the user task.

zWBWRITCT	INT	4	ID=225 (DFHWEBB) The number of CICS web support WRITE HTTPHEADER requests issued by the user task.
zDHCRECT	INT	4	ID=226 (DFHDOCH) The number of document handler CREATE requests issued by the user task.
zDHINSCT	INT	4	ID=227 (DFHDOCH) The number of document handler INSERT requests issued by the user task.
zDHSETCT	INT	4	ID=228 (DFHDOCH) The number of document handler SET requests issued by the user task.
zDHRETCT	INT	4	ID=229 (DFHDOCH) The number of document handler RETRIEVE requests issued by the user task.
zDHDELCT	INT	4	ID=223 (DFHDOCH) The number of document handler DELETE requests issued by the user task.
zDHTOTCT	INT	4	ID=230 (DFHDOCH) The total number of document handler requests issued by the user task.
zDHTOTDCL	INT	4	ID=240 (DFHDOCH) The total length of all documents created by the user task.
zSOBYENCT	INT	4	ID=242 (DFH SOCK) The number of bytes encrypted by the secure sockets layer for the user task.
zSOBYDECT	INT	4	ID=243 (DFH SOCK) The number of bytes decrypted by the secure sockets layer for the user task.
zSOEXTRCT	INT	4	ID=289 (DFH SOCK) The number of EXTRACT TCP/IP and EXTRACT CERTIFICATE requests issued by the user task.
zSOCNPST	INT	4	ID=290 (DFH SOCK) The total number of requests made by the user task to create a nonpersistent outbound socket.
zSOCPSCT	INT	4	ID=291 (DFH SOCK) The total number of requests made by the user task to create a persistent outbound socket.
zSONPSHWM	INT	4	ID=292 (DFH SOCK) The peak number of nonpersistent outbound sockets owned by the user task.
zSOPSHWM	INT	4	ID=293 (DFH SOCK) The peak number of persistent outbound sockets owned by the user task.
zSORCVCT	INT	4	ID=294 (DFH SOCK) The total number of receive requests issued for outbound sockets (persistent and nonpersistent) by the user task.
zSOCHRIN	INT	4	ID=295 (DFH SOCK) The total number of bytes received on outbound sockets by the user task.
zSOSENDCT	INT	4	ID=296 (DFH SOCK) The total number of send requests issued for outbound sockets (persistent and nonpersistent) by the user task.
zSOCHROUT	INT	4	ID=297 (DFH SOCK) The total number of bytes sent on outbound sockets by the user task.
zSOTOTCT	INT	4	ID=298 (DFH SOCK) The total number of socket requests issued by the user task.
zSOMSGIN1	INT	4	ID=301 (DFH SOCK) The number of inbound socket receive requests issued by the user task.
zSOCHRIN1	INT	4	ID=302 (DFH SOCK) The number of characters received by inbound socket receive requests issued by the user task.
zSOMSGOU1	INT	4	ID=303 (DFH SOCK) The number of inbound socket send requests issued by the user task.
zSOCHROU1	INT	4	ID=304 (DFH SOCK) The number of characters sent by inbound socket send requests issued by the user task.
zIMSREQCT	INT	4	ID=179 (DFHDATA) The number of IMS (DBCTL) requests issued by the user task.
zDB2REQCT	INT	4	ID=180 (DFHDATA) The total number of Db2 EXEC SQL and Instrumentation Facility Interface (IFI) requests issued by the user task.
zWWMREQCT	INT	4	ID=395 (DFHDATA) The total number of WebSphere MQ requests issued by the user task.
zTCBATTCT	INT	4	ID=251 (DFHTASK) The number of CICS TCBS attached by or on behalf of the user task.

zDSTCBHWM	INT	4	ID=252 (DFHTASK) The peak number of CICS open TCBs (in TCB modes L8, L9, S8, T8, X8, and X9) that have been concurrently allocated to the user task.
zWBREDOCT	INT	4	ID=331 (DFHWEBB) The number of CICS web support READ HTTPHEADER requests issued by the user task when CICS is an HTTP client.
zWBWRTOCT	INT	4	ID=332 (DFHWEBB) The number of CICS web support WRITE HTTPHEADER requests issued by the user task when CICS is an HTTP client.
zWBRCVIN1	INT	4	ID=333 (DFHWEBB) The number of CICS web support RECEIVE and CONVERSE requests issued by the user task when CICS is an HTTP client.
zWBCHRIN1	INT	4	ID=334 (DFHWEBB) The number of bytes received by the CICS web support RECEIVE and CONVERSE requests issued by the user task when CICS is an HTTP client.
zWBSNDOU1	INT	4	ID=335 (DFHWEBB) The number of CICS web support SEND and CONVERSE requests issued by the user task when CICS is an HTTP client.
zWBCHROU1	INT	4	ID=336 (DFHWEBB) The number of bytes sent by the CICS web support SEND and CONVERSE requests issued by the user task when CICS is an HTTP client.
zWBPARSCT	INT	4	ID=337 (DFHWEBB) The number of CICS web support PARSE URL requests issued by the user task.
zWBRRWOCT	INT	4	ID=338 (DFHWEBB) The number of CICS web support BROWSE HTTPHEADER requests (STARTBROWSE, READNEXT, and ENDBROWSE) issued by the user task when CICS is an HTTP client.
zWBIWBSCT	INT	4	ID=340 (DFHWEBB) The number of EXEC CICS INVOKE SERVICE and EXEC CICS INVOKE WEBSERVICE requests issued by the user task.
zWBREPRDL	INT	4	ID=341 (DFHWEBB) The total length, in bytes, of the data read from the repository in temporary storage by the user task.
zWBREPWDL	INT	4	ID=342 (DFHWEBB) The total length, in bytes, of the data written to the repository in temporary storage by the user task.
zPGTOTCCT	INT	4	ID=321 (DFHCHNL) The number of CICS requests for channel containers issued by the user task.
zPGBRWCCT	INT	4	ID=322 (DFHCHNL) The number of CICS browse requests for channel containers issued by the user task.
zPGGETCCT	INT	4	ID=323 (DFHCHNL) The number of GET CONTAINER and GET64 CONTAINER requests for channel containers issued by the user task.
zPGPUTCCT	INT	4	ID=324 (DFHCHNL) The number of PUT CONTAINER and PUT64 CONTAINER requests for channel containers issued by the user task.
zPGMOVCCT	INT	4	ID=325 (DFHCHNL) The number of MOVE CONTAINER requests for channel containers issued by the user task.
zPGGETCDL	INT	4	ID=326 (DFHCHNL) The total length, in bytes, of the data in the containers of all the GET CONTAINER CHANNEL and GET64 CONTAINER CHANNEL commands issued by the user task.
zPGPUTCDL	INT	4	ID=327 (DFHCHNL) The total length, in bytes, of the data in the containers of all the PUT CONTAINER CHANNEL and PUT64 CONTAINER CHANNEL commands issued by the user task.
zPGCRECCT	INT	4	ID=328 (DFHCHNL) The number of containers created by MOVE, PUT CONTAINER, and PUT64 CONTAINER requests for channel containers issued by the user task.
zPGCSTHWM	INT	4	ID=329 (DFHCHNL) Maximum amount (high-water mark), in bytes, of container storage allocated to the user task.
zISALLOCT	INT	4	ID=288 (DFHSOCK) The number of allocate session requests issued by the user task for sessions using IPIC.
zEICTOTCT	INT	4	ID=402 (DFHCICS) Total number of Interval Control Start, Cancel, Delay, and Retrieve requests issued by the user task.
zECSIGECT	INT	4	ID=415 (DFHCICS) The number of EXEC CICS SIGNAL EVENT commands issued by the user task.

zECEFOPCT	INT	4	ID=416 (DFHCICS) The number of event filter operations performed by the user task.
zECEVNTCT	INT	4	ID=417 (DFHCICS) The number of events captured by the user task.
zECSEVCCT	INT	4	ID=418 (DFHCICS) The number of synchronous emission events captured by the user task.
zTIASKTCT	INT	4	ID=405 (DFHCICS) The number of EXEC CICS ASKTIME commands issued by the user task.
zTITOTCT	INT	4	ID=406 (DFHCICS) The total number of EXEC CICS ASKTIME, CONVERTTIME, and FORMATTIME commands issued by the user task.
zBFDGSTCT	INT	4	ID=408 (DFHCICS) The total number of EXEC CICS BIF DIGEST commands issued by the user task.
zBFTOTCT	INT	4	ID=409 (DFHCICS) The total number of EXEC CICS BIF DEEDIT and BIF DIGEST commands issued by the user task.
zMLXSSTDL	INT	4	ID=412 (DFHWEBB) The total length of the documents that were parsed using the z/OS XML System Services parser.
zMLXMLTCT	INT	4	ID=413 (DFHWEBB) The number of EXEC CICS TRANSFORM commands issued by the user task.
zWSACBLCT	INT	4	ID=420 (DFHWEBB) The number of EXEC CICS WSACONTEXT BUILD commands issued by the user task.
zWSACGTCT	INT	4	ID=421 (DFHWEBB) The number of EXEC CICS WSACONTEXT GET commands issued by the user task.
zWSAEPCT	INT	4	ID=422 (DFHWEBB) The number of EXEC CICS WSAEPR CREATE commands issued by the user task.
zWSATOTCT	INT	4	ID=423 (DFHWEBB) The total number of EXEC CICS WS-Addressing commands issued by the user task.
zWBSFCRCT	INT	4	ID=386 (DFHWEBB) The number of EXEC CICS SOAPFAULT CREATE commands issued by the user task.
zWBSFTOCT	INT	4	ID=387 (DFHWEBB) The total number of EXEC CICS SOAPFAULT ADD, CREATE, and DELETE commands issued by the user task.
zWBISSFCT	INT	4	ID=388 (DFHWEBB) The total number of SOAP faults received in response to the EXEC CICS INVOKE SERVICE and EXEC CICS INVOKE WEBSERVICE commands issued by the user task.
zWBSREQBL	INT	4	ID=390 (DFHWEBB) For web service applications, the SOAP request body length.
zWBSRSPBL	INT	4	ID=392 (DFHWEBB) For web service applications, the SOAP response body length.
zWBJSNRQL	INT	4	ID=424 (DFHWEBB) For JSON web service applications, the JSON message request length.
zWBJSNRPL	INT	4	ID=425 (DFHWEBB) For JSON web service applications, the JSON message response length.
zMPRTXCD	INT	4	ID=449 (DFHCICS) The number of policy task rule thresholds that this task has exceeded.
zNCGETCT	INT	4	ID=464 (DFHCICS) The total number of requests to a named counter server to satisfy EXEC CICS GET COUNTER and EXEC CICS GET DCOUNTER commands issued by the user task.

SMF110#01_Performance_Class_ADP1_PCT1.zUSRDISPT.<fieldname>

zUSRDISPT_S	TIME	8	Total elapsed time during which the user task was dispatched on each CICS TCB under which the task ran.
zUSRDISPT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCT1.zUSRCPUT.<fieldname>

zUSRCPUT_S	TIME	8	Processor time for which the user task was dispatched on each CICS TCB under which the task ran.
zUSRCPUT_N	INT	3	Count of the number of time periods contributing to the total processor time.

SMF110#01_Performance_Class_ADP1_PCT1.zCPUTONCP.<fieldname>			
zCPUTONCP_S	TIME	8	The total task processor time on a standard processor for which the user task was dispatched on each CICS TCB under which the task ran.
zCPUTONCP_N	INT	3	Count of the number of time periods contributing to the total processor time.

SMF110#01_Performance_Class_ADP1_PCT1.zOFFLCPUT.<fieldname>			
zOFFLCPUT_S	TIME	8	The total task processor time that was spent on a standard processor but was eligible for offload to a specialty processor (zIIP or zAAP).
zOFFLCPUT_N	INT	3	Count of the number of time periods contributing to the total processor time.

SMF110#01_Performance_Class_ADP1_PCT1.zSUSPTIME.<fieldname>			
zSUSPTIME_S	TIME	8	Total elapsed wait time for which the user task was suspended by the dispatcher.
zSUSPTIME_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCT1.zDISPWT.<fieldname>			
zDISPWT_S	TIME	8	Elapsed time for which the user task waited for redispach. This time is the aggregate of the wait times between each event completion and user-task redispach.
zDISPWT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCT1.zQRDISPT.<fieldname>			
zQRDISPT_S	TIME	8	The elapsed time for which the user task was dispatched on the CICS QR TCB.
zQRDISPT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCT1.zQRCPUT.<fieldname>			
zQRCPUT_S	TIME	8	The processor time for which the user task was dispatched on the CICS QR TCB.
zQRCPUT_N	INT	3	Count of the number of time periods contributing to the total processor time.

SMF110#01_Performance_Class_ADP1_PCT1.zMSDISPT.<fieldname>			
zMSDISPT_S	TIME	8	Elapsed time for which the user task was dispatched on each CICS TCB.
zMSDISPT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCT1.zMSCPUT.<fieldname>			
zMSCPUT_S	TIME	8	The processor time for which the user task was dispatched on each CICS TCB.
zMSCPUT_N	INT	3	Count of the number of time periods contributing to the total processor time.

SMF110#01_Performance_Class_ADP1_PCT1.zRODISPT.<fieldname>			
zRODISPT_S	TIME	8	The elapsed time during which the user task was dispatched by the CICS dispatcher on the CICS RO mode TCB. The RO TCB is used for loading programs, unless the command to load the program (EXEC CICS LOAD, XCTL, or LINK) is issued by an application that is currently running on an open TCB.
zRODISPT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCT1.zROCPUT.<fieldname>			
zROCPUT_S	TIME	8	The processor time during which the user task was dispatched by the CICS dispatcher on the CICS RO mode TCB. The RO TCB is used for loading programs, unless the command to load the program (EXEC CICS LOAD,

			XCTL, or LINK) is issued by an application that is currently running on an open TCB.
zROCPUT_N	INT	3	Count of the number of time periods contributing to the total processor time.

SMF110#01_Performance_Class_ADP1_PCT1.zKY8DISPT.<fieldname>

zKY8DISPT_S	TIME	8	The total elapsed time during which the user task was dispatched by the CICS dispatcher on a CICS Key 8 mode TCB.
zKY8DISPT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCT1.zKY8CPUT.<fieldname>

zKY8CPUT_S	TIME	8	The processor time during which the user task was dispatched by the CICS dispatcher on a CICS Key 8 mode TCB.
zKY8CPUT_N	INT	3	Count of the number of time periods contributing to the total processor time.

SMF110#01_Performance_Class_ADP1_PCT1.zKY9DISPT.<fieldname>

zKY9DISPT_S	TIME	8	The total elapsed time during which the user task was dispatched by the CICS dispatcher on a CICS Key 9 mode TCB.
zKY9DISPT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCT1.zKY9CPUT.<fieldname>

zKY9CPUT_S	TIME	8	The processor time during which the user task was dispatched by the CICS dispatcher on a CICS Key 9 mode TCB.
zKY9CPUT_N	INT	3	Count of the number of time periods contributing to the total processor time.

SMF110#01_Performance_Class_ADP1_PCT1.zL8CPUT.<fieldname>

zL8CPUT_S	TIME	8	The processor time during which the user task was dispatched by the CICS dispatcher domain on a CICS L8 mode TCB.
zL8CPUT_N	INT	3	Count of the number of time periods contributing to the total processor time.

SMF110#01_Performance_Class_ADP1_PCT1.zL9CPUT.<fieldname>

zL9CPUT_S	TIME	8	The processor time during which the user task was dispatched by the CICS dispatcher domain on a CICS L9 mode TCB.
zL9CPUT_N	INT	3	Count of the number of time periods contributing to the total processor time.

SMF110#01_Performance_Class_ADP1_PCT1.zS8CPUT.<fieldname>

zS8CPUT_S	TIME	8	The processor time during which the user task was dispatched by the CICS dispatcher domain on a CICS S8 mode TCB.
zS8CPUT_N	INT	3	Count of the number of time periods contributing to the total processor time.

SMF110#01_Performance_Class_ADP1_PCT1.zX8CPUT.<fieldname>

zX8CPUT_S	TIME	8	The processor time during which the user task was dispatched by the CICS dispatcher domain on a CICS X8 mode TCB.
zX8CPUT_N	INT	3	Count of the number of time periods contributing to the total processor time.

SMF110#01_Performance_Class_ADP1_PCT1.zX9CPUT.<fieldname>

zX9CPUT_S	TIME	8	The processor time during which the user task was dispatched by the CICS dispatcher domain on a CICS X9 mode TCB.
zX9CPUT_N	INT	3	Count of the number of time periods contributing to the total processor time.

SMF110#01_Performance_Class_ADP1_PCT1.zT8CPUT.<fieldname>			
zT8CPUT_S	TIME	8	The processor time during which the user task was dispatched by the CICS dispatcher domain on a CICS T8 mode TCB.
zT8CPUT_N	INT	3	Count of the number of time periods contributing to the total processor time.

SMF110#01_Performance_Class_ADP1_PCT1.zQRMODDLY.<fieldname>			
zQRMODDLY_S	TIME	8	The elapsed time for which the user task waited for redispach on the CICS QR mode TCB.
zQRMODDLY_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCT1.zMXTOTDLY.<fieldname>			
zMXTOTDLY_S	TIME	8	The elapsed time in which the user task waited to obtain a CICS L8 or L9 mode open TCB, because the region had reached the limit set by CICS for these TCBs.
zMXTOTDLY_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCT1.zMAXXTDLY.<fieldname>			
zMAXXTDLY_S	TIME	8	The elapsed time for which the user task waited to obtain a CICS XP TCB (X8 or X9 mode), because the CICS system reached the limit set by CICS for these types of TCB.
zMAXXTDLY_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCT1.zMAXSTDLY.<fieldname>			
zMAXSTDLY_S	TIME	8	The elapsed time for which the user task waited to obtain a CICS SSL TCB (S8 mode), because the CICS system reached the limit set by the system initialization parameter MAXSSLTCBS.
zMAXSTDLY_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCT1.zMAXTTDLY.<fieldname>			
zMAXTTDLY_S	TIME	8	The elapsed time for which the user task waited to obtain a T8 TCB, because the CICS system reached the limit of available threads.
zMAXTTDLY_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCT1.zDSTCBMWT.<fieldname>			
zDSTCBMWT_S	TIME	8	The elapsed time that the user task spent in TCB mismatch waits. That is, waiting because no available TCB matched the request, but at least one non matching TCB was free.
zDSTCBMWT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCT1.zDSCHMDLY.<fieldname>			
zDSCHMDLY_S	TIME	8	The elapsed time in which the user task waited for redispach after a CICS Dispatcher change-TCB mode request was issued by or on behalf of the user task.
zDSCHMDLY_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCT1.zEXWTTIME.<fieldname>			
zEXWTTIME_S	TIME	8	The total elapsed time for which the user waited on exception conditions.
zEXWTTIME_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCT1.zTCIOWTT.<fieldname>			
zTCIOWTT_S	TIME	8	Elapsed time for which the user task waited for input from the terminal operator after issuing a RECEIVE request.
zTCIOWTT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCT1.zFCIOWTT.<fieldname>			
zFCIOWTT_S	TIME	8	Elapsed time in which the user task waited for file I/O.
zFCIOWTT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.
SMF110#01_Performance_Class_ADP1_PCT1.zFCXCWTT.<fieldname>			
zFCXCWTT_S	TIME	8	The elapsed time in which the user task waited for exclusive control of a VSAM control interval.
zFCXCWTT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.
SMF110#01_Performance_Class_ADP1_PCT1.zFCVSWTT.<fieldname>			
zFCVSWTT_S	TIME	8	The elapsed time in which the user task waited for a VSAM string.
zFCVSWTT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.
SMF110#01_Performance_Class_ADP1_PCT1.zJCIOWTT.<fieldname>			
zJCIOWTT_S	TIME	8	Elapsed time for which the user task waited for journal (logstream) I/O.
zJCIOWTT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.
SMF110#01_Performance_Class_ADP1_PCT1.zTSIOWTT.<fieldname>			
zTSIOWTT_S	TIME	8	Elapsed time for which the user task waited for VSAM temporary storage I/O.
zTSIOWTT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.
SMF110#01_Performance_Class_ADP1_PCT1.zIRIOWTT.<fieldname>			
zIRIOWTT_S	TIME	8	Elapsed time for which the user task waited for control at this end of an MRO link.
zIRIOWTT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.
SMF110#01_Performance_Class_ADP1_PCT1.zTDIOWTT.<fieldname>			
zTDIOWTT_S	TIME	8	Elapsed time in which the user waited for VSAM transient data I/O.
zTDIOWTT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.
SMF110#01_Performance_Class_ADP1_PCT1.zPCLOADTM.<fieldname>			
zPCLOADTM_S	TIME	8	Elapsed time in which the user task waited for fetches from DFHRPL or dynamic LIBRARY concatenations.
zPCLOADTM_N	INT	3	Count of the number of time periods contributing to the total elapsed time.
SMF110#01_Performance_Class_ADP1_PCT1.zDSPDELAY.<fieldname>			
zDSPDELAY_S	TIME	8	The elapsed time waiting for first dispatch.
zDSPDELAY_N	INT	3	Number of waits.
SMF110#01_Performance_Class_ADP1_PCT1.zTCLDELAY.<fieldname>			
zTCLDELAY_S	TIME	8	The elapsed time waiting for first dispatch, which was delayed because of the limits set for the transaction class of this transaction (zTCLSNAM) being reached.
zTCLDELAY_N	INT	3	Number of waits.
SMF110#01_Performance_Class_ADP1_PCT1.zMXTDELAY.<fieldname>			
zMXTDELAY_S	TIME	8	The elapsed time waiting for the first dispatch, which was delayed because of the limits set by the system parameter, MXT, being reached.
zMXTDELAY_N	INT	3	Number of waits.
SMF110#01_Performance_Class_ADP1_PCT1.zENQDELAY.<fieldname>			

zENQDELAY_S	TIME	8	The elapsed time waiting for a CICS task control local enqueue.
zENQDELAY_N	INT	3	The number of local enqueues.

SMF110#01_Performance_Class_ADP1_PCT1.zGNQDELAY.<fieldname>

zGNQDELAY_S	TIME	8	The elapsed time waiting for a CICS task control global enqueue.
zGNQDELAY_N	INT	3	The number of global enqueues.

SMF110#01_Performance_Class_ADP1_PCT1.zLU61WTT.<fieldname>

zLU61WTT_S	TIME	8	The elapsed time for which the user task waited for I/O on a LUTYPE6.1 connection or session.
zLU61WTT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCT1.zLU62WTT.<fieldname>

zLU62WTT_S	TIME	8	The elapsed time for which the user task waited for I/O on a LUTYPE6.2 (APPC) connection or session.
zLU62WTT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCT1.zSZWAIT.<fieldname>

zSZWAIT_S	TIME	8	Elapsed time in which the user task waited for all FEPI services.
zSZWAIT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCT1.zRMITIME.<fieldname>

zRMITIME_S	TIME	8	The total elapsed time spent in the CICS Resource Manager Interface (RMI).
zRMITIME_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCT1.zRMISUSP.<fieldname>

zRMISUSP_S	TIME	8	The total elapsed time that the task was suspended by the CICS dispatcher while in the CICS Resource Manager Interface (RMI).
zRMISUSP_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCT1.zSYNCTIME.<fieldname>

zSYNCTIME_S	TIME	8	Total elapsed time for which the user task was dispatched and was processing syncpoint requests.
zSYNCTIME_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCT1.zRLSWAIT.<fieldname>

zRLSWAIT_S	TIME	8	Elapsed time in which the user task waited for RLS file I/O.
zRLSWAIT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCT1.zRLSCPUT.<fieldname>

zRLSCPUT_S	TIME	8	For RLS requests issued only from the QR TCB, this value is the RLS File Request SRB CPU time that this transaction spent processing RLS file requests.
zRLSCPUT_N	INT	3	Count of the number of time periods contributing to the total CPU SRB processor time.

SMF110#01_Performance_Class_ADP1_PCT1.zLMDELAY.<fieldname>

zLMDELAY_S	TIME	8	The elapsed time that the user task waited to acquire a lock on a resource.
zLMDELAY_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCT1.zWTEXWAIT.<fieldname>

zWTEXWAIT_S	TIME	8	The elapsed time that the user task waited for one or more ECBs, passed to CICS by the user task using the EXEC CICS WAIT EXTERNAL ECBLIST command, to be posted by the MVS POST command.
zWTEXWAIT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCT1.zWTCEWAIT.<fieldname>

zWTCEWAIT_S	TIME	8	The elapsed time that the user task waited for one of these events: 1. One or more ECBs, passed to CICS by the user task using the EXEC CICS WAITCICS ECBLIST command, to be posted by the MVS POST command. 2. Completion of an event initiated by the same or by another user task.
zWTCEWAIT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCT1.zICDELAY.<fieldname>

zICDELAY_S	TIME	8	The elapsed time that the user task waited as a result of issuing one of the following commands: 1. An interval control EXEC CICS DELAY command for a specified time interval. 2. An interval control EXEC CICS DELAY command for a specified time of day to expire. 3. An interval control EXEC CICS RETRIEVE command with the WAIT option specified.
zICDELAY_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCT1.zGVUPWAIT.<fieldname>

zGVUPWAIT_S	TIME	8	The elapsed time that the user task waited as a result of giving up control to another task.
zGVUPWAIT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCT1.zTSSHWAIT.<fieldname>

zTSSHWAIT_S	TIME	8	Elapsed time that the user task waited for an asynchronous shared temporary storage request to a temporary storage data server to complete.
zTSSHWAIT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCT1.zCFDTPWAIT.<fieldname>

zCFDTPWAIT_S	TIME	8	The elapsed time in which the user task waited for a data table access request to the Coupling Facility Data Table server to complete.
zCFDTPWAIT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCT1.zSRVSYWTT.<fieldname>

zSRVSYWTT_S	TIME	8	Total elapsed time in which the user task waited for syncpoint or resynchronization processing using the Coupling Facility data tables server to complete.
zSRVSYWTT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCT1.zRRMSWAIT.<fieldname>

zRRMSWAIT_S	TIME	8	The elapsed time in which the user task waited indoubt using resource recovery services for EXCI.
zRRMSWAIT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCT1.zRUNTRWTT.<fieldname>

zRUNTRWTT_S	TIME	8	The elapsed time in which the user task waited for completion of a transaction that ran as a result of the user task issuing a CICS BTS run process request and a run activity request synchronously.
zRUNTRWTT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCT1.zSYNCDLY.<fieldname>

zSYNCDLY_S	TIME	8	The elapsed time in which the user task waited for a syncpoint request to be issued by its parent transaction.
------------	------	---	--

zSYNCDLY_N	INT	3	Count of the number of time periods contributing to the total elapsed time.
------------	-----	---	---

SMF110#01_Performance_Class_ADP1_PCT1.zSOIOWTT.<fieldname>

zSOIOWTT_S	TIME	8	The elapsed time for which the user task waited for inbound socket I/O.
zSOIOWTT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCT1.zIMSWAIT.<fieldname>

zIMSWAIT_S	TIME	8	The elapsed time during which the user task waited for DBCTL to service the IMS requests issued by the user task.
zIMSWAIT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCT1.zDB2RDYQW.<fieldname>

zDB2RDYQW_S	TIME	8	The elapsed time during which the user task waited for a Db2 thread to become available.
zDB2RDYQW_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCT1.zDB2CONWT.<fieldname>

zDB2CONWT_S	TIME	8	The elapsed time during which the user task waited for a Db2 connection to become available for use with the user task's open TCB.
zDB2CONWT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCT1.zWMQGETWT.<fieldname>

zWMQGETWT_S	TIME	8	The elapsed time during which the user task waited for WebSphere MQ to service the user task's GETWAIT request.
zWMQGETWT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCT1.zJVMTIME.<fieldname>

zJVMTIME_S	TIME	8	The total elapsed time spent in the JVM by the user task.
zJVMTIME_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCT1.zJVMSUSP.<fieldname>

zJVMSUSP_S	TIME	8	The elapsed time for which the user task was suspended by the CICS dispatcher while running in the JVM.
zJVMSUSP_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCT1.zSOOIOWTT.<fieldname>

zSOOIOWTT_S	TIME	8	The total elapsed time that the user task waited on outbound sockets.
zSOOIOWTT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCT1.zRQRWAIT.<fieldname>

zRQRWAIT_S	TIME	8	The elapsed time during which the request receiver user task CIRR (or user specified transaction ID) waited for any outstanding replies to be satisfied.
zRQRWAIT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCT1.zRQPWAIT.<fieldname>

zRQPWAIT_S	TIME	8	The elapsed time during which the request processor user task CIRP waited for any outstanding replies to be satisfied.
zRQPWAIT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCT1.zOTSINDWT.<fieldname>

zOTSINDWT_S	TIME	8	The elapsed time in which the user task was dispatched or suspended indoubt (or both) while processing a syncpoint for an Object Transaction
-------------	------	---	--

			Service (OTS) syncpoint request.
zOTSINDWT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCT1.zJVMITIME.<fieldname>

zJVMITIME_S	TIME	8	The elapsed time spent initializing the JVM environment.
zJVMITIME_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCT1.zJVMRTIME.<fieldname>

zJVMRTIME_S	TIME	8	Reserved field, returns zero.
zJVMRTIME_N	INT	3	Reserved field, returns zero.

SMF110#01_Performance_Class_ADP1_PCT1.zPTPWAIT.<fieldname>

zPTPWAIT_S	TIME	8	The elapsed time for which the user task waited for the 3270 bridge partner transaction to complete.
zPTPWAIT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCT1.zDSMMSWWT.<fieldname>

zDSMMSWWT_S	TIME	8	The elapsed time that the user task spent waiting because no TCB was available and a TCB was not created because of MVS storage constraints.
zDSMMSWWT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCT1.zISIWTT.<fieldname>

zISIWTT_S	TIME	8	The elapsed time for which a user task waited for control at this end of an IPIC connection.
zISIWTT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCT1.zJVMTHDWT.<fieldname>

zJVMTHDWT_S	TIME	8	The elapsed time that the user task waited to obtain a JVM server thread because the CICS system had reached the thread limit for a JVM server in the CICS region.
zJVMTHDWT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCT1.zWMQASRBT.<fieldname>

zWMQASRBT_S	TIME	8	The WebSphere MQ SRB time this transaction spent processing WebSphere MQ API requests.
zWMQASRBT_N	INT	3	Count of the number of time periods contributing to the total SRB time.

SMF110#01_Performance_Class_ADP1_PCT1.zTDILWTT.<fieldname>

zTDILWTT_S	TIME	8	The elapsed time for which the user task waited for an intrapartition transient data lock (TDIPLOCK).
zTDILWTT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCT1.zTDELWTT.<fieldname>

zTDELWTT_S	TIME	8	The elapsed time for which the user task waited for an extrapartition transient data lock (TDEPLOCK).
zTDELWTT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCT1.zROMODDLY.<fieldname>

zROMODDLY_S	TIME	8	The elapsed time for which the user task waited for redispach on the CICS RO TCB.
zROMODDLY_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCT1.zSOMODDLY.<fieldname>

zSOMODDLY_S	TIME	8	The elapsed time for which the user task waited for redispach on the CICS SO TCB.
zSOMODDLY_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCT1.zISALWTT.<fieldname>

zISALWTT_S	TIME	8	The elapsed time for which a user task waited for an allocate request for an IPIC session.
zISALWTT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCT1.zTCALWTT.<fieldname>

zTCALWTT_S	TIME	8	The elapsed time for which a user task waited for an allocate request for an MRO (Inter-Region Communication), LU6.1, or LU6.2 session.
zTCALWTT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class_ADP1_PCT1.zDSAPTHWT.<fieldname>

zDSAPTHWT_S	TIME	8	The dispatcher allocated pthread wait time. This is the time that the transaction had to wait for a Liberty pthread to be allocated during links to Liberty programs.
zDSAPTHWT_N	INT	3	Count of the number of time periods contributing to the total wait time.

SMF110#01_Performance_Class_ADP1_PCT1.zRMITOTAL.<fieldname>

zRMITOTAL_S	TIME	8	The total elapsed time spent in the CICS Resource Manager Interface (RMI).
zRMITOTAL_N	INT	3	Count of the number of time periods contributing to the total elapsed time spent in the CICS Resource Manager Interface (RMI).

SMF110#01_Performance_Class_ADP1_PCT1.zRMIOOTHER.<fieldname>

zRMIOOTHER_S	TIME	8	The total elapsed time spent in the CICS RMI for resource manager requests other than Db2, DBCTL, EXEC DLI, IBM MQ, CICSplex SM and CICS TCP/IP socket requests.
zRMIOOTHER_N	INT	3	Count of the number of time periods contributing to the total elapsed time spent in the CICS RMI for resource manager requests other than Db2, DBCTL, EXEC DLI, IBM MQ, CICSplex SM and CICS TCP/IP socket requests.

SMF110#01_Performance_Class_ADP1_PCT1.zRMIDB2.<fieldname>

zRMIDB2_S	TIME	8	The total elapsed time spent in the CICS RMI for Db2 requests.
zRMIDB2_N	INT	3	Count of the number of time periods contributing to the total elapsed time spent in the CICS RMI for Db2 requests.

SMF110#01_Performance_Class_ADP1_PCT1.zRMIDBCTL.<fieldname>

zRMIDBCTL_S	TIME	8	The total elapsed time spent in the CICS RMI for DBCTL requests.
zRMIDBCTL_N	INT	3	Count of the number of time periods contributing to the total elapsed time spent in the CICS RMI for DBCTL requests.

SMF110#01_Performance_Class_ADP1_PCT1.zRMIEXDLI.<fieldname>

zRMIEXDLI_S	TIME	8	The total elapsed time spent in the CICS RMI for EXEC DLI requests.
zRMIEXDLI_N	INT	3	Count of the number of time periods contributing to the total elapsed time spent in the CICS RMI for EXEC DLI requests.

SMF110#01_Performance_Class_ADP1_PCT1.zRMIMQM.<fieldname>

zRMIMQM_S	TIME	8	The total elapsed time spent in the CICS RMI for IBM MQ requests.
zRMIMQM_N	INT	3	Count of the number of time periods contributing to the total elapsed time spent in the CICS RMI for IBM MQ requests.

SMF110#01_Performance_Class_ADP1_PCT1.zRMICPSM.<fieldname>

zRMICPSM_S	TIME	8	The total elapsed time spent in the CICS RMI for CICSplex SM requests.
zRMICPSM_N	INT	3	Count of the number of time periods contributing to the total elapsed time spent in the CICS RMI for CICSplex SM requests.

SMF110#01_Performance_Class_ADP1_PCT1.zRMITCPIP.<fieldname>

zRMITCPIP_S	TIME	8	The total elapsed time spent in the CICS RMI for CICS TCP/IP socket requests.
zRMITCPIP_N	INT	3	Count of the number of time periods contributing to the total elapsed time spent in the CICS RMI for CICS TCP/IP socket requests.

Secondary segment: SMF110#01_Performance_Class

Field Name	Type	Len	Description
<i>SMF110#01_Performance_Class.<fieldname></i>			
zTRAN	CHAR	4	ID=001 (DFHTASK) Transaction identification.
zTERM	CHAR	4	ID=002 (DFHTERM) Terminal or session identification. This field is null if the task is not associated with a terminal or session.
zUSERID	CHAR	8	ID=089 (DFHCICS) User identification at task creation. This identification can also be the remote user identifier for a task created as the result of receiving an ATTACH request across an MRO or APPC link with attach-time security enabled.
zTTYPE	CHAR	4	ID=004 (DFHTASK) Transaction start type. The high-order bytes (0 and 1) are set as follows: 'TO' => Attached from terminal input. 'S' => Attached by automatic transaction initiation (ATI) without data. 'SD' => Attached by automatic transaction initiation (ATI) with data. 'QD' => Attached by transient data trigger level. 'U' => Attached by user request. 'TP' => Attached from terminal TCTTE transaction ID. 'SZ' => Attached by front-end programming interface (FEPI).
zSTART	TSTMP	8	ID=005 (DFHCICS) Start time of measurement interval, which is one of the following times: - The time at which the user task was attached. - The time at which data recording was most recently reset in support of the MCT user event monitoring point DELIVER option or the monitoring options MNCONV, MNSYNC, or FREQUENCY.
zSTOP	TSTMP	8	ID=006 (DFHCICS) Finish time of measurement interval, which is one of the following times: - The time at which the user task was detached. - The time at which data recording was completed in support of the MCT user event monitoring point DELIVER option or the monitoring options MNCONV, MNSYNC, or FREQUENCY.
zTRANNUM	DEC	4 (7,0)	ID=031 (DFHTASK) Transaction identification number or 'III' for system initialisation, 'TCP' for terminal control.
zTRANPRI	INT	4	ID=109 (DFHTASK) Transaction priority when monitoring of the task was initialized.
zTCLSNAME	CHAR	8	ID=166 (DFHTASK) Transaction class name. This field is null if the transaction is not in a TRANCLASS.
zLUNAME	CHAR	8	ID=111 (DFHTERM) The z/OS Communications Server SNA logical unit name (if available) of the terminal that is associated with this transaction.
zPGMNAME	CHAR	8	ID=071 (DFHPROG) The name of the first program invoked at attach-time.
zNETUOWPX	CHAR	20	ID=097 (DFHTASK) Fully qualified name by which the originating system is known to the z/OS Communications Server network.
zNETUOWSX	CHAR	8	ID=098 (DFHTASK) Name by which the network unit of work ID is known in the originating system.
zRSYSID	CHAR	4	ID=130 (DFHCICS) The name (system ID) of the remote system to which this transaction was routed, either statically or dynamically.
zPERRECNT	INT	4	ID=131 (DFHCICS) The number of performance class records written by the CICS Monitoring Facility (CMF) for the user task.
zRMUOWID	CHAR	8	

			ID=132 (DFHTASK) The identifier of the unit of work (unit of recovery) for this task.
zSRVCLASS	CHAR	8	ID=167 (DFHCICS) The z/OS Workload Manager (WLM) service class for this transaction.
zRPTCLASS	CHAR	8	ID=168 (DFHCICS) The z/OS Workload Manager (WLM) report class for this transaction.
zFCTYNAME	CHAR	4	ID=163 (DFHTASK) Transaction facility name. This field is null if the transaction is not associated with a facility.

SMF110#01_Performance_Class.zTRANFLAG.<fieldname>

zTRAN_Facility	INT (ENUM)	1	Transaction facility type.
zTRAN_id	INT (ENUM)	1	Transaction identification.

SMF110#01_Performance_Class.zTRANFLAG.zTRAN_WLM.<fieldname>

zResponse	BIT	1	Report the total response time (begin-to-end phase) for completed work request (transaction).
zAllPhase	BIT	1	Notify that the entire execution phase of the work request is complete.
zSubPhase	BIT	1	Notify that a subset of the execution phase of the work request is complete.
zAbNormal	BIT	1	This transaction has been reported to the z/OS workload manager as completing abnormally because it has tried to access Db2 and a connection unavailable response has been returned. This abnormal completion occurs when all the following are true: 1. zResponse is set. 2. CICS is not connected to Db2. 3. The CICS-Db2 adapter is in standby mode (STANDBYMODE(RECONNECT) or STANDBYMODE(CONNECT)). 4. CONNECTERROR(SQLCODE) is specified, causing the application to receive a -923 SQL code.

SMF110#01_Performance_Class.zTRANFLAG.zTRAN_Def.<fieldname>

zTDLocBelow	BIT	1	1 => TASKDATALOC=BELOW
zTDKeyCICS	BIT	1	1 => TASKDATAKEY=CICS
zIsolateNo	BIT	1	1 => ISOLATE=NO
zDynamic	BIT	1	1 => DYNAMIC=YES

SMF110#01_Performance_Class.zTRANFLAG.<fieldname>

zTRAN_Origin	INT (ENUM)	1	Transaction Origin Type.
--------------	---------------	---	--------------------------

SMF110#01_Performance_Class.zTRANFLAG.zTRAN_Status.<fieldname>

zOrigin	BIT	1	The transaction origin.
zResource	BIT	1	Resource class record, or records, for this task.
zIdentity	BIT	1	Identity class record, or records, for this task.
zPurge	BIT	1	Task purge or runaway resulted in the open TCB the task was executing on being terminated.
zAbend	BIT	1	Task abnormally terminated.

SMF110#01_Performance_Class.zTRANFLAG.<fieldname>

zTRAN_Track	INT	1	Transaction tracking origin data tag.
-------------	-----	---	---------------------------------------

SMF110#01_Performance_Class.zTRANFLAG.zRecovery_Manager.<fieldname>

zInDWaitNo	BIT	1	Indoubt WAIT=NO.
zInDCommit	BIT	1	Indoubt ACTION=COMMIT.
zUOWInD	BIT	1	Recovery manager, UOW resolved with indoubt action.

zUOWShunt	BIT	1	Recovery manager, Shunt.
zUOWUnShunt	BIT	1	Recovery manager, Unshunt.
zInDFail	BIT	1	Recovery manager, Indoubt failure.
zROFail	BIT	1	Recovery manager, Resource owner failure.

SMF110#01_Performance_Class.zTERMINFO.<fieldname>

zTERM_Assoc	INT (ENUM)	1	Task associated with terminal or session.
zTERM_SessType	INT (ENUM)	1	If the principal facility for this task is a session, this field identifies the session type.
zTERM_AM	INT (ENUM)	1	Identifies the access method defined for the terminal ID or session ID in field TERM.
zTERM_Type	INT (ENUM)	1	Identifies the terminal or session type for the terminal id or session id in TERM.

SMF110#01_Performance_Class.<fieldname>

zTERMCNNM	CHAR	4	ID=169 (DFHTERM) Terminal session connection name. If the terminal facility associated with this transaction is a session, this field is the name of the owning connection (sysid).
zBRDGTRAN	CHAR	4	ID=124 (DFHTASK) Bridge listener transaction identifier. For CICS 3270 Bridge transactions, this field is the name of the Bridge listener transaction that attached the user task.
zRRMSURID	CHAR	16	ID=190 (DFHTASK) RRMS/MVS unit-of-recovery ID (URID).
zPRCSNAME	CHAR	36	ID=200 (DFHCBTS) The name of the CICS business transaction service (BTS) process of which the user task formed part.
zPRCSTYPE	CHAR	8	ID=201 (DFHCBTS) The process-type of the CICS BTS process of which the user task formed part.
zPRCSID	CHAR	52	ID=202 (DFHCBTS) The CICS-assigned identifier of the CICS BTS root activity that the user task implemented.
zACTVTYID	CHAR	52	ID=203 (DFHCBTS) The CICS-assigned identifier of the CICS BTS root activity that the user task implemented.
zACTVTYNM	CHAR	16	ID=204 (DFHCBTS) The name of the CICS BTS activity that the user task implemented.
zCLIPADDR	CHAR	40	ID=318 (DFH SOCK) The IP address of the client or Telnet client.
zTRNGRPID	CHAR	28	ID=082 (DFHTASK) The transaction group ID is assigned at transaction attach time, and can be used to correlate the transactions that CICS runs for the same incoming work request. For example, the CWXN and CWBA transactions for Web requests.
zNETID	CHAR	8	ID=197 (DFHTERM) NETID if a network qualified name has been received from the Communications Server. If it is a resource and the network qualified name has not yet been received, NETID is 8 blanks. In all other cases, it is nulls.
zRLUNAME	CHAR	8	ID=198 (DFHTERM) Real network name if a network qualified name has been received from the Communications Server.
zTCPSRVCE	CHAR	8	ID=245 (DFH SOCK) The TCP/IP service name that attached the user task.
zPORTNUM	INT	4	ID=246 (DFH SOCK) The TCP/IP port number of the TCP/IP service that attached the user task.
zOTSTID	CHAR	128	ID=194 (DFHTASK) This field is the first 128 bytes of the Object Transaction Service (OTS) Transaction ID (TID).
zCLIPPORT	INT	4	ID=330 (DFH SOCK) The TCP/IP port number of the originating client or Telnet client.
zISIPICNM	CHAR	8	ID=305 (DFH SOCK) The name of the IPIC (IPCONN) entry of the TCP/IP service that attached the user task.
zONETWKID	CHAR	8	ID=359 (DFHCICS) The network identifier from which this work request (transaction) originated.

zOAPPLID	CHAR	8	ID=360 (DFHCICS) The APPLID of the CICS region in which this work request (transaction) originated. For example, the region in which the CWXN task ran.
zOSTART	TSTMP	8	ID=361 (DFHCICS) The time at which the originating task, for example the CWXN task, was started.
zOTRANNUM	DEC	4 (7,0)	ID=362 (DFHCICS) The number of the originating task. For example, the CWXN task.
zOTRAN	CHAR	4	ID=363 (DFHCICS) The transaction ID (TRANSID) of the originating task. For example, the CWXN task.
zOUSERID	CHAR	8	ID=364 (DFHCICS) The originating Userid-2 or Userid-1, for example from CWBA, depending on the originating task.
zOUSERCOR	CHAR	64	ID=365 (DFHCICS) The originating user correlator.
zOTCPSVCE	CHAR	8	ID=366 (DFHCICS) The name of the originating TCPIP SERVICE.
zOPORTNUM	INT	4	ID=367 (DFHCICS) The port number used by the originating TCPIP SERVICE.
zOCLIPADR	CHAR	40	ID=372 (DFHCICS) The IP address of the originating client or Telnet client.
zOCLIPORT	INT	4	ID=369 (DFHCICS) The TCP/IP port number of the originating client or Telnet client.

SMF110#01_Performance_Class.zOTRANFLG.<fieldname>

zOTRAN_Facility	INT (ENUM)	1	Originating Transaction facility type.
zOTRAN_id	INT (ENUM)	1	Originating Transaction identification.

SMF110#01_Performance_Class.zOTRANFLG.zOTRAN_WLM.<fieldname>

zResponse	BIT	1	Report the total response time (begin-to-end phase) for completed work request (transaction).
zAllPhase	BIT	1	Notify that the entire execution phase of the work request is complete.
zSubPhase	BIT	1	Notify that a subset of the execution phase of the work request is complete.
zAbNormal	BIT	1	This transaction has been reported to the z/OS workload manager as completing abnormally because it has tried to access Db2 and a connection unavailable response has been returned. This abnormal completion occurs when all the following are true: 1. zResponse is set. 2. CICS is not connected to Db2. 3. The CICS-Db2 adapter is in standby mode (STANDBYMODE(RECONNECT) or STANDBYMODE(CONNECT)). 4. CONNECTERROR(SQLCODE) is specified, causing the application to receive a -923 SQL code.

SMF110#01_Performance_Class.zOTRANFLG.zOTRAN_Def.<fieldname>

zTDLocBelow	BIT	1	1 => TASKDATALOC=BELOW
zTDKeyCICS	BIT	1	1 => TASKDATAKEY=CICS
zIsolateNo	BIT	1	1 => ISOLATE=NO
zDynamic	BIT	1	1 => DYNAMIC=YES

SMF110#01_Performance_Class.zOTRANFLG.<fieldname>

zOTRAN_Origin	INT (ENUM)	1	Originating Transaction Type.
---------------	---------------	---	-------------------------------

SMF110#01_Performance_Class.zOTRANFLG.zOTRAN_Status.<fieldname>

zOrigin	BIT	1	The transaction origin.
zResource	BIT	1	Resource class record, or records, for this task.
zIdentity	BIT	1	Identity class record, or records, for this task.
zPurge	BIT	1	Task purge or runaway resulted in the open TCB the task was executing on being terminated.

zAbend	BIT	1	Task abnormally terminated.
--------	-----	---	-----------------------------

SMF110#01_Performance_Class.zOTRANFLG.<fieldname>

zOTRAN_Track	INT	1	Originating Transaction tracking origin data tag.
--------------	-----	---	---

SMF110#01_Performance_Class.zOTRANFLG.zORecovery_Manager.<fieldname>

zInDWaitNo	BIT	1	Indoubt WAIT=NO.
zInDCommit	BIT	1	Indoubt ACTION=COMMIT.
zUOWInD	BIT	1	Recovery manager, UOW resolved with indoubt action.
zUOWShunt	BIT	1	Recovery manager, Shunt.
zUOWUnShunt	BIT	1	Recovery manager, Unshunt.
zInDFail	BIT	1	Recovery manager, Indoubt failure.
zROFail	BIT	1	Recovery manager, Resource owner failure.

SMF110#01_Performance_Class.zOTRANFLG.<fieldname>

zOFCTYNME	CHAR	8	ID=371 (DFHCICS) The facility name of the originating transaction.
zWBURIMNM	CHAR	8	ID=380 (DFHWEBB) For CICS web support, Atom feeds, and web service applications, the name of the URIMAP resource definition that was mapped to the URI of the inbound request that was processed by this task.
zWBPIPLNM	CHAR	8	ID=381 (DFHWEBB) For web service applications, the name of the PIPELINE resource definition that was used to provide information about the message handlers that act on the service request processed by this task.
zWBATMSNM	CHAR	8	ID=382 (DFHWEBB) For Atom feeds, the name of the ATOMSERVICE resource definition that was used to process this task.
zWBSVCENM	CHAR	32	ID=383 (DFHWEBB) For web service applications, the name of the WEBSERVICE resource definition that was used to process this task.
zWBSVOPNM	CHAR	64	ID=384 (DFHWEBB) For web service applications, the first 64 bytes of the web service operation name.
zWBPROGNM	CHAR	8	ID=385 (DFHWEBB) For CICS web support, the name of the program from the URIMAP resource definition that was used to provide the application-generated response to the HTTP request processed by this task.
zPHNTWKID	CHAR	8	ID=373 (DFHCICS) The network identifier of the CICS system of an immediately previous task in another CICS system with which this task is associated.
zPHAPPLID	CHAR	8	ID=374 (DFHCICS) The APPLID from previous hop data. This is the APPLID of the CICS system of a previous task in another CICS system with which this task is associated.
zPHSTART	TSTMP	8	ID=375 (DFHCICS) The start time of the immediately previous task in another CICS system with which this task is associated.
zPHTRANNO	DEC	4 (7,0)	ID=376 (DFHCICS) The task number of the immediately previous task in another CICS system with which this task is associated.
zPHTRAN	CHAR	4	ID=377 (DFHCICS) The transaction ID (TRANSID) of the immediately previous task in another CICS system with which this task is associated.
zPHCOUNT	INT	4	ID=378 (DFHCICS) The number of times there has been a request from one CICS system to another CICS system to initiate a task with which this task is associated.
zOADID	CHAR	64	ID=351 (DFHCICS) The adapter identifier added to the origin data by the adapter.
zOADATA1	CHAR	64	ID=352 (DFHCICS) The data added to the origin data by the adapter.
zOADATA2	CHAR	64	ID=353 (DFHCICS) The data added to the origin data by using the adapter.
zOADATA3	CHAR	64	ID=354 (DFHCICS) The data added to the origin data by the adapter.
zSOCIPHER	HEX	4	ID=320 (DFH SOCK) Identifies the code for the cipher suite that was selected during the SSL handshake for use on the inbound connection, for

			example X'0000002F'.
zCECMCHTP	CHAR	4	ID=430 (DFHTASK) The CEC machine type, in EBCDIC, for the physical hardware environment where the CICS region is running.
zCECMDLID	CHAR	16	ID=431 (DFHTASK) The CEC model number, in EBCDIC, for the physical hardware environment where the CICS region is running.
zLPARNAME	CHAR	8	ID=432 (DFHTASK) The name, in EBCDIC, of the logical partition (LPAR) on the processor where the CICS region is running.
zMAXTASKS	INT	4	ID=433 (DFHTASK) The MXT or MAXTASKS value, expressed as a number of tasks, for the CICS region at the time the user task was attached.
zCURTASKS	INT	4	ID=434 (DFHTASK) The current number of active user transactions in the system at the time the user task was attached.
zACAPPLNM	CHAR	64	ID=451 (DFHTASK) The 64-character name of the application in the application context data.
zACPLATNM	CHAR	64	ID=452 (DFHTASK) The 64-character name of the platform in the application context data.
zACMAJVER	INT	4	ID=453 (DFHTASK) The major version of the application in the application context data, expressed as a 4-byte binary value.
zACMINVER	INT	4	ID=454 (DFHTASK) The minor version of the application in the application context data, expressed as a 4-byte binary value.
zACMICVER	INT	4	ID=455 (DFHTASK) The micro version of the application in the application context data, expressed as a 4-byte binary value.
zACOPERNM	CHAR	64	ID=456 (DFHTASK) The 64-character name of the operation in the application context data.
zPTSTART	TSTMP	8	ID=480 (DFHCICS) The start time of the immediately previous or parent task in the same CICS system with which the task is associated.
zPTTRANNO	DEC	4 (7,0)	ID=481 (DFHCICS) The task number of the immediately previous or parent task in the same CICS system with which the task is associated.
zPTTRAN	CHAR	4	ID=482 (DFHCICS) The transaction ID (TRANSID) of the immediately previous or parent task in the same CICS system with which the task is associated.
zPTCOUNT	INT	4	ID=483 (DFHCICS) The number of times there has been a request from one task to initiate another task in the same CICS system with which this task is associated, such as by a RUN TRANSID or START command.

SMF110#01_Performance_Class.zTASKFLAG.<fieldname>

zClockErr	BIT	1	Detected an attempt either to start a user clock that was already running or to stop one that was not running.
-----------	-----	---	--

SMF110#01_Performance_Class.<fieldname>

zABCODEO	CHAR	4	ID=113 (DFHPROG) Original abend code.
zABCODEC	CHAR	4	ID=114 (DFHPROG) Current abend code.
zRTYPE	CHAR	4	ID=112 (DFHCICS) Performance record type: C => Record output for a terminal converse, D => Record output for a user EMP DELIVER request, F => Record output for a long-running transaction, S => Record output for a sync point, T => Record output for the end of a task.
zTCMSGIN1	INT	4	ID=034 (DFHTERM) Number of messages received from the principal terminal facility of the task, including LUTYPE6.1 and LUTYPE6.2 (APPC) but not MRO (IRC).
zTCCHRIN1	INT	4	ID=083 (DFHTERM) Number of characters received from the principal terminal facility of the task, including LUTYPE6.1 and LUTYPE6.2 (APPC) but not MRO (IRC).
zTCMSGOU1	INT	4	ID=035 (DFHTERM) Number of messages sent to the principal terminal facility of the task, including LUTYPE6.1 and LUTYPE6.2 (APPC) but not MRO (IRC).
zTCCHROU1	INT	4	ID=084 (DFHTERM) Number of characters sent to the principal terminal facility of the task, including LUTYPE6.1 and LUTYPE6.2 (APPC) but not MRO (IRC).

zTCMSGIN2	INT	4	ID=067 (DFHTERM) Number of messages received from the LUTYPE6.1 alternate terminal facilities by the user task.
zTCCHRIN2	INT	4	ID=085 (DFHTERM) Number of characters received from the LUTYPE6.1 alternate terminal facilities by the user task. (Not applicable to ISC APPC.)
zTCMSGOU2	INT	4	ID=068 (DFHTERM) Number of messages sent to the LUTYPE6.1 alternate terminal facilities by the user task.
zTCCHROU2	INT	4	ID=086 (DFHTERM) Number of characters sent to the LUTYPE6.1 alternate terminal facilities by the user task. (Not applicable to ISC APPC.)
zTCM62IN2	INT	4	ID=135 (DFHTERM) Number of messages received from the alternate facility by the user task for LUTYPE6.2 (APPC) sessions.
zTCC62IN2	INT	4	ID=137 (DFHTERM) Number of characters received from the alternate facility by the user task for LUTYPE6.2 (APPC) sessions.
zTCM62OU2	INT	4	ID=136 (DFHTERM) Number of messages sent to the alternate facility by the user task for LUTYPE6.2 (APPC) sessions.
zTCC62OU2	INT	4	ID=138 (DFHTERM) Number of characters sent to the alternate facility by the user task for LUTYPE6.2 (APPC) sessions.
zTCALLOCT	INT	4	ID=069 (DFHTERM) Number of TCTTE ALLOCATE requests issued by the user task for LUTYPE6.2 (APPC), LUTYPE6.1, and IRC sessions.
zSCUGETCT_Below	INT	4	ID=054 (DFHSTOR) Number of user-storage GETMAIN requests issued by the user task for storage below the 16 MB line, in the UDSA.
zSCUGETCT_Above	INT	4	ID=105 (DFHSTOR) Number of user-storage GETMAIN requests issued by the user task for storage above the 16 MB line, in the extended user dynamic storage area (EUDSA).
zSCCGETCT_Below	INT	4	ID=117 (DFHSTOR) Number of user-storage GETMAIN requests issued by the user task for storage below the 16 MB line, in the CDSA.
zSCCGETCT_Above	INT	4	ID=120 (DFHSTOR) Number of user-storage GETMAIN requests issued by the user task for storage above the 16 MB line, in the ECDSA.
zSCUSRHWM_Below	INT	4	ID=033 (DFHSTOR) Maximum amount (high-water mark) of user storage allocated to the user task below the 16 MB line, in the user dynamic storage area (UDSA).
zSCUSRHWM_Above	INT	4	ID=106 (DFHSTOR) Maximum amount (high-water mark) of user storage allocated to the user task above the 16 MB line, in the EUDSA.
zSC24CHWM	INT	4	ID=116 (DFHSTOR) Maximum amount (high-water mark) of user storage allocated to the user task below the 16 MB line, in the CICS dynamic storage area (CDSA).
zSC31CHWM	INT	4	ID=119 (DFHSTOR) Maximum amount (high-water mark) of user storage allocated to the user task above the 16 MB line, in the extended CICS dynamic storage area (ECDSA).
zSCUSRSTG_Below	INT	8	ID=095 (DFHSTOR) Storage occupancy of the user task below the 16 MB line, in the UDSA. This measures the area under the curve of storage in use against elapsed time.
zSCUSRSTG_Above	INT	8	ID=107 (DFHSTOR) Storage occupancy of the user task above the 16 MB line, in the EUDSA. This measures the area under the curve of storage in use against elapsed time.
zSC24COCC	INT	8	ID=118 (DFHSTOR) Storage occupancy of the user task below the 16 MB line, in the CDSA. This measures the area under the curve of storage in use against elapsed time.
zSC31COCC	INT	8	ID=121 (DFHSTOR) Storage occupancy of the user task above the 16 MB line, in the ECDSA. This measures the area under the curve of storage in use against elapsed time.
zSC24SGCT	INT	4	ID=144 (DFHSTOR) Number of storage GETMAIN requests issued by the user task for shared storage below the 16 MB line, in the CDSA or SDSA.
zSC24GSHR	INT	4	ID=145 (DFHSTOR) Number of bytes of shared storage obtained by the user task by using a GETMAIN request below the 16 MB line, in the CDSA or SDSA.
zSC24FSHR	INT	4	ID=146 (DFHSTOR) Number of bytes of shared storage released by the user task by using a FREEMAIN request below the 16 MB line, in the CDSA or SDSA.
zSC31SGCT	INT	4	

			ID=147 (DFHSTOR) Number of storage GETMAIN requests issued by the user task for shared storage above the 16 MB line, in the ECDSA or ESDSA.
zSC31GSHR	INT	4	ID=148 (DFHSTOR) Number of bytes of shared storage obtained by the user task by using a GETMAIN request above the 16 MB line, in the ECDSA or ESDSA.
zSC31FSHR	INT	4	ID=149 (DFHSTOR) Number of bytes of shared storage released by the user task by using a FREEMAIN request above the 16 MB line, in the ECDSA or ESDSA.
zSC64CGCT	INT	4	ID=441 (DFHSTOR) Number of user-storage GETMAIN requests issued by the user task for storage above the bar, in the CICS dynamic storage area (GCDSA).
zSC64CHWM	INT	4	ID=442 (DFHSTOR) Maximum amount (high-water mark) of user storage, rounded up to the next 4K, allocated to the user task above the bar, in the CICS dynamic storage area (GCDSA).
zSC64UGCT	INT	4	ID=443 (DFHSTOR) Number of user-storage GETMAIN requests issued by the user task for storage above the bar, in the user dynamic storage area (GUDSA).
zSC64UHWM	INT	4	ID=444 (DFHSTOR) Maximum amount (high-water mark) of user storage, rounded up to the next 4K, allocated to the user task above the bar, in the user dynamic storage area (GUDSA).
zSC64SGCT	INT	4	ID=445 (DFHSTOR) Number of storage GETMAIN requests issued by the user task for shared storage above the bar, in the GCDSA or GSDSA.
zSC64GSHR	INT	4	ID=446 (DFHSTOR) Amount of shared storage obtained by the user task by using a GETMAIN request above the bar, in the GCDSA or GSDSA. The total number of bytes obtained is rounded up to the next 4096 bytes, and the resulting number of 4K pages is displayed.
zSC64FSHR	INT	4	ID=447 (DFHSTOR) Amount of shared storage released by the user task by using a FREEMAIN request above the bar, in the GCDSA or GSDSA. The total number of bytes obtained is rounded up to the next 4096 bytes, and the resulting number of 4K pages is displayed.
zPCSTGHWM	INT	4	ID=087 (DFHSTOR) Maximum amount (high-water mark) of program storage in use by the user task both above and below the 16 MB line.
zPC31AHWM	INT	4	ID=139 (DFHSTOR) Maximum amount (high-water mark) of program storage in use by the user task above the 16 MB line.
zPC24BHWM	INT	4	ID=108 (DFHSTOR) Maximum amount (high-water mark) of program storage in use by the user task below the 16 MB line.
zPC31CHWM	INT	4	ID=142 (DFHSTOR) Maximum amount (high-water mark) of program storage in use by the user task above the 16 MB line, in the extended CICS dynamic storage area (ECDSA).
zPC24CHWM	INT	4	ID=143 (DFHSTOR) Maximum amount (high-water mark) of program storage in use by the user task below the 16 MB line, in the CICS dynamic storage area (CDSA).
zPC31RHWM	INT	4	ID=122 (DFHSTOR) Maximum amount (high-water mark) of program storage in use by the user task above the 16 MB line, in the extended read-only dynamic storage area (ERDSA).
zPC24RHWM	INT	4	ID=162 (DFHSTOR) Maximum amount (high-water mark) of program storage in use by the user task below the 16 MB line, in the read-only dynamic storage area (RDSA).
zPC31SHWM	INT	4	ID=161 (DFHSTOR) Maximum amount (high-water mark) of program storage in use by the user task above the 16 MB line, in the extended shared dynamic storage area (ESDSA).
zPC24SHWM	INT	4	ID=160 (DFHSTOR) Maximum amount (high-water mark) of program storage in use by the user task below the 16 MB line, in the shared dynamic storage area (SDSA).
zFCGETCT	INT	4	ID=036 (DFHFILE) Number of file GET requests issued by the user task.
zFCPUTCT	INT	4	ID=037 (DFHFILE) Number of file PUT requests issued by the user task.
zFCBRWCT	INT	4	ID=038 (DFHFILE) Number of file browse requests issued by the user task. This number excludes the START and END browse requests.
zFCADDCT	INT	4	ID=039 (DFHFILE) Number of file ADD requests issued by the user task.

zFCDELCT	INT	4	ID=040 (DFHFILE) Number of file DELETE requests issued by the user task.
zFCTOTCT	INT	4	ID=093 (DFHFILE) Total number of file control requests issued by the user task. This number excludes any request for OPEN, CLOSE, ENABLE, or DISABLE of a file.
zFCAMCT	INT	4	ID=070 (DFHFILE) Number of times the user task invoked file access-method interfaces. This number excludes requests for OPEN and CLOSE.
zTDGETCT	INT	4	ID=041 (DFHDEST) Number of transient data GET requests issued by the user task.
zTDPUTCT	INT	4	ID=042 (DFHDEST) Number of transient data PUT requests issued by the user task.
zTDPURCT	INT	4	ID=043 (DFHDEST) Number of transient data PURGE requests issued by the user task.
zTDTOTCT	INT	4	ID=091 (DFHDEST) Total number of transient data requests issued by the user task.
zTSGETCT	INT	4	ID=044 (DFHTEMP) Number of temporary storage GET requests to auxiliary or main temporary storage issued by the user task.
zTSPUTACT	INT	4	ID=046 (DFHTEMP) Number of PUT requests to auxiliary temporary storage issued by the user task.
zTSPUTMCT	INT	4	ID=047 (DFHTEMP) Number of PUT requests to main temporary storage issued by the user task.
zTSGETSCT	INT	4	ID=460 (DFHTEMP) Number of temporary storage GET requests from shared temporary storage issued by the user task.
zTSPUTSCT	INT	4	ID=461 (DFHTEMP) Number of temporary storage PUT requests to shared temporary storage issued by the user task.
zTSTOTCT	INT	4	ID=092 (DFHTEMP) Total number of temporary storage requests issued by the user task.
zBMSMAPCT	INT	4	ID=050 (DFHMAPP) Number of BMS MAP requests issued by the user task. This field corresponds to the number of RECEIVE MAP requests that did not incur a terminal I/O, and the number of RECEIVE MAP FROM requests.
zBMSINCT	INT	4	ID=051 (DFHMAPP) Number of BMS IN requests issued by the user task. This field corresponds to the number of RECEIVE MAP requests that incurred a terminal I/O.
zBMSOUTCT	INT	4	ID=052 (DFHMAPP) Number of BMS OUT requests issued by the user task. This field corresponds to the number of SEND MAP requests.
zBMSTOTCT	INT	4	ID=090 (DFHMAPP) Total number of BMS requests issued by the user task.
zPCLINKCT	INT	4	ID=055 (DFHPROG) Number of program LINK and INVOKE APPLICATION requests issued by the user task, including the link to the first program of the user task.
zPCXCTLCT	INT	4	ID=056 (DFHPROG) Number of program XCTL requests issued by the user task.
zPCLOADCT	INT	4	ID=057 (DFHPROG) Number of program LOAD requests issued by the user task.
zPCLURMCT	INT	4	ID=072 (DFHPROG) Number of program LINK URM (user-replaceable module) requests issued by, or on behalf of, the user task.
zPCDPLCT	INT	4	ID=073 (DFHPROG) Number of distributed program link (DPL) requests issued by the user task.
zPCDLCSDL	INT	4	ID=286 (DFHPROG) The total length, in bytes, of the data in the containers of all the distributed program link (DPL) requests issued with the CHANNEL option by the user task.
zPCDLCRDL	INT	4	ID=287 (DFHPROG) The total length, in bytes, of the data in the containers of all DPL RETURN CHANNEL commands issued by the user task.
zPCLNKCCT	INT	4	ID=306 (DFHPROG) Number of local program LINK and INVOKE APPLICATION requests, with the CHANNEL option, issued by the user task.

zPCXCLCCT	INT	4	ID=307 (DFHPROG) Number of program XCTL requests issued with the CHANNEL option by the user task.
zPCDPLCCT	INT	4	ID=308 (DFHPROG) Number of program distributed program link (DPL) requests issued with the CHANNEL option by the user task.
zPCRTNCCT	INT	4	ID=309 (DFHPROG) Number of remote pseudoconversational RETURN requests, with the CHANNEL option, issued by the user task.
zPCRTNCDL	INT	4	ID=310 (DFHPROG) The total length, in bytes, of the data in the containers of all the remote pseudoconversational RETURN CHANNEL commands issued by the user task.
zJNLWRTCT	INT	4	ID=058 (DFHJOUR) Number of journal write requests issued by the user task.
zLOGWRTCT	INT	4	ID=172 (DFHJOUR) Number of CICS log stream write requests issued by the user task.
zICPUINCT	INT	4	ID=059 (DFHTASK) Number of interval control START or INITIATE requests during the user task.
zICTOTCT	INT	4	ID=066 (DFHTASK) Total number of Interval Control Start, Cancel, Delay, and Retrieve requests issued by the user task.
zICSTACCT	INT	4	ID=065 (DFHTASK) Total number of local interval control START requests, with the CHANNEL option, issued by the user task.
zICSTACDL	INT	4	ID=345 (DFHTASK) Total length, in bytes, of the data in the containers of all the locally executed START CHANNEL requests issued by the user task.
zICSTRCCT	INT	4	ID=346 (DFHTASK) Total number of interval control START CHANNEL requests, to be run on remote systems, issued by the user task.
zICSTRCDL	INT	4	ID=347 (DFHTASK) Total length, in bytes, of the data in the containers of all the remotely executed START CHANNEL requests issued by the user task.
zSPSYNCCT	INT	4	ID=060 (DFHSYNC) Number of SYNCPOINT requests issued during the user task.
zCFCAPICT	INT	4	ID=025 (DFHCICS) Number of CICS OO foundation class requests, including the Java API for CICS (JCICS) classes, issued by the user task.
zSZALLOCT	INT	4	ID=150 (DFHFEPI) Number of conversations allocated by the user task. This number is incremented for each FEPI ALLOCATE POOL or FEPI CONVERSE POOL.
zSZRCVCT	INT	4	ID=151 (DFHFEPI) Number of FEPI RECEIVE requests made by the user task. This number is also incremented for each FEPI CONVERSE request.
zSZSENDCT	INT	4	ID=152 (DFHFEPI) Number of FEPI SEND requests made by the user task. This number is also incremented for each FEPI CONVERSE request.
zSZSTRCT	INT	4	ID=153 (DFHFEPI) Number of FEPI START requests made by the user task.
zSZCHROUT	INT	4	ID=154 (DFHFEPI) Number of characters sent through FEPI by the user task.
zSZCHRIN	INT	4	ID=155 (DFHFEPI) Number of characters received through FEPI by the user task.
zSZALLCTO	INT	4	ID=157 (DFHFEPI) Number of times the user task timed out while waiting to allocate a conversation.
zSZRCVTO	INT	4	ID=158 (DFHFEPI) Number of times the user task timed out while waiting to receive data.
zSZTOTCT	INT	4	ID=159 (DFHFEPI) Total number of all FEPI API and SPI requests made by the user task.
zBARSYNCT	INT	4	ID=205 (DFHCBTS) The number of CICS BTS run process, or run activity, requests that the user task made in order to execute a process or activity synchronously.
zBARASYCT	INT	4	ID=206 (DFHCBTS) The number of CICS BTS run process, or run activity, requests that the user task made in order to execute a process or activity asynchronously.
zBALKPACT	INT	4	ID=207 (DFHCBTS) The number of CICS BTS link process, or link activity, requests that the user task issued.

zBADPROCT	INT	4	ID=208 (DFHCBTS) The number of CICS BTS define process requests issued by the user task.
zBADACTCT	INT	4	ID=209 (DFHCBTS) The number of CICS BTS define activity requests issued by the user task.
zBARSPACT	INT	4	ID=210 (DFHCBTS) The number of CICS BTS reset process and reset activity requests issued by the user task.
zBASUPACT	INT	4	ID=211 (DFHCBTS) The number of CICS BTS suspend process, or suspend activity, requests issued by the user task.
zBARMPACT	INT	4	ID=212 (DFHCBTS) The number of CICS BTS resume process, or resume activity, requests issued by the user task.
zBADCPACT	INT	4	ID=213 (DFHCBTS) The number of CICS BTS delete activity, cancel process, or cancel activity, requests issued by the user task.
zBAACQPCT	INT	4	ID=214 (DFHCBTS) The number of CICS BTS acquire process, or acquire activity, requests issued by the user task.
zBATOTPCT	INT	4	ID=215 (DFHCBTS) Total number of CICS BTS process and activity requests issued by the user task.
zBAPRDCCT	INT	4	ID=216 (DFHCBTS) The number of CICS BTS delete, get, move, or put, container requests for process data containers issued by the user task.
zBAACDCCT	INT	4	ID=217 (DFHCBTS) The number of CICS BTS delete, get, move, or put, container requests for current activity data containers issued by the user task.
zBATOTCCT	INT	4	ID=218 (DFHCBTS) Total number of CICS BTS delete, get, move, or put, process container and activity container requests issued by the user task.
zBARATECT	INT	4	ID=219 (DFHCBTS) The number of CICS BTS retrieve-reattach event requests issued by the user task.
zBADFIECT	INT	4	ID=220 (DFHCBTS) The number of CICS BTS define-input event requests issued by the user task.
zBATIAECT	INT	4	ID=221 (DFHCBTS) The number of CICS BTS DEFINE TIMER EVENT, CHECK TIMER EVENT, DELETE TIMER EVENT, and FORCE TIMER EVENT requests issued by the user task.
zBATOTECT	INT	4	ID=222 (DFHCBTS) Total number of CICS BTS event-related requests issued by the user task.
zWBRCVCT	INT	4	ID=231 (DFHWEBB) The number of CICS web support RECEIVE requests issued by the user task.
zWBCHRIN	INT	4	ID=232 (DFHWEBB) The number of bytes received by the CICS web support RECEIVE requests issued by the user task.
zWBSENDCT	INT	4	ID=233 (DFHWEBB) The number of CICS web support SEND requests issued by the user task.
zWBCHROUT	INT	4	ID=234 (DFHWEBB) The number of bytes sent by the CICS web support SEND requests issued by the user task.
zWBTOTCT	INT	4	ID=235 (DFHWEBB) The total number of CICS web support requests issued by the user task.
zWBREPRCT	INT	4	ID=236 (DFHWEBB) The number of reads from the repository in temporary storage issued by the user task.
zWBREPWCT	INT	4	ID=237 (DFHWEBB) The number of writes to the repository in temporary storage issued by the user task.
zWBEXTRCT	INT	4	ID=238 (DFHWEBB) The number of CICS web support EXTRACT requests issued by the user task.
zWBRRWCT	INT	4	ID=239 (DFHWEBB) The number of CICS web support browsing requests for HTTPHEADER, FORMFIELD, and QUERYPARM (STARTBROWSE, READNEXT, and ENDBROWSE) issued by the user task.
zWBREADCT	INT	4	ID=224 (DFHWEBB) The number of CICS web support READ HTTPHEADER, READ FORMFIELD, and READ QUERYPARM requests issued by the user task.
zWBWRITCT	INT	4	ID=225 (DFHWEBB) The number of CICS web support WRITE HTTPHEADER requests issued by the user task.
zDHCRECT	INT	4	

			ID=226 (DFHDOCH) The number of document handler CREATE requests issued by the user task.
zDHINSCT	INT	4	ID=227 (DFHDOCH) The number of document handler INSERT requests issued by the user task.
zDHSETCT	INT	4	ID=228 (DFHDOCH) The number of document handler SET requests issued by the user task.
zDHRETCT	INT	4	ID=229 (DFHDOCH) The number of document handler RETRIEVE requests issued by the user task.
zDHDELCT	INT	4	ID=223 (DFHDOCH) The number of document handler DELETE requests issued by the user task.
zDHTOTCT	INT	4	ID=230 (DFHDOCH) The total number of document handler requests issued by the user task.
zDHTOTDCL	INT	4	ID=240 (DFHDOCH) The total length of all documents created by the user task.
zSOBYENCT	INT	4	ID=242 (DFH SOCK) The number of bytes encrypted by the secure sockets layer for the user task.
zSOBYDECT	INT	4	ID=243 (DFH SOCK) The number of bytes decrypted by the secure sockets layer for the user task.
zSOEXTRCT	INT	4	ID=289 (DFH SOCK) The number of EXTRACT TCPIP and EXTRACT CERTIFICATE requests issued by the user task.
zSOCNPSCT	INT	4	ID=290 (DFH SOCK) The total number of requests made by the user task to create a nonpersistent outbound socket.
zSOCPSCT	INT	4	ID=291 (DFH SOCK) The total number of requests made by the user task to create a persistent outbound socket.
zSONPSHWM	INT	4	ID=292 (DFH SOCK) The peak number of nonpersistent outbound sockets owned by the user task.
zSOPSHWM	INT	4	ID=293 (DFH SOCK) The peak number of persistent outbound sockets owned by the user task.
zSORCVCT	INT	4	ID=294 (DFH SOCK) The total number of receive requests issued for outbound sockets (persistent and nonpersistent) by the user task.
zSOCHRIN	INT	4	ID=295 (DFH SOCK) The total number of bytes received on outbound sockets by the user task
zSOSENDCT	INT	4	ID=296 (DFH SOCK) The total number of send requests issued for outbound sockets (persistent and nonpersistent) by the user task.
zSOCHROUT	INT	4	ID=297 (DFH SOCK) The total number of bytes sent on outbound sockets by the user task.
zSOTOTCT	INT	4	ID=298 (DFH SOCK) The total number of socket requests issued by the user task.
zSOMSGIN1	INT	4	ID=301 (DFH SOCK) The number of inbound socket receive requests issued by the user task.
zSOCHRIN1	INT	4	ID=302 (DFH SOCK) The number of characters received by inbound socket receive requests issued by the user task.
zSOMSGOU1	INT	4	ID=303 (DFH SOCK) The number of inbound socket send requests issued by the user task.
zSOCHROU1	INT	4	ID=304 (DFH SOCK) The number of characters sent by inbound socket send requests issued by the user task.
zIMSREQCT	INT	4	ID=179 (DFHDATA) The number of IMS (DBCTL) requests issued by the user task.
zDB2REQCT	INT	4	ID=180 (DFHDATA) The total number of Db2 EXEC SQL and Instrumentation Facility Interface (IFI) requests issued by the user task.
zWWMQREQCT	INT	4	ID=395 (DFHDATA) The total number of WebSphere MQ requests issued by the user task.
zTCBATTCT	INT	4	ID=251 (DFHTASK) The number of CICS TCBs attached by or on behalf of the user task.
zDSTCBHWM	INT	4	ID=252 (DFHTASK) The peak number of CICS open TCBs (in TCB modes L8, L9, S8, T8, X8, and X9) that have been concurrently allocated to the

			user task.
zWBREDOCT	INT	4	ID=331 (DFHWEBB) The number of CICS web support READ HTTPHEADER requests issued by the user task when CICS is an HTTP client.
zWBWRTOCT	INT	4	ID=332 (DFHWEBB) The number of CICS web support WRITE HTTPHEADER requests issued by the user task when CICS is an HTTP client.
zWBRCVIN1	INT	4	ID=333 (DFHWEBB) The number of CICS web support RECEIVE and CONVERSE requests issued by the user task when CICS is an HTTP client.
zWBCHRIN1	INT	4	ID=334 (DFHWEBB) The number of bytes received by the CICS web support RECEIVE and CONVERSE requests issued by the user task when CICS is an HTTP client.
zWBSNDOU1	INT	4	ID=335 (DFHWEBB) The number of CICS web support SEND and CONVERSE requests issued by the user task when CICS is an HTTP client.
zWBCHROU1	INT	4	ID=336 (DFHWEBB) The number of bytes sent by the CICS web support SEND and CONVERSE requests issued by the user task when CICS is an HTTP client.
zWBPARSCT	INT	4	ID=337 (DFHWEBB) The number of CICS web support PARSE URL requests issued by the user task.
zWBRRWOCT	INT	4	ID=338 (DFHWEBB) The number of CICS web support BROWSE HTTPHEADER requests (STARTBROWSE, READNEXT, and ENDBROWSE) issued by the user task when CICS is an HTTP client.
zWBIWBSCT	INT	4	ID=340 (DFHWEBB) The number of EXEC CICS INVOKE SERVICE and EXEC CICS INVOKE WEBSERVICE requests issued by the user task.
zWBREPRDL	INT	4	ID=341 (DFHWEBB) The total length, in bytes, of the data read from the repository in temporary storage by the user task.
zWBREPWDL	INT	4	ID=342 (DFHWEBB) The total length, in bytes, of the data written to the repository in temporary storage by the user task.
zPGTOTCCT	INT	4	ID=321 (DFHCHNL) The number of CICS requests for channel containers issued by the user task.
zPGBRWCCCT	INT	4	ID=322 (DFHCHNL) The number of CICS browse requests for channel containers issued by the user task.
zPGGETCCT	INT	4	ID=323 (DFHCHNL) The number of GET CONTAINER and GET64 CONTAINER requests for channel containers issued by the user task.
zPGPUTCCT	INT	4	ID=324 (DFHCHNL) The number of PUT CONTAINER and PUT64 CONTAINER requests for channel containers issued by the user task.
zPGMOVCCCT	INT	4	ID=325 (DFHCHNL) The number of MOVE CONTAINER requests for channel containers issued by the user task.
zPGGETCDL	INT	4	ID=326 (DFHCHNL) The total length, in bytes, of the data in the containers of all the GET CONTAINER CHANNEL and GET64 CONTAINER CHANNEL commands issued by the user task.
zPGPUTCDL	INT	4	ID=327 (DFHCHNL) The total length, in bytes, of the data in the containers of all the PUT CONTAINER CHANNEL and PUT64 CONTAINER CHANNEL commands issued by the user task.
zPGCRECCT	INT	4	ID=328 (DFHCHNL) The number of containers created by MOVE, PUT CONTAINER, and PUT64 CONTAINER requests for channel containers issued by the user task.
zPGCSTHWM	INT	4	ID=329 (DFHCHNL) Maximum amount (high-water mark), in bytes, of container storage allocated to the user task.
zISALLOCT	INT	4	ID=288 (DFH SOCK) The number of allocate session requests issued by the user task for sessions using IPIC.
zEICTOTCT	INT	4	ID=402 (DFHCICS) Total number of Interval Control Start, Cancel, Delay, and Retrieve requests issued by the user task.
zECSIGECT	INT	4	ID=415 (DFHCICS) The number of EXEC CICS SIGNAL EVENT commands issued by the user task.
zECEFOPT	INT	4	ID=416 (DFHCICS) The number of event filter operations performed by the user task.

zECEVNTCT	INT	4	ID=417 (DFHCICS) The number of events captured by the user task.
zECSEVCCT	INT	4	ID=418 (DFHCICS) The number of synchronous emission events captured by the user task.
zTIASKTCT	INT	4	ID=405 (DFHCICS) The number of EXEC CICS ASKTIME commands issued by the user task.
zTITOTCT	INT	4	ID=406 (DFHCICS) The total number of EXEC CICS ASKTIME, CONVERTTIME, and FORMATTIME commands issued by the user task.
zBFDGSTCT	INT	4	ID=408 (DFHCICS) The total number of EXEC CICS BIF DIGEST commands issued by the user task.
zBFTOTCT	INT	4	ID=409 (DFHCICS) The total number of EXEC CICS BIF DEEDIT and BIF DIGEST commands issued by the user task.
zMLXSSTD L	INT	4	ID=412 (DFHWEBB) The total length of the documents that were parsed using the z/OS XML System Services parser.
zMLXMLTCT	INT	4	ID=413 (DFHWEBB) The number of EXEC CICS TRANSFORM commands issued by the user task.
zWSACBLCT	INT	4	ID=420 (DFHWEBB) The number of EXEC CICS WSACONTEXT BUILD commands issued by the user task.
zWSACGTCT	INT	4	ID=421 (DFHWEBB) The number of EXEC CICS WSACONTEXT GET commands issued by the user task.
zWSAEPCT	INT	4	ID=422 (DFHWEBB) The number of EXEC CICS WSAEPR CREATE commands issued by the user task.
zWSATOTCT	INT	4	ID=423 (DFHWEBB) The total number of EXEC CICS WS-Addressing commands issued by the user task.
zWBSFCRCT	INT	4	ID=386 (DFHWEBB) The number of EXEC CICS SOAPFAULT CREATE commands issued by the user task.
zWBSFTOCT	INT	4	ID=387 (DFHWEBB) The total number of EXEC CICS SOAPFAULT ADD, CREATE, and DELETE commands issued by the user task.
zWBISSFCT	INT	4	ID=388 (DFHWEBB) The total number of SOAP faults received in response to the EXEC CICS INVOKE SERVICE and EXEC CICS INVOKE WEBSERVICE commands issued by the user task.
zWBSREQBL	INT	4	ID=390 (DFHWEBB) For web service applications, the SOAP request body length.
zWBSRSPBL	INT	4	ID=392 (DFHWEBB) For web service applications, the SOAP response body length.
zWBJSNRQL	INT	4	ID=424 (DFHWEBB) For JSON web service applications, the JSON message request length.
zWBJSNRPL	INT	4	ID=425 (DFHWEBB) For JSON web service applications, the JSON message response length.
zMPPTXCD	INT	4	ID=449 (DFHCICS) The number of policy task rule thresholds that this task has exceeded.
zNCGETCT	INT	4	ID=464 (DFHCICS) The total number of requests to a named counter server to satisfy EXEC CICS GET COUNTER and EXEC CICS GET DCOUNTER commands issued by the user task.
zASTOTCT	INT	4	ID=470 (DFHTASK) The total number of EXEC CICS asynchronous API commands that have been issued by the user task. Includes RUN TRANSID, FETCH CHILD, FETCH ANY, and FREE CHILD commands.
zASRUNCT	INT	4	ID=471 (DFHTASK) The number of EXEC CICS RUN TRANSID commands that have been issued by the user task.
zASFTCHCT	INT	4	ID=472 (DFHTASK) The number of EXEC CICS FETCH CHILD and EXEC CICS FETCH ANY commands that have been issued by the user task.
zASFRECT	INT	4	ID=473 (DFHTASK) The number of EXEC CICS FREE CHILD commands that have been issued by the user task.
zMPSRECT	INT	4	ID=466 (DFHCICS) The number of times that policy system rules have been evaluated for the task.
zMPSRACT	INT	4	ID=467 (DFHCICS) The number of times that policy system rules that have evaluated true and have triggered either a message or an event.

SMF110#01_Performance_Class.zUSRDISPT.<fieldname>			
zUSRDISPT_S	TIME	8	Total elapsed time during which the user task was dispatched on each CICS TCB under which the task ran.
zUSRDISPT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class.zUSRCPUT.<fieldname>			
zUSRCPUT_S	TIME	8	Processor time for which the user task was dispatched on each CICS TCB under which the task ran.
zUSRCPUT_N	INT	3	Count of the number of time periods contributing to the total processor time.

SMF110#01_Performance_Class.zCPUTONCP.<fieldname>			
zCPUTONCP_S	TIME	8	The total task processor time on a standard processor for which the user task was dispatched on each CICS TCB under which the task ran.
zCPUTONCP_N	INT	3	Count of the number of time periods contributing to the total processor time.

SMF110#01_Performance_Class.zOFFLCPUT.<fieldname>			
zOFFLCPUT_S	TIME	8	The total task processor time that was spent on a standard processor but was eligible for offload to a specialty processor (zIIP or zAAP).
zOFFLCPUT_N	INT	3	Count of the number of time periods contributing to the total processor time.

SMF110#01_Performance_Class.zSUSPTIME.<fieldname>			
zSUSPTIME_S	TIME	8	Total elapsed wait time for which the user task was suspended by the dispatcher.
zSUSPTIME_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class.zDISPWTT.<fieldname>			
zDISPWTT_S	TIME	8	Elapsed time for which the user task waited for redispach. This time is the aggregate of the wait times between each event completion and user-task redispach.
zDISPWTT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class.zQRDISPT.<fieldname>			
zQRDISPT_S	TIME	8	The elapsed time for which the user task was dispatched on the CICS QR TCB.
zQRDISPT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class.zQRCPUT.<fieldname>			
zQRCPUT_S	TIME	8	The processor time for which the user task was dispatched on the CICS QR TCB.
zQRCPUT_N	INT	3	Count of the number of time periods contributing to the total processor time.

SMF110#01_Performance_Class.zMSDISPT.<fieldname>			
zMSDISPT_S	TIME	8	Elapsed time for which the user task was dispatched on each CICS TCB.
zMSDISPT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class.zMSCPUT.<fieldname>			
zMSCPUT_S	TIME	8	The processor time for which the user task was dispatched on each CICS TCB.
zMSCPUT_N	INT	3	Count of the number of time periods contributing to the total processor time.

SMF110#01_Performance_Class.zRODISPT.<fieldname>			
zRODISPT_S	TIME	8	The elapsed time during which the user task was dispatched by the CICS dispatcher on the CICS RO mode TCB. The RO TCB is used for loading programs, unless the command to load the program (EXEC CICS LOAD, XCTL, or LINK) is issued by an application that is currently running on an open TCB.
zRODISPT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class.zROCPUT.<fieldname>			
zROCPUT_S	TIME	8	The processor time during which the user task was dispatched by the CICS dispatcher on the CICS RO mode TCB. The RO TCB is used for loading programs, unless the command to load the program (EXEC CICS LOAD, XCTL, or LINK) is issued by an application that is currently running on an open TCB.
zROCPUT_N	INT	3	Count of the number of time periods contributing to the total processor time.

SMF110#01_Performance_Class.zKY8DISPT.<fieldname>			
zKY8DISPT_S	TIME	8	The total elapsed time during which the user task was dispatched by the CICS dispatcher on a CICS Key 8 mode TCB.
zKY8DISPT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class.zKY8CPUT.<fieldname>			
zKY8CPUT_S	TIME	8	The processor time during which the user task was dispatched by the CICS dispatcher on a CICS Key 8 mode TCB.
zKY8CPUT_N	INT	3	Count of the number of time periods contributing to the total processor time.

SMF110#01_Performance_Class.zKY9DISPT.<fieldname>			
zKY9DISPT_S	TIME	8	The total elapsed time during which the user task was dispatched by the CICS dispatcher on a CICS Key 9 mode TCB.
zKY9DISPT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class.zKY9CPUT.<fieldname>			
zKY9CPUT_S	TIME	8	The processor time during which the user task was dispatched by the CICS dispatcher on a CICS Key 9 mode TCB.
zKY9CPUT_N	INT	3	Count of the number of time periods contributing to the total processor time.

SMF110#01_Performance_Class.zL8CPUT.<fieldname>			
zL8CPUT_S	TIME	8	The processor time during which the user task was dispatched by the CICS dispatcher domain on a CICS L8 mode TCB.
zL8CPUT_N	INT	3	Count of the number of time periods contributing to the total processor time.

SMF110#01_Performance_Class.zL9CPUT.<fieldname>			
zL9CPUT_S	TIME	8	The processor time during which the user task was dispatched by the CICS dispatcher domain on a CICS L9 mode TCB.
zL9CPUT_N	INT	3	Count of the number of time periods contributing to the total processor time.

SMF110#01_Performance_Class.zS8CPUT.<fieldname>			
zS8CPUT_S	TIME	8	The processor time during which the user task was dispatched by the CICS dispatcher domain on a CICS S8 mode TCB.
zS8CPUT_N	INT	3	Count of the number of time periods contributing to the total processor time.

SMF110#01_Performance_Class.zX8CPUT.<fieldname>			
zX8CPUT_S	TIME	8	The processor time during which the user task was dispatched by the CICS dispatcher domain on a CICS X8 mode TCB.
zX8CPUT_N	INT	3	Count of the number of time periods contributing to the total processor time.

SMF110#01_Performance_Class.zX9CPUT.<fieldname>			
zX9CPUT_S	TIME	8	The processor time during which the user task was dispatched by the CICS dispatcher domain on a CICS X9 mode TCB.
zX9CPUT_N	INT	3	Count of the number of time periods contributing to the total processor time.

SMF110#01_Performance_Class.zT8CPUT.<fieldname>			
zT8CPUT_S	TIME	8	The processor time during which the user task was dispatched by the CICS dispatcher domain on a CICS T8 mode TCB.
zT8CPUT_N	INT	3	Count of the number of time periods contributing to the total processor time.

SMF110#01_Performance_Class.zQRMODDLY.<fieldname>			
zQRMODDLY_S	TIME	8	The elapsed time for which the user task waited for redispach on the CICS QR mode TCB.
zQRMODDLY_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class.zMXTOTDLY.<fieldname>			
zMXTOTDLY_S	TIME	8	The elapsed time in which the user task waited to obtain a CICS L8 or L9 mode open TCB, because the region had reached the limit set by CICS for these TCBs.
zMXTOTDLY_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class.zMAXXTDLY.<fieldname>			
zMAXXTDLY_S	TIME	8	The elapsed time for which the user task waited to obtain a CICS XP TCB (X8 or X9 mode), because the CICS system reached the limit set by CICS for these types of TCB.
zMAXXTDLY_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class.zMAXSTDLY.<fieldname>			
zMAXSTDLY_S	TIME	8	The elapsed time for which the user task waited to obtain a CICS SSL TCB (S8 mode), because the CICS system reached the limit set by the system initialization parameter MAXSSLTCBS.
zMAXSTDLY_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class.zMAXTTDLY.<fieldname>			
zMAXTTDLY_S	TIME	8	The elapsed time for which the user task waited to obtain a T8 TCB, because the CICS system reached the limit of available threads.
zMAXTTDLY_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class.zDSTCBMWT.<fieldname>			
zDSTCBMWT_S	TIME	8	The elapsed time that the user task spent in TCB mismatch waits. That is, waiting because no available TCB matched the request, but at least one non matching TCB was free.
zDSTCBMWT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class.zDSCHMDLY.<fieldname>			
zDSCHMDLY_S	TIME	8	The elapsed time in which the user task waited for redispach after a CICS Dispatcher change-TCB mode request was issued by or on behalf of the user task.

zDSCHMDLY_N	INT	3	Count of the number of time periods contributing to the total elapsed time.
-------------	-----	---	---

SMF110#01_Performance_Class.zEXWTTIME.<fieldname>

zEXWTTIME_S	TIME	8	The total elapsed time for which the user waited on exception conditions.
zEXWTTIME_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class.zTCIOWTT.<fieldname>

zTCIOWTT_S	TIME	8	Elapsed time for which the user task waited for input from the terminal operator after issuing a RECEIVE request.
zTCIOWTT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class.zFCIOWTT.<fieldname>

zFCIOWTT_S	TIME	8	Elapsed time in which the user task waited for file I/O.
zFCIOWTT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class.zFCXCWTT.<fieldname>

zFCXCWTT_S	TIME	8	The elapsed time in which the user task waited for exclusive control of a VSAM control interval.
zFCXCWTT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class.zFCVSWTT.<fieldname>

zFCVSWTT_S	TIME	8	The elapsed time in which the user task waited for a VSAM string.
zFCVSWTT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class.zJCIOWTT.<fieldname>

zJCIOWTT_S	TIME	8	Elapsed time for which the user task waited for journal (logstream) I/O.
zJCIOWTT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class.zTSIOWTT.<fieldname>

zTSIOWTT_S	TIME	8	Elapsed time for which the user task waited for VSAM temporary storage I/O.
zTSIOWTT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class.zIRIOWTT.<fieldname>

zIRIOWTT_S	TIME	8	Elapsed time for which the user task waited for control at this end of an MRO link.
zIRIOWTT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class.zTDIOWTT.<fieldname>

zTDIOWTT_S	TIME	8	Elapsed time in which the user waited for VSAM transient data I/O.
zTDIOWTT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class.zPCLOADTM.<fieldname>

zPCLOADTM_S	TIME	8	Elapsed time in which the user task waited for fetches from DFHRPL or dynamic LIBRARY concatenations.
zPCLOADTM_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class.zDSPDELAY.<fieldname>

zDSPDELAY_S	TIME	8	The elapsed time waiting for first dispatch.
zDSPDELAY_N	INT	3	Number of waits.

SMF110#01_Performance_Class.zTCLDELAY.<fieldname>

zTCLDELAY_S	TIME	8	The elapsed time waiting for first dispatch, which was delayed because of the limits set for the transaction class of this transaction (zTCLNAME) being reached.
zTCLDELAY_N	INT	3	Number of waits.

SMF110#01_Performance_Class.zMXTDELAY.<fieldname>

zMXTDELAY_S	TIME	8	The elapsed time waiting for the first dispatch, which was delayed because of the limits set by the system parameter, MXT, being reached.
zMXTDELAY_N	INT	3	Number of waits.

SMF110#01_Performance_Class.zENQDELAY.<fieldname>

zENQDELAY_S	TIME	8	The elapsed time waiting for a CICS task control local enqueue.
zENQDELAY_N	INT	3	The number of local enqueues.

SMF110#01_Performance_Class.zGNQDELAY.<fieldname>

zGNQDELAY_S	TIME	8	The elapsed time waiting for a CICS task control global enqueue.
zGNQDELAY_N	INT	3	The number of global enqueues.

SMF110#01_Performance_Class.zLU61WTT.<fieldname>

zLU61WTT_S	TIME	8	The elapsed time for which the user task waited for I/O on a LUTYPE6.1 connection or session.
zLU61WTT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class.zLU62WTT.<fieldname>

zLU62WTT_S	TIME	8	The elapsed time for which the user task waited for I/O on a LUTYPE6.2 (APPC) connection or session.
zLU62WTT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class.zSZWAIT.<fieldname>

zSZWAIT_S	TIME	8	Elapsed time in which the user task waited for all FEPI services.
zSZWAIT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class.zRMITIME.<fieldname>

zRMITIME_S	TIME	8	The total elapsed time spent in the CICS Resource Manager Interface (RMI).
zRMITIME_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class.zRMISUSP.<fieldname>

zRMISUSP_S	TIME	8	The total elapsed time that the task was suspended by the CICS dispatcher while in the CICS Resource Manager Interface (RMI).
zRMISUSP_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class.zSYNCTIME.<fieldname>

zSYNCTIME_S	TIME	8	Total elapsed time for which the user task was dispatched and was processing syncpoint requests.
zSYNCTIME_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class.zRLSWAIT.<fieldname>

zRLSWAIT_S	TIME	8	Elapsed time in which the user task waited for RLS file I/O.
zRLSWAIT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class.zRLSCPUT.<fieldname>

zRLSCPUT_S	TIME	8	For RLS requests issued only from the QR TCB, this value is the RLS File Request SRB CPU time that this transaction spent processing RLS file requests.
zRLSCPUT_N	INT	3	Count of the number of time periods contributing to the total CPU SRB processor time.

SMF110#01_Performance_Class.zLMDELAY.<fieldname>

zLMDELAY_S	TIME	8	The elapsed time that the user task waited to acquire a lock on a resource.
zLMDELAY_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class.zWTEXWAIT.<fieldname>

zWTEXWAIT_S	TIME	8	The elapsed time that the user task waited for one or more ECBs, passed to CICS by the user task using the EXEC CICS WAIT EXTERNAL ECBLIST command, to be posted by the MVS POST command.
zWTEXWAIT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class.zWTCEWAIT.<fieldname>

zWTCEWAIT_S	TIME	8	The elapsed time that the user task waited for one of these events: 1. One or more ECBs, passed to CICS by the user task using the EXEC CICS WAITCICS ECBLIST command, to be posted by the MVS POST command. 2. Completion of an event initiated by the same or by another user task.
zWTCEWAIT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class.zICDELAY.<fieldname>

zICDELAY_S	TIME	8	The elapsed time that the user task waited as a result of issuing one of the following commands: 1. An interval control EXEC CICS DELAY command for a specified time interval. 2. An interval control EXEC CICS DELAY command for a specified time of day to expire. 3. An interval control EXEC CICS RETRIEVE command with the WAIT option specified.
zICDELAY_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class.zGVUPWAIT.<fieldname>

zGVUPWAIT_S	TIME	8	The elapsed time that the user task waited as a result of giving up control to another task.
zGVUPWAIT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class.zTSSHWAIT.<fieldname>

zTSSHWAIT_S	TIME	8	Elapsed time that the user task waited for an asynchronous shared temporary storage request to a temporary storage data server to complete.
zTSSHWAIT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class.zCFDTWAIT.<fieldname>

zCFDTWAIT_S	TIME	8	The elapsed time in which the user task waited for a data table access request to the Coupling Facility Data Table server to complete.
zCFDTWAIT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class.zSRVSYWTT.<fieldname>

zSRVSYWTT_S	TIME	8	Total elapsed time in which the user task waited for syncpoint or resynchronization processing using the Coupling Facility data tables server to complete.
zSRVSYWTT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class.zRRMSWAIT.<fieldname>

zRRMSWAIT_S	TIME	8	The elapsed time in which the user task waited indoubt using resource recovery services for EXCI.
-------------	------	---	---

zRRMSWAIT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.
-------------	-----	---	---

SMF110#01_Performance_Class.zRUNTRWTT.<fieldname>

zRUNTRWTT_S	TIME	8	The elapsed time in which the user task waited for completion of a transaction that ran as a result of the user task issuing a CICS BTS run process request and a run activity request synchronously.
zRUNTRWTT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class.zSYNCDLY.<fieldname>

zSYNCDLY_S	TIME	8	The elapsed time in which the user task waited for a syncpoint request to be issued by its parent transaction.
zSYNCDLY_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class.zSOIOWTT.<fieldname>

zSOIOWTT_S	TIME	8	The elapsed time for which the user task waited for inbound socket I/O.
zSOIOWTT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class.zIMSWAIT.<fieldname>

zIMSWAIT_S	TIME	8	The elapsed time during which the user task waited for DBCTL to service the IMS requests issued by the user task.
zIMSWAIT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class.zDB2RDYQW.<fieldname>

zDB2RDYQW_S	TIME	8	The elapsed time during which the user task waited for a Db2 thread to become available.
zDB2RDYQW_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class.zDB2CONWT.<fieldname>

zDB2CONWT_S	TIME	8	The elapsed time during which the user task waited for a Db2 connection to become available for use with the user task's open TCB.
zDB2CONWT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class.zWMQGETWT.<fieldname>

zWMQGETWT_S	TIME	8	The elapsed time during which the user task waited for WebSphere MQ to service the user task's GETWAIT request.
zWMQGETWT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class.zJVMTIME.<fieldname>

zJVMTIME_S	TIME	8	The total elapsed time spent in the JVM by the user task.
zJVMTIME_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class.zJVMSUSP.<fieldname>

zJVMSUSP_S	TIME	8	The elapsed time for which the user task was suspended by the CICS dispatcher while running in the JVM.
zJVMSUSP_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class.zSOOIOWTT.<fieldname>

zSOOIOWTT_S	TIME	8	The total elapsed time that the user task waited on outbound sockets.
zSOOIOWTT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class.zRQRWAIT.<fieldname>

zRQRWAIT_S	TIME	8	The elapsed time during which the request receiver user task CIRR (or user specified transaction ID) waited for any outstanding replies to be
------------	------	---	---

			satisfied.
zRQRWAIT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.
SMF110#01_Performance_Class.zRQPWAIT.<fieldname>			
zRQPWAIT_S	TIME	8	The elapsed time during which the request processor user task CIRP waited for any outstanding replies to be satisfied.
zRQPWAIT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.
SMF110#01_Performance_Class.zOTSINDWT.<fieldname>			
zOTSINDWT_S	TIME	8	The elapsed time in which the user task was dispatched or suspended indoubt (or both) while processing a syncpoint for an Object Transaction Service (OTS) syncpoint request.
zOTSINDWT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.
SMF110#01_Performance_Class.zJVMITIME.<fieldname>			
zJVMITIME_S	TIME	8	The elapsed time spent initializing the JVM environment.
zJVMITIME_N	INT	3	Count of the number of time periods contributing to the total elapsed time.
SMF110#01_Performance_Class.zJVMRTIME.<fieldname>			
zJVMRTIME_S	TIME	8	Reserved field, returns zero.
zJVMRTIME_N	INT	3	Reserved field, returns zero.
SMF110#01_Performance_Class.zPTPWAIT.<fieldname>			
zPTPWAIT_S	TIME	8	The elapsed time for which the user task waited for the 3270 bridge partner transaction to complete.
zPTPWAIT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.
SMF110#01_Performance_Class.zDSMMSWWT.<fieldname>			
zDSMMSWWT_S	TIME	8	The elapsed time that the user task spent waiting because no TCB was available and a TCB was not created because of MVS storage constraints.
zDSMMSWWT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.
SMF110#01_Performance_Class.zISLOWTT.<fieldname>			
zISLOWTT_S	TIME	8	The elapsed time for which a user task waited for control at this end of an IPICT connection.
zISLOWTT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.
SMF110#01_Performance_Class.zJVMTHDWT.<fieldname>			
zJVMTHDWT_S	TIME	8	The elapsed time that the user task waited to obtain a JVM server thread because the CICS system had reached the thread limit for a JVM server in the CICS region.
zJVMTHDWT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.
SMF110#01_Performance_Class.zWMQASRBT.<fieldname>			
zWMQASRBT_S	TIME	8	The WebSphere MQ SRB time this transaction spent processing WebSphere MQ API requests.
zWMQASRBT_N	INT	3	Count of the number of time periods contributing to the total SRB time.
SMF110#01_Performance_Class.zTDILWTT.<fieldname>			
zTDILWTT_S	TIME	8	The elapsed time for which the user task waited for an intrapartition transient data lock (TDIPLOCK).
zTDILWTT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class.zTDELWTT.<fieldname>			
zTDELWTT_S	TIME	8	The elapsed time for which the user task waited for an extrapartition transient data lock (TDEPLOCK).
zTDELWTT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class.zROMODDLY.<fieldname>			
zROMODDLY_S	TIME	8	The elapsed time for which the user task waited for redispach on the CICS RO TCB.
zROMODDLY_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class.zSOMODDLY.<fieldname>			
zSOMODDLY_S	TIME	8	The elapsed time for which the user task waited for redispach on the CICS SO TCB.
zSOMODDLY_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class.zISALWTT.<fieldname>			
zISALWTT_S	TIME	8	The elapsed time for which a user task waited for an allocate request for an IPIC session.
zISALWTT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class.zTCALWTT.<fieldname>			
zTCALWTT_S	TIME	8	The elapsed time for which a user task waited for an allocate request for an MRO (Inter-Region Communication), LU6.1, or LU6.2 session.
zTCALWTT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class.zDSAPTHWT.<fieldname>			
zDSAPTHWT_S	TIME	8	The dispatcher allocated pthread wait time. This is the time that the transaction had to wait for a Liberty pthread to be allocated during links to Liberty programs.
zDSAPTHWT_N	INT	3	Count of the number of time periods contributing to the total wait time.

SMF110#01_Performance_Class.zASFTCHWT.<fieldname>			
zASFTCHWT_S	TIME	8	The elapsed time that the user task waited for a child task as a result of issuing an EXEC CICS FETCH CHILD or EXEC CICS FETCH ANY command which was not completed.
zASFTCHWT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class.zASRNATWT.<fieldname>			
zASRNATWT_S	TIME	8	The elapsed time that the user task was delayed as a result of asynchronous child task limits managed by the asynchronous services domain.
zASRNATWT_N	INT	3	Count of the number of time periods contributing to the total elapsed time.

SMF110#01_Performance_Class.zRMITOTAL.<fieldname>			
zRMITOTAL_S	TIME	8	The total elapsed time spent in the CICS Resource Manager Interface (RMI).
zRMITOTAL_N	INT	3	Count of the number of time periods contributing to the total elapsed time spent in the CICS Resource Manager Interface (RMI).

SMF110#01_Performance_Class.zRMIOOTHER.<fieldname>			
zRMIOOTHER_S	TIME	8	The total elapsed time spent in the CICS RMI for resource manager requests other than Db2, DBCTL, EXEC DLI, IBM MQ, CICSplex SM and CICS TCP/IP socket requests.
zRMIOOTHER_N	INT	3	Count of the number of time periods contributing to the total elapsed time spent in the CICS RMI for resource manager requests other than Db2, DBCTL, EXEC DLI, IBM MQ, CICSplex SM and CICS TCP/IP socket

			requests.
--	--	--	-----------

SMF110#01_Performance_Class.zRMIDB2.<fieldname>

zRMIDB2_S	TIME	8	The total elapsed time spent in the CICS RMI for Db2 requests.
zRMIDB2_N	INT	3	Count of the number of time periods contributing to the total elapsed time spent in the CICS RMI for Db2 requests.

SMF110#01_Performance_Class.zRMIDBCTL.<fieldname>

zRMIDBCTL_S	TIME	8	The total elapsed time spent in the CICS RMI for DBCTL requests.
zRMIDBCTL_N	INT	3	Count of the number of time periods contributing to the total elapsed time spent in the CICS RMI for DBCTL requests.

SMF110#01_Performance_Class.zRMIEXDLI.<fieldname>

zRMIEXDLI_S	TIME	8	The total elapsed time spent in the CICS RMI for EXEC DLI requests.
zRMIEXDLI_N	INT	3	Count of the number of time periods contributing to the total elapsed time spent in the CICS RMI for EXEC DLI requests.

SMF110#01_Performance_Class.zRMIMQM.<fieldname>

zRMIMQM_S	TIME	8	The total elapsed time spent in the CICS RMI for IBM MQ requests.
zRMIMQM_N	INT	3	Count of the number of time periods contributing to the total elapsed time spent in the CICS RMI for IBM MQ requests.

SMF110#01_Performance_Class.zRMICPSM.<fieldname>

zRMICPSM_S	TIME	8	The total elapsed time spent in the CICS RMI for CICSplex SM requests.
zRMICPSM_N	INT	3	Count of the number of time periods contributing to the total elapsed time spent in the CICS RMI for CICSplex SM requests.

SMF110#01_Performance_Class.zRMITCPIP.<fieldname>

zRMITCPIP_S	TIME	8	The total elapsed time spent in the CICS RMI for CICS TCP/IP socket requests.
zRMITCPIP_N	INT	3	Count of the number of time periods contributing to the total elapsed time spent in the CICS RMI for CICS TCP/IP socket requests.

SMF110#01_Performance_Class.zWBURIOPN.<fieldname>

zWBURIOPN_S	TIME	8	The total elapsed time that the user task was processing WEB OPEN URIMAP requests that are issued by the user task.
zWBURIOPN_N	INT	3	Count of the number of time periods contributing to the total elapsed time that the user task was processing WEB OPEN URIMAP requests that are issued by the user task.

SMF110#01_Performance_Class.zWBURIRCV.<fieldname>

zWBURIRCV_S	TIME	8	The total elapsed time that the user task was processing WEB RECEIVE requests and the receiving side of WEB CONVERSE requests that are issued by the user task. The sessions these requests target to are opened by the WEB OPEN URIMAP command.
zWBURIRCV_N	INT	3	Count of the number of time periods contributing to the total elapsed time that the user task was processing WEB RECEIVE requests and the receiving side of WEB CONVERSE requests that are issued by the user task. The sessions these requests target to are opened by the WEB OPEN URIMAP command.

SMF110#01_Performance_Class.zWBURISND.<fieldname>

zWBURISND_S	TIME	8	The total elapsed time that the user task was processing WEB SEND requests and the sending side of WEB CONVERSE requests that are issued by the user task. The sessions these requests target to are opened by the WEB OPEN URIMAP command.
zWBURISND_N	INT	3	

			Count of the number of time periods contributing to the total elapsed time that the user task was processing WEB SEND requests and the sending side of WEB CONVERSE requests that are issued by the user task. The sessions these requests target to are opened by the WEB OPEN URIMAP command.
--	--	--	---

SMF110#01_Performance_Class.zWBSVINVK.<fieldname>

zWBSVINVK_S	TIME	8	The total elapsed time that the user task was processing INVOKE SERVICE requests for WEBSERVICES.
zWBSVINVK_N	INT	3	Count of the number of time periods contributing to the total elapsed time that the user task was processing INVOKE SERVICE requests for WEBSERVICES.

SMF110#01_Performance_Class.<fieldname>

zCBSVRNM	CHAR	4	ID=311 (DFHEJBS) CBSVRNM
zEJBSACCT	INT	4	ID=312 (DFHEJBS) EJBSACCT
zEJBSPACT	INT	4	ID=313 (DFHEJBS) EJBSPACT
zEJBCRECT	INT	4	ID=314 (DFHEJBS) EJBCRECT
zEJBREMCT	INT	4	ID=315 (DFHEJBS) EJBREMCT
zEJBMTHCT	INT	4	ID=316 (DFHEJBS) EJBMTHTCT
zEJBTOTCT	INT	4	ID=317 (DFHEJBS) EJBTOTCT
zSOCONMSG	CHAR	4	ID=344 (DFH SOCK) Indicates whether the task processed the first message for establishing a new connection for a client. This field helps you measure how often a new socket connection is created. 'Y' Indicates that the task processed the first message from the client. 'N' Indicates that the task processed a subsequent message from the client.
zNJSAPPNM	CHAR	32	ID=419 (DFHWEBB) Node.js application name from which the task was started.

Secondary segment: SMF110#01_Exception_Class

Field Name	Type	Len	Description
<i>SMF110#01_Exception_Class.<fieldname></i>			
zMNTRN	CHAR	4	Transaction identification.
zMNTER	CHAR	4	Terminal identification. This field is null if the task is not associated with a terminal or session.
zMNUSR	CHAR	8	User identification at task creation. This identifier can also be the remote user identifier for a task created as the result of receiving an ATTACH request across an MRO or APPC link with attach-time security enabled.
zMNTST	CHAR	4	Transaction start type. 'TO' => Attached from terminal input. 'S' => Attached by automatic transaction initiation (ATI) without data. 'SD' => Attached by automatic transaction initiation (ATI) with data. 'QD' => Attached by transient data trigger level. 'U' => Attached by user request. 'TP' => Attached from terminal TCTTE transaction ID. 'SZ' => Attached by Front End Programming Interface (FEPI).
zMNSTA	TSTMP	8	Start time of the exception.
zMNSTO	TSTMP	8	Finish time of the exception.
zMNTNO	DEC	4 (7,0)	Transaction identification number.
zMNTPR	INT	4	Transaction priority when monitoring was initialized for the task.
zMNLUN	CHAR	8	z/OS Communications Server logical unit name (if available) of the terminal associated with this transaction. This field is nulls if the task is not associated with a terminal.
zMNEXN	INT	4	Exception sequence number for this task.

zMNRTY	CHAR	8	Exception resource type.
zMNRID	CHAR	8	Exception resource identification.
zMNTYP	INT (ENUM)	2	Exception type.
zMNTCN	CHAR	8	Transaction class name. This field is null if the transaction is not in a transaction class.
zMNSRV	CHAR	8	z/OS Workload Manager Service Class name for this transaction. This field is null if there are no transaction classification rules defined for CICS subsystems in the active z/OS Workload Manager (WLM) service policy, or if the transaction was WLM-classified in another CICS region.
zMNRPT	CHAR	8	z/OS Workload Manager Report Class name for this transaction. This field is null if there are no transaction classification rules defined for CICS subsystems in the active z/OS Workload Manager (WLM) service policy, or if the transaction was WLM-classified in another CICS region.
zMNNPX	CHAR	20	Fully qualified name by which the originating system is known to the z/OS Communications Server network.
zMNNSX	INT	8	Name by which the unit of work is known within the originating system.
zTRAN_Facility	INT (ENUM)	1	Transaction facility type.
zTRAN_id	INT (ENUM)	1	Transaction identification.

SMF110#01_Exception_Class.zTRAN_WLM.<fieldname>

zResponse	BIT	1	Report the total response time (begin-to-end phase) for completed work request (transaction).
zAllPhase	BIT	1	Notify that the entire execution phase of the work request is complete.
zSubPhase	BIT	1	Notify that a subset of the execution phase of the work request is complete.
zAbNormal	BIT	1	This transaction has been reported to the z/OS workload manager as completing abnormally because it has tried to access Db2 and a connection unavailable response has been returned. This abnormal completion occurs when all the following are true: 1. zResponse is set. 2. CICS is not connected to Db2. 3. The CICS-Db2 adapter is in standby mode (STANDBYMODE(RECONNECT) or STANDBYMODE(CONNECT)). 4. CONNECTERROR(SQLCODE) is specified, causing the application to receive a -923 SQL code.

SMF110#01_Exception_Class.zTRAN_Def.<fieldname>

zTDLocBelow	BIT	1	1 => TASKDATALOC=BELOW
zTDKeyCICS	BIT	1	1 => TASKDATAKEY=CICS
zIsolateNo	BIT	1	1 => ISOLATE=NO
zDynamic	BIT	1	1 => DYNAMIC=YES

SMF110#01_Exception_Class.<fieldname>

zTRAN_Origin	INT (ENUM)	1	Transaction Origin Type.
--------------	---------------	---	--------------------------

SMF110#01_Exception_Class.zTRAN_Status.<fieldname>

zOrigin	BIT	1	The transaction origin.
zResource	BIT	1	Resource class record, or records, for this task.
zIdentity	BIT	1	Identity class record, or records, for this task.
zPurge	BIT	1	Task purge or runaway resulted in the open TCB the task was executing on being terminated.
zAbend	BIT	1	Task abnormally terminated.

SMF110#01_Exception_Class.<fieldname>

zTRAN_Track	INT	1	Transaction tracking origin data tag.
-------------	-----	---	---------------------------------------

SMF110#01_Exception_Class.zRecovery_Manager.<fieldname>

zInDWaitNo	BIT	1	Indoubt WAIT=NO.
zInDCommit	BIT	1	Indoubt ACTION=COMMIT.
zUOWInD	BIT	1	Recovery manager, UOW resolved with indoubt action.
zUOWShunt	BIT	1	Recovery manager, Shunt.
zUOWUnShunt	BIT	1	Recovery manager, Unshunt.
zInDFail	BIT	1	Recovery manager, Indoubt failure.
zROFail	BIT	1	Recovery manager, Resource owner failure.

SMF110#01_Exception_Class.<fieldname>

zMNFN	CHAR	4	Transaction facility name. This field is null if the transaction is not associated with a facility.
zMNCN	CHAR	8	The name of the currently running program for this user task when the exception condition occurred.
zMNBTR	CHAR	4	3270 Bridge transaction identification.
zMNURI	CHAR	16	RRMS/MVS unit-of-recovery ID (URID).
zMNRIL	INT	4	Exception resource ID length.
zMNRIX	CHAR	256	Exception resource ID (extended).
zMNNID	CHAR	8	NETID if a network qualified name has been received from z/OS Communications Server. For a z/OS Communications Server resource when the network qualified name has not yet been received, NETID is eight blanks. In all other cases, this field is nulls.
zMNRLU	CHAR	8	Real network name if a network qualified name has been received from z/OS.

Secondary segment: **SMF110#01_Transaction_Resource_Class**

Field Name	Type	Len	Description
SMF110#01_Transaction_Resource_Class.<fieldname>			
zLEN	INT	2	Length of resource data.
zID	INT	2	Monitoring domain id.
zDS_VERS	INT	1	DSECT version number.

SMF110#01_Transaction_Resource_Class.zHeader.<fieldname>

zHDRLEN	INT	2	Length of header data.
zTRN	INT	2	Number of record triplets.
zISO	INT	4	Offset to ID data.
zISL	INT	2	Length of ID entry.
zISN	INT	2	Number of ID entries.
zFSO	INT	4	Offset to File data.
zFSL	INT	2	Length of File entry.
zFSN	INT	2	Number of File entries.
zTSO	INT	4	Offset to TSQueue data.
zTSL	INT	2	Length of TSQueue entry.

zTSN	INT	2	Number of TSQueue entries.
zDSO	INT	4	Offset to DPL data.
zDSL	INT	2	Length of DPL entry.
zDSN	INT	2	Number of DPL entries.

Secondary segment: **SMF110#01_Transaction_Resource_Class_ID**

SMF110#01_Transaction_Resource_Class_ID.zRecovery_Manager.<fieldname>

zInDWaitNo	BIT	1	Indoubt WAIT=NO.
zInDCommit	BIT	1	Indoubt ACTION=COMMIT.
zUOWInD	BIT	1	Recovery manager, UOW resolved with indoubt action.
zUOWShunt	BIT	1	Recovery manager, Shunt.
zUOWUnShunt	BIT	1	Recovery manager, Unshunt.
zInDFail	BIT	1	Recovery manager, Indoubt failure.
zROFail	BIT	1	Recovery manager, Resource owner failure.

SMF110#01_Transaction_Resource_Class_ID.<fieldname>

zFCTYNAME	CHAR	4	Transaction facility name. This field is null if the transaction is not associated with a facility.
zRTYPE	CHAR	4	Transaction Facility record type: C => Record output for a terminal converse, D => Record output for a user EMP DELIVER request, F => Record output for a long-running transaction, S => Record output for a sync point, T => Record output for the end of a task.
zTERM_Assoc	INT (ENUM)	1	Task associated with terminal or session.
zTERM_SessType	INT (ENUM)	1	If the principal facility for this task is a session, this field identifies the session type.
zTERM_AM	INT (ENUM)	1	Identifies the access method defined for the terminal ID or session ID in field TERM.
zTERM_Type	INT (ENUM)	1	Identifies the terminal or session type for the terminal id or session id in TERM.
zTERMCNNM	CHAR	4	Terminal session connection name. If the terminal facility associated with this transaction is a session, this field is the name of the owning connection (sysid).

SMF110#01_Transaction_Resource_Class_ID.zRES_FLAG1.<fieldname>

zMaxFiles	BIT	1	The maximum number of files to be monitored (defined in the MCT) has been exceeded by the transaction.
zMaxStor	BIT	1	The maximum number of temporary storage queues to be monitored (defined in the MCT) has been exceeded by the transaction.

zMaxLink	BIT	1	The maximum number of distributed program link requests to be monitored (defined in the MCT) has been exceeded by the transaction.
----------	-----	---	--

SMF110#01_Transaction_Resource_Class_ID.<fieldname>

zISIPICNM	CHAR	8	The name of the IPIC (IPCONN) entry of the TCP/IP service that attached the user task.
zCLIPADDR	CHAR	40	The IP address of the originating client or Telnet client.
zORIGIN_NETWORKID	CHAR	8	The network identifier from which this work request (transaction) originated.
zORIGIN_APPLID	CHAR	8	The applid of the CICS region where this work request (transaction) originated. For example, the region in which the CWXN task ran.
zORIGIN_ATT_TIME	TSTMP	8	The time when the originating task, for example, the CWXN task, was started.
zORIGIN_TRANNUM	DEC	4 (7,0)	The number of the originating task. For example, the CWXN task.
zORIGIN_TRANID	CHAR	4	The transaction ID (TRANSID) of the originating task. For example, the CWXN task.
zORIGIN_USERID	CHAR	8	The originating Userid-2 or Userid-1, for example, from CWBA, depending on the originating task.
zORIGIN_USER_CORR	CHAR	64	The originating user correlator.
zORIGIN_TCPIPSESV	CHAR	8	The name of the originating TCPIP SERVICE.
zORIGIN_PORTNUM	INT	4	The port number used by the originating TCPIP SERVICE.
zORIGIN_CLIPADDR	CHAR	40	The IP address of the originating client or Telnet client.
zORIGIN_CLIPPORT	INT	4	The TCP/IP port number of the originating client or Telnet client.
zOTRAN_Facility	INT (ENUM)	1	Originating Transaction facility type.
zOTRAN_id	INT (ENUM)	1	Originating Transaction identification.

SMF110#01_Transaction_Resource_Class_ID.zOTRAN_WLM.<fieldname>

zResponse	BIT	1	Report the total response time (begin-to-end phase) for completed work request (transaction).
zAllPhase	BIT	1	Notify that the entire execution phase of the work request is complete.
zSubPhase	BIT	1	Notify that a subset of the execution phase of the work request is complete.
zAbNormal	BIT	1	This transaction has been reported to the z/OS workload manager as completing abnormally because it has tried to access Db2 and a connection unavailable response has been returned. This abnormal completion occurs when all the following are true: 1. zResponse is set. 2. CICS is not connected to Db2. 3. The CICS-Db2 adapter is in standby mode (STANDBYMODE(RECONNECT) or STANDBYMODE(CONNECT)). 4. CONNECTERROR(SQLCODE) is specified, causing the application to receive a -923 SQL code.

zInDWaitNo	BIT	1	Indoubt WAIT=NO.
zInDCommit	BIT	1	Indoubt ACTION=COMMIT.
zUOWInD	BIT	1	Recovery manager, UOW resolved with indoubt action.
zUOWShunt	BIT	1	Recovery manager, Shunt.
zUOWUnShunt	BIT	1	Recovery manager, Unshunt.
zInDFail	BIT	1	Recovery manager, Indoubt failure.
zROFail	BIT	1	Recovery manager, Resource owner failure.

SMF110#01_Transaction_Resource_Class_ID.<fieldname>

zORIGIN_FCTYNAME	CHAR	8	The facility name of the originating transaction.
zPHD_NETWKID	CHAR	8	The network identifier of the CICS system of an immediately previous task in another CICS region with which this task is associated.
zPHD_APPLID	CHAR	8	The APPLID from previous hop data. This is the APPLID of the CICS system of a previous task in another CICS system with which this task is associated.
zPHD_ATTACH_TIME	TSTMP	8	The start time of the immediately previous task in another CICS system with which this task is associated.
zPHD_TRANNUM	DEC	4 (7,0)	The task number of the immediately previous task in another CICS system with which this task is associated.
zPHD_TRANID	CHAR	4	The transaction ID (TRANSID) of the immediately previous task in another CICS system with which this task is associated.
zPHD_COUNT	INT	4	The number of times there has been a request from one CICS system to another CICS region to initiate a task with which this task is associated.
zTRNGRPID	CHAR	28	The transaction group ID of the originating task.
zPTD_ATTACH_TIME	TSTMP	8	The start time of the immediately previous or parent task in the same CICS system with which this task is associated.
zPTD_TRANNUM	DEC	4 (7,0)	The task number of the immediately previous or parent task in the same CICS system with which this task is associated.
zPTD_TRANID	CHAR	4	The transaction ID (TRANSID) of the immediately previous or parent task in the same CICS system with which this task is associated.
zPTD_COUNT	INT	4	The number of times there has been a request from one task to initiate another task in the same CICS system with which this task is associated, such as by an EXEC CICS RUN TRANSID or START command.

Secondary segment: SMF110#01_Transaction_Resource_Class_File

Field Name	Type	Len	Description
SMF110#01_Transaction_Resource_Class_File.<fieldname>			
zNAME	CHAR	8	

			The CICS 8-character name of the file to which the following data fields refer.
zGET	TIME	4	The elapsed time that the user task waited for completion of GET requests issued by the user task for this file.
zGET_N	INT	3	The number of GET requests issued against the file.
zPUT	TIME	4	The elapsed time that the user task waited for completion of PUT requests issued by the user task for this file.
zPUT_N	INT	3	The number of PUT requests issued against the file.
zBRWSE	TIME	4	The elapsed time that the user task waited for completion of BROWSE requests issued by the user task for this file.
zBRWSE_N	INT	3	The number of BROWSE requests issued against the file.
zADD	TIME	4	The elapsed time that the user task waited for completion of ADD requests issued by the user task for this file.
zADD_N	INT	3	The number of ADD requests issued against the file.
zDEL	TIME	4	The elapsed time that the user task waited for completion of DELETE requests issued by the user task for this file.
zDEL_N	INT	3	The number of DELETE requests issued against the file.
zTOTAL	TIME	4	The total elapsed time that the user task waited for completion of all requests issued by the user task for this file.
zTOTAL_N	INT	3	The number of all requests issued against the file.
zAM_RQ	INT	4	Number of times the user task called file access-method interfaces.
zIO_WT	INT	4	The total I/O wait time on this file.
zIO_WT_N	INT	3	The number of requests issued against the file which waited for I/O.
zRLS_IO_WT	TIME	4	The elapsed time in which the user task waited for RLS file I/O on this file.
zRLS_IO_WT_N	INT	3	The number of requests issued against the RLS file which waited for I/O.
zCFDT_IO_WT	TIME	4	The elapsed time in which the user task waited for a data table access request to the coupling facility data table server to complete for this file.
zCFDT_IO_WT_N	INT	3	The number of requests to the coupling facility data table server for the file.
zXC_WT	TIME	4	The elapsed time in which the user task waited for exclusive enqueues.
zXC_WT_N	INT	3	The number of requests for exclusive enqueues for the file.
zVS_WT	TIME	4	The elapsed time in which the user task waited for VSAM strings.
zVS_WT_N	INT	3	The number of requests for VSAM strings for the file.

Secondary segment: SMF110#01_Transaction_Resource_Class_TSQueue

Field Name	Type	Len	Description
<i>SMF110#01_Transaction_Resource_Class_TSQueue.<fieldname></i>			
zNAME	CHAR	16	The CICS 16-character name of the temporary storage queue to which the following data fields refer.
zGET	TIME	4	The elapsed time that the user task waited for completion of GET requests issued by the user task for this temporary storage queue.
zGET_N	INT	3	The number of GET requests issued against the temporary storage queue.
zPUT_AUX	TIME	4	The elapsed time that the user task waited for completion of PUT requests to auxiliary temporary storage, issued by the user task for this temporary storage queue.
zPUT_AUX_N	INT	3	The number of PUT requests to auxiliary temporary storage issued against the temporary storage queue.
zPUT_MAIN	TIME	4	The elapsed time that the user task waited for completion of PUT requests to main temporary storage, issued by the user task for this temporary

			storage queue.
zPUT_MAIN_N	INT	3	The number of PUT requests to main temporary storage issued against the temporary storage queue.
zTOTAL	TIME	4	The total elapsed time that the user task waited for completion of all requests issued by the user task for this temporary storage queue.
zTOTAL_N	INT	3	The number of all requests issued against the temporary storage queue.
zGET_ITEML	INT	4	The total length of all items obtained from this temporary storage queue.
zPUT_AUX_ITEML	INT	4	The total length of all items written to the auxiliary temporary storage queue.
zPUT_MAIN_ITEML	INT	4	The total length of all items written to the main temporary storage queue.
zIO_WT	TIME	4	The total I/O wait time units on this temporary storage queue.
zIO_WT_N	INT	3	The number of requests issued against the temporary storage queue which waited for I/O.
zIO_WT_SHR	TIME	4	The total I/O wait time units on the shared temporary storage queue.
zIO_WT_SHR_N	INT	3	The number of requests issued against the shared temporary storage queue which waited for I/O.
zGET_SHR	TIME	4	The elapsed time that the user task waited for completion of GET requests to shared temporary storage, issued by the user task for this temporary storage queue.
zGET_SHR_N	INT	3	The number of GET requests to shared temporary storage issued against the temporary storage queue.
zPUT_SHR	TIME	4	The elapsed time that the user task waited for completion of PUT requests to shared temporary storage, issued by the user task for this temporary storage queue.
zPUT_SHR_N	INT	3	The number of PUT requests to shared temporary storage issued against the temporary storage queue.
zGET_SHR_ITEML	INT	4	The total length of all items obtained from this shared temporary storage queue.
zPUT_SHR_ITEML	INT	4	The total length of all items written to this shared temporary storage queue.

Secondary segment: SMF110#01_Transaction_Resource_Class_DPL

Field Name	Type	Len	Description
<i>SMF110#01_Transaction_Resource_Class_DPL.<fieldname></i>			
zPROGRAM_NAME	CHAR	8	The name of the program to which the following data fields refer.
zSYSID	CHAR	4	The name of the remote system to which this program was routed for the distributed program link.
zLINK_REQS	CHAR	4	The number of distributed program link requests issued by the user task for this program and sysid combination.

Secondary segment: SMF110#01_Identity_Resource_Class

Field Name	Type	Len	Description
<i>SMF110#01_Identity_Resource_Class.<fieldname></i>			
zLEN	INT	2	Length of identity data.
zID	INT	2	Monitoring domain id.
zDS_VERS	INT	1	DSECT version number.

SMF110#01_Identity_Resource_Class.zHeader.<fieldname>			
zHDRLLEN	INT	2	Length of header data.
zTRN	INT	2	Number of record triplets.
zISO	INT	4	Offset to ID data.
zISL	INT	2	Length of ID entry.
zISN	INT	2	Number of ID entries.
zDSO	INT	4	Offset to Data entru.
zDSL	INT	2	Length of Data entry.
zDSN	INT	2	Number of Data entries.

Secondary segment: **SMF110#01_Identity_Resource_Class_ID**

Field Name	Type	Len	Description
SMF110#01_Identity_Resource_Class_ID.<fieldname>			
zTRANID	CHAR	4	Transaction identification.
zTERMID	CHAR	4	Terminal identification. This field is null if the task is not associated with a terminal or session.
zUSERID	CHAR	8	User identification at task creation. This identifier can also be the remote user identifier for a task created as the result of receiving an ATTACH request across an MRO or APPC link with attach-time security enabled.
zSTYPE	CHAR	4	Transaction start type. 'TO' => Attached from terminal input. 'S' => Attached by automatic transaction initiation (ATI) without data. 'SD' => Attached by automatic transaction initiation (ATI) with data. 'QD' => Attached by transient data trigger level. 'U' => Attached by user request. 'TP' => Attached from terminal TCTTE transaction ID. 'SZ' => Attached by Front End Programming Interface (FEPI).
zSTART	TSTMP	8	Start time of the exception.
zSTOP	TSTMP	8	Finish time of the exception.
zTASKNO	INT	4	Transaction identification number.
zLUNAME	CHAR	8	The z/OS Communications Server SNA logical unit name (if available) of the terminal that is associated with this transaction.
zPGMNAME	CHAR	8	The name of the first program invoked at attach-time.
zUOW_PX	CHAR	20	Fully qualified name by which the originating system is known to the z/OS Communications Server network.
zUOW_SX	CHAR	8	Name by which the network unit of work ID is known in the originating system.
zRSYSID	CHAR	4	The name (system ID) of the remote system to which this transaction was routed, either statically or dynamically.
zTRAN_Facility	INT (ENUM)	1	Transaction facility type.
zTRAN_id	INT (ENUM)	1	Transaction identification.

SMF110#01_Identity_Resource_Class_ID.zTRAN_WLM.<fieldname>			
zResponse	BIT	1	Report the total response time (begin-to-end phase) for completed work request (transaction).
zAllPhase	BIT	1	Notify that the entire execution phase of the work request is complete.
zSubPhase	BIT	1	Notify that a subset of the execution phase of the work request is complete.
zAbNormal	BIT	1	

			This transaction has been reported to the z/OS workload manager as completing abnormally because it has tried to access Db2 and a connection unavailable response has been returned. This abnormal completion occurs when all the following are true: 1. zResponse is set. 2. CICS is not connected to Db2. 3. The CICS-Db2 adapter is in standby mode (STANDBYMODE(RECONNECT) or STANDBYMODE(CONNECT)). 4. CONNECTERROR(SQLCODE) is specified, causing the application to receive a -923 SQL code.

zOrigin	BIT	1	The transaction origin.
zResource	BIT	1	Resource class record, or records, for this task.
zIdentity	BIT	1	Identity class record, or records, for this task.
zPurge	BIT	1	Task purge or runaway resulted in the open TCB the task was executing on being terminated.
zAbend	BIT	1	Task abnormally terminated.

SMF110#01_Identity_Resource_Class_ID.<fieldname>

zTRAN_Track	INT	1	Transaction tracking origin data tag.
-------------	-----	---	---------------------------------------

SMF110#01_Identity_Resource_Class_ID.zRecovery_Manager.<fieldname>

zInDWaitNo	BIT	1	Indoubt WAIT=NO.
zInDCommit	BIT	1	Indoubt ACTION=COMMIT.
zUOWInD	BIT	1	Recovery manager, UOW resolved with indoubt action.
zUOWShunt	BIT	1	Recovery manager, Shunt.
zUOWUnShunt	BIT	1	Recovery manager, Unshunt.
zInDFail	BIT	1	Recovery manager, Indoubt failure.
zROFail	BIT	1	Recovery manager, Resource owner failure.

SMF110#01_Identity_Resource_Class_ID.<fieldname>

zFCTYNAME	CHAR	4	Transaction facility name. This field is null if the transaction is not associated with a facility.
zRTYPE	CHAR	4	Transaction Facility record type: C => Record output for a terminal converse, D => Record output for a user EMP DELIVER request, F => Record output for a long-running transaction, S => Record output for a sync point, T => Record output for the end of a task.
zTERM_Assoc	INT (ENUM)	1	Task associated with terminal or session.
zTERM_SessType	INT (ENUM)	1	If the principal facility for this task is a session, this field identifies the session type.
zTERM_AM	INT (ENUM)	1	Identifies the access method defined for the terminal ID or session ID in field TERM.
zTERM_Type	INT (ENUM)	1	Identifies the terminal or session type for the terminal id or session id in TERM.

zTERMCNNM	CHAR	4	Terminal session connection name. If the terminal facility associated with this transaction is a session, this field is the name of the owning connection (sysid).
zISIPICNM	CHAR	8	The name of the IPIC (IPCONN) entry of the TCP/IP service that attached the user task.
zCLIPADDR	CHAR	40	The IP address of the originating client or Telnet client.
zORIGIN_NETWORKID	CHAR	8	The network identifier from which this work request (transaction) originated.
zORIGIN_APPLID	CHAR	8	The applid of the CICS region where this work request (transaction) originated. For example, the region in which the CWXN task ran.
zORIGIN_ATT_TIME	TSTMP	8	The time when the originating task, for example, the CWXN task, was started.
zORIGIN_TRANNUM	DEC	4 (7,0)	The number of the originating task. For example, the CWXN task.
zORIGIN_TRANID	CHAR	4	The transaction ID (TRANSID) of the originating task. For example, the CWXN task.
zORIGIN_USERID	CHAR	8	The originating Userid-2 or Userid-1, for example, from CWBA, depending on the originating task.
zORIGIN_USER_CORR	CHAR	64	The originating user correlator.
zORIGIN_TCPIPSERV	CHAR	8	The name of the originating TCPIP SERVICE.
zORIGIN_PORTNUM	INT	4	The port number used by the originating TCPIP SERVICE.
zORIGIN_CLIPADDR	CHAR	40	The IP address of the originating client or Telnet client.
zORIGIN_CLIPPORT	INT	4	The TCP/IP port number of the originating client or Telnet client.
zOTRAN_Facility	INT (ENUM)	1	Originating Transaction facility type.
zOTRAN_id	INT (ENUM)	1	Originating Transaction identification.

SMF110#01_Identity_Resource_Class_ID.zOTRAN_WLM.<fieldname>

zResponse	BIT	1	Report the total response time (begin-to-end phase) for completed work request (transaction).
zAllPhase	BIT	1	Notify that the entire execution phase of the work request is complete.
zSubPhase	BIT	1	Notify that a subset of the execution phase of the work request is complete.
zAbNormal	BIT	1	This transaction has been reported to the z/OS workload manager as completing abnormally because it has tried to access Db2 and a connection unavailable response has been returned. This abnormal completion occurs when all the following are true: 1. zResponse is set. 2. CICS is not connected to Db2. 3. The CICS-Db2 adapter is in standby mode (STANDBYMODE(RECONNECT) or STANDBYMODE(CONNECT)). 4. CONNECTERROR(SQLCODE) is specified, causing the application to receive a -923 SQL code.

zUOWInD	BIT	1	Recovery manager, UOW resolved with indoubt action.
zUOWShunt	BIT	1	Recovery manager, Shunt.
zUOWUnShunt	BIT	1	Recovery manager, Unshunt.
zInDFail	BIT	1	Recovery manager, Indoubt failure.
zROFail	BIT	1	Recovery manager, Resource owner failure.

SMF110#01_Identity_Resource_Class_ID.<fieldname>

zORIGIN_FCTYNAME	CHAR	8	The facility name of the originating transaction.
zPHD_NETWORKID	CHAR	8	The network identifier of the CICS system of an immediately previous task in another CICS region with which this task is associated.
zPHD_APPLID	CHAR	8	The APPLID from previous hop data. This is the APPLID of the CICS system of a previous task in another CICS system with which this task is associated.
zPHD_ATTACH_TIME	TSTMP	8	The start time of the immediately previous task in another CICS system with which this task is associated.
zPHD_TRANNUM	DEC	4 (7,0)	The task number of the immediately previous task in another CICS system with which this task is associated.
zPHD_TRANID	CHAR	4	The transaction ID (TRANSID) of the immediately previous task in another CICS system with which this task is associated.
zPHD_COUNT	INT	4	The number of times there has been a request from one CICS system to another CICS region to initiate a task with which this task is associated.
zPTD_ATTACH_TIME	TSTMP	8	The start time of the immediately previous or parent task in the same CICS system with which this task is associated.
zPTD_TRANNUM	DEC	4 (7,0)	The task number of the immediately previous or parent task in the same CICS system with which this task is associated.
zPTD_TRANID	CHAR	4	The transaction ID (TRANSID) of the immediately previous or parent task in the same CICS system with which this task is associated.
zPTD_COUNT	INT	4	The number of times there has been a request from one task to initiate another task in the same CICS system with which this task is associated, such as by an EXEC CICS RUN TRANSID or START command.

Secondary segment: SMF110#01_Identity_Resource_Class_Data

zSTNUM	INT	4	(IBM name: N/A) System transactions ended.
zGUTCL	TSTMP	8	(IBM name: N/A) Time last trans ended (GMT).
zLUTCL	TSTMP	8	(IBM name: N/A) Time last trans ended (Local).
zGUTAT	TSTMP	8	(IBM name: N/A) Time last trans attach (GMT).
zLUTAT	TSTMP	8	(IBM name: N/A) Time last trans attch (Local).
zMXUTA	INT	4	(IBM name: N/A) MXT at last trans attach.
zCAUTA	INT	4	(IBM name: N/A) Current tasks at last attach.
zAUTRT	TIME	8	(IBM name: N/A) Avg user trans resp time.
zPUTRT	TIME	8	(IBM name: N/A) Peak user trans resp time.
zGUTRT	TSTMP	8	(IBM name: N/A) Time peak resp time (GMT).
zLUTRT	TSTMP	8	(IBM name: N/A) Time peak resp time (Local).
zCPUT	TIME	8	(IBM name: N/A) Total CPU time.
zTONCP	TIME	8	(IBM name: N/A) Total CPU time on CP.
zOFLCP	TIME	8	(IBM name: N/A) Total CPU time offload on CP.

Secondary segment: SMF110#02_Monitoring_Stats_Resid

Field Name	Type	Len	Description
SMF110#02_Monitoring_Stats_Resid.<fieldname>			
zLEN	INT	2	(IBM name: N/A) Length of record. Length of this header record + the length of the data that follows.

zID	INT (ENUM)	2	(IBM name: N/A) 'MNR' => Monitoring (RESID) statistics.
zVERS	INT	1	(IBM name: N/A) Statistics record version.
zTRID	CHAR	4	(IBM name: N/A) TRAN - Transaction identification.
zTEID	CHAR	4	(IBM name: N/A) TERM - Terminal identification.
zUSID	CHAR	8	(IBM name: N/A) USERID - User identification.
zTRTY	CHAR	4	(IBM name: N/A) TTYE - Transaction type.
zATTT	TSTMP	8	(IBM name: N/A) START - Task start time.
zDETT	TSTMP	8	(IBM name: N/A) STOP - Task stop time.
zTRSN	DEC	4 (7,0)	(IBM name: N/A) TRANNUM - Transaction sequence number.
zTPRI	INT	4	(IBM name: N/A) TRANPRI - Transaction priority.
zTCLSN	CHAR	8	(IBM name: N/A) TCLSNAME - Transaction class name.
zLUNM	CHAR	8	(IBM name: N/A) LUNAME - VTAM logical unit name.
zPGNM	CHAR	8	(IBM name: N/A) PGMNAME - First program name.
zNETPX	CHAR	20	(IBM name: N/A) NETUOWPX - Network Unit-of-Work Netname.
zNETSX	CHAR	8	(IBM name: N/A) NETUOWSX - Network Unit-of-Work Instance/Seqno.
zRSYS	CHAR	4	(IBM name: N/A) RSYSID - Remote sysid routed to.
zPRCNT	INT	4	(IBM name: N/A) PERRECNT - Performance record count.
zRMUOW	CHAR	8	(IBM name: N/A) RMUOWID - Recovery Manager Unit-of-Work id.
zSRVCL	CHAR	8	(IBM name: N/A) SRVCLSNM - Workload Manager service class name.
zRPTCL	CHAR	8	(IBM name: N/A) RPTCLSNM - Workload Manager report class name.
zFCTY	CHAR	4	(IBM name: N/A) FCTYNAME - Transaction Facility name.
zTRAN_Facility	INT (ENUM)	1	(IBM name: N/A) Transaction facility type.
zTRAN_id	INT (ENUM)	1	(IBM name: N/A) Transaction identification.

SMF110#02_Monitoring_Stats_Resid.zTRAN_WLM.<fieldname>

zResponse	BIT	1	WLM Report the total response time (begin-to-end phase) for completed work request (transaction).
zAllPhase	BIT	1	WLM Notify that the entire execution phase of the work request is complete.
zSubPhase	BIT	1	WLM Notify that a subset of the execution phase of the work request is complete.
zAbNormal	BIT	1	This transaction has been reported to the z/OS workload manager as completing abnormally because it has tried to access Db2 and a

			connection unavailable response has been returned. This abnormal completion occurs when all the following are true: 1. zResponse is set. 2. CICS is not connected to Db2. 3. The CICS-Db2 adapter is in standby mode (STANDBYMODE(RECONNECT) or STANDBYMODE(CONNECT)). 4. CONNECTERROR(SQLCODE) is specified, causing the application to receive a -923 SQL code.

zTDLocBelow	BIT	1	1 => TASKDATALOC=BELOW
zTDKeyCICS	BIT	1	1 => TASKDATAKEY=CICS
zIsolateNo	BIT	1	1 => ISOLATE=NO
zDynamic	BIT	1	1 => DYNAMIC=YES

SMF110#02_Monitoring_Stats_Resid.<fieldname>			
zTRAN_Origin	INT (ENUM)	1	(IBM name: N/A) Transaction Origin Type.

SMF110#02_Monitoring_Stats_Resid.zTRAN_Status.<fieldname>			
zOrigin	BIT	1	The transaction origin.
zResource	BIT	1	Resource class record, or records, for this task.
zIdentity	BIT	1	Identity class record, or records, for this task.
zPurge	BIT	1	Task purge or runaway resulted in the open TCB the task was executing on being terminated.
zAbend	BIT	1	Task abnormally terminated.

SMF110#02_Monitoring_Stats_Resid.<fieldname>			
zTRAN_Track	INT	1	(IBM name: N/A) Transaction tracking origin data tag.

SMF110#02_Monitoring_Stats_Resid.zRecovery_Manager.<fieldname>			
zInDWaitNo	BIT	1	Indoubt WAIT=NO.
zInDCommit	BIT	1	Indoubt ACTION=COMMIT.
zUOWInD	BIT	1	Recovery manager, UOW resolved with indoubt action.
zUOWShunt	BIT	1	Recovery manager, Shunt.
zUOWUnShunt	BIT	1	Recovery manager, Unshunt.
zInDFail	BIT	1	Recovery manager, Indoubt failure.
zROFail	BIT	1	Recovery manager, Resource owner failure.

SMF110#02_Monitoring_Stats_Resid.<fieldname>			
zTERM_Assoc	INT (ENUM)	1	(IBM name: N/A) Task associated with terminal or session.
zTERM_SessType	INT (ENUM)	1	(IBM name: N/A) If the principal facility for this task is a session, this field identifies the session type.
zTERM_AM	INT (ENUM)	1	(IBM name: N/A) Identifies the access method defined for the terminal ID or session ID in field TERM.
zTERM_Type	INT (ENUM)	1	(IBM name: N/A) Device type code.
zTECNM	CHAR	4	(IBM name: N/A) TERMCONM - Terminal Connection name.
zBTRID	CHAR	4	(IBM name: N/A) BRDGTRAN - Bridge Transaction id.

zURID	CHAR	16	(IBM name: N/A) RRMSURID - RRMS/MVS Unit of Recovery id.
zPNAME	CHAR	36	(IBM name: N/A) PRCSNAME - Process name.
zPTYPE	CHAR	8	(IBM name: N/A) PRCSTYPE - Process type.
zPRCID	CHAR	52	(IBM name: N/A) PRCSID - Process id.
zACTID	CHAR	52	(IBM name: N/A) ACTVTYID - Activity id.
zACTNM	CHAR	16	(IBM name: N/A) ACTVTYNM - Activity name.
zCIPAD	CHAR	40	(IBM name: N/A) CLIPADDR - Client IP Address.
zTGPID	CHAR	28	(IBM name: N/A) TRNGRPID - Transaction Group Id.
zNETID	CHAR	8	(IBM name: NETID) NETID - Network id.
zRLUNM	CHAR	8	(IBM name: N/A) RLUNAME - Real Luname.
zTCPSV	CHAR	8	(IBM name: N/A) TCPSRVCE - TCP/IP Service name.
zPORTN	INT	4	(IBM name: N/A) PORTNUM - TCP/IP Service port number.
zOTSID	CHAR	128	(IBM name: N/A) OTSTID - OTS Transaction id.
zCIPOR	INT	4	(IBM name: N/A) CLIPPORT - Client IP Port.
zISCNM	CHAR	8	(IBM name: N/A) ISIPICNM - IPCONN name.
zONWID	CHAR	8	(IBM name: N/A) ONETWKID - Originating networkid.
zOAPID	CHAR	8	(IBM name: N/A) OAPPLID - Originating applid.
zOATTT	CHAR	8	(IBM name: N/A) OSTART - Originating task start time.
zOTRSN	CHAR	4	(IBM name: N/A) OTRANNUM - Originating transaction seq no.
zOTRID	CHAR	4	(IBM name: N/A) OTRAN - Originating transaction id.
zOUSID	CHAR	8	(IBM name: N/A) OUSERID - Originating userid.
zOUSRC	CHAR	64	(IBM name: N/A) OUSERCOR - Originating user specific data.
zOTCPS	CHAR	8	(IBM name: N/A) OTCPSVCE - Originating TCPIP SERVICE.
zOPRTN	INT	4	(IBM name: N/A) OPORTNUM - Originating portnumber.
zOCIPA	CHAR	40	(IBM name: N/A) OCLIPADR - Originating client IP address.
zOCPNO	INT	4	(IBM name: N/A) OCLIPORT - Originating client portnumber.
zOTRAN_Facility	INT (ENUM)	1	(IBM name: N/A) Originating Transaction facility type.
zOTRAN_id	INT (ENUM)	1	(IBM name: N/A) Originating Transaction identification.

SMF110#02_Monitoring_Stats_Resid.zOTRAN_WLM.<fieldname>			
zResponse	BIT	1	Report the total response time (begin-to-end phase) for completed work request (transaction).
zAllPhase	BIT	1	Notify that the entire execution phase of the work request is complete.
zSubPhase	BIT	1	Notify that a subset of the execution phase of the work request is complete.
zAbNormal	BIT	1	This transaction has been reported to the z/OS workload manager as completing abnormally because it has tried to access Db2 and a connection unavailable response has been returned. This abnormal completion occurs when all the following are true: 1. zResponse is set. 2. CICS is not connected to Db2. 3. The CICS-Db2 adapter is in standby mode (STANDBYMODE(RECONNECT) or STANDBYMODE(CONNECT)). 4. CONNECTERROR(SQLCODE) is specified, causing the application to receive a -923 SQL code.

zInDWaitNo	BIT	1	Indoubt WAIT=NO.
zInDCommit	BIT	1	Indoubt ACTION=COMMIT.
zUOWInD	BIT	1	Recovery manager, UOW resolved with indoubt action.
zUOWShunt	BIT	1	Recovery manager, Shunt.
zUOWUnShunt	BIT	1	Recovery manager, Unshunt.
zInDFail	BIT	1	Recovery manager, Indoubt failure.
zROFail	BIT	1	Recovery manager, Resource owner failure.

SMF110#02_Monitoring_Stats_Resid.<fieldname>			
zOFCTY	CHAR	8	(IBM name: N/A) OFCTYNME - Originating facility name.
zURIMN	CHAR	8	(IBM name: N/A) WBURIMNM - Urimap name.
zPIPLN	CHAR	8	(IBM name: N/A) WBPIPLNM - Pipeline name.

zATMSN	CHAR	8	(IBM name: N/A) WBATMSNM - Atomservice name.
zWSVCN	CHAR	32	(IBM name: N/A) WBSVCENM - Webservice name.
zWSOPN	CHAR	64	(IBM name: N/A) WBSVOPNM - Webservice operation name.
zWPBMN	CHAR	8	(IBM name: N/A) WBPROGNM - Program name.
zPHNWD	CHAR	8	(IBM name: N/A) PHNTWKID - Previous Hop data networkid.
zPHAPL	CHAR	8	(IBM name: N/A) PHAPPLID - Previous Hop data applid.
zPHATT	CHAR	8	(IBM name: N/A) PHSTART - Previous Hop data task start time.
zPHTSN	CHAR	4	(IBM name: N/A) PHTRANNO - Previous Hop data trans seq no.
zPHTID	CHAR	4	(IBM name: N/A) PHTRAN - Previous Hop data transaction id.
zPHCNT	INT	4	(IBM name: N/A) PHCOUNT - Previous Hop data count.
zADPID	CHAR	64	(IBM name: N/A) OADID - Originating adapter id.
zADPD1	CHAR	64	(IBM name: N/A) OADATA1 - Originating adapter data 1.
zADPD2	CHAR	64	(IBM name: N/A) OADATA2 - Originating adapter data 2.
zADPD3	CHAR	64	(IBM name: N/A) OADATA3 - Originating adapter data 3.
zSOCPH	HEX	4	(IBM name: N/A) SOCIPHER - Inbound cipher selected.
zCECTP	CHAR	4	(IBM name: N/A) CECMCHTP - CEC Machine Type.
zCECID	CHAR	16	(IBM name: N/A) CECMDLID - CEC Model ID.
zLPARN	CHAR	8	(IBM name: N/A) LPARNAME - LPAR name.
zMTSKS	INT	4	(IBM name: N/A) MAXTASKS - MXT at transaction attach.
zCTSKS	INT	4	(IBM name: N/A) CURTASKS - Current tasks at tran attach.
zAPPLN	CHAR	64	(IBM name: N/A) ACAPPLNM - Current Application Name.
zPLATN	CHAR	64	(IBM name: N/A) ACPLATNM - Current Platform Name.
zMAJVR	INT	4	(IBM name: N/A) ACMAJVER - Application Major Version #.
zMINVR	INT	4	(IBM name: N/A) ACMINVER - Application Minor Version #.
zMICVR	INT	4	(IBM name: N/A) ACMICVER - Application Micro Version #.
zOPERN	CHAR	64	(IBM name: N/A) ACOPERNM - Current Operation Name.
zPTATT	CHAR	8	(IBM name: N/A) PTSTART - Previous Tran start time.
zPTTSN	CHAR	4	(IBM name: N/A) PTTRANNO - Previous Tran trans seq no.

zPTTID	CHAR	4	(IBM name: N/A) PTTRAN - Previous Tran tran id.
zPTCNT	INT	4	(IBM name: N/A) PTCOUNT - Previous tran count.

SMF110#02_Monitoring_Stats_Resid.zERROR.<fieldname>

zClockErr	BIT	1	Detected an attempt either to start a user clock that was already running or to stop one that was not running.
-----------	-----	---	--

SMF110#02_Monitoring_Stats_Resid.<fieldname>

zABCDO	CHAR	4	(IBM name: N/A) ABCDEO - Original Transaction abend codes.
zABCDC	CHAR	4	(IBM name: N/A) ABCDEC - Current Transaction abend code.
zTYPE	CHAR	4	(IBM name: N/A) Performance record type: C => Record output for a terminal converse, D => Record output for a user EMP DELIVER request, F => Record output for a long-running transaction, S => Record output for a sync point, T => Record output for the end of a task.
zPINMC	INT	4	(IBM name: N/A) TCMSGIN1 - Primary TC messages - in.
zTCI1C	INT	4	(IBM name: N/A) TCCHRIN1 - Primary TC characters - in.
zPOUMC	INT	4	(IBM name: N/A) TCMSGOU1 - Primary TC messages - out.
zTCO1C	INT	4	(IBM name: N/A) TCCHROU1 - Primary TC characters - out.
zSINMC	INT	4	(IBM name: N/A) TCMSGIN2 - Secondary TC messages - in.
zTCI2C	INT	4	(IBM name: N/A) TCCHRIN2 - Secondary TC characters - in.
zSOUMC	INT	4	(IBM name: N/A) TCMSGOU2 - Secondary TC messages - out.
zTCO2C	INT	4	(IBM name: N/A) TCCHROU2 - Secondary TC characters - out.
z62IMC	INT	4	(IBM name: N/A) TCM62IN2 - Secondary TC msgs for LU6.2. - in.
z62ICH	INT	4	(IBM name: N/A) TCC62IN2 - Secondary TC chars for LU6.2. - in.
z62OMC	INT	4	(IBM name: N/A) TCM62OU2 - Secondary TC msgs for LU6.2. - out.
z62OCH	INT	4	(IBM name: N/A) TCC62OU2 - Secondary TC chars for LU6.2. - out.
zTAC	INT	4	(IBM name: N/A) TCALLOCT - No. TCTTE allocate requests.
zSCUGB	INT	4	(IBM name: N/A) SCUGETCT - No. user storage getmains below line.
zSCUGA	INT	4	(IBM name: N/A) No. user storage getmains above line.
zSCCGB	INT	4	(IBM name: N/A) SCCGETCT - No. CDSA storage getmains below line.
zSCCGA	INT	4	(IBM name: N/A) No. ECDSA storage getmains above line.
zUSHWB	INT	4	(IBM name: N/A) SCUSRHWM - User task storage hwm below line.
zUSHWA	INT	4	(IBM name: N/A) User task storage hwm above line.

zCHWMB	INT	4	(IBM name: N/A) SC24CHWM - CDSA storage hwm below the line.
zCHWMA	INT	4	(IBM name: N/A) SC31CHWM - ECDSA storage hwm above the line.
zUTSOB	INT	8	(IBM name: N/A) SCUSRSTG - User task stge 'occupancy' below line.
zUTSOA	INT	8	(IBM name: N/A) User task stge 'occupancy' above line.
zCOCCB	INT	8	(IBM name: N/A) SC24COCC - CDSA storage 'occupancy' below line.
zCOCCA	INT	8	(IBM name: N/A) SC31COCC - ECDSA storage 'occupancy' above line.
zSC24S	INT	4	(IBM name: N/A) SC24SGCT - Shared stg getmain count below 16M.
zSC24G	INT	4	(IBM name: N/A) SC24GSHR - Shared stg bytes getmain'd.
zSC24F	INT	4	(IBM name: N/A) SC24FSHR - Shared stg bytes freemain'd.
zSC31S	INT	4	(IBM name: N/A) SC31SGCT - Shared stg getmain count above 16M.
zSC31G	INT	4	(IBM name: N/A) SC31GSHR - Shared stg bytes getmain'd.
zSC31F	INT	4	(IBM name: N/A) SC31FSHR - Shared stg bytes freemain'd.
zSCCGG	INT	4	(IBM name: N/A) SC64CGCT - No. GCDSA storage getmains.
zCHWMG	INT	4	(IBM name: N/A) SC64CHWM - GCDSA storage hwm above 2G.
zSCUGG	INT	4	(IBM name: N/A) SC64UGCT - No. GUDSA storage getmains.
zUHWMG	INT	4	(IBM name: N/A) SC64UHWG - GUDSA storage hwm above 2G.
zSC64S	INT	4	(IBM name: N/A) SC64SGCT - Shared stg getmains above 2G.
zSC64G	INT	4	(IBM name: N/A) SC64GSHR - Shared stg bytes getmain.
zSC64F	INT	4	(IBM name: N/A) SC64FSHR - Shared stg bytes freemain.
zPCUSE	INT	4	(IBM name: N/A) PCSTGHWM - Program storage hwm.
zPC31A	INT	4	(IBM name: N/A) PC31AHWM - Program storage hwm above the line.
zPCUSB	INT	4	(IBM name: N/A) PC24BHWM - Program storage hwm below the line.
zPCCAH	INT	4	(IBM name: N/A) PC31CHWM - ECDSA prog storage hwm above.
zPCCBH	INT	4	(IBM name: N/A) PC24CHWM - CDSA prog storage hwm below.
zPCRAH	INT	4	(IBM name: N/A) PC31RHWM - R/O prog storage hwm above.
zPCRBH	INT	4	(IBM name: N/A) PC24RHWM - R/O prog storage hwm below.
zPCSAH	INT	4	(IBM name: N/A) PC31SHWM - Shared prog storage hwm above.
zPCSBH	INT	4	(IBM name: N/A) PC24SHWM - Shared prog storage hwm below.

zFCGC	INT	4	(IBM name: N/A) FCGETCT - No. file gets.
zFCPC	INT	4	(IBM name: N/A) FCPUTCT - No. file puts.
zFCBC	INT	4	(IBM name: N/A) FCBRWCT - No. file browses.
zFCAC	INT	4	(IBM name: N/A) FCADDCT - No. file adds.
zFCDC	INT	4	(IBM name: N/A) FCDELCT - No. file deletes.
zFCTC	INT	4	(IBM name: N/A) FCTOTCT - Total FC requests.
zFCAMC	INT	4	(IBM name: N/A) FCAMCT - No. access method requests.
zTDGC	INT	4	(IBM name: N/A) TDGETCT - No. transient data gets.
zTDPC	INT	4	(IBM name: N/A) TDPUTCT - No. transient data puts.
zTDRC	INT	4	(IBM name: N/A) TDPURCT - No. transient data purges.
zTDTC	INT	4	(IBM name: N/A) TDTOTCT - Total TD requests.
zTSGC	INT	4	(IBM name: N/A) TSGETCT - No. temp storage gets.
zTSPAC	INT	4	(IBM name: N/A) TSPUTACT - No. temp storage puts - aux.
zTSPMC	INT	4	(IBM name: N/A) TSPUTMCT - No. temp storage puts - main.
zTSGSC	INT	4	(IBM name: N/A) TSGETSCT - No. temp storage gets - shr.
zTSPSC	INT	4	(IBM name: N/A) TSPUTSCT - No. temp storage puts - shr.
zTSTC	INT	4	(IBM name: N/A) TSTOTCT - Total TS requests.
zBMMC	INT	4	(IBM name: N/A) BMSMAPCT - No. BMS map requests.
zBMIC	INT	4	(IBM name: N/A) BMSINCT - No. BMS in requests.
zBMOOC	INT	4	(IBM name: N/A) BMSOUTCT - No. BMS out requests.
zBMTC	INT	4	(IBM name: N/A) BMSTOTCT - Total BMS requests.
zPCLIC	INT	4	(IBM name: N/A) PCLINKCT - No. program links.
zPCXC	INT	4	(IBM name: N/A) PCXCTLCT - No. program xctls.
zPCLOC	INT	4	(IBM name: N/A) PCLOADCT - No. program loads.
zPCLUC	INT	4	(IBM name: N/A) PCLURMCT - No. program links to URM.
zPCDPL	INT	4	(IBM name: N/A) PCDPLCT - No. DPL program links.
zPCDLL	INT	4	(IBM name: N/A) PCDLCSDL - DPL program links with channel.
zPCDRL	INT	4	(IBM name: N/A) PCDLCRDL - DPL program returns with channel.

zPCLCC	INT	4	(IBM name: N/A) PCLNKCT - No. program links with channel option.
zPCXCC	INT	4	(IBM name: N/A) PCXCLCT - No. program xctls with channel option.
zPCDCC	INT	4	(IBM name: N/A) PCDPLCT - DPL program links with channel option.
zPCRCC	INT	4	(IBM name: N/A) PCRTNCT - No. program returns with channel.
zPCRCL	INT	4	(IBM name: N/A) PCRTNCDL - No. program returns with channel.
zJNLCT	INT	4	(IBM name: N/A) JNLWRTCT - No. journal write requests.
zLGWCT	INT	4	(IBM name: N/A) LOGWRTCT - No. CICS logger write requests.
zICC	INT	4	(IBM name: N/A) ICPUINCT - No. interval control starts.
zICTC	INT	4	(IBM name: N/A) ICTOTCT - Total interval control requests.
zICSCC	INT	4	(IBM name: N/A) ICSTACCT - No. interval control start reqs.
zICSCD	INT	4	(IBM name: N/A) ICSTACDL - Interval control start reqs with.
zICSRC	INT	4	(IBM name: N/A) ICSTRCT - No. interval control start reqs.
zICSRD	INT	4	(IBM name: N/A) ICSTRCDL - Interval control start reqs with.
zSPPC	INT	4	(IBM name: N/A) SPSYNCT - No. syncpoint requests.
zCFACT	INT	4	(IBM name: N/A) CFCAPICT - No. OO Class Library API requests.
zSZACT	INT	4	(IBM name: N/A) SZALLOCT - No. FEPI allocates.
zSZRCT	INT	4	(IBM name: N/A) SZRCVCT - No. FEPI receives.
zSZSCT	INT	4	(IBM name: N/A) SZSENDCT - No. FEPI sends.
zSZTCT	INT	4	(IBM name: N/A) SZSTRTCT - No. FEPI starts.
zSZCOT	INT	4	(IBM name: N/A) SZCHROUT - No. chars sent via FEPI.
zSZCIN	INT	4	(IBM name: N/A) SZCHRIN - No. chars received via FEPI.
zSZATO	INT	4	(IBM name: N/A) SZALLCTO - No. FEPI allocate timeouts.
zSZRTO	INT	4	(IBM name: N/A) SZRCVTO - No. FEPI receive timeouts.
zSZTOT	INT	4	(IBM name: N/A) SZTOTCT - Total no. FEPI requests.
zBARSC	INT	4	(IBM name: N/A) BARSYNCT - No. Run Process/Activity Sync.
zBARAC	INT	4	(IBM name: N/A) BARASYCT - No. Run Process/Activity Async.
zBALKC	INT	4	(IBM name: N/A) BALKPACT - No. Link Process/Activity reqs.
zBADPC	INT	4	(IBM name: N/A) BADPROCT - No. Define Process requests.

zBADAC	INT	4	(IBM name: N/A) BADACTCT - No. Define Activity requests.
zBTPAC	INT	4	(IBM name: N/A) BARSPACT - No. Reset Process/Activity requests.
zBSPAC	INT	4	(IBM name: N/A) BASUPACT - No. Suspend Process/Activity requests.
zBRPAC	INT	4	(IBM name: N/A) BARMPACT - No. Resume Process/Activity requests.
zBDCPC	INT	4	(IBM name: N/A) BADCPACT - No. Delete Activity and Cancel.
zBAAPC	INT	4	(IBM name: N/A) BAACQPCT - No. Acquire Process requests.
zBATPC	INT	4	(IBM name: N/A) BATOTPCT - Total No. Process/Activity requests.
zBAPDC	INT	4	(IBM name: N/A) BAPRDCCT - No. Process Data Container requests.
zBAADC	INT	4	(IBM name: N/A) BAACDCCT - No. Activity Data Container requests.
zBATCC	INT	4	(IBM name: N/A) BATOTCCT - Total No. Data Container requests.
zBAREC	INT	4	(IBM name: N/A) BARATECT - No. Retrieve Reattach Event requests.
zBADIC	INT	4	(IBM name: N/A) BADFIECT - No. Define Input Event requests.
zBATAC	INT	4	(IBM name: N/A) BATIAECT - No. Timer Associated Event requests.
zBATEC	INT	4	(IBM name: N/A) BATOTECT - Total No. Event requests.
zWBRCT	INT	4	(IBM name: N/A) WBRCVCT - No. WEB Receive requests.
zWBCIN	INT	4	(IBM name: N/A) WBCHRIN - No. Characters received via WEB reqs.
zWBSCT	INT	4	(IBM name: N/A) WBSENDCT - No. WEB Send requests.
zWBCOT	INT	4	(IBM name: N/A) WBCHROUT - No. Characters sent via WEB requests.
zWBTC	INT	4	(IBM name: N/A) WBTOTCT - Total No. WEB requests.
zWBRPR	INT	4	(IBM name: N/A) WBREPRCT - No. Repository Reads.
zWBRPW	INT	4	(IBM name: N/A) WBREPWCT - No. Repository Writes.
zWBERC	INT	4	(IBM name: N/A) WBEXTRCT - No. WEB Extract requests.
zWBBRC	INT	4	(IBM name: N/A) WBBRWCT - No. WEB Browse requests.
zWBRRC	INT	4	(IBM name: N/A) WBREADCT - No. WEB Read requests.
zWBWRC	INT	4	(IBM name: N/A) WBWRITET - No. WEB Write requests.
zDHCRC	INT	4	(IBM name: N/A) DHCRECT - No. Document Create requests.
zDHINC	INT	4	(IBM name: N/A) DHINSCT - No. Document Insert requests.
zDHSTC	INT	4	(IBM name: N/A) DHSETCT - No. Document Set requests.

zDHRCT	INT	4	(IBM name: N/A) DHRETCT - No. Document Retrieve requests.
zDHDLC	INT	4	(IBM name: N/A) DHDELCT - No. Document Delete requests.
zDHTC	INT	4	(IBM name: N/A) DHTOTCT - Total No. Document requests.
zDHTDL	INT	4	(IBM name: N/A) DHTOTDCL - Total Document Created length.
zSOBEN	INT	4	(IBM name: N/A) SOBYENCT - No. Bytes Encrypted.
zSOBDE	INT	4	(IBM name: N/A) SOBYDECT - No. Bytes Decrypted.
zSOERC	INT	4	(IBM name: N/A) SOEXTRCT - No. Extract TCP/IP and Extract.
zSOCNS	INT	4	(IBM name: N/A) SOCNPST - No. Create Non-Persistent Socket reqs.
zSOCPS	INT	4	(IBM name: N/A) SOCPSCT - No. Create Persistent Socket reqs.
zSONHW	INT	4	(IBM name: N/A) SONPSHWM - Non-Persistent Socket HWM.
zSOPHW	INT	4	(IBM name: N/A) SOPSHWM - Persistent Socket HWM.
zSORCT	INT	4	(IBM name: N/A) SORCVCT - No. Socket Receive requests.
zSOCIN	INT	4	(IBM name: N/A) SOCHRIN - No. Characters received.
zSOSCT	INT	4	(IBM name: N/A) SOSENDCT - No. Socket Send requests.
zSOCOT	INT	4	(IBM name: N/A) SOCHROUT - No. Characters sent.
zSOTC	INT	4	(IBM name: N/A) SOTOTCT - Total No. Socket requests.
zSOIMC	INT	4	(IBM name: N/A) SOMSGIN1 - No. Inbound Socket Receive reqs.
zSOI1C	INT	4	(IBM name: N/A) SOCHRIN1 - No. Inbound Socket Characters rec'vd.
zSOOMC	INT	4	(IBM name: N/A) SOMSGOU1 - No. Inbound Socket Send reqs.
zSOO1C	INT	4	(IBM name: N/A) SOCHROU1 - No. Inbound Socket Characters sent.
zIMSRC	INT	4	(IBM name: N/A) IMSREQCT - Total No. IMS requests.
zDB2RC	INT	4	(IBM name: N/A) DB2REQCT - Total No. DB2 requests.
zWMQRC	INT	4	(IBM name: N/A) WMQREQCT - Total No. WebSphere MQ requests.
zTCBAC	INT	4	(IBM name: N/A) TCBATTCT - No. CICS Dispatcher TCB Attach's.
zDSTHW	INT	4	(IBM name: N/A) DSTCBHWM - CICS Dispatcher TCB HWM.
zWBROC	INT	4	(IBM name: N/A) WBREDOCT - No. Web Read requests.
zWBWOC	INT	4	(IBM name: N/A) WBWRTOCT - No. Web Write requests.
zWBIRC	INT	4	(IBM name: N/A) WBRCVIN1 - No. Web Receive requests.

zWBI1C	INT	4	(IBM name: N/A) WBCHRIN1 - No. Bytes received by Web reqs.
zWBOSC	INT	4	(IBM name: N/A) WBSNDOU1 - No. Web Send requests.
zWBO1C	INT	4	(IBM name: N/A) WBCHROU1 - No. Bytes sent by Web send reqs.
zWBPRC	INT	4	(IBM name: N/A) WBPARSCT - No. Web Parse requests.
zWBBOC	INT	4	(IBM name: N/A) WBBRWOC - No. Web Browse requests.
zWBIWC	INT	4	(IBM name: N/A) WBIWBSCT - No. Invoke Webservice requests.
zWBRDL	INT	4	(IBM name: N/A) WBREPRDL - Repository Read data length.
zWBWDL	INT	4	(IBM name: N/A) WBREPWDL - Repository Write data length.
zPGCTC	INT	4	(IBM name: N/A) PGTOTCCT - Total No. channel data container reqs.
zPGBCC	INT	4	(IBM name: N/A) PGBRWCCT - No. Browse container channel requests.
zPGGCC	INT	4	(IBM name: N/A) PGGETCCT - No. Get container channel requests.
zPGPCC	INT	4	(IBM name: N/A) PGPUTCCT - No. Put container channel requests.
zPGMCC	INT	4	(IBM name: N/A) PGMOVCCT - No. Move container channel requests.
zPGGCL	INT	4	(IBM name: N/A) PGGETCDL - Get container channel data length.
zPGPCL	INT	4	(IBM name: N/A) PGPUTCDL - Put container channel data length.
zPGCCC	INT	4	(IBM name: N/A) PGCRECCT - No. Containers created.
zPGCSH	INT	4	(IBM name: N/A) PGCSTHWM - Container Storage HWM.
zISACT	INT	4	(IBM name: N/A) ISALLOCT - No. IPCONN allocate requests.
zEICTC	INT	4	(IBM name: N/A) EICTOTCT - Total No. EXEC CICS requests.
zECSGE	INT	4	(IBM name: N/A) ECSIGECT - No. SIGNAL EVENT requests.
zECFOC	INT	4	(IBM name: N/A) ECEFOPT - No. Event Filter operations.
zECEVC	INT	4	(IBM name: N/A) ECEVNTCT - No. EVENTS captured.
zECSEC	INT	4	(IBM name: N/A) ECSEVCCT - No. synchronous emission EVENTS.
zTIATC	INT	4	(IBM name: N/A) TIASKTCT - No. EXEC CICS ASKTIME requests.
zTITC	INT	4	(IBM name: N/A) TITOTCT - Total No. EXEC xxxxxxTIME reqs.
zBFDGC	INT	4	(IBM name: N/A) BFDGSTCT - No. BIF DIGEST requests.
zBFTC	INT	4	(IBM name: N/A) BFTOTCT - Total No. BIF requests.
zMLTDL	INT	4	(IBM name: N/A) MLXSSTD - Total document length.

zMLXTC	INT	4	(IBM name: N/A) MLXMLTCT - No. EXEC CICS TRANSFORM requests.
zWSCBC	INT	4	(IBM name: N/A) WSACBLCT - No. WSACONTEXT BUILD requests.
zWSCGC	INT	4	(IBM name: N/A) WSACGTCT - No. WSACONTEXT GET requests.
zWSEPC	INT	4	(IBM name: N/A) WSAEPCT - No. WSAEPR CREATE requests.
zWSATC	INT	4	(IBM name: N/A) WSATOTCT - Total No. WS-Addressing requests.
zWSFCC	INT	4	(IBM name: N/A) WBSFCRCT - No. SOAPFAULT CREATE requests.
zWSFTC	INT	4	(IBM name: N/A) WBSFTOCT - Total No. SOAPFAULT requests.
zWSSFC	INT	4	(IBM name: N/A) WBSSFC - No. INVOKE xxxSERVICE SOAP faults.
zWSQBL	INT	4	(IBM name: N/A) WBSREQBL - SOAP request body length.
zWSRBL	INT	4	(IBM name: N/A) WBSRSPBL - SOAP response body length.
zJSRQL	INT	4	(IBM name: N/A) WBJSNRQL - JSON request body length.
zJSRPL	INT	4	(IBM name: N/A) WBJSNRPL - JSON response body length.
zMPPTX	INT	4	(IBM name: N/A) MPPRTXCD - Managed Platform - Policy.
zNCGET	INT	4	(IBM name: N/A) NCGETCT - No. EXEC CICS GET COUNTER and GET DCOUNTER requests.
zASTC	INT	4	(IBM name: N/A) ASTOTCT - Total number of.
zASRNC	INT	4	(IBM name: N/A) ASRUNCT - No. EXEC CICS RUN TRANSID.
zASFTC	INT	4	(IBM name: N/A) ASFTCHCT - No. EXEC CICS FETCH command.
zASFRC	INT	4	(IBM name: N/A) ASFRECT - No. EXEC CICS FREE CHILD.
zMPSRE	INT	4	(IBM name: N/A) MPSRECT - No. system rule evaluations.
zMPSRA	INT	4	(IBM name: N/A) MPSRACT - No. system rule actions.
zUSRDISPT	TIME	8	(IBM name: N/A) Total elapsed time during which the user task was dispatched on each CICS TCB under which the task ran.
zUSRDISPT_N	INT	3	(IBM name: N/A) Count of the number of time periods contributing to the total elapsed time.
zUSRCPUT	TIME	8	(IBM name: N/A) Processor time for which the user task was dispatched on each CICS TCB under which the task ran.
zUSRCPUT_N	INT	3	(IBM name: N/A) Count of the number of time periods contributing to the total processor time.
zCPUTONCP	TIME	8	(IBM name: N/A) The total task processor time on a standard processor for which the user task was dispatched on each CICS TCB under which the task ran.
zCPUTONCP_N	INT	3	(IBM name: N/A) Count of the number of time periods contributing to the total processor time.

zOFFLCPUT	TIME	8	(IBM name: N/A) The total task processor time that was spent on a standard processor but was eligible for offload to a specialty processor (zIIP or zAAP).
zOFFLCPUT_N	INT	3	(IBM name: N/A) Count of the number of time periods contributing to the total processor time.
zSUSPTIME	TIME	8	(IBM name: N/A) Total elapsed wait time for which the user task was suspended by the dispatcher.
zSUSPTIME_N	INT	3	(IBM name: N/A) Count of the number of time periods contributing to the total elapsed time.
zDISPWTT	TIME	8	(IBM name: N/A) Elapsed time for which the user task waited for redispach. This time is the aggregate of the wait times between each event completion and user-task redispach.
zDISPWTT_N	INT	3	(IBM name: N/A) Count of the number of time periods contributing to the total elapsed time.
zQRDISPT	TIME	8	(IBM name: N/A) The elapsed time for which the user task was dispatched on the CICS QR TCB.
zQRDISPT_N	INT	3	(IBM name: N/A) Count of the number of time periods contributing to the total elapsed time.
zQRCPUT	TIME	8	(IBM name: N/A) The processor time for which the user task was dispatched on the CICS QR TCB.
zQRCPUT_N	INT	3	(IBM name: N/A) Count of the number of time periods contributing to the total processor time.
zMSDISPT	TIME	8	(IBM name: N/A) Elapsed time for which the user task was dispatched on each CICS TCB.
zMSDISPT_N	INT	3	(IBM name: N/A) Count of the number of time periods contributing to the total elapsed time.
zMSCPUP	TIME	8	(IBM name: N/A) The processor time for which the user task was dispatched on each CICS TCB.
zMSCPUP_N	INT	3	(IBM name: N/A) Count of the number of time periods contributing to the total processor time.
zRODISPT	TIME	8	(IBM name: N/A) The elapsed time during which the user task was dispatched by the CICS dispatcher on the CICS RO mode TCB. The RO TCB is used for loading programs, unless the command to load the program (EXEC CICS LOAD, XCTL, or LINK) is issued by an application that is currently running on an open TCB.
zRODISPT_N	INT	3	(IBM name: N/A) Count of the number of time periods contributing to the total elapsed time.
zROCPUP	TIME	8	(IBM name: N/A) The processor time during which the user task was dispatched by the CICS dispatcher on the CICS RO mode TCB. The RO TCB is used for loading programs, unless the command to load the program (EXEC CICS LOAD, XCTL, or LINK) is issued by an application that is currently running on an open TCB.
zROCPUP_N	INT	3	(IBM name: N/A) Count of the number of time periods contributing to the total processor time.
zKY8DISPT	TIME	8	(IBM name: N/A) The total elapsed time during which the user task was dispatched by the CICS dispatcher on a CICS Key 8 mode TCB.
zKY8DISPT_N	INT	3	(IBM name: N/A) Count of the number of time periods contributing to the total elapsed time.
zKY8CPUP	TIME	8	(IBM name: N/A) The processor time during which the user task was dispatched by the CICS

			dispatcher on a CICS Key 8 mode TCB.
zKY8CPUT_N	INT	3	(IBM name: N/A) Count of the number of time periods contributing to the total processor time.
zKY9DISPT	TIME	8	(IBM name: N/A) The total elapsed time during which the user task was dispatched by the CICS dispatcher on a CICS Key 9 mode TCB.
zKY9DISPT_N	INT	3	(IBM name: N/A) Count of the number of time periods contributing to the total elapsed time.
zKY9CPUT	TIME	8	(IBM name: N/A) The processor time during which the user task was dispatched by the CICS dispatcher on a CICS Key 9 mode TCB.
zKY9CPUT_N	INT	3	(IBM name: N/A) Count of the number of time periods contributing to the total processor time.
zL8CPUT	TIME	8	(IBM name: N/A) The processor time during which the user task was dispatched by the CICS dispatcher domain on a CICS L8 mode TCB.
zL8CPUT_N	INT	3	(IBM name: N/A) Count of the number of time periods contributing to the total processor time.
zL9CPUT	TIME	8	(IBM name: N/A) The processor time during which the user task was dispatched by the CICS dispatcher domain on a CICS L9 mode TCB.
zL9CPUT_N	INT	3	(IBM name: N/A) Count of the number of time periods contributing to the total processor time.
zS8CPUT	TIME	8	(IBM name: N/A) The processor time during which the user task was dispatched by the CICS dispatcher domain on a CICS S8 mode TCB.
zS8CPUT_N	INT	3	(IBM name: N/A) Count of the number of time periods contributing to the total processor time.
zX8CPUT	TIME	8	(IBM name: N/A) The processor time during which the user task was dispatched by the CICS dispatcher domain on a CICS X8 mode TCB.
zX8CPUT_N	INT	3	(IBM name: N/A) Count of the number of time periods contributing to the total processor time.
zX9CPUT	TIME	8	(IBM name: N/A) The processor time during which the user task was dispatched by the CICS dispatcher domain on a CICS X9 mode TCB.
zX9CPUT_N	INT	3	(IBM name: N/A) Count of the number of time periods contributing to the total processor time.
zT8CPUT	TIME	8	(IBM name: N/A) The processor time during which the user task was dispatched by the CICS dispatcher domain on a CICS T8 mode TCB.
zT8CPUT_N	INT	3	(IBM name: N/A) Count of the number of time periods contributing to the total processor time.
zQRMODDLY	TIME	8	(IBM name: N/A) The elapsed time for which the user task waited for redispach on the CICS QR mode TCB.
zQRMODDLY_N	INT	3	(IBM name: N/A) Count of the number of time periods contributing to the total elapsed time.
zMXTOTDLY	TIME	8	(IBM name: N/A) The elapsed time in which the user task waited to obtain a CICS L8 or L9 mode open TCB, because the region had reached the limit set by CICS for these TCBs.
zMXTOTDLY_N	INT	3	

			(IBM name: N/A) Count of the number of time periods contributing to the total elapsed time.
zMAXXTDLY	TIME	8	(IBM name: N/A) The elapsed time for which the user task waited to obtain a CICS XP TCB (X8 or X9 mode), because the CICS system reached the limit set by CICS for these types of TCB.
zMAXXTDLY_N	INT	3	(IBM name: N/A) Count of the number of time periods contributing to the total elapsed time.
zMAXSTDLY	TIME	8	(IBM name: N/A) The elapsed time for which the user task waited to obtain a CICS SSL TCB (S8 mode), because the CICS system reached the limit set by the system initialization parameter MAXSSLTCBS.
zMAXSTDLY_N	INT	3	(IBM name: N/A) Count of the number of time periods contributing to the total elapsed time.
zMAXTTDLY	TIME	8	(IBM name: N/A) The elapsed time for which the user task waited to obtain a T8 TCB, because the CICS system reached the limit of available threads.
zMAXTTDLY_N	INT	3	(IBM name: N/A) Count of the number of time periods contributing to the total elapsed time.
zDSTCBMWT	TIME	8	(IBM name: N/A) The elapsed time that the user task spent in TCB mismatch waits. That is, waiting because no available TCB matched the request, but at least one non matching TCB was free.
zDSTCBMWT_N	INT	3	(IBM name: N/A) Count of the number of time periods contributing to the total elapsed time.
zDSCHMDLY	TIME	8	(IBM name: N/A) The elapsed time in which the user task waited for redispach after a CICS Dispatcher change-TCB mode request was issued by or on behalf of the user task.
zDSCHMDLY_N	INT	3	(IBM name: N/A) Count of the number of time periods contributing to the total elapsed time.
zEXWTTIME	TIME	8	(IBM name: N/A) The total elapsed time for which the user waited on exception conditions.
zEXWTTIME_N	INT	3	(IBM name: N/A) Count of the number of time periods contributing to the total elapsed time.
zTCIOWTT	TIME	8	(IBM name: N/A) Elapsed time for which the user task waited for input from the terminal operator after issuing a RECEIVE request.
zTCIOWTT_N	INT	3	(IBM name: N/A) Count of the number of time periods contributing to the total elapsed time.
zFCIOWTT	TIME	8	(IBM name: N/A) Elapsed time in which the user task waited for file I/O.
zFCIOWTT_N	INT	3	(IBM name: N/A) Count of the number of time periods contributing to the total elapsed time.
zFCXCWTT	TIME	8	(IBM name: N/A) The elapsed time in which the user task waited for exclusive control of a VSAM control interval.
zFCXCWTT_N	INT	3	(IBM name: N/A) Count of the number of time periods contributing to the total elapsed time.
zFCVSWTT	TIME	8	(IBM name: N/A) The elapsed time in which the user task waited for a VSAM string.
zFCVSWTT_N	INT	3	(IBM name: N/A) Count of the number of time periods contributing to the total elapsed time.
zJCIOWTT	TIME	8	(IBM name: N/A) Elapsed time for which the user task waited for journal (logstream) I/O.
zJCIOWTT_N	INT	3	(IBM name: N/A) Count of the number of time periods contributing to the total elapsed time.
zTSIOWTT	TIME	8	(IBM name: N/A) Elapsed time for which the user task waited for VSAM temporary storage

			I/O.
zTSIOWTT_N	INT	3	(IBM name: N/A) Count of the number of time periods contributing to the total elapsed time.
zIRIOWTT	TIME	8	(IBM name: N/A) Elapsed time for which the user task waited for control at this end of an MRO link.
zIRIOWTT_N	INT	3	(IBM name: N/A) Count of the number of time periods contributing to the total elapsed time.
zTDIOWTT	TIME	8	(IBM name: N/A) Elapsed time in which the user waited for VSAM transient data I/O.
zTDIOWTT_N	INT	3	(IBM name: N/A) Count of the number of time periods contributing to the total elapsed time.
zPCLOADTM	TIME	8	(IBM name: N/A) Elapsed time in which the user task waited for fetches from DFHRPL or dynamic LIBRARY concatenations.
zPCLOADTM_N	INT	3	(IBM name: N/A) Count of the number of time periods contributing to the total elapsed time.
zDSPDELAY	TIME	8	(IBM name: N/A) The elapsed time waiting for first dispatch.
zDSPDELAY_N	INT	3	(IBM name: N/A) Number of waits.
zTCLDELAY	TIME	8	(IBM name: N/A) The elapsed time waiting for first dispatch, which was delayed because of the limits set for the transaction class of this transaction (zTCLSNAME) being reached.
zTCLDELAY_N	INT	3	(IBM name: N/A) Number of waits.
zMXTDELAY	TIME	8	(IBM name: N/A) The elapsed time waiting for the first dispatch, which was delayed because of the limits set by the system parameter, MXT, being reached.
zMXTDELAY_N	INT	3	(IBM name: N/A) Number of waits.
zENQDELAY	TIME	8	(IBM name: N/A) The elapsed time waiting for a CICS task control local enqueue.
zENQDELAY_N	INT	3	(IBM name: N/A) The number of local enqueues.
zGNQDELAY	TIME	8	(IBM name: N/A) The elapsed time waiting for a CICS task control global enqueue.
zGNQDELAY_N	INT	3	(IBM name: N/A) The number of global enqueues.
zLU61WTT	TIME	8	(IBM name: N/A) The elapsed time for which the user task waited for I/O on a LUTYPE6.1 connection or session.
zLU61WTT_N	INT	3	(IBM name: N/A) Count of the number of time periods contributing to the total elapsed time.
zLU62WTT	TIME	8	(IBM name: N/A) The elapsed time for which the user task waited for I/O on a LUTYPE6.2 (APPC) connection or session.
zLU62WTT_N	INT	3	(IBM name: N/A) Count of the number of time periods contributing to the total elapsed time.
zSZWAIT	TIME	8	(IBM name: N/A) Elapsed time in which the user task waited for all FEPI services.
zSZWAIT_N	INT	3	(IBM name: N/A) Count of the number of time periods contributing to the total elapsed time.
zRMITIME	TIME	8	(IBM name: N/A) The total elapsed time spent in the CICS Resource Manager Interface (RMI).
zRMITIME_N	INT	3	

			(IBM name: N/A) Count of the number of time periods contributing to the total elapsed time.
zRMISUSP	TIME	8	(IBM name: N/A) The total elapsed time that the task was suspended by the CICS dispatcher while in the CICS Resource Manager Interface (RMI).
zRMISUSP_N	INT	3	(IBM name: N/A) Count of the number of time periods contributing to the total elapsed time.
zSYNCTIME	TIME	8	(IBM name: N/A) Total elapsed time for which the user task was dispatched and was processing syncpoint requests.
zSYNCTIME_N	INT	3	(IBM name: N/A) Count of the number of time periods contributing to the total elapsed time.
zRLSWAIT	TIME	8	(IBM name: N/A) Elapsed time in which the user task waited for RLS file I/O.
zRLSWAIT_N	INT	3	(IBM name: N/A) Count of the number of time periods contributing to the total elapsed time.
zRLSCPUT	TIME	8	(IBM name: N/A) For RLS requests issued only from the QR TCB, this value is the RLS File Request SRB CPU time that this transaction spent processing RLS file requests.
zRLSCPUT_N	INT	3	(IBM name: N/A) Count of the number of time periods contributing to the total CPU SRB processor time.
zLMDELAY	TIME	8	(IBM name: N/A) The elapsed time that the user task waited to acquire a lock on a resource.
zLMDELAY_N	INT	3	(IBM name: N/A) Count of the number of time periods contributing to the total elapsed time.
zWTEXWAIT	TIME	8	(IBM name: N/A) The elapsed time that the user task waited for one or more ECBs, passed to CICS by the user task using the EXEC CICS WAIT EXTERNAL ECBLIST command, to be posted by the MVS POST command.
zWTEXWAIT_N	INT	3	(IBM name: N/A) Count of the number of time periods contributing to the total elapsed time.
zWTCEWAIT	TIME	8	(IBM name: N/A) The elapsed time that the user task waited for one of these events: 1. One or more ECBs, passed to CICS by the user task using the EXEC CICS WAITCICS ECBLIST command, to be posted by the MVS POST command. 2. Completion of an event initiated by the same or by another user task.
zWTCEWAIT_N	INT	3	(IBM name: N/A) Count of the number of time periods contributing to the total elapsed time.
zICDELAY	TIME	8	(IBM name: N/A) The elapsed time that the user task waited as a result of issuing one of the following commands: 1. An interval control EXEC CICS DELAY command for a specified time interval. 2. An interval control EXEC CICS DELAY command for a specified time of day to expire. 3. An interval control EXEC CICS RETRIEVE command with the WAIT option specified.
zICDELAY_N	INT	3	(IBM name: N/A) Count of the number of time periods contributing to the total elapsed time.
zGVUPWAIT	TIME	8	(IBM name: N/A) The elapsed time that the user task waited as a result of giving up control to another task.
zGVUPWAIT_N	INT	3	(IBM name: N/A) Count of the number of time periods contributing to the total elapsed time.
zTSSHWAIT	TIME	8	(IBM name: N/A) Elapsed time that the user task waited for an asynchronous shared temporary storage request to a temporary storage data server to complete.
zTSSHWAIT_N	INT	3	(IBM name: N/A) Count of the number of time periods contributing to the total elapsed time.
zCFDTPWAIT	TIME	8	(IBM name: N/A) The elapsed time in which the user task waited for a data table access

			request to the Coupling Facility Data Table server to complete.
zCFDTPWAIT_N	INT	3	(IBM name: N/A) Count of the number of time periods contributing to the total elapsed time.
zSRVSYWTT	TIME	8	(IBM name: N/A) Total elapsed time in which the user task waited for syncpoint or resynchronization processing using the Coupling Facility data tables server to complete.
zSRVSYWTT_N	INT	3	(IBM name: N/A) Count of the number of time periods contributing to the total elapsed time.
zRRMSWAIT	TIME	8	(IBM name: N/A) The elapsed time in which the user task waited indoubt using resource recovery services for EXCI.
zRRMSWAIT_N	INT	3	(IBM name: N/A) Count of the number of time periods contributing to the total elapsed time.
zRUNTRWTT	TIME	8	(IBM name: N/A) The elapsed time in which the user task waited for completion of a transaction that ran as a result of the user task issuing a CICS BTS run process request and a run activity request synchronously.
zRUNTRWTT_N	INT	3	(IBM name: N/A) Count of the number of time periods contributing to the total elapsed time.
zSYNCDLY	TIME	8	(IBM name: N/A) The elapsed time in which the user task waited for a syncpoint request to be issued by its parent transaction.
zSYNCDLY_N	INT	3	(IBM name: N/A) Count of the number of time periods contributing to the total elapsed time.
zSOIOWTT	TIME	8	(IBM name: N/A) The elapsed time for which the user task waited for inbound socket I/O.
zSOIOWTT_N	INT	3	(IBM name: N/A) Count of the number of time periods contributing to the total elapsed time.
zIMSWAIT	TIME	8	(IBM name: N/A) The elapsed time during which the user task waited for DBCTL to service the IMS requests issued by the user task.
zIMSWAIT_N	INT	3	(IBM name: N/A) Count of the number of time periods contributing to the total elapsed time.
zDB2RDYQW	TIME	8	(IBM name: N/A) The elapsed time during which the user task waited for a Db2 thread to become available.
zDB2RDYQW_N	INT	3	(IBM name: N/A) Count of the number of time periods contributing to the total elapsed time.
zDB2CONWT	TIME	8	(IBM name: N/A) The elapsed time during which the user task waited for a Db2 connection to become available for use with the user task's open TCB.
zDB2CONWT_N	INT	3	(IBM name: N/A) Count of the number of time periods contributing to the total elapsed time.
zWMQGETWT	TIME	8	(IBM name: N/A) The elapsed time during which the user task waited for WebSphere MQ to service the user task's GETWAIT request.
zWMQGETWT_N	INT	3	(IBM name: N/A) Count of the number of time periods contributing to the total elapsed time.
zJVMTIME	TIME	8	(IBM name: N/A) The total elapsed time spent in the JVM by the user task.
zJVMTIME_N	INT	3	(IBM name: N/A) Count of the number of time periods contributing to the total elapsed time.
zJVMSUSP	TIME	8	(IBM name: N/A) The elapsed time for which the user task was suspended by the CICS dispatcher while running in the JVM.
zJVMSUSP_N	INT	3	(IBM name: N/A) Count of the number of time periods contributing to the total elapsed time.
zSOOIOWTT	TIME	8	

			(IBM name: N/A) The total elapsed time that the user task waited on outbound sockets.
zSOOIOWTT_N	INT	3	(IBM name: N/A) Count of the number of time periods contributing to the total elapsed time.
zRQRWAIT	TIME	8	(IBM name: N/A) The elapsed time during which the request receiver user task CIRR (or user specified transaction ID) waited for any outstanding replies to be satisfied.
zRQRWAIT_N	INT	3	(IBM name: N/A) Count of the number of time periods contributing to the total elapsed time.
zRQPWAIT	TIME	8	(IBM name: N/A) The elapsed time during which the request processor user task CIRP waited for any outstanding replies to be satisfied.
zRQPWAIT_N	INT	3	(IBM name: N/A) Count of the number of time periods contributing to the total elapsed time.
zOTSINDWT	TIME	8	(IBM name: N/A) The elapsed time in which the user task was dispatched or suspended indoubt (or both) while processing a syncpoint for an Object Transaction Service (OTS) syncpoint request.
zOTSINDWT_N	INT	3	(IBM name: N/A) Count of the number of time periods contributing to the total elapsed time.
zJVMITIME	TIME	8	(IBM name: N/A) The elapsed time spent initializing the JVM environment.
zJVMITIME_N	INT	3	(IBM name: N/A) Count of the number of time periods contributing to the total elapsed time.
zJVMRTIME	TIME	8	(IBM name: N/A) Reserved field, returns zero.
zJVMRTIME_N	INT	3	(IBM name: N/A) Reserved field, returns zero.
zPTPWAIT	TIME	8	(IBM name: N/A) The elapsed time for which the user task waited for the 3270 bridge partner transaction to complete.
zPTPWAIT_N	INT	3	(IBM name: N/A) Count of the number of time periods contributing to the total elapsed time.
zDSMMSCWT	TIME	8	(IBM name: N/A) The elapsed time that the user task spent waiting because no TCB was available and a TCB was not created because of MVS storage constraints.
zDSMMSCWT_N	INT	3	(IBM name: N/A) Count of the number of time periods contributing to the total elapsed time.
zLSIOWTT	TIME	8	(IBM name: N/A) The elapsed time for which a user task waited for control at this end of an IPIEC connection.
zLSIOWTT_N	INT	3	(IBM name: N/A) Count of the number of time periods contributing to the total elapsed time.
zJVMTHDWT	TIME	8	(IBM name: N/A) The elapsed time that the user task waited to obtain a JVM server thread because the CICS system had reached the thread limit for a JVM server in the CICS region.
zJVMTHDWT_N	INT	3	(IBM name: N/A) Count of the number of time periods contributing to the total elapsed time.
zWMQASRBT	TIME	8	(IBM name: N/A) The WebSphere MQ SRB time this transaction spent processing WebSphere MQ API requests.
zWMQASRBT_N	INT	3	(IBM name: N/A) Count of the number of time periods contributing to the total SRB time.
zTDILWTT	TIME	8	(IBM name: N/A) The elapsed time for which the user task waited for an intrapartition transient data lock (TDIPLOCK).
zTDILWTT_N	INT	3	

			(IBM name: N/A) Count of the number of time periods contributing to the total elapsed time.
zTDELWTT	TIME	8	(IBM name: N/A) The elapsed time for which the user task waited for an extrapartition transient data lock (TDEPLOCK).
zTDELWTT_N	INT	3	(IBM name: N/A) Count of the number of time periods contributing to the total elapsed time.
zROMODDLY	TIME	8	(IBM name: N/A) The elapsed time for which the user task waited for redispach on the CICS RO TCB.
zROMODDLY_N	INT	3	(IBM name: N/A) Count of the number of time periods contributing to the total elapsed time.
zSOMODDLY	TIME	8	(IBM name: N/A) The elapsed time for which the user task waited for redispach on the CICS SO TCB.
zSOMODDLY_N	INT	3	(IBM name: N/A) Count of the number of time periods contributing to the total elapsed time.
zISALWTT	TIME	8	(IBM name: N/A) The elapsed time for which a user task waited for an allocate request for an IPIIC session.
zISALWTT_N	INT	3	(IBM name: N/A) Count of the number of time periods contributing to the total elapsed time.
zTCALWTT	TIME	8	(IBM name: N/A) The elapsed time for which a user task waited for an allocate request for an MRO (Inter-Region Communication), LU6.1, or LU6.2 session.
zTCALWTT_N	INT	3	(IBM name: N/A) Count of the number of time periods contributing to the total elapsed time.
zDSAPTHWT	TIME	8	(IBM name: N/A) The dispatcher allocated pthread wait time. This is the time that the transaction had to wait for a Liberty pthread to be allocated during links to Liberty programs.
zDSAPTHWT_N	INT	3	(IBM name: N/A) Count of the number of time periods contributing to the total wait time.
zASFTCHWT	TIME	8	(IBM name: N/A) The elapsed time that the user task waited for a child task as a result of issuing an EXEC CICS FETCH CHILD or EXEC CICS FETCH ANY command which was not completed.
zASFTCHWT_N	INT	3	(IBM name: N/A) Count of the number of time periods contributing to the total elapsed time.
zASRNATWT	TIME	8	(IBM name: N/A) The elapsed time that the user task was delayed as a result of asynchronous child task limits managed by the asynchronous services domain.
zASRNATWT_N	INT	3	(IBM name: N/A) Count of the number of time periods contributing to the total elapsed time.

Secondary segment: SMF110#02_Transaction_Dump_Resid

Field Name	Type	Len	Description
<i>SMF110#02_Transaction_Dump_Resid.<fieldname></i>			
zLEN	INT	2	(IBM name: N/A) Length of record. Length of this header record + the length of the data that follows.
zID	INT (ENUM)	2	(IBM name: N/A) 'TDR' => Transaction dump (RESID) statistics.
zVERS	INT	1	(IBM name: N/A) Statistics record version.

zCODE	CHAR	4	(IBM name: N/A) Dumpcode.
zSTKN	INT	4	(IBM name: N/A) # of system dumps taken.
zSSUPR	INT	4	(IBM name: N/A) # of system dumps suppressed.
zTTKN	INT	4	(IBM name: N/A) # of transaction dumps taken.

zNYRQG	INT	4	(IBM name: N/A) Storage GET requests.
zNYRQF	INT	4	(IBM name: N/A) Storage FREE requests.
zNYRQS	INT	4	(IBM name: N/A) GETs which failed to get storage.
zNYRQC	INT	4	(IBM name: N/A) Compress (defragmentation) attempts.
zOWNAM	CHAR	8	(IBM name: N/A) Pool name AXMPGLOW.
zOWSIZ	INT	4	(IBM name: N/A) Size of storage pool area.
zOWPTR	HEX	4	(IBM name: N/A) Address of storage pool area.
zOWMX	INT	4	(IBM name: N/A) Total pages in the storage pool.
zOWUS	INT	4	(IBM name: N/A) Number of used pages in the pool.
zOWFR	INT	4	(IBM name: N/A) Number of free pages in the pool.
zOWLO	INT	4	(IBM name: N/A) Lowest free pages (since reset).
zOWRQG	INT	4	(IBM name: N/A) Storage GET requests.

zOWRQF	INT	4	(IBM name: N/A) Storage FREE requests.
zOWRQS	INT	4	(IBM name: N/A) GETs which failed to get storage.
zOWRQC	INT	4	(IBM name: N/A) Compress (defragmentation) attempts.

Record Type 111 - CICS Transaction Gateway

SMF Record 111 (CICS Transaction Gateway) is mapped by structure member "T111".

Primary Segment:

- SMF111_CICS_Transaction_Gateway

Secondary Segment(s): 12 (in alphabetical order)

- SMF111_Connection_Manager_Stats
- SMF111_CICS_Server_EXCI_Instance_Stats
- SMF111_CICS_Server_IPIC_Instance_Stats
- SMF111_CICS_Server_Stats
- SMF111_Data_Section
- SMF111_Gateway_Daemon_Stats
- SMF111_Product_Section
- SMF111_Protocol_Handler_Stats
- SMF111_System_Environment_Stats
- SMF111_Web_Service_Instance_Stats
- SMF111_Web_Service_Stats
- SMF111_Worker_Thread_Stats

Primary segment: SMF111_CICS_Transaction_Gateway

Field Name	Type	Len	Description
<i>SMF111_CICS_Transaction_Gateway.<fieldname></i>			
<i>SMF111_CICS_Transaction_Gateway.Header_Self_Defining_Section.<fieldname></i>			
zFLG	HEX	1	(IBM name: N/A) System indicator: Bit Meaning when set 0-2 Reserved 3-6 Version indicators.
zRTY	INT	1	(IBM name: N/A) Record type 111 (X'6F').
zTME	TSTMP	8	(IBM name: N/A) Date/Time that the record was moved into the SMF buffer.
zSID	CHAR	4	(IBM name: N/A) System identification (from the SID parameter).
zSSID	CHAR	4	(IBM name: N/A) Subsystem identification. CTGZ
zSTY	INT	2	(IBM name: N/A) Record subtype. CICS Transaction Gateway uses only one subtype. This value is always zero.
<i>SMF111_CICS_Transaction_Gateway.Self_defining_Section.<fieldname></i>			
zTRN	INT	2	(IBM name: N/A) Number of triplets.
zPOF	INT	4	(IBM name: N/A) Offset to product section.
zPLN	INT	2	(IBM name: N/A) Length of product section.
zPON	INT	2	(IBM name: N/A) Number of product sections.
zDOF	INT	4	(IBM name: N/A) Offset to DATA section.
zDLN	INT	2	(IBM name: N/A) Length of DATA section.
zDON	INT	2	(IBM name: N/A) Number of DATA sections.

Secondary segment: SMF111_Data_Section

Field Name	Type	Len	Description
SMF111_Data_Section.<fieldname>			
zRest	XVCHAR	0 32760	

Secondary segment: SMF111_Product_Section

Field Name	Type	Len	Description
SMF111_Product_Section.<fieldname>			
zVRM	HEX	2	(IBM name: N/A) Record version (0x0VRM). Each letter represents a numeric digit from values 0 to 9. V = Version, R = Release, M = Maintenance.
zPRN	CHAR	8	(IBM name: N/A) Generic product name.
zSPN	CHAR	8	(IBM name: N/A) Gateway daemon identifier.
zMFL	INT	2	(IBM name: N/A) Record maintenance indicator.
zSTATTYPE	INT (ENUM)	1	(IBM name: CTG_STATTYPE) Statistics type. This event drives the statistic to be recorded.
zCOLTS	TSTMP	8	(IBM name: CTG_COLTS) Collection time & date (0cyy,dddf,00hh,mmss) local time. set to the time that the gateway daemon requests that records for a statistics interval are cut. this value represents the time that the interval is initially requested. time to process the interval data and perform the i/o is not included. the value corresponds to the statint and stateod values in the configuration file. the timestamp that the record is written is filled in by SMF in zTME.
zLOCOFFSET	INT	4	(IBM name: CTG_LOCOFFSET) Offset from GMT to local time in seconds. Number to add to the system local time to derive GMT.
zLSTRESET	INT	4	(IBM name: CTG_LSTRESET) Last reset time or initialization time (in seconds). The period in time in seconds since the last reset. If the first time stats have been issued in the lifetime of the CICS Transaction Gateway this value represents time since initialization. The reset is performed each time that interval statistics are cut.
zINTERVAL	INT	4	(IBM name: CTG_INTERVAL) Interval seconds. Length of time remaining before the next interval.
zINTVCOUNT	INT	4	(IBM name: CTG_INTVCOUNT) Interval number. A sequence number that increments each time an interval is requested. The scope of this is within a specific Gateway daemon instance, for the lifetime of that Gateway daemon. The first interval is defined as 1.
zSTARTTS	TSTMP	8	(IBM name: CTG_STARTTS) Gateway start time & date (0cyy,dddf,00hh,mmss) local time. Set to the date that the gateway daemon started.

Secondary segment: SMF111_Connection_Manager_Stats

Field Name	Type	Len	Description
SMF111_Connection_Manager_Stats.<fieldname>			

zDATALEN	INT	2	(IBM name: CTG_DATALEN) Length of record. Length of this header record + the length of the data that follows.
zRECORDID	INT (ENUM)	2	(IBM name: CTG_RECORDID) Record ID resource group. Each CICS TG statistics resource group has a numeric ID allocated to it.
zRECVER	INT	1	(IBM name: CTG_RECVER) Data section version. A combination of CTGRECID and CTGRECVER controls the version of the structure. Because structures are fixed length, you change CTGRECVER every time a statistic is added to a resource group (in between releases).
zCM_CALLOC	INT	4	(IBM name: CTG_CM_CALLOC) Currently allocated connection managers
zCM_CCURR	INT	4	(IBM name: CTG_CM_CCURR) Current number of connection managers
zCM_CWAITING	INT	4	(IBM name: CTG_CM_CWAITING) Number of connection managers waiting
zCM_LTIMEOUTS	INT	4	(IBM name: CTG_CM_LTIMEOUTS) Number of times connect timeout reached
zCM_SINIT	INT	4	(IBM name: CTG_CM_SINIT) Initial number of connection managers
zCM_SMAX	INT	4	(IBM name: CTG_CM_SMAX) Maximum number of connection managers.
zCM_ITIMEOUTS	INT	4	(IBM name: CTG_CM_ITIMEOUTS) Number of times connect timeout reached
zCM_IALLOCHI	INT	4	(IBM name: CTG_CM_IALLOCHI) Peak number of allocated connection manager threads
zCM_ICREATED	INT	4	(IBM name: CTG_CM_ICREATED) Number of connection manager threads created
zCM_IALLOC	INT	4	(IBM name: CTG_CM_IALLOC) Number of times a connection manager thread was allocated
zCM_LALLOC	INT	4	(IBM name: CTG_CM_LALLOC) Number of allocations for connection manager threads representing the number of connections that have been established from remote clients.

Secondary segment: SMF111_CICS_Server_Stats

Field Name	Type	Len	Description
<i>SMF111_CICS_Server_Stats.<fieldname></i>			
zDATALEN	INT	2	(IBM name: CTG_DATALEN) Length of record. Length of this header record + the length of the data that follows.
zRECORDID	INT (ENUM)	2	(IBM name: CTG_RECORDID) Record ID resource group. Each CICS TG statistics resource group has a numeric ID allocated to it.
zRECVER	INT	1	(IBM name: CTG_RECVER) Data section version. A combination of CTGRECID and CTGRECVER controls the version of the structure. Because structures are fixed length, you change CTGRECVER every time a statistic is added to a resource group (in between releases).
zCS_CALLOC	INT	4	(IBM name: CTG_CS_CALLOC) Number of EXCI pipes allocated
zCS_LALLOCFAIL	INT	4	(IBM name: CTG_CS_LALLOCFAIL) Number of EXCI pipe allocate failures
zCS_LALLREQ	INT	4	(IBM name: CTG_CS_LALLREQ) Number of requests processed

zCS_LCOMMSFAIL	INT	4	(IBM name: CTG_CS_LCOMMSFAIL) Number of CICS communication failures
zCS_LCOUNT	INT	4	(IBM name: CTG_CS_LCOUNT) Number of CICS servers
zCS_LREALLOC	INT	4	(IBM name: CTG_CS_LREALLOC) Number of EXCI pipe reallocations
zCS_SLOGONLIM	INT	4	(IBM name: CTG_CS_SLOGONLIM) EXCI pipe limit
zCS_SNETNAME	CHAR	8	(IBM name: CTG_CS_SNETNAME) EXCI NETNAME
zCS_IALLOCFAIL	INT	4	(IBM name: CTG_CS_IALLOCFAIL) Number of EXCI pipe allocate failures
zCS_IALLREQ	INT	4	(IBM name: CTG_CS_IALLREQ) Number of requests processed
zCS_ICOMMSFAIL	INT	4	(IBM name: CTG_CS_ICOMMSFAIL) Number of CICS communication failures
zCS_ICOUNT	INT	4	(IBM name: CTG_CS_ICOUNT) Number of CICS servers
zCS_IREALLOC	INT	4	(IBM name: CTG_CS_IREALLOC) Number of EXCI pipe reallocations
zCS_IREQDATA	HEX	8	(IBM name: CTG_CS_IREQDATA) Amount of CICS request data
zCS_LREQDATA	HEX	8	(IBM name: CTG_CS_LREQDATA) Amount of CICS request data
zCS_IRESPDATA	HEX	8	(IBM name: CTG_CS_IRESPDATA) Amount of CICS response data
zCS_LRESPDATA	HEX	8	(IBM name: CTG_CS_LRESPDATA) Amount of CICS response data
zCS_SCOUNT	INT	4	(IBM name: CTG_CS_SCOUNT) Number of defined CICS servers
zCS_ICONNFALL	INT	4	(IBM name: CTG_CS_ICONNFALL) Number of connect failures
zCS_LCONNFAIL	INT	4	(IBM name: CTG_CS_LCONNFAIL) Number of connect failures
zCS_ILOSTCON	INT	4	(IBM name: CTG_CS_ILOSTCON) Number of lost connections
zCS_LLOSTCON	INT	4	(IBM name: CTG_CS_LLOSTCON) Number of lost connections
zCS_LIDLETIMEOUT	INT	4	(IBM name: CTG_CS_LIDLETIMEOUT) Number of timed out connections
zCS_CSESSCURR	INT	4	(IBM name: CTG_CS_CSESSCURR) Number of IPIK sessions in use
zCS_CSESSMAX	INT	4	(IBM name: CTG_CS_CSESSMAX) Number of negotiated IPIK sessions
zCS_LSESSFAIL	INT	4	(IBM name: CTG_CS_LSESSFAIL) Number of IPIK session failures
zCS_ISESSFAIL	INT	4	(IBM name: CTG_CS_ISESSFAIL) Number of IPIK session failures
zCS_CWAITING	INT	4	(IBM name: CTG_CS_CWAITING) Number of requests waiting on a response
zCS_IIDLETIMEOUT	INT	4	(IBM name: CTG_CS_IIDLETIMEOUT) Number of timed out connections
zCS_IAVRESP	INT	4	(IBM name: CTG_CS_IAVRESP) Average CICS response time
zCS_LAVRESP	INT	4	(IBM name: CTG_CS_LAVRESP) Average CICS response time

Secondary segment: SMF111_CICS_Server_EXCI_Instance_Stats

Field Name	Type	Len	Description
<i>SMF111_CICS_Server_EXCI_Instance_Stats.<fieldname></i>			
zDATALEN	INT	2	(IBM name: CTG_DATALEN) Length of record. Length of this header record + the length of the data that follows.
zRECORDID	INT (ENUM)	2	(IBM name: CTG_RECORDID) Record ID resource group. Each CICS TG statistics resource group has a numeric ID allocated to it.
zRECVER	INT	1	(IBM name: CTG_RECVER) Data section version. A combination of CTGRECID and CTGRECVER controls the version of the structure. Because structures are fixed length, you change CTGRECVER every time a statistic is added to a resource group (in between releases).
zCSx_SAPPLID	CHAR	8	(IBM name: CTG_CSx_SAPPLID) Name of CICS server
zCSx_CALLOC	INT	4	(IBM name: CTG_CSx_CALLOC) Number of EXCI pipes allocated
zCSx_LALLOCFAIL	INT	4	(IBM name: CTG_CSx_LALLOCFAIL) Number of EXCI pipe allocate failures
zCSx_LALLREQ	INT	4	(IBM name: CTG_CSx_LALLREQ) Number of requests processed
zCSx_IALLOCFAIL	INT	4	(IBM name: CTG_CSx_IALLOCFAIL) Number of EXCI pipe allocate failures
zCSx_IALLREQ	INT	4	(IBM name: CTG_CSx_IALLREQ) Number of requests processed
zCSx_IAVRESP	INT	4	(IBM name: CTG_CSx_IAVRESP) Average CICS response time
zCSx_LAVRESP	INT	4	(IBM name: CTG_CSx_LAVRESP) Average CICS response time
zCSx_LCOMMSFAIL	INT	4	(IBM name: CTG_CSx_LCOMMSFAIL) Number of CICS communication failures
zCSx_IREQDATA	HEX	8	(IBM name: CTG_CSx_IREQDATA) Amount of CICS request data
zCSx_LREQDATA	HEX	8	(IBM name: CTG_CSx_LREQDATA) Amount of CICS request data
zCSx_IRESPDATA	HEX	8	(IBM name: CTG_CSx_IRESPDATA) Amount of CICS response data
zCSx_LRESPDATA	HEX	8	(IBM name: CTG_CSx_LRESPDATA) Amount of CICS response data
zCSx_SPROTOCOL	CHAR	8	(IBM name: CTG_CSx_SPROTOCOL) CICS server protocol
zCSx_ICOMMSFAIL	INT	4	(IBM name: CTG_CSx_ICOMMSFAIL) Number of CICS communication failures
zCSx_CWAITING	INT	4	(IBM name: CTG_CSx_CWAITING) Number of requests waiting on a response

Secondary segment: SMF111_CICS_Server_IPIC_Instance_Stats

zWT_ETIMEOUTS	INT	4	(IBM name: CTG_WT_ETIMEOUTS) Number of times worker timeout reached
zWT_IALLOCHI	INT	4	(IBM name: CTG_WT_IALLOCHI) Peak number of allocated worker threads

Secondary segment: SMF111_Web_Service_Stats

Field Name	Type	Len	Description
<i>SMF111_Web_Service_Stats.<fieldname></i>			
zDATALEN	INT	2	(IBM name: CTG_DATALEN) Length of record. Length of this header record + the length of the data that follows.
zRECORDID	INT (ENUM)	2	(IBM name: CTG_RECORDID) Record ID resource group. Each CICS TG statistics resource group has a numeric ID allocated to it.

zRECVER	INT	1	(IBM name: CTG_RECVER) Data section version. A combination of CTGRECID and CTGRECVER controls the version of the structure. Because structures are fixed length, you change CTGRECVER every time a statistic is added to a resource group (in between releases).
zWS_CREQ	INT	4	(IBM name: CTG_WS_CREQ) The current number of inflight web service transactions. These transactions might or might not be active in CICS. However, they represent one mirror transaction, which might be in a suspended state.
zWS_CWAITING	INT	4	(IBM name: CTG_WS_CWAITING) The current number of web services waiting for a worker thread to become available.
zWS_IALLREQ	INT	4	(IBM name: CTG_WS_IALLREQ) The number of web service requests that have been processed. Successful and failed requests are included.
zWS_IAVRESP	INT	4	(IBM name: CTG_WS_IAVRESP) The average time in milliseconds for web services to respond to requests from remote clients. Successful and failed requests are included. This value includes the CICS response time, as provided by the corresponding CS_LAVRESP statistic.
zWS_IREQHI	INT	4	(IBM name: CTG_WS_IREQHI) The peak number of concurrent web service transactions that have been in flight at the same time.
zWS_IREQDATA	HEX	8	(IBM name: CTG_WS_IREQDATA) The amount of application request data (in bytes) received from clients of all web services.
zWS_IRESPDATA	HEX	8	(IBM name: CTG_WS_IRESPDATA) The amount of application response data (in bytes) returned to clients of all web services.
zWS_LALLREQ	INT	4	(IBM name: CTG_WS_LALLREQ) The number of web service requests that have been processed. Successful and failed requests are included.
zWS_LAVRESP	INT	4	(IBM name: CTG_WS_LAVRESP) The average time in milliseconds for web services to respond to requests from remote clients. Successful and failed requests are included. This value includes the CICS response time, as provided by the corresponding CS_LAVRESP statistic.
zWS_LREQHI	INT	4	(IBM name: CTG_WS_LREQHI) The peak number of concurrent web service transactions that have been in flight at the same time.
zWS_LREQDATA	HEX	8	(IBM name: CTG_WS_LREQDATA) The amount of application request data (in bytes) received from clients of all web services.
zWS_LRESPDATA	HEX	8	(IBM name: CTG_WS_LRESPDATA) The amount of application response data (in bytes) returned to clients of all web services.
zWS_SCOUNT	INT	4	(IBM name: CTG_WS_SCOUNT) The number of web services defined in the configuration file.

Secondary segment: SMF111_Web_Service_Instance_Stats

Field Name	Type	Len	Description
<i>SMF111_Web_Service_Instance_Stats.<fieldname></i>			
zDATALEN	INT	2	(IBM name: CTG_DATALEN) Length of record. Length of this header record + the length of the data that follows.
zRECORDID	INT (ENUM)	2	(IBM name: CTG_RECORDID) Record ID resource group. Each CICS TG statistics resource group has a numeric ID allocated to it.
zRECVER	INT	1	

			(IBM name: CTG_RECVER) Data section version. A combination of CTGRECID and CTGRECVER controls the version of the structure. Because structures are fixed length, you change CTGRECVER every time a statistic is added to a resource group (in between releases).
zWSX_SININAME	CHAR	8	(IBM name: CTG_WSX_SININAME) Web service name
zWSX_CREQ	INT	4	(IBM name: CTG_WSX_CREQ) The current number of inflight web service transactions. These transactions might or might not be active in CICS. However, they represent one mirror transaction, which might be in a suspended state.
zWSX_IALLREQ	INT	4	(IBM name: CTG_WSX_IALLREQ) The number of web service requests that have been processed. Successful and failed requests are included.
zWSX_IAVRESP	INT	4	(IBM name: CTG_WSX_IAVRESP) The average time in milliseconds for web service x to respond to requests from remote clients. Successful and failed requests are included. This value includes the CICS response time, as provided by the corresponding CS_LAVRESP statistic.
zWSX_IREQHI	INT	4	(IBM name: CTG_WSX_IREQHI) The peak number of concurrent web service transactions that have been in flight at the same time.
zWSX_IREQDATA	HEX	8	(IBM name: CTG_WSX_IREQDATA) The amount of application request data (in bytes) received from clients of web service x.
zWSX_IRESPDATA	HEX	8	(IBM name: CTG_WSX_IRESPDATA) The amount of application response data (in bytes) returned to clients of web service x.
zWSX_LALLREQ	INT	4	(IBM name: CTG_WSX_LALLREQ) The number of web service requests that have been processed. Successful and failed requests are included.
zWSX_LAVRESP	INT	4	(IBM name: CTG_WSX_LAVRESP) The average time in milliseconds for web service x to respond to requests from remote clients. Successful and failed requests are included. This value includes the CICS response time, as provided by the corresponding CS_LAVRESP statistic.
zWSX_LREQHI	INT	4	(IBM name: CTG_WSX_LREQHI) The peak number of concurrent web service transactions that have been in flight at the same time.
zWSX_LREQDATA	HEX	8	(IBM name: CTG_WSX_LREQDATA) The amount of application request data (in bytes) received from clients of web service x.
zWSX_LRESPDATA	HEX	8	(IBM name: CTG_WSX_LRESPDATA) The amount of application response data (in bytes) returned to clients of web service x.
zWSX_SEIBTRNID	CHAR	4	(IBM name: CTG_WSX_SEIBTRNID) The CICS EIBTRNID transaction identifier for requests to this web service.
zWSX_SMIRROR	CHAR	8	(IBM name: CTG_WSX_SMIRROR) The name of the CICS mirror transaction under which requests to this web service run.
zWSX_SPROGRAM	CHAR	8	(IBM name: CTG_WSX_SPROGRAM) The name of the CICS program that implements this web service.
zWSX_SSERVER	CHAR	8	(IBM name: CTG_WSX_SSERVER) The CICS server that requests to this web service are sent.
zWSX_SURI	CHAR	256	(IBM name: CTG_WSX_SURI) The URI that requests to this web service are sent.

Record Type 113 - Hardware Statistics

SMF Record 113 (Hardware Statistics) is mapped by structure member "T113".

Primary Segment:

- [SMF113_Hardware_Stats](#)

Secondary Segment(s): 9 (in alphabetical order)

- [SMF113_Identification](#)
- [SMF113_Subsystem](#)
- [SMF113_SubType_1](#)
- [SMF113_SubType_1_CounterLCR](#)
- [SMF113_SubType_1_CounterSet](#)
- [SMF113_SubType_1_CounterSCR](#)
- [SMF113_SubType_2](#)
- [SMF113_SubType_2_Counters](#)
- [SMF113_SubType_2_CounterSet](#)

Primary segment: [SMF113_Hardware_Stats](#)

Field Name	Type	Len	Description
<i>SMF113_Hardware_Stats.<fieldname></i>			
<i>SMF113_Hardware_Stats.Header_Self_defining_Section.<fieldname></i>			
zFLG	HEX	1	(IBM name: SM113FLG) Header flag byte: Bit Meaning when set 0 SUBSYSTEM identification follows system identification 1 SubTypeS used 2 RESERVED 3-6 Version indicators 7 RESERVED
zRTY	INT	1	(IBM name: SMF113RTY) Record type 113 (X'71')
zTME	TSTMP	8	(IBM name: SMF113TME) Date/Time when the record was moved into the SMF buffer.
zSID	CHAR	4	(IBM name: SMF113SID) System identification (from the SID parameter).
zWID	CHAR	4	(IBM name: SMF113WID) Subsystem identifier.
zSTY	INT	2	(IBM name: SMF113STP) Indicates the record SubType, based on the value of SMF113STP: 1 HARDWARE event counter deltas 2 HARDWARE event counters
zSDL	INT	2	(IBM name: SMF113SDL) Length of self-defining section.
zSOF	INT	4	(IBM name: SMF113SOF) Offset to subsystem section from beginning of record type 113
zSLN	INT	2	(IBM name: SMF113SLN) Length of subsystem section
zSON	INT	2	(IBM name: SMF113SON) Number of subsystem sections
zIOF	INT	4	(IBM name: SMF113IOF) Offset to identification section from beginning of record type 113
zILN	INT	2	(IBM name: SMF113ILN) Length of identification section
zION	INT	2	(IBM name: SMF113ION) Number of identification sections
zDOF	INT	4	(IBM name: SMF113DOF) Offset to data section from beginning of record type 113
zDLN	INT	2	(IBM name: SMF113DLN) Length of data section
zDON	INT	2	(IBM name: SMF113DON) Number of data sections

Secondary segment: SMF113_Subsystem

Field Name	Type	Len	Description
<i>SMF113_Subsystem.<fieldname></i>			
zRVN	CHAR	2	(IBM name: SMF113RVN) Record version number
zPNM	CHAR	8	(IBM name: SMF113PNM) Product name
zOSL	CHAR	8	(IBM name: SMF113OSL) MVS product level

Secondary segment: SMF113_Identification

Field Name	Type	Len	Description
<i>SMF113_Identification.<fieldname></i>			
zJBN	CHAR	8	(IBM name: SMF113JBN) Job name
zRST	TSTMP	8	(IBM name: SMF113RST) Reader start time
zSTN	CHAR	8	(IBM name: SMF113STN) Step name
zIntervalStart	TSTMP	8	(IBM name: SMF113IntervalStart) Interval start time, STCK format
zIntervalEnd	TSTMP	8	(IBM name: SMF113IntervalEnd) Interval end time, STCK format

Secondary segment: SMF113_SubType_1

Field Name	Type	Len	Description
<i>SMF113_SubType_1.<fieldname></i>			
zCTS	TSTMP	8	(IBM name: SMF113_1_CTS) Time when the hardware data collection run started in STCK format
zCTM	TSTMP	8	(IBM name: SMF113_1_CTM) Time when this SMF record was written in STCK format.
zCpuld	INT	2	(IBM name: SMF113_1_Cpuld) Processor ID for which the hardware counters are recorded. Note that zero is a valid processor number.
zCpuProcClass	INT (ENUM)	1	(IBM name: SMF113_1_CpuProcClass) The processor type for which the hardware event counters are recorded.
zCpuSpeed	INT	4	(IBM name: SMF113_1_CpuSpeed) Processor speed for which the event counters are recorded. Speed is in cycles/microsecond.
zMachType	CHAR	4	(IBM name: SMF113_1_MachType) The machine type.
zMachModel	CHAR	16	(IBM name: SMF113_1_MachModel) The machine model.
zCtrVersion0	INT	2	(IBM name: SMF113_1_CtrVersion0) Zero counter version number. This number is increased when there is a

			change to the meaning of a counter in the z/OS counter set.
zCtrVersion1	INT	2	(IBM name: SMF113_1_CtrVersion1) First counter version number. This number is increased when there is a change to the meaning of a counter or the number of installed counters in the Basic or Problem-state counter sets.
zCtrVersion2	INT	2	(IBM name: SMF113_1_CtrVersion2) Second counter version number. This number is increased when there is a change to the meaning of a counter or the number of installed counters in the Crypto-activity or Extended or MT-diagnostic counter sets.
zFlags2	INT	2	(IBM name: SMF113_1_Flags2) Record flags:
zCSOF	INT	4	(IBM name: SMF113_1_CSOF) Offset to counter set section, from beginning of r SMF record type 113.
zCSLN	INT	2	(IBM name: SMF113_1_CSLN) Length of counter set section.
zCSON	INT	2	(IBM name: SMF113_1_CSON) Number of counter set sections.
zSeqCode	CHAR	16	(IBM name: SMF113_1_SeqCode) The machine sequence code.
zCoreId	INT	2	(IBM name: SMF113_1_CoreId) Core ID for which the hardware event counters are recorded. Note that zero is a valid core ID number.

Secondary segment: SMF113_SubType_1_CounterSet

Field Name	Type	Len	Description
<i>SMF113_SubType_1_CounterSet.<fieldname></i>			
zCSType	INT (ENUM)	2	(IBM name: SMF113_1_CSType) Counter set type for counters recorded

SMF113_SubType_1_CounterSet.zFlags.<fieldname>

zLCDS	BIT	1	This counter set's counter data section is mapped by SMF113_1_LCDS. Otherwise, it is mapped by SMF113_1_SCDS.
-------	-----	---	---

SMF113_SubType_1_CounterSet.<fieldname>

zCDOF	INT	4	(IBM name: SMF113_1_CDOF) Offset to counter data section for this counter set, from the beginning of the record. This can be to a SMF113_1_SCDS section or a SMF113_1_LCDS section, depending on bit 0 of SMF113_1_Flags.
zCDLN	INT	2	(IBM name: SMF113_1_CDLN) Length of counter data section.
zCDON	INT	2	(IBM name: SMF113_1_CDON) Number of counter data sections.

Secondary segment: SMF113_SubType_1_CounterSCR

Field Name	Type	Len	Description
<i>SMF113_SubType_1_CounterSCR.<fieldname></i>			
zSCR	INT	4	(IBM name: SMF113_1_SCR) Event counter value delta. This is the number of times a particular counter event has occurred since either the start of the HIS collection run, or the previous SMF 113 TYPE 1 RECORD was written.

Secondary segment: SMF113_SubType_1_CounterLCR

Field Name	Type	Len	Description
<i>SMF113_SubType_1_CounterLCR.<fieldname></i>			
zLCR	INT	8	(IBM name: SMF113_1_LCR) Event counter value delta. This is the number of times a particular counter event has occurred since either the start of the HIS collection run, or the previous SMF 113 TYPE 1 RECORD was written.

Secondary segment: SMF113_SubType_2

Field Name	Type	Len	Description
<i>SMF113_SubType_2.<fieldname></i>			
zCTS	TSTMP	8	(IBM name: SMF113_2_CTS) Time when the hardware data collection run started in STCK format
zCTM	TSTMP	8	(IBM name: SMF113_2_CTM) Time when this SMF record was written in STCK format.
zCPU#	INT	1	(IBM name: SMF113_2_CPU#) This field is deprecated, use SMF113_2_Cpuld instead. Processor number for which the hardware counters in SMF113_2_CR are recorded. Note that zero is a valid processor number.
zCpuProcClass	INT (ENUM)	1	(IBM name: SMF113_2_CpuProcClass) The processor type for which the hardware event counters are recorded.

<i>SMF113_SubType_2.zCF.<fieldname></i>			
zFirst	BIT	1	First SMF record for the hardware data collection run. The counter values are the initial values at the beginning of the run.
zInter	BIT	1	Intermediate SMF record, written by the system at defined intervals during the hardware data collection run. The counter values are intermediate values. The interval is based on the SMFINTVAL parameter specified at the start of the hardware data collection run.
zFinal	BIT	1	Final SMF record written for this hardware data collection run. The counter values are the final values.
zNonStd	BIT	1	Indicates that the SMF record was written on non-standard hardware.
zLost	BIT	1	When on, the hardware indicated the hardware has lost counter data during the current interval.

<i>SMF113_SubType_2.<fieldname></i>			
zCTRVN1	INT	2	(IBM name: SMF113_2_CTRVN1) First counter version number. This number is increased when there is a change to the meaning of a counter or a change to the number of the installed counters in the basic or problem-state counter sets.
zCTRVN2	INT	2	(IBM name: SMF113_2_CTRVN2) Second counter version number. This number is increased when there is a change to the meaning of a counter or a change to the number of the installed counters in the crypto-activity or extended counter sets. Self-defining section
zCSOF	INT	4	(IBM name: SMF113_2_CSOF) Offset to counter set section, from beginning of SMF record type 113
zCSLN	INT	2	(IBM name: SMF113_2_CSLN) Length of counter set sections
zCSON	INT	2	(IBM name: SMF113_2_CSON) Number of counter set sections
zCDOF	INT	4	

			(IBM name: SMF113_2_CDOF) Offset to counters section, from beginning of SMF record type 113
zCDLN	INT	2	(IBM name: SMF113_2_CDLN) Length of counters sections
zCDON	INT	2	(IBM name: SMF113_2_CDON) Number of counter sections CPU information section
zCPSP	INT	4	(IBM name: SMF113_2_CPSP) Processor speed for which the hardware event counters are recorded. Speed is in cycles/microsecond.
zMachType	CHAR	4	(IBM name: SMF113_2_MachType) The machine type.
zMachModel	CHAR	16	(IBM name: SMF113_2_MachModel) The machine model.
zCpuld	INT	2	(IBM name: SMF113_2_Cpuld) Processor ID for which the hardware event counters are recorded. Note that zero is a valid processor number.
zSeqCode	CHAR	16	(IBM name: SMF113_2_SeqCode) The machine sequence code.

Secondary segment: SMF113_SubType_2_CounterSet

Field Name	Type	Len	Description
<i>SMF113_SubType_2_CounterSet.<fieldname></i>			
zCST	INT (ENUM)	1	(IBM name: SMF113_2_CST) Indicates the counter set type for counters recorded in field SMF113_2_CR
zCSN	INT	2	(IBM name: SMF113_2_CSN) Number of counter sections.
zCSP	HEX	8	(IBM name: SMF113_2_CSP) Bit pattern identifying which hardware counters are being recorded. Each bit position maps to a hardware counter. For example, lets say you have a bit pattern of 'X'FC800000 00000000'. This pattern indicates that event counters 0-5 and 8 are recorded contiguously in SMF113_2_CR fields.

Secondary segment: SMF113_SubType_2_Counters

Field Name	Type	Len	Description
<i>SMF113_SubType_2_Counters.<fieldname></i>			
zCR	INT	8	(IBM name: SMF113_2_CR) Hardware event counter value. This is the absolute number of times a particular hardware counter event has occurred.

Record Type 115 - MQSeries Statistics

SMF Record 115 (MQSeries Statistics) has several subtypes, each mapped by a structure member name of the format "T115STnn" or "T115Snnn".

Record Type 115 Subtype 1 - System Information

Primary Segment:

- SMF115#01_MQSeries_Statistics

Secondary Segment(s): 4 (in alphabetical order)

- SMF115#01_Log_Manager_Statistics
- SMF115#01_Product_Correlation
- SMF115#01_Product_Standard
- SMF115#01_Storage_Manager_Statistics

Primary segment: SMF115#01_MQSeries_Statistics

Field Name	Type	Len	Description
<i>SMF115#01_MQSeries_Statistics.<fieldname></i>			
SMF115#01_MQSeries_Statistics.Header.<fieldname>			
zFLG	HEX	1	(IBM name: SMF115FLG) System indicator: Bit Meaning when set 0-2 Reserved. 3-6 Version indicators 7 Reserved.
zRTY	INT	1	(IBM name: SMF115RTY) Record type 115
zTME	TSTMP	8	(IBM name: SMF115TME) Date/Time that the record was moved into the SMF buffer.
zSID	CHAR	4	(IBM name: SMF115SID) z/OS Subsystem identification (from the SID parameter).
zSSID	CHAR	4	(IBM name: SMF115SID) IBM MQ subsystem id.
zSTY	INT	2	(IBM name: SMF115STF) Record subtype.
zREL	CHAR	3	(IBM name: SMF115REL) IBM MQ version.

SMF115#01_MQSeries_Statistics.Self_defining_Section.<fieldname>			
zPSO	INT	4	(IBM name: SMF115PSO) Offset to the product section from the beginning of the record (including RDW).
zPSL	INT	2	(IBM name: SMF115PSL) Length of the product section.
zPSN	INT	2	(IBM name: SMF115PSN) Number of product sections.
zR9O	INT	4	(IBM name: SMF115R9O) Offset to the Storage Manager data section from beginning of the record (including RDW).
zR9L	INT	2	(IBM name: SMF115R9L) Length of the Storage Manager data section.
zR9N	INT	2	(IBM name: SMF115R9N) Number of Storage Manager data sections.
zRBO	INT	4	

			(IBM name: SMF115RBO) Offset to the Log Manager data section from beginning of the record (including RDW).
zRBL	INT	2	(IBM name: SMF115RBL) Length of the Log Manager data section.
zRBN	INT	2	(IBM name: SMF115RBN) Number of Log Manager data sections.

Secondary segment: **SMF115#01_Product_Standard**

Field Name	Type	Len	Description
<i>SMF115#01_Product_Standard.<fieldname></i>			
zHLEN	INT	2	(IBM name: SMF115HLEN) Length of the standard header.
zHTYP	INT (ENUM)	1	(IBM name: SMF115HTYP) Header Type.
zHRMID	INT	1	(IBM name: SMF115HRMID) Resource manager id.
zHIID	INT	2	(IBM name: SMF115HIID) IFC ID.
zHNSDA	INT	1	(IBM name: SMF115HNSDA) Number of self-defining areas.
zHREL	INT	1	(IBM name: SMF115HREL) Release indicator.
zHACE	HEX	4	(IBM name: SMF115HACE) ACE address - dispatch unit address.
zSNM	CHAR	4	(IBM name: SMF115SNM) Subsystem name.
zSTCK	TSTMP	8	(IBM name: SMF115STCK) STCK Store clock value of header.
zISEQ	INT	4	(IBM name: SMF115ISEQ) Sequence number for IFCID.
zWSEQ	INT	4	(IBM name: SMF115WSEQ) Sequence number for destination.

<i>SMF115#01_Product_Standard.zHFLG.<fieldname></i>			
zSMFC	BIT	1	More SMF records follow for this interval.

<i>SMF115#01_Product_Standard.<fieldname></i>			
zSTIME	TSTMP	8	(IBM name: SMF115STIME) STCK MQ view of interval start.
zSDURN	FIXED	8 (20,6)	(IBM name: SMF115SDURN) Interval duration in seconds.

Secondary segment: **SMF115#01_Product_Correlation**

Field Name	Type	Len	Description
<i>SMF115#01_Product_Correlation.<fieldname></i>			
zHLEN	INT	2	(IBM name: SMF115HLEN) Length of the standard header.
zHTYP		1	

	INT (ENUM)		(IBM name: SMF115HTYP) Header Type.
zCAuthId	CHAR	8	(IBM name: N/A) Authorization id.
zCCV	CHAR	12	(IBM name: N/A) Correlation id value.
zCCN	CHAR	8	(IBM name: N/A) Connection name. Not valid on end of memory and reflects the NVS home ASID connection name.
zCOPID	CHAR	8	(IBM name: N/A) Original operator id.
zCATYP	HEX	4	(IBM name: N/A) Connecting System Type Code.
zCTOKN	CHAR	22	(IBM name: N/A) Accounting token.
zCNID	CHAR	16	(IBM name: N/A) Network identifier.

Secondary segment: **SMF115#01_Storage_Manager_Statistics**

Field Name	Type	Len	Description
<i>SMF115#01_Storage_Manager_Statistics.<fieldname></i>			
zSMID	HEX	2	(IBM name: SMF115SMID) Control block id.
zSMLN	INT	2	(IBM name: SMF115SMLN) Length of control block.
zSMDESC	CHAR	4	(IBM name: SMF115SMDESC) Eye-catcher.
zSMGPLF	INT	4	(IBM name: SMF115SMGPLF) Fixed pools created.
zSMFPLF	INT	4	(IBM name: SMF115SMFPLF) Fixed pools deallocated.
zSMFREF	INT	4	(IBM name: SMF115SMFREF) Fixed pool segments freed.
zSMEXPF	INT	4	(IBM name: SMF115SMEXPF) Fixed pool segments expanded.
zSMCONF	INT	4	(IBM name: SMF115SMCONF) Fixed pool segments contracted.
zSMGPLV	INT	4	(IBM name: SMF115SMGPLV) Variable pools created.
zSMFPLV	INT	4	(IBM name: SMF115SMFPLV) Variable pools deallocated.
zSMFREV	INT	4	(IBM name: SMF115SMFREV) Variable pool segments freed.
zSMEXPV	INT	4	(IBM name: SMF115SMEXPV) Variable pool segments expanded.
zSMCONV	INT	4	(IBM name: SMF115SMCONV) Variable pool segments contracted.
zSMGETM	INT	4	(IBM name: SMF115SMGETM) GETMAIN issued to allocate storage other than fixed and variable blocks.
zSMFREM	INT	4	(IBM name: SMF115SMFREM) FREEMAIN issued to deallocate storage other than fixed and variable blocks.
zSMRCNZ	INT	4	

			(IBM name: SMF115SMRCNZ) Nonzero return codes issued by GETMAIN/FREEMAIN.
zSMCONT	INT	4	(IBM name: SMF115SMCONT) Contractions issued for short on storage.
zSMCRIT	INT	4	(IBM name: SMF115SMCRIT) Short on storage bit set.
zSMABND	INT	4	(IBM name: SMF115SMABND) Abend issued because of short on storage.
zSMCN64	INT	4	(IBM name: SMF115SMCN64) Contractions for short on 64-bit storage.
zSMCR64	INT	4	(IBM name: SMF115SMCR64) Short on 64-bit storage bit set.

Secondary segment: **SMF115#01_Log_Manager_Statistics**

Field Name	Type	Len	Description
<i>SMF115#01_Log_Manager_Statistics.<fieldname></i>			
zLMID	HEX	2	(IBM name: SMF115LMID) Control block id.
zLMLEN	INT	2	(IBM name: SMF115LMLEN) Length of block.
zLMDESC	CHAR	4	(IBM name: SMF115LMDESC) Eye-catcher.
zLMWRW	INT	4	(IBM name: SMF115LMWRW) Write request count, WAIT.
zLMWRNW	INT	4	(IBM name: SMF115LMWRNW) Write request count, NOWAIT.
zLMWRF	INT	4	(IBM name: SMF115LMWRF) Write request count, FORCE.
zLMWTB	INT	4	(IBM name: SMF115LMWTB) Wait count due to unavailable active buffer.
zLMRBUF	INT	4	(IBM name: SMF115LMRBUF) Log reads satisfied from output buffers.
zLMRACT	INT	4	(IBM name: SMF115LMRACT) Reads satisfied from active log data set.
zLMRARH	INT	4	(IBM name: SMF115LMRARH) Reads satisfied from archive log data set.
zLMTVC	INT	4	(IBM name: SMF115LMTVC) Number of read accesses delayed due to tape volume contention.
zLMBSDS	INT	4	(IBM name: SMF115LMBSDS) Total BSDS access requests.
zLMBFFL	INT	4	(IBM name: SMF115LMBFFL) Active log output control intervals created.
zLMBFWR	INT	4	(IBM name: SMF115LMBFWR) Count of calls to write active log buffers.
zLMALR	INT	4	(IBM name: SMF115LMALR) Archive log read allocations.
zLMALW	INT	4	(IBM name: SMF115LMALW) Archive log write allocations.
zLMCIOF	INT	4	(IBM name: SMF115LMCIOF) Count of control intervals.
zLMLLCP	INT	4	(IBM name: SMF115LMLLCP) Count of checkpoints issued.

zLMWUR	INT	4	(IBM name: SMF115LMWUR) Number of read accesses delayed due to unavailable resource.
zLMLAMA	INT	4	(IBM name: SMF115LMLAMA) Number of look-ahead tape volume mounts attempted. This field along with field QJSTLAMS, will show how many times look-ahead mounting failed, thus negating potential significant performance gains.
zLMLAMS	INT	4	(IBM name: SMF115LMLAMS) Number of look-ahead tape volume mounts performed.
zLMLSUS	INT	4	(IBM name: SMF115LMLSUS) Number of times a log request resulted in a suspend for a log write to occur.
zLMLOGW	INT	4	(IBM name: SMF115LMLOGW) Total number of log write i/o requests.
zLMCIWR	INT	4	(IBM name: SMF115LMCIWR) Total number of log CI-s written.
zLMSERW	INT	4	(IBM name: SMF115LMSERW) Number of serial log write requests for CI re-writes when dual logging.
zLMTHRW	INT	4	(IBM name: SMF115LMTHRW) Number of times a log write request was scheduled because the log write threshold was reached.
zLMBPAG	INT	4	(IBM name: SMF115LMBPAG) Number of times a log-write buffer had to be paged-in before it could be used.

SMF115#01_Log_Manager_Statistics.zLMCmp.<fieldname>

zLMCmpReq	INT	4	(IBM name: SMF115LMCmpReq) Compression requests.
zLMCmpFail	INT	4	(IBM name: SMF115LMCmpFail) Compression failures.
zLMCmpUncmp	INT	8	(IBM name: SMF115LMCmpUncmp) Uncompressed bytes.
zLMCmpComp	INT	8	(IBM name: SMF115LMCmpComp) Compressed bytes.
zLMDecReq	INT	4	(IBM name: SMF115LMDecReq) Decompression requests.
zLMDecFail	INT	4	(IBM name: SMF115LMDecFail) Decompression failures.
zLMDecUncmp	INT	8	(IBM name: SMF115LMDecUncmp) Uncompressed bytes.
zLMDecComp	INT	8	(IBM name: SMF115LMDecComp) Compressed bytes.

SMF115#01_Log_Manager_Statistics.zLMCopy1CI1.<fieldname>

zLMCopy1CI1Count	INT	4	(IBM name: SMF115LMCopy1CI1Count) Number of Writes for this log and type.
zLMCopy1CI1CI	INT	4	(IBM name: SMF115LMCopy1CI1CI) Number of CIs for this log and type.
zLMCopy1CI1TotIO	TIME	8	(IBM name: SMF115LMCopy1CI1TotIO) Total IO time in STCK units.
zLMCopy1CI1TotSus	TIME	8	(IBM name: SMF115LMCopy1CI1TotSus) Total suspend time in STCK units.
zLMCopy1CI1MaxIO	TIME	8	(IBM name: SMF115LMCopy1CI1MaxIO) Max IO time in STCK units.
zLMCopy1CI1MaxIOT	TSTMP	8	(IBM name: SMF115LMCopy1CI1MaxIOT) STCK time of max IO time incident.
zLMCopy1CI1MaxIOL	CHAR	8	(IBM name: SMF115LMCopy1CI1MaxIOL) Log name indicator of incident.

zLMCopy1C11MaxSus	TIME	8	(IBM name: SMF115LMCopy1C11MaxSus) Max suspend time in STCK units.
zLMCopy1C11MaxSusT	TSTMP	8	(IBM name: SMF115LMCopy1C11MaxSusT) STCK time of max suspend time incident.
zLMCopy1C11MqxSusL	CHAR	8	(IBM name: SMF115LMCopy1C11MqxSusL) Log name indicator of incident.

SMF115#01_Log_Manager_Statistics.zLMCopy1Cln.<fieldname>

zLMCopy1ClnCount	INT	4	(IBM name: SMF115LMCopy1ClnCount) Number of Writes for this log and type.
zLMCopy1ClnCI	INT	4	(IBM name: SMF115LMCopy1ClnCI) Number of CIs for this log and type.
zLMCopy1ClnTotIO	TIME	8	(IBM name: SMF115LMCopy1ClnTotIO) Total IO time in STCK units.
zLMCopy1ClnTotSus	TIME	8	(IBM name: SMF115LMCopy1ClnTotSus) Total suspend time in STCK units.
zLMCopy1ClnMaxIO	TIME	8	(IBM name: SMF115LMCopy1ClnMaxIO) Max IO time in STCK units.
zLMCopy1ClnMaxIOT	TSTMP	8	(IBM name: SMF115LMCopy1ClnMaxIOT) STCK time of max IO time incident.
zLMCopy1ClnMaxIOL	CHAR	8	(IBM name: SMF115LMCopy1ClnMaxIOL) Log name indicator of incident.
zLMCopy1ClnMaxSus	TIME	8	(IBM name: SMF115LMCopy1ClnMaxSus) Max suspend time in STCK units.
zLMCopy1ClnMaxSusT	TSTMP	8	(IBM name: SMF115LMCopy1ClnMaxSusT) STCK time of max suspend time incident.
zLMCopy1ClnMqxSusL	CHAR	8	(IBM name: SMF115LMCopy1ClnMqxSusL) Log name indicator of incident.

SMF115#01_Log_Manager_Statistics.zLMCopy2C11.<fieldname>

zLMCopy2C11Count	INT	4	(IBM name: SMF115LMCopy2C11Count) Number of Writes for this log and type.
zLMCopy2C11CI	INT	4	(IBM name: SMF115LMCopy2C11CI) Number of CIs for this log and type.
zLMCopy2C11TotIO	TIME	8	(IBM name: SMF115LMCopy2C11TotIO) Total IO time in STCK units.
zLMCopy2C11TotSus	TIME	8	(IBM name: SMF115LMCopy2C11TotSus) Total suspend time in STCK units.
zLMCopy2C11MaxIO	TIME	8	(IBM name: SMF115LMCopy2C11MaxIO) Max IO time in STCK units.
zLMCopy2C11MaxIOT	TSTMP	8	(IBM name: SMF115LMCopy2C11MaxIOT) STCK time of max IO time incident.
zLMCopy2C11MaxIOL	CHAR	8	(IBM name: SMF115LMCopy2C11MaxIOL) Log name indicator of incident.
zLMCopy2C11MaxSus	TIME	8	(IBM name: SMF115LMCopy2C11MaxSus) Max suspend time in STCK units.
zLMCopy2C11MaxSusT	TSTMP	8	(IBM name: SMF115LMCopy2C11MaxSusT) STCK time of max suspend time incident.
zLMCopy2C11MqxSusL	CHAR	8	(IBM name: SMF115LMCopy2C11MqxSusL) Log name indicator of incident.

SMF115#01_Log_Manager_Statistics.zLMCopy2Cln.<fieldname>

zLMCopy2ClnCount	INT	4	(IBM name: SMF115LMCopy2ClnCount) Number of Writes for this log and type.
zLMCopy2ClnCI	INT	4	(IBM name: SMF115LMCopy2ClnCI) Number of CIs for this log and type.

zLMCopy2CInTotIO	TIME	8	(IBM name: SMF115LMCopy2CInTotIO) Total IO time in STCK units.
zLMCopy2CInTotSus	TIME	8	(IBM name: SMF115LMCopy2CInTotSus) Total suspend time in STCK units.
zLMCopy2CInMaxIO	TIME	8	(IBM name: SMF115LMCopy2CInMaxIO) Max IO time in STCK units.
zLMCopy2CInMaxIOT	TSTMP	8	(IBM name: SMF115LMCopy2CInMaxIOT) STCK time of max IO time incident.
zLMCopy2CInMaxIOL	CHAR	8	(IBM name: SMF115LMCopy2CInMaxIOL) Log name indicator of incident.
zLMCopy2CInMaxSus	TIME	8	(IBM name: SMF115LMCopy2CInMaxSus) Max suspend time in STCK units.
zLMCopy2CInMaxSusT	TSTMP	8	(IBM name: SMF115LMCopy2CInMaxSusT) STCK time of max suspend time incident.
zLMCopy2CInMqxSusL	CHAR	8	(IBM name: SMF115LMCopy2CInMqxSusL) Log name indicator of incident.

SMF115#01_Log_Manager_Statistics.<fieldname>

zLMSLPTU	FIXED	8 (20,6)	(IBM name: SMF115LMSLPTU) Physical writer sleep time in seconds.
zLMIOSQU	HEX	16	(IBM name: SMF115LMIOSQU) Sum squares IO time.

Record Type 115 Subtype 2 - Message, Buffer, Paging Activity

Primary segment: [SMF115#02_MQSeries_Statistics](#)

Field Name	Type	Len	Description
<i>SMF115#02_MQSeries_Statistics.<fieldname></i>			
<i>SMF115#02_MQSeries_Statistics.Header.<fieldname></i>			
zFLG	HEX	1	(IBM name: SMF115FLG) System indicator: Bit Meaning when set 0-2 Reserved. 3-6 Version indicators 7 Reserved.
zRTY	INT	1	(IBM name: SMF115RTY) Record type 115
zTME	TSTMP	8	(IBM name: SMF115TME) Date/Time that the record was moved into the SMF buffer.
zSID	CHAR	4	(IBM name: SMF115SID) z/OS Subsystem identification (from the SID parameter).
zSSID	CHAR	4	(IBM name: SMF115SID) IBM MQ subsystem id.
zSTY	INT	2	(IBM name: SMF115STF) Record subtype.
zREL	CHAR	3	(IBM name: SMF115REL) IBM MQ version.

<i>SMF115#02_MQSeries_Statistics.Self_defining_Section.<fieldname></i>			
zPSO	INT	4	(IBM name: SMF115PSO) Offset to the product section from the beginning of the record (including RDW).
zPSL	INT	2	(IBM name: SMF115PSL) Length of the product section.
zPSN	INT	2	(IBM name: SMF115PSN) Number of product sections.
zR1O	INT	4	(IBM name: SMF115R1O) Offset to the Message Manager data section from beginning of the record (including RDW).
zR1L	INT	2	(IBM name: SMF115R1L) Length of the Message Manager data section.
zR1N	INT	2	(IBM name: SMF115R1N) Number of Message Manager data sections.
zR2O	INT	4	(IBM name: SMF115R2O) Offset to the Data Manager data section from beginning of the record (including RDW).

zR2L	INT	2	(IBM name: SMF115R2L) Length of the Data Manager data section.
zR2N	INT	2	(IBM name: SMF115R2N) Number of Data Manager data sections.
zR3O	INT	4	(IBM name: SMF115R3O) Offset to the Buffer Manager data section from beginning of the record (including RDW).
zR3L	INT	2	(IBM name: SMF115R3L) Length of the Buffer Manager data section.
zR3N	INT	2	(IBM name: SMF115R3N) Number of Buffer Manager data sections.
zR4O	INT	4	(IBM name: SMF115R4O) Offset to the Lock Manager data section from beginning of the record (including RDW).
zR4L	INT	2	(IBM name: SMF115R4L) Length of the Lock Manager data section.
zR4N	INT	2	(IBM name: SMF115R4N) Number of Lock Manager data sections.
zR5O	INT	4	(IBM name: SMF115R5O) Offset to the DB2 Manager data section from beginning of the record (including RDW).
zR5L	INT	2	(IBM name: SMF115R5L) Length of the DB2 Manager data section.
zR5N	INT	2	(IBM name: SMF115R5N) Number of DB2 Manager data sections.
zR6O	INT	4	(IBM name: SMF115R6O) Offset to the Coupling Facility data section from beginning of the record (including RDW).
zR6L	INT	2	(IBM name: SMF115R6L) Length of the Coupling Facility data section.
zR6N	INT	2	(IBM name: SMF115R6N) Number of Coupling Facility data sections.
zR7O	INT	4	(IBM name: SMF115R7O) Offset to the Topic Manager data section from beginning of the record (including RDW).
zR7L	INT	2	(IBM name: SMF115R7L) Length of the Topic Manager data section.
zR7N	INT	2	(IBM name: SMF115R7N) Number of Topic Manager data sections.
zR8O	INT	4	(IBM name: SMF115R8O) Offset to the SMDS data section from beginning of the record (including RDW).
zR8L	INT	2	(IBM name: SMF115R8L) Length of the SMDS data section.
zR8N	INT	2	(IBM name: SMF115R8N) Number of SMDS data sections.

Secondary segment: SMF115#02_Product_Standard

Field Name	Type	Len	Description
SMF115#02_Product_Standard.<fieldname>			
zHLEN	INT	2	(IBM name: SMF115HLEN) Length of the standard header.
zHTYP	INT (ENUM)	1	(IBM name: SMF115HTYP) Header Type.

zHRMID	INT	1	(IBM name: SMF115HRMID) Resource manager id.
zHIID	INT	2	(IBM name: SMF115HIID) IFC ID.
zHNSDA	INT	1	(IBM name: SMF115HNSDA) Number of self-defining areas.
zHREL	INT	1	(IBM name: SMF115HREL) Release indicator.
zHACE	HEX	4	(IBM name: SMF115HACE) ACE address - dispatch unit address.
zSNM	CHAR	4	(IBM name: SMF115SNM) Subsystem name.
zSTCK	TSTMP	8	(IBM name: SMF115STCK) STCK Store clock value of header.
zISEQ	INT	4	(IBM name: SMF115ISEQ) Sequence number for IFCID.
zWSEQ	INT	4	(IBM name: SMF115WSEQ) Sequence number for destination.

SMF115#02_Product_Standard.zHFLG.<fieldname>

zSMFC	BIT	1	More SMF records follow for this interval.
-------	-----	---	--

SMF115#02_Product_Standard.<fieldname>

zSTIME	TSTMP	8	(IBM name: SMF115STIME) STCK MQ view of interval start.
zSDURN	FIXED	8 (20,6)	(IBM name: SMF115SDURN) Interval duration in seconds.

Secondary segment: SMF115#02_Product_Correlation

Field Name	Type	Len	Description
SMF115#02_Product_Correlation.<fieldname>			
zHLEN	INT	2	(IBM name: SMF115HLEN) Length of the standard header.
zHTYP	INT (ENUM)	1	(IBM name: SMF115HTYP) Header Type.
zCAuthId	CHAR	8	(IBM name: N/A) Authorization id.
zCCV	CHAR	12	(IBM name: N/A) Correlation id value.
zCCN	CHAR	8	(IBM name: N/A) Connection name. Not valid on end of memory and reflects the NVS home ASID connection name.
zCOPID	CHAR	8	(IBM name: N/A) Original operator id.
zCATYP	HEX	4	(IBM name: N/A) Connecting System Type Code.
zCTOKN	CHAR	22	(IBM name: N/A) Accounting token.
zCNID	CHAR	16	(IBM name: N/A) Network identifier.

Secondary segment: SMF115#02_Message_Manager_Statistics

Field Name	Type	Len	Description
<i>SMF115#02_Message_Manager_Statistics.<fieldname></i>			
zMMID	HEX	2	(IBM name: SMF115MMID) Control block id.
zMMLLEN	INT	2	(IBM name: SMF115MMLLEN) Length of control block.
zMMDESC	CHAR	4	(IBM name: SMF115MMDESC) Eye-catcher.
zMMOPEN	INT	4	(IBM name: SMF115MMOPEN) Number of MQOPEN requests.
zMMCLOS	INT	4	(IBM name: SMF115MMCLOS) Number of MQCLOSE requests.
zMMGET	INT	4	(IBM name: SMF115MMGET) Number of MQGET requests.
zMMPUT	INT	4	(IBM name: SMF115MMPUT) Number of MQPUT requests.
zMMPUT1	INT	4	(IBM name: SMF115MMPUT1) Number of MQPUT1 requests.
zMMINQ	INT	4	(IBM name: SMF115MMINQ) Number of MQINQ requests.
zMMSET	INT	4	(IBM name: SMF115MMSET) Number of MQSET requests.
zMMCALH	INT	4	(IBM name: SMF115MMCALH) Number of Close All Handles reqs.
zMMSUB	INT	4	(IBM name: SMF115MMSUB) Number of Subscribes.
zMMSUBR	INT	4	(IBM name: SMF115MMSUBR) Number of Subscribe request.
zMMCB	INT	4	(IBM name: SMF115MMCB) Number of Register callback.
zMMCTL	INT	4	(IBM name: SMF115MMCTL) Number of Control.
zMMSTUS	INT	4	(IBM name: SMF115MMSTUS) Number of stat requests.
zMMPUBS	INT	4	(IBM name: SMF115MMPUBS) Number publish requests (PUT+PUT1).
zMMSPP	INT	8	(IBM name: SMF115MMSPP) Number of successful pers puts.
zMMSNP	INT	8	(IBM name: SMF115MMSNP) Number of successful non-pers puts.
zMMPBP	INT	8	(IBM name: SMF115MMPBP) Number of pers bytes put.
zMMNBP	INT	8	(IBM name: SMF115MMNBP) Number of non-pers bytes put.

Secondary segment: SMF115#02_Data_Manager_Statistics

Field Name	Type	Len	Description
<i>SMF115#02_Data_Manager_Statistics.<fieldname></i>			
zDMID	HEX	2	(IBM name: SMF115DMID) Control block id.

zDMLLEN	INT	2	(IBM name: SMF115DMLLEN) Length of control block.
zDMDESC	CHAR	4	(IBM name: SMF115DMDESC) Eye-catcher.
zDMMGET	INT	4	(IBM name: SMF115DMMGET) Number of Message Get requests.
zDMMPUT	INT	4	(IBM name: SMF115DMMPUT) Number of Message Put requests.
zDMMBLR	INT	4	(IBM name: SMF115DMMBLR) Number of Release Browse Lock requests.
zDMDCRE	INT	4	(IBM name: SMF115DMDCRE) Number of Object Create requests.
zDMDPUT	INT	4	(IBM name: SMF115DMDPUT) Number of Object Put requests.
zDMDEL	INT	4	(IBM name: SMF115DMDEL) Number of Object Delete requests.
zDMGGET	INT	4	(IBM name: SMF115DMGGET) Number of Object Get requests.
zDMDLOC	INT	4	(IBM name: SMF115DMDLOC) Number of Object Locate requests.
zDMMCNT	INT	4	(IBM name: SMF115DMMCNT) Number of Message Count requests.
zDMALST	INT	4	(IBM name: SMF115DMALST) Number of Stgclass change requests.
zDMLLOMM	INT	4	(IBM name: SMF115DMLLOMM) Number of Lock Marked Msg requests.
zDMDLMM	INT	4	(IBM name: SMF115DMDLMM) Number of Delete Marked Msg requests.
zDMENUM	INT	4	(IBM name: SMF115DMENUM) Number of Enumerate/select requests.
zDMRAIO	INT	4	(IBM name: SMF115DMRAIO) Number of Read aheads doing I/O.
zDMRABP	INT	4	(IBM name: SMF115DMRABP) Number of Read aheads from Buff Pool.
zDMGETD	INT	4	(IBM name: SMF115DMGETD) Number of Gets that got msg off disk.
zDMGETB	INT	4	(IBM name: SMF115DMGETB) Number of Gets that got msg from BP.

Secondary segment: **SMF115#02_Buffer_Manager_Statistics**

Field Name	Type	Len	Description
<i>SMF115#02_Buffer_Manager_Statistics.<fieldname></i>			
zBMID	HEX	2	(IBM name: SMF115BMID) Control block id.
zBMLEN	INT	2	(IBM name: SMF115BMLEN) Length of control block.
zBMDESC	CHAR	4	(IBM name: SMF115BMDESC) Eye-catcher.
zBMPOOL	INT	4	(IBM name: SMF115BMPOOL) Buffer Pool Number.
zBMNBUF	INT	4	(IBM name: SMF115BMNBUF) Number of buffers in pool.

zBMCBSL	INT	4	(IBM name: SMF115BMCBSL) Lowest Number of stealable buffers.
zBMCBS	INT	4	(IBM name: SMF115BMCBS) Number of stealable buffers.
zBMGETP	INT	4	(IBM name: SMF115BMGETP) Number of Get Page (old) requests.
zBMGETN	INT	4	(IBM name: SMF115BMGETN) Number of Get Page (new) requests.
zBMRIO	INT	4	(IBM name: SMF115BMRIO) Number of DASD read operations.
zBMSTW	INT	4	(IBM name: SMF115BMSTW) Number of Set Write Intent requests.
zBMTPW	INT	4	(IBM name: SMF115BMTPW) Number of pages written to DASD.
zBMWIO	INT	4	(IBM name: SMF115BMWIO) Number of DASD write operations.
zBMIMW	INT	4	(IBM name: SMF115BMIMW) Number of synchronous write operations.
zBMDWT	INT	4	(IBM name: SMF115BMDWT) Number of times deferred write threshold is reached.
zBMDMC	INT	4	(IBM name: SMF115BMDMC) Number of times synchronous write threshold is reached.
zBMSTL	INT	4	(IBM name: SMF115BMSTL) Number of buffer steals.
zBMSTLA	INT	4	(IBM name: SMF115BMSTLA) Number of times hash chain modified during buffer steal.
zBMSOS	INT	4	(IBM name: SMF115BMSOS) Number times suspended for no stealable buffers.

SMF115#02_Buffer_Manager_Statistics.zBMFLAG.<fieldname>

zAboveBar	BIT	1	buffer pool is located above the bar
zFixPages	BIT	1	buffer pool is backed by fixed 4KB pages otherwise pageable 4KB pages are used.

Secondary segment: SMF115#02_Lock_Manager_Statistics

Field Name	Type	Len	Description
<i>SMF115#02_Lock_Manager_Statistics.<fieldname></i>			
zLMID	HEX	2	(IBM name: SMF115LMID) Control block id.
zLMLEN	INT	2	(IBM name: SMF115LMLEN) Length of control block.
zLMDESC	CHAR	4	(IBM name: SMF115LMDESC) Eye-catcher.
zLMGETL	INT	4	(IBM name: N/A) Number of GET LOCK requests.
zLMHLDL	INT	4	(IBM name: N/A) Number of times requested lock held.
zLMRELL	INT	4	(IBM name: N/A) Number of RELEASE LOCK requests.

Secondary segment: **SMF115#02_DB2_Manager_Statistics**

Field Name	Type	Len	Description
<i>SMF115#02_DB2_Manager_Statistics.<fieldname></i>			
zDB2ID	HEX	2	(IBM name: SMF115DB2ID) Control block id.
zDB2LEN	INT	2	(IBM name: SMF115DB2LEN) Length of control block.
zDB2DESC	CHAR	4	(IBM name: SMF115DB2DESC) Eye-catcher.
zDB2NUMTASK	INT	4	(IBM name: SMF115DB2NUMTASK) Number of server tasks.
zDB2ACTTASK	INT	4	(IBM name: SMF115DB2ACTTASK) Number of active server tasks.
zDB2CONNCNT	INT	4	(IBM name: SMF115DB2CONNCNT) Number of connect requests.
zDB2DISCCNT	INT	4	(IBM name: SMF115DB2DISCCNT) Number of disconnect requests.
zDB2DHIGMAX	INT	4	(IBM name: SMF115DB2DHIGMAX) Max. request queue depth.
zDB2ABNDCNT	INT	4	(IBM name: SMF115DB2ABNDCNT) Number of DB2SRV task abends.
zDB2REQUCNT	INT	4	(IBM name: SMF115DB2REQUCNT) Number of request queues.
zDB2DEADCNT	INT	4	(IBM name: SMF115DB2DEADCNT) Number of deadlock timeouts.
zDB2DELECNT	INT	4	(IBM name: SMF115DB2DELECNT) Number of delete requests.
zDB2LISTCNT	INT	4	(IBM name: SMF115DB2LISTCNT) Number of list requests.
zDB2READCNT	INT	4	(IBM name: SMF115DB2READCNT) Number of read requests.
zDB2UPDTCNT	INT	4	(IBM name: SMF115DB2UPDTCNT) Number of update requests.
zDB2WRITCNT	INT	4	(IBM name: SMF115DB2WRITCNT) Number of write requests.
zDB2SCSSEL	INT	4	(IBM name: SMF115DB2SCSSEL) SCST selects - Shared Ch. status.
zDB2SCSINS	INT	4	(IBM name: SMF115DB2SCSINS) SCST inserts - Shared Ch. status.
zDB2SCSUPD	INT	4	(IBM name: SMF115DB2SCSUPD) SCST updates - Shared Ch. status.
zDB2SCSDEL	INT	4	(IBM name: SMF115DB2SCSDEL) SCST deletes - Shared Ch. status.
zDB2SSKSEL	INT	4	(IBM name: SMF115DB2SSKSEL) SSKT selects - Shared sync. key.
zDB2SSKINS	INT	4	(IBM name: SMF115DB2SSKINS) SSKT inserts - Shared sync. key.
zDB2SSKDEL	INT	4	(IBM name: SMF115DB2SSKDEL) SSKT deletes - Shared sync. key.
zDB2SCSBFTS	INT	4	(IBM name: SMF115DB2SCSBFTS) SCST Number of times buffer too small.
zDB2SCSMAXR	INT	4	(IBM name: SMF115DB2SCSMAXR) SCST maximum rows on query.
zDB2DELETCUW	TIME	8	(IBM name: SMF115DB2DELETCUW) Total elapse time - Thread delete.

zDB2DELETMXW	TIME	8	(IBM name: SMF115DB2DELETMXW) Maximum elapse time - Thread delete.
zDB2DELESCUW	TIME	8	(IBM name: SMF115DB2DELESCUW) Total elapse time - SQL delete.
zDB2DELESMXW	TIME	8	(IBM name: SMF115DB2DELESMXW) Maximum elapse time - SQL delete.
zDB2LISTTCUW	TIME	8	(IBM name: SMF115DB2LISTTCUW) Total elapse time - Thread list.
zDB2LISTTMXW	TIME	8	(IBM name: SMF115DB2LISTTMXW) Maximum elapse time - Thread list.
zDB2LISTSCUW	TIME	8	(IBM name: SMF115DB2LISTSCUW) Total elapse time - SQL list.
zDB2LISTSMXW	TIME	8	(IBM name: SMF115DB2LISTSMXW) Maximum elapse time - SQL list.
zDB2READTCUW	TIME	8	(IBM name: SMF115DB2READTCUW) Total elapse time - Thread read.
zDB2READTMXW	TIME	8	(IBM name: SMF115DB2READTMXW) Maximum elapse time - Thread read.
zDB2READSCUW	TIME	8	(IBM name: SMF115DB2READSCUW) Total elapse time - SQL read.
zDB2READSMXW	TIME	8	(IBM name: SMF115DB2READSMXW) Maximum elapse time - SQL read.
zDB2UPDTCUW	TIME	8	(IBM name: SMF115DB2UPDTCUW) Total elapse time - Thread update.
zDB2UPDTTMXW	TIME	8	(IBM name: SMF115DB2UPDTTMXW) Maximum elapse time - Thread update.
zDB2UPDTSCUW	TIME	8	(IBM name: SMF115DB2UPDTSCUW) Total elapse time - SQL update.
zDB2UPDTSMXW	TIME	8	(IBM name: SMF115DB2UPDTSMXW) Maximum elapse time - SQL update.
zDB2WRITTCUW	TIME	8	(IBM name: SMF115DB2WRITTCUW) Total elapse time - Thread write.
zDB2WRITTMXW	TIME	8	(IBM name: SMF115DB2WRITTMXW) Maximum elapse time - Thread write.
zDB2WRITSCUW	TIME	8	(IBM name: SMF115DB2WRITSCUW) Total elapse time - SQL write.
zDB2WRITSMXW	TIME	8	(IBM name: SMF115DB2WRITSMXW) Maximum elapse time - SQL write.
zDB2SCSSTCUW	TIME	8	(IBM name: SMF115DB2SCSSTCUW) Total elapse time - Thread select.
zDB2SCSSTMXW	TIME	8	(IBM name: SMF115DB2SCSSTMXW) Maximum elapse time - Thread select.
zDB2SCSSCUW	TIME	8	(IBM name: SMF115DB2SCSSCUW) Total elapse time - SQL select.
zDB2SCSSMXW	TIME	8	(IBM name: SMF115DB2SCSSMXW) Maximum elapse time - SQL select.
zDB2SCSITCUW	TIME	8	(IBM name: SMF115DB2SCSITCUW) Total elapse time - Thread insert.
zDB2SCSITMXW	TIME	8	(IBM name: SMF115DB2SCSITMXW) Maximum elapse time - Thread insert.
zDB2SCSISCUW	TIME	8	(IBM name: SMF115DB2SCSISCUW) Total elapse time - SQL insert.
zDB2SCSISMXW	TIME	8	(IBM name: SMF115DB2SCSISMXW) Maximum elapse time - SQL insert.
zDB2SCSUTCUW	TIME	8	(IBM name: SMF115DB2SCSUTCUW) Total elapse time - Thread update.

zDB2SCSUTMXW	TIME	8	(IBM name: SMF115DB2SCSUTMXW) Maximum elapse time - Thread update.
zDB2SCSUSCUW	TIME	8	(IBM name: SMF115DB2SCSUSCUW) Total elapse time - SQL update.
zDB2SCSUSMXW	TIME	8	(IBM name: SMF115DB2SCSUSMXW) Maximum elapse time - SQL update.
zDB2SCSDTCUW	TIME	8	(IBM name: SMF115DB2SCSDTCUW) Total elapse time - Thread delete.
zDB2SCSDTMXW	TIME	8	(IBM name: SMF115DB2SCSDTMXW) Maximum elapse time - Thread delete.
zDB2SCSDSCUW	TIME	8	(IBM name: SMF115DB2SCSDSCUW) Total elapse time - SQL delete.
zDB2SCSDSMXW	TIME	8	(IBM name: SMF115DB2SCSDSMXW) Maximum elapse time - SQL delete.
zDB2SSKSTCUW	TIME	8	(IBM name: SMF115DB2SSKSTCUW) Total elapse time - Thread select.
zDB2SSKSTMXW	TIME	8	(IBM name: SMF115DB2SSKSTMXW) Maximum elapse time - Thread select.
zDB2SSKSSCUW	TIME	8	(IBM name: SMF115DB2SSKSSCUW) Total elapse time - SQL select.
zDB2SSKSSMXW	TIME	8	(IBM name: SMF115DB2SSKSSMXW) Maximum elapse time - SQL select.
zDB2SSKITCUW	TIME	8	(IBM name: SMF115DB2SSKITCUW) Total elapse time - Thread insert.
zDB2SSKITMXW	TIME	8	(IBM name: SMF115DB2SSKITMXW) Maximum elapse time - Thread insert.
zDB2SSKISCUW	TIME	8	(IBM name: SMF115DB2SSKISCUW) Total elapse time - SQL insert.
zDB2SSKISMXW	TIME	8	(IBM name: SMF115DB2SSKISMXW) Maximum elapse time - SQL insert.
zDB2SSKDTCUW	TIME	8	(IBM name: SMF115DB2SSKDTCUW) Total elapse time - Thread delete.
zDB2SSKDTMXW	TIME	8	(IBM name: SMF115DB2SSKDTMXW) Maximum elapse time - Thread delete.
zDB2SSKDSCUW	TIME	8	(IBM name: SMF115DB2SSKDSCUW) Total elapse time - SQL delete.
zDB2SSKDSMXW	TIME	8	(IBM name: SMF115DB2SSKDSMXW) Maximum elapse time - SQL delete.
zDB2LMSSEL	INT	4	(IBM name: SMF115DB2LMSSEL) Number of DB2 BLOB read requests.
zDB2LMSINS	INT	4	(IBM name: SMF115DB2LMSINS) Number of DB2 BLOB insert requests.
zDB2LMSUPD	INT	4	(IBM name: SMF115DB2LMSUPD) Number of DB2 BLOB update requests.
zDB2LMSDEL	INT	4	(IBM name: SMF115DB2LMSDEL) Number of DB2 BLOB delete requests.
zDB2LMSLIS	INT	4	(IBM name: SMF115DB2LMSLIS) Number of DB2 BLOB list requests.
zDB2LMSSTCUW	INT	8	(IBM name: SMF115DB2LMSSTCUW) Total elapse time - thd. BLOB read.
zDB2LMSSTMXW	INT	8	(IBM name: SMF115DB2LMSSTMXW) Max Elapse time - thd. BLOB read.
zDB2LMSSSCUW	INT	8	(IBM name: SMF115DB2LMSSSCUW) Total elapse time - SQL BLOB read.
zDB2LMSSSMXW	INT	8	(IBM name: SMF115DB2LMSSSMXW) Max Elapse time - SQL BLOB read.

zDB2LMSITCUW	INT	8	(IBM name: SMF115DB2LMSITCUW) Total elapse time - thd. BLOB write.
zDB2LMSITMXW	INT	8	(IBM name: SMF115DB2LMSITMXW) Max Elapse time - thd. BLOB write.
zDB2LMSISCUW	INT	8	(IBM name: SMF115DB2LMSISCUW) Total elapse time - SQL BLOB write.
zDB2LMSISMXW	INT	8	(IBM name: SMF115DB2LMSISMXW) Max Elapse time - SQL BLOB write.
zDB2LMSUTCW	INT	8	(IBM name: SMF115DB2LMSUTCW) Total elapse time - thd. BLOB update.
zDB2LMSUTMXW	INT	8	(IBM name: SMF115DB2LMSUTMXW) Max Elapse time - thd. BLOB update.
zDB2LMSUSCUW	INT	8	(IBM name: SMF115DB2LMSUSCUW) Total elapse time - SQL BLOB update.
zDB2LMSUSMXW	INT	8	(IBM name: SMF115DB2LMSUSMXW) Max Elapse time - SQL BLOB update.
zDB2LMSDTCW	INT	8	(IBM name: SMF115DB2LMSDTCW) Total elapse time - thd. BLOB delete.
zDB2LMSDTMXW	INT	8	(IBM name: SMF115DB2LMSDTMXW) Max Elapse time - thd. BLOB delete.
zDB2LMSDSCW	INT	8	(IBM name: SMF115DB2LMSDSCW) Total elapse time - SQL BLOB delete.
zDB2LMSDSMXW	INT	8	(IBM name: SMF115DB2LMSDSMXW) Max Elapse time - SQL BLOB delete.
zDB2LMSLTCW	INT	8	(IBM name: SMF115DB2LMSLTCW) Total elapse time - thd. BLOB list.
zDB2LMSLTMXW	INT	8	(IBM name: SMF115DB2LMSLTMXW) Max Elapse time - thd. BLOB list.
zDB2LMSLSCW	INT	8	(IBM name: SMF115DB2LMSLSCW) Total elapse time - SQL BLOB list.
zDB2LMSLSMXW	INT	8	(IBM name: SMF115DB2LMSLSMXW) Max Elapse time - SQL BLOB list.

zPGBPNO	INT	4	(IBM name: SMF115PGBPNO) Associate buffer pool number.
zPGTOPG	INT	4	(IBM name: SMF115PGTOPG) Total pages.
zPGUNPG	INT	4	(IBM name: SMF115PGUNPG) Current unused pages.
zPGPPG	INT	4	(IBM name: SMF115PGPPG) Persistent used pages.
zPGNPPG	INT	4	(IBM name: SMF115PGNPPG) Non-Persistent used pages.
zPGFULL	INT	4	(IBM name: SMF115PGFULL) Times of pageset full.
zPGPCHI	INT	4	(IBM name: SMF115PGPCHI) Put cursor high value.
zPGDWPN	INT	4	(IBM name: SMF115PGDWPN) Number of write page I/Os.
zPGDWPP	INT	4	(IBM name: SMF115PGDWPP) Number of pages written.
zPGDWPT	TIME	8	(IBM name: SMF115PGDWPT) Total write I/O time.
zPGIMWN	INT	4	(IBM name: SMF115PGIMWN) Number of IMW page I/Os.
zPGIMWP	INT	4	(IBM name: SMF115PGIMWP) Number of pages IMW.
zPGIMWT	TIME	8	(IBM name: SMF115PGIMWT) Total IMW I/O time.
zPGGETN	INT	4	(IBM name: SMF115PGGETN) Number of read page I/Os.
zPGGETP	INT	4	(IBM name: SMF115PGGETP) Number of pages read.
zPGGETT	TIME	8	(IBM name: SMF115PGGETT) Total read I/O time.
zPGCKPP	INT	4	(IBM name: SMF115PGCKPP) Pages written in checkpoints.
zPGEXPN	INT	2	(IBM name: SMF115PGEXPN) Number of extends.
zPGSTRN	CHAR	1	(IBM name: SMF115PGSTRN) Number of stripes.

zPGEXPM	CHAR	1	(IBM name: SMF115PGEXPM) Expansion method see MQUSAGE_EXPAND*.
zPGSTAT	CHAR	1	(IBM name: SMF115PGSTAT) Pageset status, see MQUSAGE_PS_*.

SMF115#201_Data_Manager_Page_Set.zPGFLAG.<fieldname>

zExp	BIT	1	Is expansion occurred.

Record Type 115 Subtype 215 - Bufferpool Information

Primary Segment:

- [SMF115#215_MQSeries_Statistics](#)

Secondary Segment(s): 3 (in alphabetical order)

- [SMF115#215_Buffer_Manager_Statistics](#)
- [SMF115#215_Product_Correlation](#)
- [SMF115#215_Product_Standard](#)

Primary segment: [SMF115#215_MQSeries_Statistics](#)

Field Name	Type	Len	Description
<i>SMF115#215_MQSeries_Statistics.<fieldname></i>			
<i>SMF115#215_MQSeries_Statistics.Header.<fieldname></i>			
zFLG	HEX	1	(IBM name: SMF115FLG) System indicator: Bit Meaning when set 0-2 Reserved. 3-6 Version indicators 7 Reserved.
zRTY	INT	1	(IBM name: SMF115RTY) Record type 115
zTME	TSTMP	8	(IBM name: SMF115TME) Date/Time that the record was moved into the SMF buffer.
zSID	CHAR	4	(IBM name: SMF115SID) z/OS Subsystem identification (from the SID parameter).
zSSID	CHAR	4	(IBM name: SMF115SID) IBM MQ subsystem id.
zSTY	INT	2	(IBM name: SMF115STF) Record subtype.
zREL	CHAR	3	(IBM name: SMF115REL) IBM MQ version.
<i>SMF115#215_MQSeries_Statistics.Self_defining_Section.<fieldname></i>			
zPSO	INT	4	(IBM name: SMF115PSO) Offset to the product section from the beginning of the record (including RDW).
zPSL	INT	2	(IBM name: SMF115PSL) Length of the product section.
zPSN	INT	2	(IBM name: SMF115PSN) Number of product sections.
zR1O	INT	4	(IBM name: SMF115R1O) Offset to the Buffer Manager data section from beginning of the record (including RDW).
zR1L	INT	2	(IBM name: SMF115R1L) Length of the Buffer Manager data section.
zR1N	INT	2	(IBM name: SMF115R1N) Number of Buffer Manager data sections.

Secondary segment: [SMF115#215_Product_Standard](#)

Field Name	Type	Len	Description
<i>SMF115#215_Product_Standard.<fieldname></i>			
zHLEN	INT	2	

			(IBM name: SMF115HLEN) Length of the standard header.
zHTYP	INT (ENUM)	1	(IBM name: SMF115HTYP) Header Type.
zHRMID	INT	1	(IBM name: SMF115HRMID) Resource manager id.
zHIID	INT	2	(IBM name: SMF115HIID) IFC ID.
zHNSDA	INT	1	(IBM name: SMF115HNSDA) Number of self-defining areas.
zHREL	INT	1	(IBM name: SMF115HREL) Release indicator.
zHACE	HEX	4	(IBM name: SMF115HACE) ACE address - dispatch unit address.
zSNM	CHAR	4	(IBM name: SMF115SNM) Subsystem name.
zSTCK	TSTMP	8	(IBM name: SMF115STCK) STCK Store clock value of header.
zISEQ	INT	4	(IBM name: SMF115ISEQ) Sequence number for IFCID.
zWSEQ	INT	4	(IBM name: SMF115WSEQ) Sequence number for destination.

SMF115#215_Product_Standard.zHFLG.<fieldname>

zSMFC	BIT	1	More SMF records follow for this interval.
-------	-----	---	--

SMF115#215_Product_Standard.<fieldname>

zSTIME	TSTMP	8	(IBM name: SMF115STIME) STCK MQ view of interval start.
zSDURN	FIXED	8 (20,6)	(IBM name: SMF115SDURN) Interval duration in seconds.

Secondary segment: SMF115#215_Product_Correlation

Field Name	Type	Len	Description
SMF115#215_Product_Correlation.<fieldname>			
zHLEN	INT	2	(IBM name: SMF115HLEN) Length of the standard header.
zHTYP	INT (ENUM)	1	(IBM name: SMF115HTYP) Header Type.
zCAuthId	CHAR	8	(IBM name: N/A) Authorization id.
zCCV	CHAR	12	(IBM name: N/A) Correlation id value.
zCCN	CHAR	8	(IBM name: N/A) Connection name. Not valid on end of memory and reflects the NVS home ASID connection name.
zCOPID	CHAR	8	(IBM name: N/A) Original operator id.
zCATYP	HEX	4	(IBM name: N/A) Connecting System Type Code.
zCTOKN	CHAR	22	(IBM name: N/A) Accounting token.

zCNID	CHAR	16	(IBM name: N/A) Network identifier.
-------	------	----	--

Secondary segment: **SMF115#215_Buffer_Manager_Statistics**

Field Name	Type	Len	Description
<i>SMF115#215_Buffer_Manager_Statistics.<fieldname></i>			
zBMID	HEX	2	(IBM name: SMF115BMID) Control block id.
zBMLEN	INT	2	(IBM name: SMF115BMLEN) Length of control block.
zBMDESC	CHAR	4	(IBM name: SMF115BMDESC) Eye-catcher.
zBMPOOL	INT	4	(IBM name: SMF115BMPOOL) Buffer Pool Number.
zBMNBUF	INT	4	(IBM name: SMF115BMNBUF) Number of buffers in pool.
zBMCBSL	INT	4	(IBM name: SMF115BMCBSL) Lowest Number of stealable buffers.
zBMCBS	INT	4	(IBM name: SMF115BMCBS) Number of stealable buffers.
zBMGETP	INT	4	(IBM name: SMF115BMGETP) Number of Get Page (old) requests.
zBMGETN	INT	4	(IBM name: SMF115BMGETN) Number of Get Page (new) requests.
zBMRIO	INT	4	(IBM name: SMF115BMRIO) Number of DASD read operations.
zBMSTW	INT	4	(IBM name: SMF115BMSTW) Number of Set Write Intent requests.
zBMTPW	INT	4	(IBM name: SMF115BMTPW) Number of pages written to DASD.
zBMWIO	INT	4	(IBM name: SMF115BMWIO) Number of DASD write operations.
zBMIMW	INT	4	(IBM name: SMF115BMIMW) Number of synchronous write operations.
zBMDWT	INT	4	(IBM name: SMF115BMDWT) Number of times deferred write threshold is reached.
zBMDMC	INT	4	(IBM name: SMF115BMDMC) Number of times synchronous write threshold is reached.
zBMSTL	INT	4	(IBM name: SMF115BMSTL) Number of buffer steals.
zBMSTLA	INT	4	(IBM name: SMF115BMSTLA) Number of times hash chain modified during buffer steal.
zBMSOS	INT	4	(IBM name: SMF115BMSOS) Number times suspended for no stealable buffers.
<i>SMF115#215_Buffer_Manager_Statistics.zBMFLAG.<fieldname></i>			
zAboveBar	BIT	1	buffer pool is located above the bar
zFixPages	BIT	1	buffer pool is backed by fixed 4KB pages otherwise pageable 4KB pages are used.

zCATYP	HEX	4	(IBM name: N/A) Connecting System Type Code.
zCTOKN	CHAR	22	(IBM name: N/A) Accounting token.
zCNID	CHAR	16	(IBM name: N/A) Network identifier.

Secondary segment: **SMF115#231_Channel_Initiator**

Field Name	Type	Len	Description
SMF115#231_Channel_Initiator.<fieldname>			
zCIID	HEX	2	(IBM name: SMF115CIID) Control block id.
zCILEN	INT	2	(IBM name: SMF115CILEN) Length of control block.
zCIDESC	CHAR	4	(IBM name: SMF115CIDESC) Eye-catcher.
zCIJOBNAME	CHAR	8	(IBM name: SMF115CIJOBNAME) Chinit job name.
zCIQSGN	CHAR	4	(IBM name: SMF115CIQSGN) QSG name.
zCINOCC	INT	4	(IBM name: SMF115CINOCC) High water mark of current channels.
zCIMXCC	INT	4	(IBM name: SMF115CIMXCC) Maximum current channels.
zCINOAC	INT	4	(IBM name: SMF115CINOAC) High water mark of active channels.
zCIMXAC	INT	4	

			(IBM name: SMF115CIMXAC) Maximum active channels.
zCIMXTP	INT	4	(IBM name: SMF115CIMXTP) Maximum TCP/IP channels.
zCIMXLU	INT	4	(IBM name: SMF115CIMXLU) Maximum LU 6.2 channels
zCISTUS	INT	4	(IBM name: SMF115CISTUS) Storage usage for Chinit.
zCITSKN	HEX	4	(IBM name: SMF115CITSKN) Task number. (TCB addr)
zCIREQN	INT	4	(IBM name: SMF115CIREQN) Number of requests for task.
zCICPTM	TIME	8	(IBM name: SMF115CICPTM) Busy CPU time.
zCIELTM	TIME	8	(IBM name: SMF115CIELTM) Elapse time.
zCIWTTM	TIME	8	(IBM name: SMF115CIWTTM) Wait elapsed time.

Secondary segment: **SMF115#231_Dispatcher_Task**

Field Name	Type	Len	Description
<i>SMF115#231_Dispatcher_Task.<fieldname></i>			
zCIDSP	INT	4	(IBM name: SMF115CIDSP) Number of channels running on this dispatcher task.

Secondary segment: **SMF115#231_Adapter_Task**

Field Name	Type	Len	Description
<i>SMF115#231_Adapter_Task.<fieldname></i>			
zCIADP	INT	4	(IBM name: SMF115CIADP) Adapter Task.

Secondary segment: **SMF115#231_SSL_Task**

Field Name	Type	Len	Description
<i>SMF115#231_SSL_Task.<fieldname></i>			
zCILSTM	TSTMP	8	(IBM name: SMF115CILSTM) Time of day of max SSL request.
zCILSDU	TIME	8	(IBM name: SMF115CILSDU) Duration of max SSL request.

Secondary segment: **SMF115#231_DNS_Task**

Field Name	Type	Len	Description
<i>SMF115#231_DNS_Task.<fieldname></i>			

zCILGTM	TSTMP	8	(IBM name: SMF115CILGTM) Time of day of max DNS request.
zCILGDU	TIME	8	(IBM name: SMF115CILGDU) Duration of max DNS request.

Record Type 116 - MQSeries Accounting

SMF Record 116 (MQSeries Accounting) has several subtypes, each mapped by a structure member name of the format "T116STnn".

Record Type 116 Subtype 0 - Message Manager Accounting

Primary Segment:

- [SMF116#00_MQSeries_Accounting](#)

Secondary Segment(s): 3 (in alphabetical order)

- [SMF116#00_Accounting_Data](#)
- [SMF116#00_Message_Manager](#)
- [SMF116#00_Product_Information](#)

Primary segment: [SMF116#00_MQSeries_Accounting](#)

Field Name	Type	Len	Description
<i>SMF116#00_MQSeries_Accounting.<fieldname></i>			
<i>SMF116#00_MQSeries_Accounting.Header.<fieldname></i>			
zFLG	HEX	1	(IBM name: SMF116FLG) System indicator: Bit Meaning when set 0-2 Reserved. 3-6 Version indicators 7 Reserved.
zRTY	INT	1	(IBM name: SMF116RTY) Record type 116
zTME	TSTMP	8	(IBM name: SMF116TME) Date/Time that the record was moved into the SMF buffer.
zSID	CHAR	4	(IBM name: SMF116SID) z/OS Subsystem identification (from the SID parameter).
zSSID	CHAR	4	(IBM name: SMF116SID) IBM MQ subsystem id.
zSTY	INT	2	(IBM name: SMF116STF) Record subtype.
zREL	CHAR	3	(IBM name: SMF116REL) IBM MQ version.

<i>SMF116#00_MQSeries_Accounting.Self_defining_Section.<fieldname></i>			
zPSO	INT	4	(IBM name: SMF116PSO) Offset to the product section from the beginning of the record (including RDW).
zPSL	INT	2	(IBM name: SMF116PSL) Length of the product section.
zPSN	INT	2	(IBM name: SMF116PSN) Number of product sections.
zR1O	INT	4	(IBM name: SMF116R1O) Offset to the Accounting Data section from the beginning of the record (including RDW).
zR1L	INT	2	(IBM name: SMF116R1L) Length of the Accounting Data section.
zR1N	INT	2	(IBM name: SMF116R1N) Number of Accounting Data sections.
zR2O	INT	4	(IBM name: SMF116R2O) Offset to the Message Manager accounting section from the beginning of

			the record (including RDW).
zR2L	INT	2	(IBM name: SMF116R2L) Length of the Message Manager accounting section.
zR2N	INT	2	(IBM name: SMF116R2N) Number of Message Manager accounting sections.
zR6O	INT	4	(IBM name: SMF116R6O) Offset to the MVS section from the beginning of the record (including RDW).
zR6L	INT	2	(IBM name: SMF116R6L) Length of the MVS section.
zR6N	INT	2	(IBM name: SMF116R6N) Number of MVS sections.

Secondary segment: **SMF116#00_Product_Information**

Field Name	Type	Len	Description
<i>SMF116#00_Product_Information.<fieldname></i>			
zHLEN	INT	2	(IBM name: SMF116HLEN) Length of the standard header.
zHTYP	INT (ENUM)	1	(IBM name: SMF116HTYP) Header Type.
zHRMID	INT	1	(IBM name: SMF116HRMID) Resource manager id.
zHIID	INT	2	(IBM name: SMF116HIID) IFC ID.
zHNSDA	INT	1	(IBM name: SMF116HNSDA) Number of self-defining areas.
zHREL	INT	1	(IBM name: SMF116HREL) Release indicator.
zHACE	HEX	4	(IBM name: SMF116HACE) ACE address - dispatch unit address.
zSNM	CHAR	4	(IBM name: SMF116SNM) Subsystem name.
zSTCK	TSTMP	8	(IBM name: SMF116STCK) STCK Store clock value of header.
zISEQ	INT	4	(IBM name: SMF116ISEQ) Sequence number for IFCID.
zWSEQ	INT	4	(IBM name: SMF116WSEQ) Sequence number for destination.

SMF116#00_Product_Information.zHFLG.<fieldname>

zSMFC	BIT	1	More SMF records follow for this interval.
-------	-----	---	--

SMF116#00_Product_Information.<fieldname>

zCLEN	INT	2	(IBM name: SMF116CLEN) Length of the standard header.
zCTYP	INT (ENUM)	1	(IBM name: SMF116CTYP) Header Type. (Correlation Header = 2)
zCAuthId	CHAR	8	(IBM name: SMF116CAuthId) Authorization id.
zCCV	CHAR	12	(IBM name: SMF116CCV) Correlation id value.
zCCN	CHAR	8	

			(IBM name: SMF116CCN) Connection name. Not valid on end of memory and reflects the NVS home ASID connection name.
zCOPID	CHAR	8	(IBM name: SMF116COPID) Original operator id.
zCATYP	HEX	4	(IBM name: SMF116CATYP) Connecting System Type Code.
zCTOKN	CHAR	22	(IBM name: SMF116CTOKN) Accounting token.
zCNID	CHAR	16	(IBM name: SMF116CNID) Network identifier.

Secondary segment: **SMF116#00_Accounting_Data**

Field Name	Type	Len	Description
<i>SMF116#00_Accounting_Data.<fieldname></i>			
zBSC	TSTMP	8	(IBM name: SMF116BSC) Beginning store clock value.
zESC	TSTMP	8	(IBM name: SMF116ESC) Ending store clock value.
zBJST	TIME	8	(IBM name: SMF116BJST) Beginning TCB CPU time from MVS for all environments (CICS, IMS, & TSO). Binary zero means no timing is available for data base access agents, this is the begin cpu time for the agent.
zEJST	TIME	8	(IBM name: SMF116EJST) Ending TCB CPU time in all environments. Binary zero means no timing is available for data base access agents, this is the end cpu time for the agent.
zBSRB	TIME	8	(IBM name: SMF116BSRB) Beginning SRB ASCB time. For data base access agents, this time is invalid.
zESRB	TIME	8	(IBM name: SMF116ESRB) Ending SRB ASCB time. For data base access agents, this time is invalid.
zRINV	INT (ENUM)	4	(IBM name: SMF116RINV) Reason Accounting invoked. Read = Reads request for IFCID 0147 or 0148. Sign-On = Same user resign-on with same authid. New-User = New user - the authorization id changed. De-Alloc = Deallocation - normal program termination. EOT-PgmTerm = End of task - application program terminated. EOT-PgmAbend = End of task - application program abend situation. (Accounting Record written at de-allocation.) EOM-Abend = End of memory - abnormal termination. (Accounting Record written at de-allocation.) In-Doubt = Resolve INDOUBT. (Accounting Record written at de-allocation.) Force = CANCEL FORCE - STOP FORCE COMMAND. (Accounting Record written at de-allocation.) EOT-PgmTerm-In-Doubt = End of task - application program terminated. (Accounting Record written with work unit gone INDOUBT.) EOT-PgmAbend-In-Doubt = End of task - application program abend situation. (Accounting Record written with work unit gone INDOUBT.) EOM-Abend-In-Doubt = End of memory - abnormal termination. (Accounting Record written with work unit gone INDOUBT.) Force-In-Doubt = CANCEL FORCE - STOP FORCE COMMAND. (Accounting Record written with work unit gone INDOUBT.)
zNID	CHAR	16	(IBM name: SMF116NID) Network id value from CCB.
zCOMM	INT	4	(IBM name: SMF116COMM) Number of commit phase 2 requests.
zBACK	INT	4	(IBM name: SMF116BACK) Number of backout requests.
zASC	TIME	8	(IBM name: SMF116ASC) Accumulated elapsed time in subsystem.
zAJST	TIME	8	

			(IBM name: SMF116AJST) Accumulated home TCB ASCB time while in subsystem for IMS and TSO accumulated attach TCB time in subsystem for CICS.
zASRB	TIME	8	(IBM name: SMF116ASRB) Accumulated home SRB ASCB time while in subsystem.
zAWTI	TIME	8	(IBM name: SMF116AWTI) Accumulated I/O elapsed wait time for I/O done under this thread.
zAWTL	TIME	8	(IBM name: SMF116AWTL) Accumulated LOCK and LATCH elapsed time.
zARNA	INT	4	(IBM name: SMF116ARNA) Number of entry/exit events processed.
zARNE	INT	4	(IBM name: SMF116ARNE) Number of wait trace events processed for waits for I/O under this thread.
zAWTR	TIME	8	(IBM name: SMF116AWTR) Accumulated wait time for read I/O that is done under a thread other than this one.
zAWTW	TIME	8	(IBM name: SMF116AWTW) Accumulated wait time for write I/O that is done under a thread other than this one.
zAWTE	TIME	8	(IBM name: SMF116AWTE) Accumulated wait time due to synchronous execution unit switch to services from this thread.
zALOG	TIME	8	(IBM name: SMF116ALOG) Accumulated wait time due to processing of ARCHIVE LOG MODE(QUIESCE) commands. Note that this number represents the amount of time that an individual thread was suspended due to an ARCHIVE LOG MODE(QUIESCE) command and not the time that it took for the entire command to complete.
zARNL	INT	4	(IBM name: SMF116ARNL) Number of wait trace events processed for waits for LOCK/LATCH.
zARNR	INT	4	(IBM name: SMF116ARNR) Number of wait trace events processed for waits for read I/O under another thread.
zARNW	INT	4	(IBM name: SMF116ARNW) Number of wait trace events processed for waits for write I/O under another thread.
zARNS	INT	4	(IBM name: SMF116ARNS) Number of wait trace events processed for waits for synchronous execution unit switching to service tasks.
zALCT	INT	4	(IBM name: SMF116ALCT) Number of suspensions due to processing of archive LOG MODE(QUIESCE) commands.

Secondary segment: **SMF116#00_Message_Manager**

Field Name	Type	Len	Description
<i>SMF116#00_Message_Manager.<fieldname></i>			
SMF115MMID	HEX	2	Control block id.
SMF115MMLEN	INT	2	Length of control block.
SMF115MMDESC	CHAR	4	Eye-catcher.
SMF115MMCPUT	TIME	8	CPU time used.
SMF115MMPUTA	INT	4	# puts for length 0-99 bytes.
SMF115MMPUTB	INT	4	# puts for length 100-999 bytes.
SMF115MMPUTC	INT	4	# puts for length 1000-9999 bytes.
SMF115MMPUTD	INT	4	# puts for length >= 10000 bytes.

SMF115MMGETA	INT	4	# gets for length 0-99 bytes.
SMF115MMGETB	INT	4	# gets for length 100-999 bytes.
SMF115MMGETC	INT	4	# gets for length 1000-9999 bytes.
SMF115MMGETD	INT	4	# gets for length >= 10000 bytes.

Record Type 116 Subtype 1 - Thread/Queue Level Accounting

Primary Segment:

- [SMF116#01_MQSeries_Accounting](#)

Secondary Segment(s): 4 (in alphabetical order)

- [SMF116#01_Product_Information](#)
- [SMF116#01_Queue_Level_Accounting](#)
- [SMF116#01_Thread_Level_Accounting](#)
- [SMF116#01_Thread_Level_Identification](#)

Primary segment: [SMF116#01_MQSeries_Accounting](#)

Field Name	Type	Len	Description
<i>SMF116#01_MQSeries_Accounting.<fieldname></i>			
<i>SMF116#01_MQSeries_Accounting.Header.<fieldname></i>			
zFLG	HEX	1	(IBM name: SMF116FLG) System indicator: Bit Meaning when set 0-2 Reserved. 3-6 Version indicators 7 Reserved.
zRTY	INT	1	(IBM name: SMF116RTY) Record type 116
zTME	TSTMP	8	(IBM name: SMF116TME) Date/Time that the record was moved into the SMF buffer.
zSID	CHAR	4	(IBM name: SMF116SID) z/OS Subsystem identification (from the SID parameter).
zSSID	CHAR	4	(IBM name: SMF116SSID) IBM MQ subsystem id.
zSTY	INT	2	(IBM name: SMF116STY) Record subtype.
zREL	CHAR	3	(IBM name: SMF116REL) IBM MQ version.

<i>SMF116#01_MQSeries_Accounting.Self_defining_Section.<fieldname></i>			
zPSO	INT	4	(IBM name: SMF116PSO) Offset to the product section from the beginning of the record (including RDW).
zPSL	INT	2	(IBM name: SMF116PSL) Length of the product section.
zPSN	INT	2	(IBM name: SMF116PSN) Number of product sections.
zTIO	INT	4	(IBM name: SMF116TIO) Offset to the Thread Level ID Data section from the beginning of the record (including RDW).
zTIL	INT	2	(IBM name: SMF116TIL) Length of the Thread Level ID Data section.
zTIN	INT	2	(IBM name: SMF116TIN) Number of Thread Level ID Data sections.
zTAO	INT	4	(IBM name: SMF116TAO) Offset to the Thread Level Accounting Data section from the beginning of the record (including RDW).
zTAL	INT	2	(IBM name: SMF116TAL) Length of the Thread Level Accounting Data section.
zTAN	INT	2	(IBM name: SMF116TAN) Number of Thread Level Accounting Data sections.
zQAO	INT	4	

			(IBM name: SMF116QAO) Offset to the Queue Level Accounting Data section from the beginning of the record (including RDW).
zQAL	INT	2	(IBM name: SMF116QAL) Length of the Queue Level Accounting Data section.
zQAN	INT	2	(IBM name: SMF116QAN) Number of Queue Level Accounting Data sections.

Secondary segment: **SMF116#01_Product_Information**

Field Name	Type	Len	Description
<i>SMF116#01_Product_Information.<fieldname></i>			
zHLEN	INT	2	(IBM name: SMF116HLEN) Length of the standard header.
zHTYP	INT (ENUM)	1	(IBM name: SMF116HTYP) Header Type.
zHRMID	INT	1	(IBM name: SMF116HRMID) Resource manager id.
zHIID	INT	2	(IBM name: SMF116HIID) IFC ID.
zHNSDA	INT	1	(IBM name: SMF116HNSDA) Number of self-defining areas.
zHREL	INT	1	(IBM name: SMF116HREL) Release indicator.
zHACE	HEX	4	(IBM name: SMF116HACE) ACE address - dispatch unit address.
zSNM	CHAR	4	(IBM name: SMF116SNM) Subsystem name.
zSTCK	TSTMP	8	(IBM name: SMF116STCK) STCK Store clock value of header.
zISEQ	INT	4	(IBM name: SMF116ISEQ) Sequence number for IFCID.
zWSEQ	INT	4	(IBM name: SMF116WSEQ) Sequence number for destination.

<i>SMF116#01_Product_Information.zHFLG.<fieldname></i>			
zSMFC	BIT	1	More SMF records follow for this interval.

<i>SMF116#01_Product_Information.<fieldname></i>			
zCLEN	INT	2	(IBM name: SMF116CLEN) Length of the standard header.
zCTYP	INT (ENUM)	1	(IBM name: SMF116CTYP) Header Type. (Correlation Header = 2)
zCAuthId	CHAR	8	(IBM name: SMF116CAuthId) Authorization id.
zCCV	CHAR	12	(IBM name: SMF116CCV) Correlation id value.
zCCN	CHAR	8	(IBM name: SMF116CCN) Connection name. Not valid on end of memory and reflects the NVS home ASID connection name.
zCOPID	CHAR	8	(IBM name: SMF116COPID) Original operator id.
zCATYP	HEX	4	(IBM name: SMF116CATYP) Connecting System Type Code.

zCTOKN	CHAR	22	(IBM name: SMF116CTOKN) Accounting token.
zCNID	CHAR	16	(IBM name: SMF116CNID) Network identifier.

Secondary segment: **SMF116#01_Thread_Level_Identification**

Field Name	Type	Len	Description
<i>SMF116#01_Thread_Level_Identification.<fieldname></i>			
zTIID	HEX	2	(IBM name: SMF116TIID) Control block id.
zTILEN	INT	2	(IBM name: SMF116TILEN) Length of control block.
zTIDESC	CHAR	4	(IBM name: SMF116TIDESC) Eye-catcher.
zTIATYP	INT	4	(IBM name: SMF116TIATYP) Connection type.
zTICCN	CHAR	8	(IBM name: SMF116TICCN) Connection name.
zTIOPID	CHAR	8	(IBM name: SMF116TIOPID) CCBOPID Operator ID.
zTINID	CHAR	16	(IBM name: SMF116TINID) NID.
zTICORI	CHAR	12	(IBM name: SMF116TICORI) Correlator.
zTIUOWI	CHAR	24	(IBM name: SMF116TIUOWI) LUWID.
zTIACCT	CHAR	22	(IBM name: SMF116TIACCT) Accounting token.
zTICHL	CHAR	20	(IBM name: SMF116TICHL) Channel name.
zTICHLG	CHAR	48	(IBM name: SMF116TICHLG) Channel connection name.
zTICTXT	CHAR	16	(IBM name: SMF116TICTXT) current context token.
zTITRAN	CHAR	8	(IBM name: SMF116TITRAN) CCBUSER Userid.
zTICFWD	INT	4	(IBM name: SMF116TICFWD) Reserved.
zTICBWD	INT	4	(IBM name: SMF116TICBWD) Reserved.
zTIWTAS	INT	4	(IBM name: SMF116TIWTAS) Reserved.

Secondary segment: **SMF116#01_Thread_Level_Accounting**

Field Name	Type	Len	Description
<i>SMF116#01_Thread_Level_Accounting.<fieldname></i>			
zTAID	HEX	2	(IBM name: SMF116TAID) Control block id.
zTALEN	INT	2	

			(IBM name: SMF116TALEN) Length of control block.
zTADESC	CHAR	4	(IBM name: SMF116TADESC) Eye-catcher.
zTASTRT	TSTMP	8	(IBM name: SMF116TASTRT) Timestamp when WTAS was allocated.
zTAMTHR	INT	4	(IBM name: SMF116TAMTHR) Reserved.
zTAWTAS	INT	4	(IBM name: SMF116TAWTAS) Reserved.
zTALATC	HEX	8	(IBM name: SMF116TALATC) Reserved.
zTAHSHI	INT	4	(IBM name: SMF116TAHSHI) Reserved.
zTANEXT	INT	4	(IBM name: SMF116TANEXT) Reserved.

SMF116#01_Thread_Level_Accounting.zTAFLAG.<fieldname>

zAEOT	BIT	1	Accounting end of thread.
-------	-----	---	---------------------------

SMF116#01_Thread_Level_Accounting.<fieldname>

zTAWQCT	INT	4	(IBM name: SMF116TAWQCT) Count of WQSTAT blocks.
zTALWET	TIME	8	(IBM name: SMF116TALWET) Latch elapse time wait.
zTALWN	INT	4	(IBM name: SMF116TALWN) Number of times waiting for latch.
zTAOTET	TIME	8	(IBM name: SMF116TAOTET) 'Other' MQ Calls elapsed.
zTAOTCT	TIME	8	(IBM name: SMF116TAOTCT) 'Other' MQ calls CPU time.
zTAOTN	INT	4	(IBM name: SMF116TAOTN) Number of 'Other' calls.
zTAMLW	TIME	8	(IBM name: SMF116TAMLW) Max latch wait time.
zTAMLWN	INT	4	(IBM name: SMF116TAMLWN) Max wait latch number.
zTALOWN	HEX	8	(IBM name: SMF116TALOWN) Address of longest latch.
zTACMET	TIME	8	(IBM name: SMF116TACMET) Commit elapsed time.
zTACMCT	TIME	8	(IBM name: SMF116TACMCT) Commit CPU time.
zTACMN	INT	4	(IBM name: SMF116TACMN) Commit number of calls.
zTABAET	TIME	8	(IBM name: SMF116TABAET) Backout elapsed time.
zTABACT	TIME	8	(IBM name: SMF116TABACT) Backout CPU time.
zTABAN	INT	4	(IBM name: SMF116TABAN) Backout number of calls.
zTAJWET	TIME	8	(IBM name: SMF116TAJWET) Elapse time waiting for ALL journal writes to complete.
zTAJWN	INT	4	(IBM name: SMF116TAJWN) Total number of journal writes.

zTAJWB	INT	4	(IBM name: SMF116TAJWB) Number of bytes written.
zTAJCET	TIME	8	(IBM name: SMF116TAJCET) Elapsed time waiting for FORCE journal writes to complete.
zTAJCN	INT	4	(IBM name: SMF116TAJCN) Number of FORCE journal writes.
zTASUSN	INT	4	(IBM name: SMF116TASUSN) Number of task suspends.
zTASUSE	TIME	8	(IBM name: SMF116TASUSE) Total suspend time.
zTAPSE0	TIME	8	(IBM name: SMF116TAPSE0) Elapse time logging Page Set 0.
zTAPSN0	INT	4	(IBM name: SMF116TAPSN0) Number of logging request Page Set 0.
zTADBET	TIME	8	(IBM name: SMF116TADBET) DB2 Elapse thread.
zTADBES	TIME	8	(IBM name: SMF116TADBES) DB2 Elapse Server.
zTADBMT	TIME	8	(IBM name: SMF116TADBMT) DB2 max elapse thread.
zTADBMS	TIME	8	(IBM name: SMF116TADBMS) DB2 max elapse server.
zTADBCT	INT	4	(IBM name: SMF116TADBCT) DB2 requests.
zTACSEC	INT	4	(IBM name: SMF116TACSEC) Number of Coupling Facility IXLLSTE calls.
zTACMEC	INT	4	(IBM name: SMF116TACMEC) Number of Coupling Facility IXLLSTM calls.
zTARSEC	INT	4	(IBM name: SMF116TARSEC) Number of Coupling Facility IXLLSTE redrives.
zTARMEC	INT	4	(IBM name: SMF116TARMEC) Number of Coupling Facility IXLLSTM redrives.
zTASSTC	TIME	8	(IBM name: SMF116TASSTC) Time spent on Coupling Facility IXLLSTE calls.
zTAMSTC	TIME	8	(IBM name: SMF116TAMSTC) Time spent on Coupling Facility IXLLSTM calls.
zTASMRS	INT	4	(IBM name: SMF116TASMRS) Reads saved for SMDS.
zTASMRB	INT	4	(IBM name: SMF116TASMRB) Blocks read from SMDS.
zTASMWB	INT	4	(IBM name: SMF116TASMWB) Blocks written to SMDS.
zTASMRP	INT	4	(IBM name: SMF116TASMRP) Pages read from SMDS.
zTASMWP	INT	4	(IBM name: SMF116TASMWP) Pages written to SMDS.
zTASMWT	TIME	8	(IBM name: SMF116TASMWT) I/O wait time for SMDS.
zTAINTS	TSTMP	8	(IBM name: SMF116TAINTS) Interval start.
zTAINTE	TSTMP	8	(IBM name: SMF116TAINTE) Interval end.
zTAGPO	INT	4	(IBM name: SMF116TAGPO) Get Pages old.
zTAGPN	INT	4	(IBM name: SMF116TAGPN) Get Pages new.

zTACQF	INT	4	(IBM name: SMF116TACQF) Reserved.
zTACQB	INT	4	(IBM name: SMF116TACQB) Reserved.
zTAVER	INT	4	(IBM name: SMF116TAVER) Version number.
zTADBPT	INT	8	(IBM name: SMF116TADBPT) DB2 number of bytes written.
zTADBGT	INT	8	(IBM name: SMF116TADBGT) DB2 number of bytes read.
zTAPBHW	TIME	8	(IBM name: SMF116TAPBHW) Publish high water mark.
zTAPBTT	TIME	8	(IBM name: SMF116TAPBTT) Publish total elapse time.
zTATPET	TIME	8	(IBM name: SMF116TATPET) Topic Elapse time.
zTATPCT	TIME	8	(IBM name: SMF116TATPCT) Topic CPU time.
zTATPN	INT	4	(IBM name: SMF116TATPN) Topic count.
zTASUET	TIME	8	(IBM name: SMF116TASUET) MQSUB Elapse time.
zTASUCT	TIME	8	(IBM name: SMF116TASUCT) MQSUB CPU time.
zTASUN	INT	4	(IBM name: SMF116TASUN) MQSUB count.
zTASUSC	INT	4	(IBM name: SMF116TASUSC) MQSUB count of selectors.
zTASUSL	INT	4	(IBM name: SMF116TASUSL) MQSUB max length selector.
zTASQET	TIME	8	(IBM name: SMF116TASQET) MQSUBRQ Elapse time.
zTASQCT	TIME	8	(IBM name: SMF116TASQCT) MQSUBRQ CPU time.
zTASQN	INT	4	(IBM name: SMF116TASQN) MQSUBRQ count.
zTACTET	TIME	8	(IBM name: SMF116TACTET) MQCTL Elapse time.
zTACTCT	TIME	8	(IBM name: SMF116TACTCT) MQCTL CPU time.
zTACTN	INT	4	(IBM name: SMF116TACTN) MQCTL count.
zTASTET	TIME	8	(IBM name: SMF116TASTET) MQSTAT Elapse time.
zTASTCT	TIME	8	(IBM name: SMF116TASTCT) MQSTAT CPU time.
zTASTN	INT	4	(IBM name: SMF116TASTN) MQSTAT count.
zTACTSR	TIME	8	(IBM name: SMF116TACTSR) CPU TIME USED UNDER SRB.

SMF116#01_Thread_Level_Accounting.zCOMMITCF.<fieldname>

zCommitCFCount	INT	4	(IBM name: SMF116CommitCFCount) Number of calls to module for COMMIT.
zCommitCFSyncN	INT	4	(IBM name: SMF116CommitCFSyncN) Number of synchronous calls for COMMIT.

zCommitCFSyncET	FIXED	4 (10,6)	(IBM name: SMF116CommitCFSyncET) Total elapsed time for synchronous CF calls for COMMIT in seconds.
zCommitCFAsyncN	INT	4	(IBM name: SMF116CommitCFAsyncN) Number of Asynchronous calls for COMMIT.
zCommitCFAsyncET	FIXED	4 (10,6)	(IBM name: SMF116CommitCFAsyncET) Total elapsed time for Asynchronous CF calls for COMMIT in seconds.

SMF116#01_Thread_Level_Accounting.zPREFCF.<fieldname>

zPrefCFCount	INT	4	(IBM name: SMF116PrefCFCount) Number of calls to module for PREF.
zPrefCFSyncN	INT	4	(IBM name: SMF116PrefCFSyncN) Number of synchronous calls for PREF.
zPrefCFSyncET	FIXED	4 (10,6)	(IBM name: SMF116PrefCFSyncET) Total elapsed time for synchronous CF calls for PREF in seconds.
zPrefCFAsyncN	INT	4	(IBM name: SMF116PrefCFAsyncN) Number of Asynchronous calls for PREF.
zPrefCFAsyncET	FIXED	4 (10,6)	(IBM name: SMF116PrefCFAsyncET) Total elapsed time for Asynchronous CF calls for PREF in seconds.

SMF116#01_Thread_Level_Accounting.<fieldname>

zTAPRET	TIME	8	(IBM name: SMF116TAPRET) Prepare elapsed time.
zTAPRCT	TIME	8	(IBM name: SMF116TAPRCT) Prepare CPU time.
zTAPRN	INT	4	(IBM name: SMF116TAPRN) Number of Prepares.
zTALMAX	TIME	8	(IBM name: SMF116TALMAX) Array of maximum latch waits.

Secondary segment: SMF116#01_Queue_Level_Accounting

Field Name	Type	Len	Description
SMF116#01_Queue_Level_Accounting.<fieldname>			
zQAID	HEX	2	(IBM name: SMF116QAID) Control block id.
zQALEN	INT	2	(IBM name: SMF116QALEN) Length of control block.
zQADESC	CHAR	4	(IBM name: SMF116QADESC) Eye-catcher.
zWQVER	INT	4	(IBM name: SMF116WQVER) Version number.
zWQNEXT	HEX	4	(IBM name: SMF116WQNEXT) Reserved.
zCORREL	CHAR	16	(IBM name: SMF116CORREL) Correlator identifier connection WQST block to owning WTAS block.
zOBJNAME	CHAR	48	(IBM name: SMF116OBJNAME) Queue name as specified in OD of MQOPEN request.
zBASENAME	CHAR	48	(IBM name: SMF116BASENAME) Base queue name to which OBJNAME resolved.
zOPENTIME	TSTMP	8	(IBM name: SMF116OPENTIME) Time queue was first opened. (MQOPEN)
zCLOSTIME	TSTMP	8	(IBM name: SMF116CLOSTIME) Time queue was last closed. (MQCLOSE)

zQTYPE	INT	4	(IBM name: SMF116QTYPE) Type of queue.
zINDXTYPE	INT	4	(IBM name: SMF116INDXTYPE) Index type of queue.
zQSGDISP	CHAR	4	(IBM name: SMF116QSGDISP) QSGDISP of queue.
zOPENEYE	CHAR	4	(IBM name: SMF116OPENEYE) Eye catcher - 'OPEN'.
zOPENET	TIME	8	(IBM name: SMF116OPENET) Total elapsed time for MQOPENS.
zOPENCT	TIME	8	(IBM name: SMF116OPENCT) Total CPU time for MQOPENS.
zOPENN	INT	4	(IBM name: SMF116OPENN) Number of MQOPEN calls.
zCLOSEEYE	CHAR	4	(IBM name: SMF116CLOSEEYE) Eye catcher - 'CLOS'.
zCLOSEET	TIME	8	(IBM name: SMF116CLOSEET) Total elapsed time for MQCLOSEEs.
zCLOSECT	TIME	8	(IBM name: SMF116CLOSECT) Total CPU time for MQCLOSEEs.
zCLOSEN	INT	4	(IBM name: SMF116CLOSEN) Number of MQCLOSE calls.
zGETEYE	CHAR	4	(IBM name: SMF116GETEYE) Eyecatcher - 'GET'.
zGETET	TIME	8	(IBM name: SMF116GETET) Total elapsed time for MQGETs.
zGETCT	TIME	8	(IBM name: SMF116GETCT) Total CPU time for MQGETs.
zGETN	INT	4	(IBM name: SMF116GETN) Number of MQGET calls.
zGETBRWA	INT	4	(IBM name: SMF116GETBRWA) Number of MQGET browses any.
zGETBRWS	INT	4	(IBM name: SMF116GETBRWS) Number of MQGET browses specific.
zGETA	INT	4	(IBM name: SMF116GETA) Number of MQGET destructive any.
zGETS	INT	4	(IBM name: SMF116GETS) Number of MQGET destructive specific.
zGETERR	INT	4	(IBM name: SMF116GETERR) Number of unaccountable MQGETs.
zGETJWET	TIME	8	(IBM name: SMF116GETJWET) Elapsed time waiting for ALL journal writes to complete.
zGETJWN	INT	4	(IBM name: SMF116GETJWN) Number of journal writes.
zGETPSET	TIME	8	(IBM name: SMF116GETPSET) Elapsed time waiting for a read from a pageset.
zGETPSN	INT	4	(IBM name: SMF116GETPSN) Number of pageset MQGETs.
zGETSUSET	TIME	8	(IBM name: SMF116GETSUSET) Total elapsed time suspended for MQGETs.
zGETSUSN	INT	4	(IBM name: SMF116GETSUSN) Number of times suspended.
zGETEPAGE	INT	4	(IBM name: SMF116GETEPAGE) Number of pages skipped when doing MQGETs.
zGETSMMSG	INT	4	(IBM name: SMF116GETSMMSG) Number of messages skipped.

zGETEXMSG	INT	4	(IBM name: SMF116GETEXMSG) Number of expired messages.
zPUTEYE	CHAR	4	(IBM name: SMF116PUTEYE) Eyecatcher - 'PUT '.
zPUTET	TIME	8	(IBM name: SMF116PUTET) Total elapsed time for MQPUTs.
zPUTCT	TIME	8	(IBM name: SMF116PUTCT) Total CPU time for MQPUTs.
zPUTN	INT	4	(IBM name: SMF116PUTN) Number of MQPUT calls passed directly to waiting getter.
zPUTJWET	TIME	8	(IBM name: SMF116PUTJWET) Elapsed time waiting for ALL journal writes to complete.
zPUTJWN	INT	4	(IBM name: SMF116PUTJWN) Number of journal writes.
zPUTSUSET	TIME	8	(IBM name: SMF116PUTSUSET) Total elapsed time suspended for MQPUTs.
zPUTSUSN	INT	4	(IBM name: SMF116PUTSUSN) Number of times suspended.
zPUTPSET	TIME	8	(IBM name: SMF116PUTPSET) Elapsed time waiting for pageset for MQPUT.
zPUTPSN	INT	4	(IBM name: SMF116PUTPSN) Number of pageset MQPUTs.
zPUT1EYE	CHAR	4	(IBM name: SMF116PUT1EYE) Eyecatcher - 'PUT1'.
zPUT1ET	TIME	8	(IBM name: SMF116PUT1ET) Total elapsed time for MQPUT1s.
zPUT1CT	TIME	8	(IBM name: SMF116PUT1CT) Total CPU time for MQPUT1s.
zPUT1N	INT	4	(IBM name: SMF116PUT1N) Number of MQPUT1 calls.
zPUT1JWET	TIME	8	(IBM name: SMF116PUT1JWET) Elapsed time waiting for ALL journal writes to complete.
zPUT1JWN	INT	4	(IBM name: SMF116PUT1JWN) Number of journal writes.
zPUT1SUSET	TIME	8	(IBM name: SMF116PUT1SUSET) Total elapsed time suspended for MQPUT1s.
zPUT1SUSN	INT	4	(IBM name: SMF116PUT1SUSN) Number of times suspended.
zPUT1PSET	TIME	8	(IBM name: SMF116PUT1PSET) Elapsed time waiting for pageset for MQPUT1.
zPUT1PSN	INT	4	(IBM name: SMF116PUT1PSN) Number of pageset MQPUT1s.
zINQEYE	CHAR	4	(IBM name: SMF116INQEYE) Eyecatcher - 'INQ '.
zINQET	TIME	8	(IBM name: SMF116INQET) Total elapsed time for MQINQs.
zINQCT	TIME	8	(IBM name: SMF116INQCT) Total CPU time for MQINQs.
zINQN	INT	4	(IBM name: SMF116INQN) Number of MQINQ calls.
zSETEYE	CHAR	4	(IBM name: SMF116SETEYE) Eyecatcher - 'SET '.
zSETET	TIME	8	(IBM name: SMF116SETET) Total elapsed time for MQSETs.
zSETCT	TIME	8	(IBM name: SMF116SETCT) Total CPU time for MQSETs.

zSETN	INT	4	(IBM name: SMF116SETN) Number of MQSET calls.
zSETJWET	TIME	8	(IBM name: SMF116SETJWET) Elapsed time waiting for ALL journal writes to complete.
zSETJWN	INT	4	(IBM name: SMF116SETJWN) Number of journal writes.
zNPS	INT	4	(IBM name: SMF116NPS) Pageset number. This has a valid value if validput > 0 or validget > 0.
zCFSTRUCNAME	CHAR	12	(IBM name: SMF116CFSTRUCNAME) Name of CF structure.
zNBUFFPOOL	INT	4	(IBM name: SMF116NBUFFPOOL) Buffer pool number. This has a valid value if validput > 0 or validget > 0.
zPUTBYTES	TIME	8	(IBM name: SMF116PUTBYTES) Total bytes put by MQQUT/MQPUT1.
zGETBYTES	TIME	8	(IBM name: SMF116GETBYTES) Total bytes got by MQGET.
zVALIDPUT	INT	4	(IBM name: SMF116VALIDPUT) Number of MQPUT/MQPUT1s with data.
zVALIDGET	INT	4	(IBM name: SMF116VALIDGET) Number of MQGETs with data.
zNGEN	INT	4	(IBM name: SMF116NGEN) Number of generated messages.
zGETMAXMS	INT	4	(IBM name: SMF116GETMAXMS) Get maximum message size.
zGETMINMS	INT	4	(IBM name: SMF116GETMINMS) Get minimum message size.
zPUTMAXMS	INT	4	(IBM name: SMF116PUTMAXMS) Put maximum message size.
zPUTMINMS	INT	4	(IBM name: SMF116PUTMINMS) Put minimum message size.
zMAXLATNT	TIME	8	(IBM name: SMF116MAXLATNT) Maximum time on queue of message.
zMINLATNT	TIME	8	(IBM name: SMF116MINLATNT) Minimum time on queue of message.
zTOTLATNT	TIME	8	(IBM name: SMF116TOTLATNT) Total time on queue of messages.
zWQBACK	INT	4	(IBM name: SMF116WQBACK) Reserved.
zUSE_COUNT	INT	4	(IBM name: SMF116USE_COUNT) Use: +1 for open, -1 for close.
zTOTAL_USE	INT	4	(IBM name: SMF116TOTAL_USE) Total number of calls.
zGETPMSG	INT	4	(IBM name: SMF116GETPMSG) Number of persistent messages got by MQGET.
zPUTPMSG	INT	4	(IBM name: SMF116PUTPMSG) Number of persistent messages put by MQPUT.
zPUT1PMSG	INT	4	(IBM name: SMF116PUT1PMSG) Number of persistent messages put by MQPUT1.
zMAXQDPH	INT	4	(IBM name: SMF116MAXQDPH) Maximum encountered queue depth.
zFLAGS	HEX	2	(IBM name: SMF116FLAGS) Flags.
zGETDVAL	INT	4	(IBM name: SMF116GETDVAL) Number of Successful destructive gets.
zGETJCET	TIME	8	(IBM name: SMF116GETJCET) Elapsed time waiting for FORCE journal writes to complete.

zGETJCN	INT	4	(IBM name: SMF116GETJCN) Number of FORCE journal writes.
zPUTPWG	INT	4	(IBM name: SMF116PUTPWG) Number of MQPUT calls where msg.
zPUTJCET	TIME	8	(IBM name: SMF116PUTJCET) Elapsed time waiting for FORCE journal writes to complete.
zPUTJCN	INT	4	(IBM name: SMF116PUTJCN) Number of FORCE journal writes.
zPUT1PWG	INT	4	(IBM name: SMF116PUT1PWG) Number of MQPUT1 calls where message passed directly to waiting getter.
zPUT1JCET	TIME	8	(IBM name: SMF116PUT1JCET) Elapsed time waiting for FORCE journal writes to complete.
zPUT1JCN	INT	4	(IBM name: SMF116PUT1JCN) Number of FORCE journal writes.
zSETJCET	TIME	8	(IBM name: SMF116SETJCET) Elapsed time waiting for FORCE journal writes to complete.
zSETJCN	INT	4	(IBM name: SMF116SETJCN) Number of FORCE journal writes.
zPUTDSQ	INT	4	(IBM name: SMF116PUTDSQ) Puts direct to shared queue.
zPUTIGQ	INT	4	(IBM name: SMF116PUTIGQ) Puts direct to shared queue.
zPUT1IGQ	INT	4	(IBM name: SMF116PUT1IGQ) Puts direct to shared queue.
zSELCOUNT	INT	4	(IBM name: SMF116SELCOUNT) Count of selection requests.
zSELMAXLN	INT	4	(IBM name: SMF116SELMAXLN) Maximum length of selector.
zCBEYE	CHAR	4	(IBM name: SMF116CBEYE) Eyecatcher - 'CB '.
zCBET	TIME	8	(IBM name: SMF116CBET) Total elapsed time for MQCBs.
zCBCT	TIME	8	(IBM name: SMF116CBCT) Total CPU time for MQCBs.
zCBN	INT	4	(IBM name: SMF116CBN) Count of MQCB requests.
zOPENSUET	TIME	8	(IBM name: SMF116OPENSUET) OPEN suspend time.
zOPENSUN	INT	4	(IBM name: SMF116OPENSUN) OPEN suspend count.
zCLOSESUET	TIME	8	(IBM name: SMF116CLOSESUET) CLOSE suspend time.
zCLOSESUN	INT	4	(IBM name: SMF116CLOSESUN) CLOSE suspend count.
zOPENCF0	INT	4	(IBM name: SMF116OPENCF0) Number of calls for OPEN - no CF.
zCLOSECF0	INT	4	(IBM name: SMF116CLOSECF0) Number of calls for CLOSE - no CF.

SMF116#01_Queue_Level_Accounting.zOPENCFSTATS.<fieldname>

zOpenCFCount	INT	4	(IBM name: SMF116OpenCFCount) Number of calls to module for OPEN.
zOpenCFSyncN	INT	4	(IBM name: SMF116OpenCFSyncN) Number of synchronous calls for OPEN.
zOpenCFSyncET	FIXED	4 (10,6)	(IBM name: SMF116OpenCFSyncET) Total elapsed time for synchronous CF calls for OPEN in seconds.

zOpenCFAsyncN	INT	4	(IBM name: SMF116OpenCFAsyncN) Number of Asynchronous calls for OPEN.
zOpenCFAsyncET	FIXED	4 (10,6)	(IBM name: SMF116OpenCFAsyncET) Total elapsed time for Asynchronous CF calls for OPEN in seconds.

SMF116#01_Queue_Level_Accounting.zCLOSECFSTATS.<fieldname>

zCLOSECFCount	INT	4	(IBM name: SMF116CLOSECFCount) Number of calls to module for CLOSE.
zCLOSECFSyncN	INT	4	(IBM name: SMF116CLOSECFSyncN) Number of synchronous calls for CLOSE.
zCLOSECFSyncET	FIXED	4 (10,6)	(IBM name: SMF116CLOSECFSyncET) Total elapsed time for synchronous CF calls for CLOSE in seconds.
zCLOSECFAsyncN	INT	4	(IBM name: SMF116CLOSECFAsyncN) Number of Asynchronous calls for CLOSE.
zCLOSECFAsyncET	FIXED	4 (10,6)	(IBM name: SMF116CLOSECFAsyncET) Total elapsed time for Asynchronous CF calls for CLOSE in seconds.

SMF116#01_Queue_Level_Accounting.zGETCFSTATS.<fieldname>

zGETCFCount	INT	4	(IBM name: SMF116GETCFCount) Number of calls to module for GET.
zGETCFSyncN	INT	4	(IBM name: SMF116GETCFSyncN) Number of synchronous calls for GET.
zGETCFSyncET	FIXED	4 (10,6)	(IBM name: SMF116GETCFSyncET) Total elapsed time for synchronous CF calls for GET in seconds.
zGETCFAsyncN	INT	4	(IBM name: SMF116GETCFAsyncN) Number of Asynchronous calls for GET.
zGETCFAsyncET	FIXED	4 (10,6)	(IBM name: SMF116GETCFAsyncET) Total elapsed time for Asynchronous CF calls for GET in seconds.

SMF116#01_Queue_Level_Accounting.zPUTCFSTATS.<fieldname>

zPUTCFCount	INT	4	(IBM name: SMF116PUTCFCount) Number of calls to module for PUT.
zPUTCFSyncN	INT	4	(IBM name: SMF116PUTCFSyncN) Number of synchronous calls for PUT.
zPUTCFSyncET	FIXED	4 (10,6)	(IBM name: SMF116PUTCFSyncET) Total elapsed time for synchronous CF calls for PUT in seconds.
zPUTCFAsyncN	INT	4	(IBM name: SMF116PUTCFAsyncN) Number of Asynchronous calls for PUT.
zPUTCFAsyncET	FIXED	4 (10,6)	(IBM name: SMF116PUTCFAsyncET) Total elapsed time for Asynchronous CF calls for PUT in seconds.

SMF116#01_Queue_Level_Accounting.zPUT1CFSTATS.<fieldname>

zPUT1CFCount	INT	4	(IBM name: SMF116PUT1CFCount) Number of calls to module for PUT1.
zPUT1CFSyncN	INT	4	(IBM name: SMF116PUT1CFSyncN) Number of synchronous calls for PUT1.
zPUT1CFSyncET	FIXED	4 (10,6)	(IBM name: SMF116PUT1CFSyncET) Total elapsed time for synchronous CF calls for PUT1 in seconds.
zPUT1CFAsyncN	INT	4	(IBM name: SMF116PUT1CFAsyncN) Number of Asynchronous calls for PUT1.
zPUT1CFAsyncET	FIXED	4 (10,6)	(IBM name: SMF116PUT1CFAsyncET) Total elapsed time for Asynchronous CF calls for PUT1 in seconds.

SMF116#01_Queue_Level_Accounting.<fieldname>

zPUBLISHEDN	INT	4	(IBM name: SMF116PUBLISHEDN) Number of publications made.
-------------	-----	---	--

zRES1	HEX	12	(IBM name: SMF116RES1) reserved.
zTOPICOPENSRB	TIME	8	(IBM name: SMF116TOPICOPENSRB) Topic open on SRB task.
zTOPICPutSRB	TIME	8	(IBM name: SMF116TOPICPutSRB) Topic Put on SRB task.
zTOPICput1SRB	TIME	8	(IBM name: SMF116TOPICput1SRB) Topic Put1 on SRB task.
zTOPICCloseSRB	TIME	8	(IBM name: SMF116TOPICCloseSRB) Topic Close on SRB task.
zPUTDDLY	INT	4	(IBM name: SMF116PUTDDLY) Number of puts with delivery delay.

Record Type 116 Subtype 2 - More Queue Level Data Accounting

Primary Segment:

- [SMF116#02_MQSeries_Accounting](#)

Secondary Segment(s): 3 (in alphabetical order)

- [SMF116#02_Product_Information](#)
- [SMF116#02_Queue_Level_Accounting](#)
- [SMF116#02_Thread_Level_Identification](#)

Primary segment: [SMF116#02_MQSeries_Accounting](#)

Field Name	Type	Len	Description
<i>SMF116#02_MQSeries_Accounting.<fieldname></i>			
<i>SMF116#02_MQSeries_Accounting.Header.<fieldname></i>			
zFLG	HEX	1	(IBM name: SMF116FLG) System indicator: Bit Meaning when set 0-2 Reserved. 3-6 Version indicators 7 Reserved.
zRTY	INT	1	(IBM name: SMF116RTY) Record type 116
zTME	TSTMP	8	(IBM name: SMF116TME) Date/Time that the record was moved into the SMF buffer.
zSID	CHAR	4	(IBM name: SMF116SID) z/OS Subsystem identification (from the SID parameter).
zSSID	CHAR	4	(IBM name: SMF116SSID) IBM MQ subsystem id.
zSTY	INT	2	(IBM name: SMF116STY) Record subtype.
zREL	CHAR	3	(IBM name: SMF116REL) IBM MQ version.
<i>SMF116#02_MQSeries_Accounting.Self_defining_Section.<fieldname></i>			
zPSO	INT	4	(IBM name: SMF116PSO) Offset to the product section from the beginning of the record (including RDW).
zPSL	INT	2	(IBM name: SMF116PSL) Length of the product section.
zPSN	INT	2	(IBM name: SMF116PSN) Number of product sections.
zTIO	INT	4	(IBM name: SMF116TIO) Offset to the Thread Level ID Data section from the beginning of the record (including RDW).
zTIL	INT	2	(IBM name: SMF116TIL) Length of the Thread Level ID Data section.
zTIN	INT	2	(IBM name: SMF116TIN) Number of Thread Level ID Data sections.
zQAO	INT	4	(IBM name: SMF116QAO) Offset to the Queue Level Accounting Data section from the beginning of the record (including RDW).
zQAL	INT	2	(IBM name: SMF116QAL) Length of the Queue Level Accounting Data section.
zQAN	INT	2	(IBM name: SMF116QAN) Number of Queue Level Accounting Data sections.

Secondary segment: **SMF116#02_Product_Information**

Field Name	Type	Len	Description
<i>SMF116#02_Product_Information.<fieldname></i>			
zHLEN	INT	2	(IBM name: SMF116HLEN) Length of the standard header.
zHTYP	INT (ENUM)	1	(IBM name: SMF116HTYP) Header Type.
zHRMID	INT	1	(IBM name: SMF116HRMID) Resource manager id.
zHIID	INT	2	(IBM name: SMF116HIID) IFC ID.
zHNSDA	INT	1	(IBM name: SMF116HNSDA) Number of self-defining areas.
zHREL	INT	1	(IBM name: SMF116HREL) Release indicator.
zHACE	HEX	4	(IBM name: SMF116HACE) ACE address - dispatch unit address.
zSNM	CHAR	4	(IBM name: SMF116SNM) Subsystem name.
zSTCK	TSTMP	8	(IBM name: SMF116STCK) STCK Store clock value of header.
zISEQ	INT	4	(IBM name: SMF116ISEQ) Sequence number for IFCID.
zWSEQ	INT	4	(IBM name: SMF116WSEQ) Sequence number for destination.

SMF116#02_Product_Information.zHFLG.<fieldname>

zSMFC	BIT	1	More SMF records follow for this interval.
-------	-----	---	--

SMF116#02_Product_Information.<fieldname>

zCLEN	INT	2	(IBM name: SMF116CLEN) Length of the standard header.
zCTYP	INT (ENUM)	1	(IBM name: SMF116CTYP) Header Type. (Correlation Header = 2)
zCAuthId	CHAR	8	(IBM name: SMF116CAuthId) Authorization id.
zCCV	CHAR	12	(IBM name: SMF116CCV) Correlation id value.
zCCN	CHAR	8	(IBM name: SMF116CCN) Connection name. Not valid on end of memory and reflects the NVS home ASID connection name.
zCOPID	CHAR	8	(IBM name: SMF116COPID) Original operator id.
zCATYP	HEX	4	(IBM name: SMF116CATYP) Connecting System Type Code.
zCTOKN	CHAR	22	(IBM name: SMF116CTOKN) Accounting token.
zCNID	CHAR	16	(IBM name: SMF116CNID) Network identifier.

Secondary segment: **SMF116#02_Thread_Level_Identification**

Field Name	Type	Len	Description
<i>SMF116#02_Thread_Level_Identification.<fieldname></i>			
zTIID	HEX	2	(IBM name: SMF116TIID) Control block id.
zTILEN	INT	2	(IBM name: SMF116TILEN) Length of control block.
zTIDESC	CHAR	4	(IBM name: SMF116TIDESC) Eye-catcher.
zTIATYP	INT	4	(IBM name: SMF116TIATYP) Connection type.
zTICCN	CHAR	8	(IBM name: SMF116TICCN) Connection name.
zTIOPID	CHAR	8	(IBM name: SMF116TIOPID) CCBOPID Operator ID.
zTINID	CHAR	16	(IBM name: SMF116TINID) NID.
zTICORI	CHAR	12	(IBM name: SMF116TICORI) Correlator.
zTIUOWI	CHAR	24	(IBM name: SMF116TIUOWI) LUWID.
zTIACCT	CHAR	22	(IBM name: SMF116TIACCT) Accounting token.
zTICHL	CHAR	20	(IBM name: SMF116TICHL) Channel name.
zTICHL C	CHAR	48	(IBM name: SMF116TICHL C) Channel connection name.
zTICTXT	CHAR	16	(IBM name: SMF116TICTXT) current context token.
zTITRAN	CHAR	8	(IBM name: SMF116TITRAN) CCBUSER Userid.
zTICFWD	INT	4	(IBM name: SMF116TICFWD) Reserved.
zTICBWD	INT	4	(IBM name: SMF116TICBWD) Reserved.
zTIWTAS	INT	4	(IBM name: SMF116TIWTAS) Reserved.

Secondary segment: **SMF116#02_Queue_Level_Accounting**

Field Name	Type	Len	Description
<i>SMF116#02_Queue_Level_Accounting.<fieldname></i>			
zQAID	HEX	2	(IBM name: SMF116QAID) Control block id.
zQALEN	INT	2	(IBM name: SMF116QALEN) Length of control block.
zQADESC	CHAR	4	(IBM name: SMF116QADESC) Eye-catcher.
zWQVER	INT	4	(IBM name: SMF116WQVER) Version number.
zWQNEXT	HEX	4	(IBM name: SMF116WQNEXT) Reserved.

zCORREL	CHAR	16	(IBM name: SMF116CORREL) Correlator identifier connection WQST block to owning WTAS block.
zOBJNAME	CHAR	48	(IBM name: SMF116OBJNAME) Queue name as specified in OD of MQOPEN request.
zBASENAME	CHAR	48	(IBM name: SMF116BASENAME) Base queue name to which OBJNAME resolved.
zOPENTIME	TSTMP	8	(IBM name: SMF116OPENTIME) Time queue was first opened. (MQOPEN)
zCLOSTIME	TSTMP	8	(IBM name: SMF116CLOSTIME) Time queue was last closed. (MQCLOSE)
zQTYPE	INT	4	(IBM name: SMF116QTYPE) Type of queue.
zINDXTYPE	INT	4	(IBM name: SMF116INDXTYPE) Index type of queue.
zQSGDISP	CHAR	4	(IBM name: SMF116QSGDISP) QSGDISP of queue.
zOPENEYE	CHAR	4	(IBM name: SMF116OPENEYE) Eye catcher - 'OPEN'.
zOPENET	TIME	8	(IBM name: SMF116OPENET) Total elapsed time for MQOPENS.
zOPENCT	TIME	8	(IBM name: SMF116OPENCT) Total CPU time for MQOPENS.
zOPENN	INT	4	(IBM name: SMF116OPENN) Number of MQOPEN calls.
zCLOSEEYE	CHAR	4	(IBM name: SMF116CLOSEEYE) Eye catcher - 'CLOS'.
zCLOSEET	TIME	8	(IBM name: SMF116CLOSEET) Total elapsed time for MQCLOSEs.
zCLOSECT	TIME	8	(IBM name: SMF116CLOSECT) Total CPU time for MQCLOSEs.
zCLOSEN	INT	4	(IBM name: SMF116CLOSEN) Number of MQCLOSE calls.
zGETEYE	CHAR	4	(IBM name: SMF116GETEYE) Eyecatcher - 'GET'.
zGETET	TIME	8	(IBM name: SMF116GETET) Total elapsed time for MQGETs.
zGETCT	TIME	8	(IBM name: SMF116GETCT) Total CPU time for MQGETs.
zGETN	INT	4	(IBM name: SMF116GETN) Number of MQGET calls.
zGETBRWA	INT	4	(IBM name: SMF116GETBRWA) Number of MQGET browses any.
zGETBRWS	INT	4	(IBM name: SMF116GETBRWS) Number of MQGET browses specific.
zGETA	INT	4	(IBM name: SMF116GETA) Number of MQGET destructive any.
zGETS	INT	4	(IBM name: SMF116GETS) Number of MQGET destructive specific.
zGETERR	INT	4	(IBM name: SMF116GETERR) Number of unaccountable MQGETs.
zGETJWET	TIME	8	(IBM name: SMF116GETJWET) Elapsed time waiting for ALL journal writes to complete.
zGETJWN	INT	4	(IBM name: SMF116GETJWN) Number of journal writes.
zGETPSET	TIME	8	(IBM name: SMF116GETPSET) Elapsed time waiting for a read from a pageset.

zGETPSN	INT	4	(IBM name: SMF116GETPSN) Number of pageset MQGETs.
zGETSUSET	TIME	8	(IBM name: SMF116GETSUSET) Total elapsed time suspended for MQGETs.
zGETSUSN	INT	4	(IBM name: SMF116GETSUSN) Number of times suspended.
zGETEPAGE	INT	4	(IBM name: SMF116GETEPAGE) Number of pages skipped when doing MQGETs.
zGETSMMSG	INT	4	(IBM name: SMF116GETSMMSG) Number of messages skipped.
zGETEXMSG	INT	4	(IBM name: SMF116GETEXMSG) Number of expired messages.
zPUTEYE	CHAR	4	(IBM name: SMF116PUTEYE) Eyecatcher - 'PUT'.
zPUTET	TIME	8	(IBM name: SMF116PUTET) Total elapsed time for MQPUTs.
zPUTCT	TIME	8	(IBM name: SMF116PUTCT) Total CPU time for MQPUTs.
zPUTN	INT	4	(IBM name: SMF116PUTN) Number of MQPUT calls passed directly to waiting getter.
zPUTJWET	TIME	8	(IBM name: SMF116PUTJWET) Elapsed time waiting for ALL journal writes to complete.
zPUTJWN	INT	4	(IBM name: SMF116PUTJWN) Number of journal writes.
zPUTSUSET	TIME	8	(IBM name: SMF116PUTSUSET) Total elapsed time suspended for MQPUTs.
zPUTSUSN	INT	4	(IBM name: SMF116PUTSUSN) Number of times suspended.
zPUTPSET	TIME	8	(IBM name: SMF116PUTPSET) Elapsed time waiting for pageset for MQPUT.
zPUTPSN	INT	4	(IBM name: SMF116PUTPSN) Number of pageset MQPUTs.
zPUT1EYE	CHAR	4	(IBM name: SMF116PUT1EYE) Eyecatcher - 'PUT1'.
zPUT1ET	TIME	8	(IBM name: SMF116PUT1ET) Total elapsed time for MQPUT1s.
zPUT1CT	TIME	8	(IBM name: SMF116PUT1CT) Total CPU time for MQPUT1s.
zPUT1N	INT	4	(IBM name: SMF116PUT1N) Number of MQPUT1 calls.
zPUT1JWET	TIME	8	(IBM name: SMF116PUT1JWET) Elapsed time waiting for ALL journal writes to complete.
zPUT1JWN	INT	4	(IBM name: SMF116PUT1JWN) Number of journal writes.
zPUT1SUSET	TIME	8	(IBM name: SMF116PUT1SUSET) Total elapsed time suspended for MQPUT1s.
zPUT1SUSN	INT	4	(IBM name: SMF116PUT1SUSN) Number of times suspended.
zPUT1PSET	TIME	8	(IBM name: SMF116PUT1PSET) Elapsed time waiting for pageset for MQPUT1.
zPUT1PSN	INT	4	(IBM name: SMF116PUT1PSN) Number of pageset MQPUT1s.
zINQEYE	CHAR	4	(IBM name: SMF116INQEYE) Eyecatcher - 'INQ'.
zINQET	TIME	8	(IBM name: SMF116INQET) Total elapsed time for MQINQs.

zINQCT	TIME	8	(IBM name: SMF116INQCT) Total CPU time for MQINQs.
zINQN	INT	4	(IBM name: SMF116INQN) Number of MQINQ calls.
zSETEYE	CHAR	4	(IBM name: SMF116SETEYE) Eyecatcher - 'SET '.
zSETET	TIME	8	(IBM name: SMF116SETET) Total elapsed time for MQSETs.
zSETCT	TIME	8	(IBM name: SMF116SETCT) Total CPU time for MQSETs.
zSETN	INT	4	(IBM name: SMF116SETN) Number of MQSET calls.
zSETJWET	TIME	8	(IBM name: SMF116SETJWET) Elapsed time waiting for ALL journal writes to complete.
zSETJWN	INT	4	(IBM name: SMF116SETJWN) Number of journal writes.
zNPS	INT	4	(IBM name: SMF116NPS) Pageset number. This has a valid value if validput > 0 or validget > 0.
zCFSTRUCNAME	CHAR	12	(IBM name: SMF116CFSTRUCNAME) Name of CF structure.
zNBUFFPOOL	INT	4	(IBM name: SMF116NBUFFPOOL) Buffer pool number. This has a valid value if validput > 0 or validget > 0.
zPUTBYTES	TIME	8	(IBM name: SMF116PUTBYTES) Total bytes put by MQQUT/MQPUT1.
zGETBYTES	TIME	8	(IBM name: SMF116GETBYTES) Total bytes got by MQGET.
zVALIDPUT	INT	4	(IBM name: SMF116VALIDPUT) Number of MQPUT/MQPUT1s with data.
zVALIDGET	INT	4	(IBM name: SMF116VALIDGET) Number of MQGETs with data.
zNGEN	INT	4	(IBM name: SMF116NGEN) Number of generated messages.
zGETMAXMS	INT	4	(IBM name: SMF116GETMAXMS) Get maximum message size.
zGETMINMS	INT	4	(IBM name: SMF116GETMINMS) Get minimum message size.
zPUTMAXMS	INT	4	(IBM name: SMF116PUTMAXMS) Put maximum message size.
zPUTMINMS	INT	4	(IBM name: SMF116PUTMINMS) Put minimum message size.
zMAXLATNT	TIME	8	(IBM name: SMF116MAXLATNT) Maximum time on queue of message.
zMINLATNT	TIME	8	(IBM name: SMF116MINLATNT) Minimum time on queue of message.
zTOTLATNT	TIME	8	(IBM name: SMF116TOTLATNT) Total time on queue of messages.
zWQBACK	INT	4	(IBM name: SMF116WQBACK) Reserved.
zUSE_COUNT	INT	4	(IBM name: SMF116USE_COUNT) Use: +1 for open, -1 for close.
zTOTAL_USE	INT	4	(IBM name: SMF116TOTAL_USE) Total number of calls.
zGETPMSG	INT	4	(IBM name: SMF116GETPMSG) Number of persistent messages got by MQGET.
zPUTPMSG	INT	4	(IBM name: SMF116PUTPMSG) Number of persistent messages put by MQPUT.

zPUT1PMSG	INT	4	(IBM name: SMF116PUT1PMSG) Number of persistent messages put by MQPUT1.
zMAXQDPTH	INT	4	(IBM name: SMF116MAXQDPTH) Maximum encountered queue depth.
zFLAGS	HEX	2	(IBM name: SMF116FLAGS) Flags.
zGETDVAL	INT	4	(IBM name: SMF116GETDVAL) Number of Successful destructive gets.
zGETJCET	TIME	8	(IBM name: SMF116GETJCET) Elapsed time waiting for FORCE journal writes to complete.
zGETJCN	INT	4	(IBM name: SMF116GETJCN) Number of FORCE journal writes.
zPUTPWG	INT	4	(IBM name: SMF116PUTPWG) Number of MQPUT calls where msg.
zPUTJCET	TIME	8	(IBM name: SMF116PUTJCET) Elapsed time waiting for FORCE journal writes to complete.
zPUTJCN	INT	4	(IBM name: SMF116PUTJCN) Number of FORCE journal writes.
zPUT1PWG	INT	4	(IBM name: SMF116PUT1PWG) Number of MQPUT1 calls where message passed directly to waiting getter.
zPUT1JCET	TIME	8	(IBM name: SMF116PUT1JCET) Elapsed time waiting for FORCE journal writes to complete.
zPUT1JCN	INT	4	(IBM name: SMF116PUT1JCN) Number of FORCE journal writes.
zSETJCET	TIME	8	(IBM name: SMF116SETJCET) Elapsed time waiting for FORCE journal writes to complete.
zSETJCN	INT	4	(IBM name: SMF116SETJCN) Number of FORCE journal writes.
zPUTDSQ	INT	4	(IBM name: SMF116PUTDSQ) Puts direct to shared queue.
zPUTIGQ	INT	4	(IBM name: SMF116PUTIGQ) Puts direct to shared queue.
zPUT1IGQ	INT	4	(IBM name: SMF116PUT1IGQ) Puts direct to shared queue.
zSELCOUNT	INT	4	(IBM name: SMF116SELCOUNT) Count of selection requests.
zSELMAXLN	INT	4	(IBM name: SMF116SELMAXLN) Maximum length of selector.
zCBEYE	CHAR	4	(IBM name: SMF116CBEYE) Eyecatcher - 'CB '.
zCBET	TIME	8	(IBM name: SMF116CBET) Total elapsed time for MQCBs.
zCBCT	TIME	8	(IBM name: SMF116CBCT) Total CPU time for MQCBs.
zCBN	INT	4	(IBM name: SMF116CBN) Count of MQCB requests.
zOPENSUET	TIME	8	(IBM name: SMF116OPENSUET) OPEN suspend time.
zOPENSUN	INT	4	(IBM name: SMF116OPENSUN) OPEN suspend count.
zCLOSESUET	TIME	8	(IBM name: SMF116CLOSESUET) CLOSE suspend time.
zCLOSESUN	INT	4	(IBM name: SMF116CLOSESUN) CLOSE suspend count.
zOPENCF0	INT	4	(IBM name: SMF116OPENCF0) Number of calls for OPEN - no CF.

zCLOSECF0	INT	4	(IBM name: SMF116CLOSECF0) Number of calls for CLOSE - no CF.
-----------	-----	---	--

SMF116#02_Queue_Level_Accounting.zOPENCFSTATS.<fieldname>

zOpenCFCount	INT	4	(IBM name: SMF116OpenCFCount) Number of calls to module for OPEN.
zOpenCFSyncN	INT	4	(IBM name: SMF116OpenCFSyncN) Number of synchronous calls for OPEN.
zOpenCFSyncET	FIXED	4 (10,6)	(IBM name: SMF116OpenCFSyncET) Total elapsed time for synchronous CF calls for OPEN in seconds.
zOpenCFAsyncN	INT	4	(IBM name: SMF116OpenCFAsyncN) Number of Asynchronous calls for OPEN.
zOpenCFAsyncET	FIXED	4 (10,6)	(IBM name: SMF116OpenCFAsyncET) Total elapsed time for Asynchronous CF calls for OPEN in seconds.

SMF116#02_Queue_Level_Accounting.zCLOSECFSTATS.<fieldname>

zCLOSECFCount	INT	4	(IBM name: SMF116CLOSECFCount) Number of calls to module for CLOSE.
zCLOSECFSyncN	INT	4	(IBM name: SMF116CLOSECFSyncN) Number of synchronous calls for CLOSE.
zCLOSECFSyncET	FIXED	4 (10,6)	(IBM name: SMF116CLOSECFSyncET) Total elapsed time for synchronous CF calls for CLOSE in seconds.
zCLOSECFAsyncN	INT	4	(IBM name: SMF116CLOSECFAsyncN) Number of Asynchronous calls for CLOSE.
zCLOSECFAsyncET	FIXED	4 (10,6)	(IBM name: SMF116CLOSECFAsyncET) Total elapsed time for Asynchronous CF calls for CLOSE in seconds.

SMF116#02_Queue_Level_Accounting.zGETCFSTATS.<fieldname>

zGETCFCount	INT	4	(IBM name: SMF116GETCFCount) Number of calls to module for GET.
zGETCFSyncN	INT	4	(IBM name: SMF116GETCFSyncN) Number of synchronous calls for GET.
zGETCFSyncET	FIXED	4 (10,6)	(IBM name: SMF116GETCFSyncET) Total elapsed time for synchronous CF calls for GET in seconds.
zGETCFAsyncN	INT	4	(IBM name: SMF116GETCFAsyncN) Number of Asynchronous calls for GET.
zGETCFAsyncET	FIXED	4 (10,6)	(IBM name: SMF116GETCFAsyncET) Total elapsed time for Asynchronous CF calls for GET in seconds.

SMF116#02_Queue_Level_Accounting.zPUTCFSTATS.<fieldname>

zPUTCFCount	INT	4	(IBM name: SMF116PUTCFCount) Number of calls to module for PUT.
zPUTCFSyncN	INT	4	(IBM name: SMF116PUTCFSyncN) Number of synchronous calls for PUT.
zPUTCFSyncET	FIXED	4 (10,6)	(IBM name: SMF116PUTCFSyncET) Total elapsed time for synchronous CF calls for PUT in seconds.
zPUTCFAsyncN	INT	4	(IBM name: SMF116PUTCFAsyncN) Number of Asynchronous calls for PUT.
zPUTCFAsyncET	FIXED	4 (10,6)	(IBM name: SMF116PUTCFAsyncET) Total elapsed time for Asynchronous CF calls for PUT in seconds.

SMF116#02_Queue_Level_Accounting.zPUT1CFSTATS.<fieldname>

zPUT1CFCount	INT	4	(IBM name: SMF116PUT1CFCount) Number of calls to module for PUT1.
zPUT1CFSyncN	INT	4	(IBM name: SMF116PUT1CFSyncN) Number of synchronous calls for PUT1.

zPUT1CFSyncET	FIXED	4 (10,6)	(IBM name: SMF116PUT1CFSyncET) Total elapsed time for synchronous CF calls for PUT1 in seconds.
zPUT1CFAsyncN	INT	4	(IBM name: SMF116PUT1CFAsyncN) Number of Asynchronous calls for PUT1.
zPUT1CFAsyncET	FIXED	4 (10,6)	(IBM name: SMF116PUT1CFAsyncET) Total elapsed time for Asynchronous CF calls for PUT1 in seconds.

SMF116#02_Queue_Level_Accounting.<fieldname>

zPUBLISHEDN	INT	4	(IBM name: SMF116PUBLISHEDN) Number of publications made.
zRES1	HEX	12	(IBM name: SMF116RES1) reserved.
zTOPICOPENSRB	TIME	8	(IBM name: SMF116TOPICOPENSRB) Topic open on SRB task.
zTOPICPutSRB	TIME	8	(IBM name: SMF116TOPICPutSRB) Topic Put on SRB task.
zTOPICput1SRB	TIME	8	(IBM name: SMF116TOPICput1SRB) Topic Put1 on SRB task.
zTOPICCloseSRB	TIME	8	(IBM name: SMF116TOPICCloseSRB) Topic Close on SRB task.
zPUTDDLY	INT	4	(IBM name: SMF116PUTDDLY) Number of puts with delivery delay.

Record Type 116 Subtype 10 - Channel Statistics

Primary Segment:

- [SMF116#10_MQSeries_Accounting](#)

Secondary Segment(s): 2 (in alphabetical order)

- [SMF116#10_Channel_Statistics](#)
- [SMF116#10_Product_Information](#)

Primary segment: [SMF116#10_MQSeries_Accounting](#)

Field Name	Type	Len	Description
<i>SMF116#10_MQSeries_Accounting.<fieldname></i>			
<i>SMF116#10_MQSeries_Accounting.Header.<fieldname></i>			
zFLG	HEX	1	(IBM name: SMF116FLG) System indicator: Bit Meaning when set 0-2 Reserved. 3-6 Version indicators 7 Reserved.
zRTY	INT	1	(IBM name: SMF116RTY) Record type 116
zTME	TSTMP	8	(IBM name: SMF116TME) Date/Time that the record was moved into the SMF buffer.
zSID	CHAR	4	(IBM name: SMF116SID) z/OS Subsystem identification (from the SID parameter).
zSSID	CHAR	4	(IBM name: SMF116SSID) IBM MQ subsystem id.
zSTY	INT	2	(IBM name: SMF116STY) Record subtype.
zREL	CHAR	3	(IBM name: SMF116REL) IBM MQ version.

<i>SMF116#10_MQSeries_Accounting.Self_defining_Section.<fieldname></i>			
zPSO	INT	4	(IBM name: SMF116PSO) Offset to the product section from the beginning of the record (including RDW).
zPSL	INT	2	(IBM name: SMF116PSL) Length of the product section.
zPSN	INT	2	(IBM name: SMF116PSN) Number of product sections.
zR1O	INT	4	(IBM name: SMF116R1O) Offset to the Channel Statistics Data section from the beginning of the record (including RDW).
zR1L	INT	2	(IBM name: SMF116R1L) Length of the Channel Statistics Data section.
zR1N	INT	2	(IBM name: SMF116R1N) Number of Channel Statistics Data sections.

Secondary segment: [SMF116#10_Product_Information](#)

Field Name	Type	Len	Description
<i>SMF116#10_Product_Information.<fieldname></i>			
zHLEN	INT	2	(IBM name: SMF116HLEN) Length of the standard header.

zHTYP	INT (ENUM)	1	(IBM name: SMF116HTYP) Header Type.
zHRMID	INT	1	(IBM name: SMF116HRMID) Resource manager id.
zHIID	INT	2	(IBM name: SMF116HIID) IFC ID.
zHNSDA	INT	1	(IBM name: SMF116HNSDA) Number of self-defining areas.
zHREL	INT	1	(IBM name: SMF116HREL) Release indicator.
zHACE	HEX	4	(IBM name: SMF116HACE) ACE address - dispatch unit address.
zSNM	CHAR	4	(IBM name: SMF116SNM) Subsystem name.
zSTCK	TSTMP	8	(IBM name: SMF116STCK) STCK Store clock value of header.
zISEQ	INT	4	(IBM name: SMF116ISEQ) Sequence number for IFCID.
zWSEQ	INT	4	(IBM name: SMF116WSEQ) Sequence number for destination.

SMF116#10_Product_Information.zHFLG.<fieldname>

zSMFC	BIT	1	More SMF records follow for this interval.
-------	-----	---	--

Secondary segment: SMF116#10_Channel_Statistics

Field Name	Type	Len	Description
<i>SMF116#10_Channel_Statistics.<fieldname></i>			
zCHID	HEX	2	(IBM name: SMF116CHID) Control block id.
zCHLEN	INT	2	(IBM name: SMF116CHLEN) Length of control block.
zCHDESC	CHAR	4	(IBM name: SMF116CHDESC) Eye-catcher.
zCHTime	TSTMP	8	(IBM name: SMF116CHTime) Channel status collected time.
zCHName	CHAR	20	(IBM name: SMF116CHName) Channel name.
zCHDisp	INT	1	(IBM name: SMF116CHDisp) Channel disposition. (See MQCHLD_*)
zCHType	INT	1	(IBM name: SMF116CHType) Channel type. (See MQCHT_*)
zCHState	INT	1	(IBM name: SMF116CHState) Channel state. (See MQCHS_*)
zCHSTCL	INT	1	(IBM name: SMF116CHSTCL) Setting of STATCHL. (See MQMON_*)
zCHCNNM	CHAR	48	(IBM name: SMF116CHCNNM) Connection name.
zCHSTRT	TSTMP	8	(IBM name: SMF116CHSTRT) Channel start date & time.
zCHLUDT	TSTMP	8	(IBM name: SMF116CHLUDT) Channel stop date & time.
zCHLMST	TSTMP	8	

			(IBM name: SMF116CHLMST) Last message date & time.
zCHCBSZ	INT	4	(IBM name: SMF116CHCBSZ) Channel batch size.
zCHNMSG	INT	4	(IBM name: SMF116CHNMSG) Number of messages, or Number of MQI calls (for SVRCONN).
zCHNPMG	INT	4	(IBM name: SMF116CHNPMG) Number of persistent messages.
zCHBATC	INT	4	(IBM name: SMF116CHBATC) Number of batches.
zCHFUBA	INT	4	(IBM name: SMF116CHFUBA) Number of full batches.
zCHBFST	INT	4	(IBM name: SMF116CHBFST) Number of transmission buffer sent.
zCHBFRC	INT	4	(IBM name: SMF116CHBFRC) Number of transmission buffer received.
zCHCSCV	INT	4	(IBM name: SMF116CHCSCV) Current shared conversation.
zCHNBYT	INT	8	(IBM name: SMF116CHNBYT) Number of bytes.
zCHNPBY	INT	8	(IBM name: SMF116CHNPBY) Number of bytes in persistent messages.
zCHBYST	INT	8	(IBM name: SMF116CHBYST) Number of bytes sent.
zCHBYRC	INT	8	(IBM name: SMF116CHBYRC) Number of bytes received.
zCHCPRA	INT	4	(IBM name: SMF116CHCPRA) Compression rate.
zCHETAV	FIXED	4 (10,6)	(IBM name: SMF116CHETAV) Exit time average (seconds).
zCHETMN	FIXED	4 (10,6)	(IBM name: SMF116CHETMN) Exit time minimum (seconds).
zCHETMX	FIXED	4 (10,6)	(IBM name: SMF116CHETMX) Exit time maximum (seconds).
zCHETDT	TSTMP	8	(IBM name: SMF116CHETDT) Exit time maximum date & time.
zCHDNRT	FIXED	4 (10,6)	(IBM name: SMF116CHDNRT) DNS resolution time (seconds).
zCHNTAV	FIXED	4 (10,6)	(IBM name: SMF116CHNTAV) Net time average (seconds).
zCHNTMN	FIXED	4 (10,6)	(IBM name: SMF116CHNTMN) Net time minimum (seconds).
zCHNTMX	FIXED	4 (10,6)	(IBM name: SMF116CHNTMX) Net time maximum (seconds).
zCHNTDT	TSTMP	8	(IBM name: SMF116CHNTDT) Net time maximum date & time.
zCHRQMN	CHAR	48	(IBM name: SMF116CHRQMN) Remote QMGR/APP name.
zCHSLSN	CHAR	8	(IBM name: SMF116CHSLSN) SERIALNUMBER from SSLPEER (in hex).
zCHSLCN	CHAR	16	(IBM name: SMF116CHSLCN) CN from SSLCERTI.
zCHSLCS	INT	4	(IBM name: SMF116CHSLCS) SSL is used or not, if yes, the SSL CipherSpec being used (in hex).
zCHPTRC	INT	4	(IBM name: SMF116CHPTRC) Put retry count.

zCHQETC	INT	4	(IBM name: SMF116CHQETC) XMITQ empty count.
zCHCBIT	INT	4	(IBM name: SMF116CHCBIT) Channel batch interval (milliseconds).
zCHCBDL	INT	4	(IBM name: SMF116CHCBDL) Channel batch data limit (kilobytes).
zCHDSPN	INT	2	(IBM name: SMF116CHDSPN) Dispatcher number.

Record Type 117 - WebSphere Message Broker and IBM Integration Bus

SMF Record 117 (WebSphere Message Broker and IBM Integration Bus) is mapped by structure member "T117ST01".

Primary Segment:

- [SMF117#01_WebSphere_Message_Broker_and_IBM_Integration_Bus](#)

Secondary Segment(s): 4 (in alphabetical order)

- [SMF117#01_Message_Flow](#)
- [SMF117#01_Node](#)
- [SMF117#01_Terminal](#)
- [SMF117#01_Thread](#)

Primary segment: [SMF117#01_WebSphere_Message_Broker_and_IBM_Integration_Bus](#)

Field Name	Type	Len	Description
<i>SMF117#01_WebSphere_Message_Broker_and_IBM_Integration_Bus.<fieldname></i>			
<i>SMF117#01_WebSphere_Message_Broker_and_IBM_Integration_Bus.Header.<fieldname></i>			
zFLG	HEX	1	(IBM name: SMF117FLG) System indicator: Bit Meaning when set 0-2 Reserved. 3-6 Version indicators 7 Reserved.
zRTY	INT	1	(IBM name: SMF117RTY) Record type 117
zTME	TSTMP	8	(IBM name: SMF117TME) Date/Time that the record was moved into the SMF buffer.
zSID	CHAR	4	(IBM name: SMF117SID) System identification.
zSSID	CHAR	4	(IBM name: SMF117SSI) Subsystem id.
zSTY	INT	2	(IBM name: SMF117STY) Record subtype. 1 (only message flow or threads data is being collected), 2 (node data is being collected)

<i>SMF117#01_WebSphere_Message_Broker_and_IBM_Integration_Bus.Self_defining_Section.<fieldname></i>			
zNT	INT	4	(IBM name: SMF117TCT) Number of triplets in record. A triplet is a set of offset/length/number values that defines a section of the record. (Optional.)
zSRT	CHAR	1	(IBM name: SMF117SRT) Record type, one of: Archive, Snapshot.
zSRC	INT (ENUM)	1	(IBM name: SMF117SRC) Record Code.
zRSQ	INT	4	(IBM name: SMF117RSQ) Sequence number of the record when multiple records are written for a collection interval.
zNOR	INT	4	(IBM name: SMF117NOR) Total number of related records in a collection interval.
zFLOWO	INT	4	(IBM name: SMF117FLOWO) Offset to Message Flow section.
zFLOWN	INT	2	(IBM name: SMF117FLOWN) Number of Message Flow sections.
zFLOWL	INT	2	(IBM name: SMF117FLOWL) Length of Message Flow sections.
zTHREADO	INT	4	(IBM name: SMF117THREADO) Offset to Thread section.
zTHREADN	INT	2	

			(IBM name: SMF117THREADN) Number of Thread sections.
zTHREADL	INT	2	(IBM name: SMF117THREADL) Length of Thread sections.
zNODEO	INT	4	(IBM name: SMF117NODEO) Offset to Node section.
zNODEN	INT	2	(IBM name: SMF117NODEN) Number of Node sections.
zNODEL	INT	2	(IBM name: SMF117NODEL) Length of Node sections.
zTERMO	INT	4	(IBM name: SMF117TERMO) Offset to Terminal section.
zTERMN	INT	2	(IBM name: SMF117TERMN) Number of Terminal sections.
zTERML	INT	2	(IBM name: SMF117TERML) Length of Terminal sections.

Secondary segment: SMF117#01_Message_Flow

Field Name	Type	Len	Description
<i>SMF117#01_Message_Flow.<fieldname></i>			
zID	INT	2	(IBM name: IMFLID) Control block hex ID (BipSMFMessageFlow_ID).
zLEN	INT	2	(IBM name: IMFLLEN) Length of control block.
zEYE	CHAR	4	(IBM name: IMFLEYE) Eyecatcher (IMFL).
zVER	INT	4	(IBM name: IMFLVER) Version number (BipSMFRecordVersion).
zBKNM	CHAR	32	(IBM name: IMFLBKNM) Integration node name.
zBKID	CHAR	36	(IBM name: IMFLBKID) Integration node universal unique identifier.
zEXNM	CHAR	32	(IBM name: IMFLEXNM) Integration server name.
zEXID	CHAR	36	(IBM name: IMFLEXID) Integration server universal unique identifier.
zMFNM	CHAR	32	(IBM name: IMFLMFNM) Message flow name.
zSTDT_YYYY	INT	2	(IBM name: IMFLSTDT) Interval start date - year.
zSTDT_MM	INT	1	(IBM name: IMFLSTDT) Interval start date - month.
zSTDT_DD	INT	1	(IBM name: IMFLSTDT) Interval start date - day.
zSTTM	TIME	4	(IBM name: IMFLSTTM) Interval start time (format as for SM117TME).
zSTTS	CHAR	26	(IBM name: IMFLSTTS) Interval start date and time (universal timestamp in ISO8601).
zENDT_YYYY	INT	2	(IBM name: IMFLENDT) Interval end date - year.
zENDT_MM	INT	1	(IBM name: IMFLENDT) Interval end date - month.

zENDT_DD	INT	1	(IBM name: IMFLENDT) Interval end date - day.
zENTM	TIME	4	(IBM name: IMFLENTM) Interval end time (format as for SM117TME).
zENTS	CHAR	26	(IBM name: IMFLENTS) Interval end date and time (universal timestamp in ISO8601).
zTPTM	INT	8	(IBM name: IMFLTPTM) Total elapsed time spent processing input messages (8 bytes binary, microseconds).
zMXTM	INT	8	(IBM name: IMFLMXTM) Maximum elapsed time spent processing an input message (8 bytes binary, microseconds).
zMNTM	INT	8	(IBM name: IMFLMNTM) Minimum elapsed time spent processing an input message (8 bytes binary, microseconds).
zTPCP	INT	8	(IBM name: IMFLTPCP) Total processor time spent processing input messages (8 bytes binary, microseconds).
zMXCP	INT	8	(IBM name: IMFLMXCP) Maximum processor time spent processing an input message (8 bytes binary, microseconds).
zMNCP	INT	8	(IBM name: IMFLMNCP) Minimum processor time spent processing an input message (8 bytes binary, microseconds).
zWTCP	INT	8	(IBM name: IMFLWTCP) Total processor time spent waiting for input messages (8 bytes binary, microseconds).
zWTIN	INT	8	(IBM name: IMFLWTIN) Total elapsed time spent waiting for input messages (8 bytes binary, microseconds).
zTPMG	INT	4	(IBM name: IMFLTPMG) Total number of messages processed.
zTSMG	INT	8	(IBM name: IMFLTSMG) Total size of input messages (bytes).
zMXMG	INT	8	(IBM name: IMFLMXMG) Maximum input message size (bytes).
zMNMG	INT	8	(IBM name: IMFLNMGM) Minimum input message size (bytes).
zTHDP	INT	4	(IBM name: IMFLTHDP) Number of threads in pool.
zTHDM	INT	4	(IBM name: IMFLTHDM) Number of times the maximum number of threads is reached.
zERMQ1	INT	4	(IBM name: IMFLERMQ1) Number of MQGET errors (MQInput node) or web services errors (HTTPInput node).
zERMG2	INT	4	(IBM name: IMFLERMG2) Number of messages that contain errors.
zERPR	INT	4	(IBM name: IMFLERPR) Number of errors processing a message.
zTMOU	INT	4	(IBM name: IMFLTMOU) Number of timeouts processing a message (AggregateReply node only).
zCMIT	INT	4	(IBM name: IMFLCMIT) Number of transaction commits.
zBKOU	INT	4	(IBM name: IMFLBKOU) Number of transaction backouts.
zACCT	CHAR	32	(IBM name: IMFLACCT) Accounting origin.

Secondary segment: SMF117#01_Thread

Field Name	Type	Len	Description
<i>SMF117#01_Thread.<fieldname></i>			
zID	INT	2	(IBM name: ITHDID) Control block hex ID.
zLEN	INT	2	(IBM name: ITHDLEN) Length of control block.
zEYE	CHAR	4	(IBM name: ITHDEYE) Eyecatcher (ITHD).
zVER	INT	4	(IBM name: ITHDVER) Version number (BipSMFRecordVersion).
zNBR	INT	4	(IBM name: ITHDNBR) Relative thread number in pool.
zTPMG	INT	4	(IBM name: ITHDTPMG) Total number of messages processed by thread.
zTPTM	INT	8	(IBM name: ITHDTPTM) Total elapsed time spent processing input messages (8 bytes binary, microseconds).
zTPCP	INT	8	(IBM name: ITHDTPCP) Total processor time spent processing input messages (8 bytes binary, microseconds).
zWTCP	INT	8	(IBM name: ITHDWTCP) Total processor time spent waiting for input messages (8 bytes binary, microseconds).
zWTIN	INT	8	(IBM name: ITHDWTIN) Total elapsed time spent waiting for input messages (8 bytes binary, microseconds).
zTSMG	INT	8	(IBM name: ITHDTSMG) Total size of input messages (bytes).
zMXMG	INT	8	(IBM name: ITHDMXMG) Maximum size of input messages (bytes).
zMNMG	INT	8	(IBM name: ITHDMNMG) Minimum size of input messages (bytes).

Secondary segment: SMF117#01_Node

Field Name	Type	Len	Description
<i>SMF117#01_Node.<fieldname></i>			
zID	INT	2	(IBM name: INODID) Control block hex ID (BipSMFNode_ID).
zLEN	INT	2	(IBM name: INODLEN) Length of control block.
zEYE	CHAR	4	(IBM name: INODEYE) Eyecatcher (INOD).
zVER	INT	4	(IBM name: INODVER) Version number (BipSMFRecordVersion).
zNDNM	INT	8	(IBM name: INODNDNM) Name of node (Label).
zTYPE	INT	8	(IBM name: INODTYPE) Type of node.
zTPTM	INT	8	

			(IBM name: INODTPTM) Total elapsed time spent processing input messages (8 bytes binary, microseconds).
zMXTM	INT	8	(IBM name: INODMXTM) Maximum elapsed time spent processing input messages (8 bytes binary, microseconds).
zMNTM	INT	8	(IBM name: INODMNTM) Minimum elapsed time spent processing input messages (8 bytes binary, microseconds).
zTPCP	INT	8	(IBM name: INODTPCP) Total processor time spent processing input messages (8 bytes binary, microseconds).
zMXCP	INT	8	(IBM name: INODMXCP) Maximum processor time spent processing input messages (8 bytes binary, microseconds).
zMNCP	INT	8	(IBM name: INODMNCP) Minimum processor time spent processing input messages (8 bytes binary, microseconds).
zTPMG	INT	4	(IBM name: INODTPMG) Total number of messages processed by this node.
zNITL	INT	4	(IBM name: INODNITL) Number of input terminals.
zNOTL	INT	4	(IBM name: INODNOTL) Number of output terminals.

Secondary segment: SMF117#01_Terminal

Field Name	Type	Len	Description
<i>SMF117#01_Terminal.<fieldname></i>			
zID	INT	2	(IBM name: ITRMID) Control block hex ID (BipSMFTerminal_ID).
zLEN	INT	2	(IBM name: ITRMLEN) Length of control block.
zEYE	CHAR	4	(IBM name: ITRMEYE) Eyecatcher (ITRM).
zVER	INT	4	(IBM name: ITRMVER) Version number (BipSMFRecordVersion).
zTLNM	CHAR	32	(IBM name: ITRMTLNM) Name of terminal.
zTYPE	CHAR	8	(IBM name: ITRMTYPE) Type of terminal, one of: Input or Output.
zTINV	INT	4	(IBM name: ITRMTINV) Total number of invocations.

Record Type 118 - TCPIP Statistics

SMF Record 118 (TCPIP Statistics) has several subtypes, each mapped by a structure member name of the format "T118STnn".

Record Type 118 Subtype 1 - TCP API Initialization

Primary Segment:

- **SMF118#01_TCPIP_Statistics**

Secondary Segment(s): 0

Primary segment: **SMF118#01_TCPIP_Statistics**

Field Name	Type	Len	Description
<i>SMF118#01_TCPIP_Statistics.<fieldname></i>			
<i>SMF118#01_TCPIP_Statistics.Header.<fieldname></i>			
zFLG	HEX	1	(IBM name: N/A) System indicator: Bit Meaning when set 0-2 Reserved. 3-6 Version indicators 7 Reserved.
zRTY	INT	1	(IBM name: N/A) Record type 118
zTME	TSTMP	8	(IBM name: N/A) Date/Time that the record was moved into the SMF buffer.
zSID	CHAR	4	(IBM name: N/A) System ID.
zSSID	CHAR	4	(IBM name: N/A) Subsystem ID.
zSTY	INT	2	(IBM name: N/A) Record subtype.

<i>SMF118#01_TCPIP_Statistics.TCP_API_Init.<fieldname></i>			
zStatus	CHAR	4	(IBM name: N/A) Connection status: 'INIT' Connection initiation. 'TERM' Connection termination.
zLIP	IPADDRESS	4	(IBM name: N/A) Local IPv4 address.
zRIP	IPADDRESS	4	(IBM name: N/A) Remote IPv4 address.
zLPort	INT	2	(IBM name: N/A) Local port number.
zRPort	INT	2	(IBM name: N/A) Remote port number.
zIn	INT	4	(IBM name: N/A) Inbound bytes (valid only for TERM records).
zOit	INT	4	(IBM name: N/A) Outbound bytes (valid only for TERM records).
zUXOff	INT	2	(IBM name: N/A) Offset to start of an area available for user exit storage.
zUXLen	INT	2	(IBM name: N/A) User area length. The current maximum length of the user data is 52 bytes. This value could change between TCP/IP releases.

zJOBNAME	CHAR	8	(IBM name: N/A) Job name which is one of the following: 1. For interactive TSO API usage, the TSO user ID. 2. Batch-submitted jobs, the name of the JOB card. 3. Started procedures, the name of the procedure.
zJID	CHAR	8	(IBM name: N/A) JES job identifier.
zStart	TSTMP	8	(IBM name: N/A) Connection start time & date.
zUXArea	CHAR	52	(IBM name: N/A) User area, available for user exit usage. The actual displacement of this area might change between TCP/IP releases. Use the values of the user area offset and the user area length fields to access this area correctly.

Record Type 118 Subtype 2 - TCP API Termination

Primary Segment:

- SMF118#02_TCPIP_Statistics

Secondary Segment(s): 0

Primary segment: SMF118#02_TCPIP_Statistics

Field Name	Type	Len	Description
<i>SMF118#02_TCPIP_Statistics.<fieldname></i>			
<i>SMF118#02_TCPIP_Statistics.Header.<fieldname></i>			
zFLG	HEX	1	(IBM name: N/A) System indicator: Bit Meaning when set 0-2 Reserved. 3-6 Version indicators 7 Reserved.
zRTY	INT	1	(IBM name: N/A) Record type 118
zTME	TSTMP	8	(IBM name: N/A) Date/Time that the record was moved into the SMF buffer.
zSID	CHAR	4	(IBM name: N/A) System ID.
zSSID	CHAR	4	(IBM name: N/A) Subsystem ID.
zSTY	INT	2	(IBM name: N/A) Record subtype.

<i>SMF118#02_TCPIP_Statistics.TCP_API_Term.<fieldname></i>			
zStatus	CHAR	4	(IBM name: N/A) Connection status: 'INIT' Connection initiation. 'TERM' Connection termination.
zLIP	IPADDRESS	4	(IBM name: N/A) Local IPv4 address.
zRIP	IPADDRESS	4	(IBM name: N/A) Remote IPv4 address.
zLPort	INT	2	(IBM name: N/A) Local port number.
zRPort	INT	2	(IBM name: N/A) Remote port number.
zIn	INT	4	(IBM name: N/A) Inbound bytes (valid only for TERM records).
zOit	INT	4	(IBM name: N/A) Outbound bytes (valid only for TERM records).
zUXOff	INT	2	(IBM name: N/A) Offset to start of an area available for user exit storage.
zUXLen	INT	2	(IBM name: N/A) User area length. The current maximum length of the user data is 52 bytes. This value could change between TCP/IP releases.
zJOBNAME	CHAR	8	(IBM name: N/A) Job name which is one of the following: 1. For interactive TSO API usage, the TSO user ID. 2. Batch-submitted jobs, the name of the JOB card. 3. Started procedures, the name of the procedure.
zJID	CHAR	8	(IBM name: N/A) JES job identifier.

zStart	TSTMP	8	(IBM name: N/A) Connection start time & date.
zUXArea	CHAR	52	(IBM name: N/A) User area, available for user exit usage. The actual displacement of this area might change between TCP/IP releases. Use the values of the user area offset and the user area length fields to access this area correctly.

zRTY	INT	1	(IBM name: N/A) Record type 118
zTME	TSTMP	8	(IBM name: N/A) Date/Time that the record was moved into the SMF buffer.
zSID	CHAR	4	(IBM name: N/A) System ID.
zSSID	CHAR	4	(IBM name: N/A) Subsystem ID.
zSTY	INT	2	(IBM name: N/A) Record subtype.

SMF118#72_TCPIP_Statistics.FTP_Server_Logon_Fail.<fieldname>			
zCmd	CHAR	4	(IBM name: N/A) FTP subcommand APPE Append: DELE (Delete), LOGN (Login), REN (Rename), RETR (Retrieve), STOR (Store) or STOU (Store unique).
zType	CHAR	4	(IBM name: N/A) FTP file type (SEQ, JES, SQL).
zRIP	IPADDRESS	4	(IBM name: N/A) Remote (client) IP address (IPv4) or -1(FFFFFFFF) for IPv6.
zLIP	IPADDRESS	4	(IBM name: N/A) Local (server) IP address (IPv4) or -1(FFFFFFFF) for IPv6.
zLUid	CHAR	8	(IBM name: N/A) Local user ID.
zFormat	INT (ENUM)	1	(IBM name: N/A) Data format.
zMode	INT (ENUM)	1	(IBM name: N/A) Transfer mode.
zStruct	INT (ENUM)	1	(IBM name: N/A) Structure.
zDSType	INT (ENUM)	1	(IBM name: N/A) Data set type.
zStart	TIME	4	(IBM name: N/A) Start time of transmission. The start time of the transmission might be greater than the end time when the transmission began on the previous day.
zEnd	TIME	4	(IBM name: N/A) End time of transmission.
zBytes	INT	4	

			(IBM name: N/A) Byte count of transmission.
zFTPid	INT (ENUM)	1	(IBM name: N/A) FTP ID.
zReply	CHAR	3	(IBM name: N/A) Last reply sent to the client from the FTP server.
zDSN	CHAR	44	(IBM name: N/A) User ID/Data set name. For LOGN records, this is the user ID of the failed login attempt, otherwise, this is the data set name, or up to the first 44 bytes of the z/OS UNIX file name.
zMbr	CHAR	8	(IBM name: N/A) Member name of PDS.
zDSN2	CHAR	44	(IBM name: N/A) Second data set name, if needed (for example, for REN subcommands). For z/OS UNIX files, up to the first 44 bytes of the z/OS UNIX file name.
zMbr2	CHAR	8	(IBM name: N/A) Second member name, if needed (for example, REN subcommands involving PDS files).
zQual	CHAR	8	(IBM name: N/A) Started task qualifier.
zHost	CHAR	8	(IBM name: N/A) TCP/IP host name.
zRPort	INT	2	(IBM name: N/A) Remote (client) port number.
zLPort	INT	2	(IBM name: N/A) Local (server) port number.
zOff1	INT	2	(IBM name: N/A) Offset to the first z/OS UNIX file name field.
zOff2	INT	2	(IBM name: N/A) Offset to the second z/OS UNIX file name field.
zTBytes	FLOAT	8	(IBM name: N/A) Bytes transferred counter. The leftmost byte is an exponent, and other seven bytes are significant bytes.
zT4GB	INT	4	(IBM name: N/A) Bytes transferred, 4 GB increments. Increments with every 4 GBs of data transfer, starting from 0.
zUnixFid1	VCHAR	2 1025	(IBM name: N/A) First z/OS UNIX file name (maximum length is 1023 bytes).
zUnixFid2	VCHAR	2 1025	(IBM name: N/A) Second z/OS UNIX file name (maximum length is 1023 bytes).

Record Type 119 - TCPIP Statistics

SMF Record 119 (TCPIP Statistics) has several subtypes, each mapped by a structure member name of the format "T119STnn".

Record Type 119 Subtype 1 - TCP Connection Initiation

Primary Segment:

- [SMF119#01_TCPIP_Statistics](#)

Secondary Segment(s): 2 (in alphabetical order)

- [SMF119#01_Identification](#)
- [SMF119#01_TCP_Connection_Initiation](#)

Primary segment: [SMF119#01_TCPIP_Statistics](#)

Field Name	Type	Len	Description
<i>SMF119#01_TCPIP_Statistics.<fieldname></i>			
<i>SMF119#01_TCPIP_Statistics.Header.<fieldname></i>			
zFLG	HEX	1	(IBM name: N/A) System indicator: Bit Meaning when set 0-2 Reserved. 3-6 Version indicators 7 Reserved.
zRTY	INT	1	(IBM name: N/A) Record type 119
zTME	TSTMP	8	(IBM name: N/A) Date/Time that the record was moved into the SMF buffer.
zSID	CHAR	4	(IBM name: N/A) System ID.
zSSID	CHAR	4	(IBM name: N/A) Subsystem ID.
zSTY	INT	2	(IBM name: N/A) Record subtype.

<i>SMF119#01_TCPIP_Statistics.Self_defining_Section.<fieldname></i>			
zTRN	INT	2	(IBM name: N/A) Number of triplets.
zDOff	INT	4	(IBM name: N/A) Offset to the TCP/IP Identification section from the beginning of the record (including RDW).
zDLen	INT	2	(IBM name: N/A) Length of the TCP/IP Identification section.
zDNum	INT	2	(IBM name: N/A) Number of TCP/IP Identification sections.
z1Off	INT	4	(IBM name: N/A) Offset to the TCP connection Initiation Data section from the beginning of the record (including RDW).
z1Len	INT	2	(IBM name: N/A) Length of the TCP connection Initiation Data section.
z1Num	INT	2	(IBM name: N/A) Number of TCP connection Initiation Data sections.

Secondary segment: SMF119#01_Identification

Field Name	Type	Len	Description
<i>SMF119#01_Identification.<fieldname></i>			
zSYSName	CHAR	8	(IBM name: SMF119TI_SYSName) System name from SYSNAME in IEASYSxx.
zSysplexName	CHAR	8	(IBM name: SMF119TI_SysplexName) Sysplex name from SYSPLEX in COUPLExx.
zStack	CHAR	8	(IBM name: SMF119TI_Stack) TCP/IP stack name.
zReleaseID	CHAR	8	(IBM name: SMF119TI_ReleaseID) z/OS Communications Server TCP/IP release identifier.
zComp	CHAR	8	(IBM name: SMF119TI_Comp) TCP/IP subcomponent.
zASName	CHAR	8	(IBM name: SMF119TI_ASName) Started task qualifier or name of address space that writes this SMF record.
zUserID	CHAR	8	(IBM name: SMF119TI_UserID) User ID of security context.
zASID	INT	2	(IBM name: SMF119TI_ASID) ASID of address space that writes this SMF record.
zReason	INT (ENUM)	1	(IBM name: SMF119TI_Reason) Reason for writing record. IntInc => Interval record, incomplete. Int => Interval record. IEndInc => Interval ending stats, incomplete. IEnd => Interval ending stats. IShtInc => Interval shutdown stats,incomplete. ISht => Interval shutdown stats. EvtInc => Event record, incomplete. Evt => Event record, complete.
zRecordID	INT	1	(IBM name: SMF119TI_RecordID) ID value for correlating records.

Secondary segment: SMF119#01_TCP_Connection_Initiation

Field Name	Type	Len	Description
<i>SMF119#01_TCP_Connection_Initiation.<fieldname></i>			
zRName	CHAR	8	(IBM name: N/A) TCP socket resource name.
zConnID	INT	4	(IBM name: N/A) TCP socket resource id (connection id).
zSubTask	HEX	4	(IBM name: N/A) Subtask Name. (Address of MVS TCB for the task that owns this connection. Note that this is not the subtask value specified on an INITAPI call.)
zRemoteIP	IPADDRESS	16	(IBM name: N/A) Remote IP address.
zLocalIP	IPADDRESS	16	(IBM name: N/A) Local IP address.
zRemotePort	INT	2	(IBM name: N/A) Remote port number.
zLocalPort	INT	2	(IBM name: N/A) Local port number.
zConnectTS	TSTMP	8	(IBM name: N/A) Connection start date & time (UTC).

zConnectSTCK	TSTMP	8	(IBM name: N/A) Connection start date & time (STCK).

<i>SMF119#02_TCPIP_Statistics.Header.<fieldname></i>			
zFLG	HEX	1	(IBM name: N/A) System indicator: Bit Meaning when set 0-2 Reserved. 3-6 Version indicators 7 Reserved.
zRTY	INT	1	(IBM name: N/A) Record type 119
zTME	TSTMP	8	(IBM name: N/A) Date/Time that the record was moved into the SMF buffer.
zSID	CHAR	4	(IBM name: N/A) System ID.
zSSID	CHAR	4	(IBM name: N/A) Subsystem ID.
zSTY	INT	2	(IBM name: N/A) Record subtype.
<i>SMF119#02_TCPIP_Statistics.Self_defining_Section.<fieldname></i>			
zTRN	INT	2	(IBM name: N/A) Number of triplets.
zDOff	INT	4	(IBM name: N/A) Offset to the TCP/IP Identification section from the beginning of the record (including RDW).
zDLen	INT	2	(IBM name: N/A) Length of the TCP/IP Identification section.
zDNum	INT	2	(IBM name: N/A) Number of TCP/IP Identification sections.
z1Off	INT	4	(IBM name: N/A) Offset to the TCP connection termination Data section from the beginning of the record (including RDW).
z1Len	INT	2	(IBM name: N/A) Length of the TCP connection termination Data section.
z1Num	INT	2	(IBM name: N/A) Number of TCP connection termination Data sections.
z2Off	INT	4	(IBM name: N/A) Offset to the TCP connection termination Telnet Data section from the beginning of the record (including RDW).
z2Len	INT	2	(IBM name: N/A) Length of the TCP connection termination Telnet Data section.
z2Num	INT	2	(IBM name: N/A) Number of TCP connection termination Telnet Data sections.

z3Off	INT	4	(IBM name: N/A) Offset to the TCP connection termination Application Transparent Transport Layer Security (AT-TLS) Data section from the beginning of the record (including RDW).
z3Len	INT	2	(IBM name: N/A) Length of the TCP connection termination Application Transparent Transport Layer Security (AT-TLS) Data section.
z3Num	INT	2	(IBM name: N/A) Number of TCP connection termination Application Transparent Transport Layer Security (AT-TLS) Data sections.
z4Off	INT	4	(IBM name: N/A) Offset to the TCP connection termination ApplData Data section from the beginning of the record (including RDW).
z4Len	INT	2	(IBM name: N/A) Length of the TCP connection termination ApplData Data section.
z4Num	INT	2	(IBM name: N/A) Number of TCP connection termination ApplData Data sections.
z5Off	INT	4	(IBM name: N/A) Offset to the TCP connection termination IP Filter Data section from the beginning of the record (including RDW).
z5Len	INT	2	(IBM name: N/A) Length of the TCP connection termination IP Filter Data section.
z5Num	INT	2	(IBM name: N/A) Number of TCP connection termination IP Filter Data sections.

Secondary segment: **SMF119#02_Identification**

Field Name	Type	Len	Description
<i>SMF119#02_Identification.<fieldname></i>			
zSYSName	CHAR	8	(IBM name: SMF119TI_SYSName) System name from SYSNAME in IEASYSxx.
zSysplexName	CHAR	8	(IBM name: SMF119TI_SysplexName) Sysplex name from SYSPLEX in COUPLExx.
zStack	CHAR	8	(IBM name: SMF119TI_Stack) TCP/IP stack name.
zReleaseID	CHAR	8	(IBM name: SMF119TI_ReleaseID) z/OS Communications Server TCP/IP release identifier.
zComp	CHAR	8	(IBM name: SMF119TI_Comp) TCP/IP subcomponent.
zASName	CHAR	8	(IBM name: SMF119TI_ASName) Started task qualifier or name of address space that writes this SMF record.
zUserID	CHAR	8	(IBM name: SMF119TI_UserID) User ID of security context.
zASID	INT	2	(IBM name: SMF119TI_ASID) ASID of address space that writes this SMF record.
zReason	INT (ENUM)	1	(IBM name: SMF119TI_Reason) Reason for writing record. IntInc => Interval record, incomplete. Int => Interval record. IEndInc => Interval ending stats, incomplete. IEnd => Interval ending stats. IShtInc => Interval shutdown stats,incomplete. ISht => Interval shutdown stats. EvtInc => Event record, incomplete. Evt => Event record, complete.
zRecordID	INT	1	(IBM name: SMF119TI_RecordID) ID value for correlating records.

Secondary segment: **SMF119#02_TCP_Connection_Termination**

Field Name	Type	Len	Description
<i>SMF119#02_TCP_Connection_Termination.<fieldname></i>			
zRName	CHAR	8	(IBM name: N/A) TCP socket resource name.
zConnID	INT	4	(IBM name: N/A) TCP socket resource id (connection id).
zTTLSCS	INT (ENUM)	1	(IBM name: N/A) AT-TLS Connection status.
zTTLSPS	INT (ENUM)	1	(IBM name: N/A) AT-TLS Policy status.
zTermCode	INT (ENUM)	1	(IBM name: N/A) Connection Termination reason.
zSMCRStatus	INT (ENUM)	1	(IBM name: N/A) SMC-R Status. No => This connection does not use an SMC-R link. (If zSMCReason is 0, SMC-R link establishment was not attempted.) Yes => This connection uses an SMC-R link.
zSubTask	HEX	4	(IBM name: N/A) Subtask Name. (Address of MVS TCB for the task that owns this connection. Note that this is not the subtask value specified on an INITAPI call.)
zConnectStart	TSTMP	8	(IBM name: N/A) Connection start date & time.
zConnectEnd	TSTMP	8	(IBM name: N/A) Connection end date & time.
zRemoteIP	IPADDRESS	16	(IBM name: N/A) Remote IP address.
zLocalIP	IPADDRESS	16	(IBM name: N/A) Local IP address.
zRemotePort	INT	2	(IBM name: N/A) Remote port number.
zLocalPort	INT	2	(IBM name: N/A) Local port number.
zInBytes	INT	8	(IBM name: N/A) Inbound byte count.
zOutBytes	INT	8	(IBM name: N/A) Outbound byte count.
zSWS	INT	4	(IBM name: N/A) Send window size at close time.
zMSWS	INT	4	(IBM name: N/A) Max send window size.
zCWS	INT	4	(IBM name: N/A) Congestion window size at close time.
zSMS	INT	4	(IBM name: N/A) Send segment size at close time.
zRTT	INT	4	(IBM name: N/A) Round trip time at close (milliseconds).
zRVA	INT	4	(IBM name: N/A) RTT variance at close (milliseconds*milliseconds).
zStatus	INT (ENUM)	1	(IBM name: N/A) Socket status.
zTOS	INT	1	(IBM name: N/A) Type of service.

zXRT	INT	2	(IBM name: N/A) Number of retransmits. This field has a maximum value of 65535. If the actual count exceeds 65535, this value will not wrap. It will remain at 65535. Field zXRT32 contains the actual count.
zProf	CHAR	32	(IBM name: N/A) Service profile name.
zPol	CHAR	32	(IBM name: N/A) Service policy name at close time.
zInSeg	INT	8	(IBM name: N/A) Inbound segment count.
zOutSeg	INT	8	(IBM name: N/A) Outbound segment count.
zSSTCK	TSTMP	8	(IBM name: N/A) Connection start (STCK format).
zESTCK	TSTMP	8	(IBM name: N/A) Connection end (STCK format).
zDupAcksRcvd	INT	4	(IBM name: N/A) Duplicate acks received over connection.
zLclSMCLinkId	INT	4	(IBM name: N/A) Local SMC link ID.
zRmtSMCLinkId	INT	4	(IBM name: N/A) Remote SMC link ID.
zSMCRReason	HEX	4	(IBM name: N/A) SMC-R Reason Code.
zSMCRReasonE	INT (ENUM)	4	(IBM name: N/A) SMC-R Reason. NoAttempt => Link not attempted. NoRDMAConn => RDMA connectivity failure. VirtStorage => Insufficient virtual storage. ExceedFixM => SMCR FIXEDMemory limit reached. NoRMBs => TCP connection limit reached, no RMBs available. NoVLANid => VLAN id not found. NoActRNICs => No qualifying active RNICs. OutOfSynch => Peer is out of synchronisation. SubnetMis => Peer subnet/prefix mismatch. PeerNoAccept => No SMC-R remote support. NoSMCRRoute => Route not SMC eligible. NoActRNIC => No active RNICs for PNetID. ConnLocal => Connection is local. NoStorSMC => No storage for SMC negotiation. ConnIPSEC => Connection uses IPsec. FRCAserver => FRCA server. PASCALappl => Pascal application. PortNOSMC => NOSMC Port server. InvalidMTU => Invalid MTU from peer. NoIPv6Prefix => No prefix on interface. AutoSMC => AUTOSMC detected workload.

SMF119#02_TCP_Connection_Termination.zSMCFlags.<fieldname>

SMCRReasPeer	BIT	1	SMC-R reason set by peer.
SMCRCached	BIT	1	This route cached to not use SMC-R.
SMCDReasPeer	BIT	1	SMC-D reason set by peer.
SMCDCACHED	BIT	1	This route cached to not use SMC-D.

SMF119#02_TCP_Connection_Termination.<fieldname>

zSMCDStatus	INT (ENUM)	1	(IBM name: N/A) SMC-D Status. No => The SMC-D link is inactive. (If zSMCDReason is 0, SMC-D link establishment was not attempted.) Yes => The SMC-D link is active.
-------------	------------	---	--

SMF119#02_TCP_Connection_Termination.zIPSecFlags.<fieldname>

IPSecEnabled	BIT	1	IP Security enabled.
--------------	-----	---	----------------------

IPSecEnabledIPv6	BIT	1	IPv6 IP Security enabled.
IPFiltDone	BIT	1	IP filtering done for connection.
SMF119#02_TCP_Connection_Termination.<fieldname>			
zLclSMCBufSz	INT	4	(IBM name: N/A) Local RMB/DMB buffer size in KB.
zRmtSMCBufSz	INT	4	(IBM name: N/A) Remote RMB/DMB buffer size in KB.
zXRT32	INT	4	(IBM name: N/A) Number of retransmits.
zSMCDReason	HEX	4	(IBM name: N/A) SMC-D Reason Code.
zSMCDReasonE	INT (ENUM)	4	(IBM name: N/A) SMC-D Reason. NoAttempt => Link not attempted. NoSMCDRoute => Route not eligible for SMC-D. NoStorSMC => No storage for SMC negotiation. ConnIPSEC => Connection uses IPsec. FRCAserver => FRCA server. PASCALappl => Pascal application. PortNOSMC => NOSMC Port server. NoIPv6Prefix => No prefix on interface. AutoSMC => AUTOSMC detected workload. NoActiveISM => No active ISMs for the PNetID. PeerNoAccept => No SMC-D remote support. PeerUnreachable => Peer not reachable for SMC-D. VirtStorage => Insufficient virtual storage. ExceedFixM => SMCD FIXEDMemory limit exceeded. NoLMBs => TCP connection limit reached, no DMBs available. NoVLANid => VLAN id not found. NoActISMs => No act ISMs -SMC layer. OutOfSynch => Peer is out of synch. SubnetMis => Peer subnet/prefix mismatch. SameEndpoint => Both peers reside at the same endpoint. Located on the same LPAR and TCP/IP stack instance. NotObtained => TCP/IP stack could not obtain the reason code from the peer.

Secondary segment: SMF119#02_TCP_Connection_Termination_Telnet

Field Name	Type	Len	Description
SMF119#02_TCP_Connection_Termination_Telnet.<fieldname>			
zLUName	CHAR	8	(IBM name: N/A) TN3270 Telnet LU Name.
zAppl	CHAR	8	(IBM name: N/A) Target Application Name.
zLogmode	CHAR	8	(IBM name: N/A) Logmode Name.

SMF119#02_TCP_Connection_Termination_Telnet.zStatus.<fieldname>			
zDefResp	BIT	1	(IBM name: N/A) Definite Response mode.
zPerfMon	BIT	1	(IBM name: N/A) The connection is being performance monitored.
zProtocol	INT (ENUM)	1	(IBM name: N/A) Connection Protocol.

SMF119#02_TCP_Connection_Termination_Telnet.<fieldname>			
TTTelTermCode	INT (ENUM)	1	Termination Code. See the description of EZZ6034I in z/OS Communications Server: IP Messages Volume 4 (EZZ, SNM) for a list of

			reason code descriptions.

z2Len	INT	2	(IBM name: N/A) Length of the FTP client transfer completion associated data set name Data section.

z2Num	INT	2	(IBM name: N/A) Number of FTP client transfer completion associated data set name Data sections.
z3Off	INT	4	(IBM name: N/A) Offset to the FTP client transfer completion SOCKS Data section from the beginning of the record (including RDW).
z3Len	INT	2	(IBM name: N/A) Length of the FTP client transfer completion SOCKS Data section.
z3Num	INT	2	(IBM name: N/A) Number of FTP client transfer completion SOCKS Data sections.
z4Off	INT	4	(IBM name: N/A) Offset to the FTP client transfer completion security Data section from the beginning of the record (including RDW).
z4Len	INT	2	(IBM name: N/A) Length of the FTP client transfer completion security Data section.
z4Num	INT	2	(IBM name: N/A) Number of FTP client transfer completion security Data sections.
z5Off	INT	4	(IBM name: N/A) Offset to the FTP client transfer completion user name Data section from the beginning of the record (including RDW).
z5Len	INT	2	(IBM name: N/A) Length of the FTP client transfer completion user name Data section.
z5Num	INT	2	(IBM name: N/A) Number of FTP client transfer completion user name Data sections.
z6Off	INT	4	(IBM name: N/A) Offset to the FTP client load module name Data section from the beginning of the record (including RDW).
z6Len	INT	2	(IBM name: N/A) Length of the FTP client load module name Data section.
z6Num	INT	2	(IBM name: N/A) Number of FTP client load module name Data sections.

Secondary segment: **SMF119#03_Identification**

Field Name	Type	Len	Description
<i>SMF119#03_Identification.<fieldname></i>			
zSYSName	CHAR	8	(IBM name: SMF119TI_SYSName) System name from SYSNAME in IEASYSxx.
zSysplexName	CHAR	8	(IBM name: SMF119TI_SysplexName) Sysplex name from SYSPLEX in COUPLExx.
zStack	CHAR	8	(IBM name: SMF119TI_Stack) TCP/IP stack name.
zReleaseID	CHAR	8	(IBM name: SMF119TI_ReleaseID) z/OS Communications Server TCP/IP release identifier.
zComp	CHAR	8	(IBM name: SMF119TI_Comp) TCP/IP subcomponent.
zASName	CHAR	8	(IBM name: SMF119TI_ASName) Started task qualifier or name of address space that writes this SMF record.
zUserID	CHAR	8	(IBM name: SMF119TI_UserID) User ID of security context.
zASID	INT	2	(IBM name: SMF119TI_ASID) ASID of address space that writes this SMF record.
zReason	INT (ENUM)	1	(IBM name: SMF119TI_Reason) Reason for writing record. IntInc => Interval record, incomplete. Int =>

			Interval record. IEndInc => Interval ending stats, incomplete. IEnd => Interval ending stats. IShtInc => Interval shutdown stats,incomplete. ISht => Interval shutdown stats. EvtInc => Event record, incomplete. Evt => Event record, complete.
zRecordID	INT	1	(IBM name: SMF119T1_RecordID) ID value for correlating records.

Secondary segment: **SMF119#03_FTP_Client_Transfer_Completion**

Field Name	Type	Len	Description
<i>SMF119#03_FTP_Client_Transfer_Completion.<fieldname></i>			
zCmd	CHAR	4	(IBM name: N/A) FTP command (according to RFC 959).
zFType	CHAR	4	(IBM name: N/A) Local file type (SEQ, JES, or SQL).
zDRIP	IPADDRESS	16	(IBM name: N/A) Remote IP address (data connection).
zDLIP	IPADDRESS	16	(IBM name: N/A) Local IP address (data connection).
zDRPort	INT	2	(IBM name: N/A) Remote port number (data connection).
zDLPort	INT	2	(IBM name: N/A) Local port number (data connection).
zCRIP	IPADDRESS	16	(IBM name: N/A) Remote IP address (control connection).
zCLIP	IPADDRESS	16	(IBM name: N/A) Local IP address (control connection).
zCRPort	INT	2	(IBM name: N/A) Remote port number (control connection).
zCLPort	INT	2	(IBM name: N/A) Local port number (control connection).
zRUser	CHAR	8	(IBM name: N/A) User ID (login name) on server.
zLUser	CHAR	8	(IBM name: N/A) Local User ID.
zType	INT (ENUM)	1	(IBM name: N/A) Data format.
zMode	INT (ENUM)	1	(IBM name: N/A) Transfer mode.
zStruct	INT (ENUM)	1	(IBM name: N/A) Structure.
zDsType	INT (ENUM)	1	(IBM name: N/A) Data set type.
zSTime	TSTMP	8	(IBM name: N/A) Transmission start date & time.
zETime	TSTMP	8	(IBM name: N/A) Transmission end date & time.
zDur	FIXED	4 (10,2)	(IBM name: N/A) File transmission duration in units of seconds.
zBytes	INT	8	(IBM name: N/A) Transmission byte count (64-bit integer).
zLReply	CHAR	4	(IBM name: N/A) Last server reply (3-digit RFC 959 code, left-aligned).
zM1	CHAR	8	

			(IBM name: N/A) PDS member name.
zHostname	CHAR	8	(IBM name: N/A) Host name.
zRS	CHAR	8	(IBM name: N/A) Reserved for abnormal end info.
zBytesF	FLOAT	8	(IBM name: N/A) Transmission byte count (float).
zCConnID	INT	4	(IBM name: N/A) TCP connection ID of FTP control connection.
zDConnID	INT	4	(IBM name: N/A) TCP connection ID of FTP data connection, or 0 if no data connection is active.

Secondary segment: SMF119#03_FTP_Client_Transfer_Completion_Associated_DSN

Field Name	Type	Len	Description
<i>SMF119#03_FTP_Client_Transfer_Completion_Associated_DSN.<fieldname></i>			
zFileName	XVCHAR	0 4096	(IBM name: N/A) MVS or z/OS UNIX data set name associated with the file transfer operation. Use the Data Set Type field information in the FTP client transfer completion section to determine the type of file name represented by this value.

Secondary segment: SMF119#03_FTP_Client_Transfer_Completion SOCKS

Field Name	Type	Len	Description
<i>SMF119#03_FTP_Client_Transfer_Completion SOCKS.<fieldname></i>			
zServIP	IPADDRESS	16	(IBM name: N/A) IP address of SOCKS server for control connection.
zPort	INT	2	(IBM name: N/A) SOCKS port number (control connection).
zProtocol	INT (ENUM)	1	(IBM name: N/A) SOCKS protocol version (control connection).

Secondary segment: SMF119#03_FTP_Client_Transfer_Completion_Security

Field Name	Type	Len	Description
<i>SMF119#03_FTP_Client_Transfer_Completion_Security.<fieldname></i>			
zMechanism	INT (ENUM)	1	(IBM name: N/A) Protection Mechanism.
zCProtect	INT (ENUM)	1	(IBM name: N/A) Control connection Protection Level.
zDProtect	INT (ENUM)	1	(IBM name: N/A) Data connection Protection Level.
zLoginMech	INT (ENUM)	1	(IBM name: N/A) Login Method.
zProtoLevel	CHAR	8	(IBM name: N/A) Protocol level (present only if protocol mechanism is TLS or AT-TLS).

zCipherSpec	CHAR	20	(IBM name: N/A) Cipher specification (present only if protocol mechanism is TLS or AT-TLS).
zProtBuffSize	INT	4	(IBM name: N/A) Negotiated protection buffer size.
zCipher	CHAR	2	(IBM name: N/A) Hexadecimal value of cipher specification (present only if protocol mechanism is TLS or AT-TLS). If the value is 4X, the Cipher Specification must be obtained from the zCipher4 field.
zFips140	INT (ENUM)	1	(IBM name: N/A) FIPS 140 compliance level.
zCipher4	CHAR	4	(IBM name: N/A) Four byte hexadecimal value of Cipher Specification (present only if Protocol Mechanism is TLS or AT-TLS).
zSessReuse	INT (ENUM)	1	(IBM name: N/A) SSL Session reuse.
zCSSLSessIDL	INT	2	(IBM name: N/A) Length of the SSL session ID of FTP control connection.
zCSSLSessID	CHAR	32	(IBM name: N/A) SSL session ID of FTP control connection.
zDSSLSessIDL	INT	2	(IBM name: N/A) Length of the SSL session ID of FTP data connection.
zDSSLSessID	CHAR	32	(IBM name: N/A) SSL session ID of FTP data connection.

Secondary segment: SMF119#03_FTP_Client_Transfer_Completion_User_Name

Field Name	Type	Len	Description
<i>SMF119#03_FTP_Client_Transfer_Completion_User_Name.<fieldname></i>			
zUserId	XVCHAR	0 128	(IBM name: N/A) User name or user ID used to log into the FTP server.

Secondary segment: SMF119#03_FTP_Client_Load_Module_Name

Field Name	Type	Len	Description
<i>SMF119#03_FTP_Client_Load_Module_Name.<fieldname></i>			
zMemNum	INT	4	(IBM name: N/A) Number of members associated with the file transfer operation. The member names begin in field zMemName.
zLibNameL	INT	1	(IBM name: N/A) Length of the name of the Load module or program object library associated with the file transfer operation.
zLibName	CHAR	44	(IBM name: N/A) Name of the load module or program object library associated with the file transfer operation, padded with trailing blanks.
zMemName	CHAR	8	(IBM name: N/A) Names of members associated with the file transfer operation.

z14Len	INT	2	(IBM name: N/A) Length of the Management data section.
z14Num	INT	2	(IBM name: N/A) Number of Management data sections.
z15Off	INT	4	(IBM name: N/A) Offset to the IPSec common data section from the beginning of the record (including RDW).
z15Len	INT	2	(IBM name: N/A) Length of the IPSec common data section.
z15Num	INT	2	(IBM name: N/A) Number of IPSec common data sections.
z16Off	INT	4	(IBM name: N/A) Offset to the IPSec default rules data section from the beginning of the record (including RDW).
z16Len	INT	2	(IBM name: N/A) Length of the IPSec default rules data section.
z16Num	INT	2	(IBM name: N/A) Number of IPSec default rules data sections.
z17Off	INT	4	(IBM name: N/A) Offset to the Network access data section from the beginning of the record (including RDW).
z17Len	INT	2	(IBM name: N/A) Length of the Network access data section.

z17Num	INT	2	(IBM name: N/A) Number of Network access data sections.
z18Off	INT	4	(IBM name: N/A) Offset to the Dynamic VIPA address data section from the beginning of the record (including RDW).
z18Len	INT	2	(IBM name: N/A) Length of the Dynamic VIPA address data section.
z18Num	INT	2	(IBM name: N/A) Number of Dynamic VIPA address data sections.
z19Off	INT	4	(IBM name: N/A) Offset to the DVIPA routing data section from the beginning of the record (including RDW).
z19Len	INT	2	(IBM name: N/A) Length of the DVIPA routing data section.
z19Num	INT	2	(IBM name: N/A) Number of DVIPA routing data sections.
z20Off	INT	4	(IBM name: N/A) Offset to the Distributed Dynamic VIPA data section from the beginning of the record (including RDW).
z20Len	INT	2	(IBM name: N/A) Length of the Distributed Dynamic VIPA data section.
z20Num	INT	2	(IBM name: N/A) Number of Distributed Dynamic VIPA data sections.
z21Off	INT	4	(IBM name: N/A) Offset to the Default address selection policy data section from the beginning of the record (including RDW).
z21Len	INT	2	(IBM name: N/A) Length of the Default address selection policy data section.
z21Num	INT	2	(IBM name: N/A) Number of Default address selection policy data sections.

Secondary segment: SMF119#04_Identification

Field Name	Type	Len	Description
<i>SMF119#04_Identification.<fieldname></i>			
zSYSName	CHAR	8	(IBM name: SMF119TI_SYSName) System name from SYSNAME in IEASYSxx.
zSysplexName	CHAR	8	(IBM name: SMF119TI_SysplexName) Sysplex name from SYSPLEX in COUPLExx.
zStack	CHAR	8	(IBM name: SMF119TI_Stack) TCP/IP stack name.
zReleaseID	CHAR	8	(IBM name: SMF119TI_ReleaseID) z/OS Communications Server TCP/IP release identifier.
zComp	CHAR	8	(IBM name: SMF119TI_Comp) TCP/IP subcomponent.
zASName	CHAR	8	(IBM name: SMF119TI_ASName) Started task qualifier or name of address space that writes this SMF record.
zUserID	CHAR	8	(IBM name: SMF119TI_UserID) User ID of security context.
zASID	INT	2	(IBM name: SMF119TI_ASID) ASID of address space that writes this SMF record.
zReason	INT (ENUM)	1	(IBM name: SMF119TI_Reason) Reason for writing record. IntInc => Interval record, incomplete. Int => Interval record. IEndInc => Interval ending stats, incomplete. IEnd =>

			Interval ending stats. IShtInc => Interval shutdown stats,incomplete. ISht => Interval shutdown stats. EvtInc => Event record, incomplete. Evt => Event record, complete.
zRecordID	INT	1	(IBM name: SMF119TI_RecordID) ID value for correlating records.

Secondary segment: **SMF119#04_Profile_information_common**

Field Name	Type	Len	Description
<i>SMF119#04_Profile_information_common.<fieldname></i>			
zDesc	CHAR	4	(IBM name: N/A) PICO eyecatcher.
zStartTime	TSTMP	8	(IBM name: N/A) Time TCP/IP stack was started. (TOD clock value)
zStartDate	DATE	4	(IBM name: N/A) Date TCP/IP stack was started.
zChangeTime	TSTMP	8	(IBM name: N/A) Time the TCP/IP stack's profile was last changed (TOD clock value) by a VARY TCPIP,,OBEYFILE command.
zChangeDate	DATE	4	(IBM name: N/A) Date the TCP/IP stack's profile was last changed by a VARY TCPIP,,OBEYFILE command.
zChangeRsn	INT (ENUM)	1	(IBM name: N/A) Reason for last profile change.

SMF119#04_Profile_information_common.zFlags.<fieldname>

ProfComplete	BIT	1	Record contains complete profile information. If set, the record was created either during TCP/IP initialization or, by way of VARY TCPIP,,OBEYFILE where SMF TCP/IP profile record support was activated. SecChanged flags are zero if the record was created during initialization.
--------------	-----	---	---

SMF119#04_Profile_information_common.zDepStmts.<fieldname>

Autolog	BIT	1	DEVICE/LINK/BSDROUTINGPARMS for non-strategic interfaces.
V4Cfg	BIT	1	HOME for non-strategic interfaces.
V6Cfg	BIT	1	BEGINROUTES for non-strategic interfaces.
TCPCfg	BIT	1	SMFCONFIG TYPE118 or SMFPARMS.
UDPCfg	BIT	1	TRANSLATE.
GblCfg	BIT	1	VIPASMPARMS.

SMF119#04_Profile_information_common.zDepChanged.<fieldname>

Autolog	BIT	1	DEVICE/LINK/BSDROUTINGPARMS for non-strategic interfaces.
V4Cfg	BIT	1	HOME for non-strategic interfaces.
V6Cfg	BIT	1	BEGINROUTES for non-strategic interfaces.
TCPCfg	BIT	1	SMFCONFIG TYPE118 or SMFPARMS.

DistDV	BIT	1	

SMF119#04_Profile_information_common.<fieldname>			
zConsName	CHAR	8	(IBM name: N/A) Name of console from which VARY TCPIP,,OBEYFILE command was issued.
zSysplexGrpName	CHAR	8	(IBM name: N/A) Sysplex group name. The value is created when the TCP/IP stack joins the sysplex group. Because the stack joins the sysplex group after the initial profile is processed, the SMF record created during initial profile processing does not contain the sysplex group name. If the TCP/IP stack has never joined the sysplex group since it was initialized, this field is set to zeros.
zUserToken	HEX	80	(IBM name: N/A) RACF user security token of user responsible for change. For a mapping of the fields, see the RUTKN data area in z/OS Security Server RACF Data Areas.

Secondary segment: **SMF119#04_Profile_information_common_DSN**

Field Name	Type	Len	Description
SMF119#04_Profile_information_common_DSN.<fieldname>			
zDesc	CHAR	4	(IBM name: N/A) PIDS eyecatcher

SMF119#04_Profile_information_common_DSN.zFlag.<fieldname>			
Change	BIT	1	Change data set. If set, the data set was used to change the profile. If not set, the data set was used for the initial profile.
Include	BIT	1	Include data set. If set, the data set was specified on an INCLUDE statement. If not set, the data set was the main data set.

SMF119#04_Profile_information_common_DSN.<fieldname>			
zProfDSN	CHAR	54	(IBM name: N/A) The data set name value is padded with trailing blanks.

Secondary segment: **SMF119#04_Autolog_procedure**

Field Name	Type	Len	Description
<i>SMF119#04_Autolog_procedure.<fieldname></i>			
zDesc	CHAR	4	(IBM name: N/A) ALPR eyecatcher.
zName	CHAR	8	(IBM name: N/A) Procedure name to be started.
zJobName	CHAR	8	(IBM name: N/A) Job name assigned to reserved port for the started procedure.
<i>SMF119#04_Autolog_procedure.zOptions.<fieldname></i>			
DelayDVIPA	BIT	1	DELAYSTART DVIPA
DelayTTLS	BIT	1	DELAYSTART TTLS
<i>SMF119#04_Autolog_procedure.<fieldname></i>			
zParmString	CHAR	115	(IBM name: N/A) Parameter string for procedure.
zWaitTime	INT	1	(IBM name: N/A) Time to wait for procedure to end when stack is restarted and procedure is still active.

Secondary segment: **SMF119#04_IPv4_IP_configuration**

Field Name	Type	Len	Description
<i>SMF119#04_IPv4_IP_configuration.<fieldname></i>			
zDesc	CHAR	4	(IBM name: N/A) V4CF eyecatcher.
<i>SMF119#04_IPv4_IP_configuration.zFlags.<fieldname></i>			
CLAWDbInoop	BIT	1	If set, the CLAW channel programs have 2 NOP CCWs at the end.
DatagramFwd	BIT	1	If set, the stack is forwarding datagrams and field zFwdMultipPkt indicates if a multipath per packet algorithm is being used for forwarded packets. If not set, the stack is not forwarding datagrams.
FwdMultipPkt	BIT	1	This flag is valid only if flag zDatagramFwd is set. If the zFwdMultipPkt flag is set, the stack is forwarding datagrams using a multipath per packet algorithm. If not set, the stack is not using a multipath algorithm when forwarding datagrams.
DynamicXcf	BIT	1	If set, dynamic XCF interfaces are defined and the following fields contain dynamic XCF configured values. zDynXcfAddr, zDynXcfCostMetric, zDynXcfMask, zDynXcfSecClass, zDynXcfSMCD.
FormatLong	BIT	1	If set, the Netstat command displays the report output in long format. This flag is always set for IPv6-enabled stacks.
IgnRedirectCfg	BIT	1	If set, IGNOREREDIRECT was specified on the IPCONFIG profile statement.
IgnRedirectAct	BIT	1	If set, the stack is ignoring ICMP redirects and the zIgnRedirectRsn field indicates the reason why this setting is in effect.
IPSecurity	BIT	1	If set, IP security is enabled.
IQDIORouting	BIT	1	If set, IQDIO routing is enabled.
MultipPerConn	BIT	1	If set, the stack is using a multipath per connection routing selection algorithm for outbound IP traffic.
MultipPerPkt	BIT	1	

			If set, the stack is using a multipath per packet routing selection algorithm for outbound IP traffic.
PathMtuDisc	BIT	1	If set, Path MTU discovery is in effect.
SourceVipa	BIT	1	If set, the stack uses the appropriate VIPA IP address as the source IP address for outbound packets.
StopClawErr	BIT	1	If set, the stack stops channel programs when a CLAW error is detected.
SysplexRouting	BIT	1	If set, the stack communicates interface changes to the workload manager.
TCPSourceVipa	BIT	1	If set, and zSourceVipa is also set, the stack uses the address in field zTcpSrcVipaAddr as the source IP address for outbound TCP connections.
QDIOAcc	BIT	1	If set, the QDIO accelerator function is enabled.
ChkOffload	BIT	1	If set, IP, UDP and TCP checksum processing is offloaded to an OSA-Express feature.
SegOffload	BIT	1	If set, TCP segmentation is offloaded to an OSA-Express feature.
DynXcfSrcVipalName	BIT	1	If set, the zDynXcfSrcVipalName field contains the specified source VIPA interface name.
DynXcfSMCD	BIT	1	If set, the dynamically generated XCF interface can be used for new TCP connections with SMC-D.

SMF119#04_IPv4_IP_configuration.<fieldname>

zArpTimeout	INT	4	(IBM name: N/A) ARP cache timeout in seconds. If the value was configured, then it was either specified on the ARPAGE statement, or on the ARPTO parameter of the IPCONFIG statement.
zDevRetry	INT	4	(IBM name: N/A) Device retry duration in seconds.
zTcpSrcVipaAddr	IPADDRESS	4	(IBM name: N/A) VIPA source IP address for outbound TCP connections. If flags SourceVipa and TCPSourceVipa are set, this address is used as the source IP address.
zDynXcfAddr	IPADDRESS	4	(IBM name: N/A) Dynamic XCF IP address. This field is valid only if the DynamicXcf flag is set.
zDynXcfCostMetric	INT	1	(IBM name: N/A) Dynamic XCF cost metric. This field is valid only if the DynamicXcf flag is set.
zDynXcfMask	INT	1	(IBM name: N/A) Dynamic XCF number of mask bits. This field is valid only if the DynamicXcf flag is set.
zDynXcfSecClass	INT	1	(IBM name: N/A) Dynamic XCF security class. This field is valid only if the DynamicXcf flag is set.
zQDIOPriority	INT	1	(IBM name: N/A) IQDIO routing priority. This field is valid only if either the IQDIORouting flag or the QDIOAcc flag is set.
zIgnRedirectRsn	INT (ENUM)	1	(IBM name: N/A) Reason why the IgnoreRedirectAct flag is set.
zReasmTimeout	INT	1	(IBM name: N/A) Reassembly timeout in seconds.
zTTL	INT	1	(IBM name: N/A) Time to live.
zPrimaryIntfName	CHAR	16	(IBM name: N/A) Name of the primary interface. The primary interface could have been configured on a PRIMARYINTERFACE profile statement, or the stack could have selected a default primary interface.
zDynXcfSrcVipalName	CHAR	16	(IBM name: N/A) Dynamic XCF source VIPA interface name. This field is valid only if the zDynXcfSrcVipalName flag is set.

Secondary segment: **SMF119#04_IPv6_IP_configuration**

Field Name	Type	Len	Description
<i>SMF119#04_IPv6_IP_configuration.<fieldname></i>			
zDesc	CHAR	4	(IBM name: N/A) V6CF eyecatcher.

<i>SMF119#04_IPv6_IP_configuration.zFlags.<fieldname></i>			
DatagramFwd	BIT	1	If set, the stack is forwarding datagrams and field zFwdMultipPkt indicates if a multipath per packet algorithm is being used for forwarded packets. If not set, the stack is not forwarding datagrams.
FwdMultipPkt	BIT	1	This flag is valid only if flag zDatagramFwd is set. If the zFwdMultipPkt flag is set, the stack is forwarding datagrams using a multipath per packet algorithm. If not set, the stack is not using a multipath algorithm when forwarding datagrams.
DynamicXcf	BIT	1	If set, dynamic XCF interfaces are defined and the following fields contain dynamic XCF configured values: zDynXcfAddr, zDynXcfPfxRteLen, zDynXcfSecClass, zDynXcfSMCD.
DynXcflfID	BIT	1	If set, field zDynXcfIntID contains the specified interface ID value.
DynXcfSrcVipalName	BIT	1	If set, field zDynXcfSrcVipalName contains the specified source VIPA interface name.
IgnRedirectCfg	BIT	1	If set, IGNOREREDIRECT was specified on the IPCONFIG6 profile statement.
IgnRedirectAct	BIT	1	If set, the stack is ignoring ICMPv6 redirects and the zIgnRedirectRsn field indicates the reason why this setting is in effect.
IgnoreRtrHopLimit	BIT	1	If set, the stack is ignoring hop limits received in router advertisements.
IPSecurity	BIT	1	If set, IP security is enabled.
MultipPerConn	BIT	1	If set, the stack is using a multipath per connection routing selection algorithm for outbound IP traffic.
MultipPerPkt	BIT	1	If set, the stack is using a multipath per packet routing selection algorithm for outbound IP traffic.
SourceVipa	BIT	1	If set, the TCP/IP stack uses the appropriate VIPA IP address as the source IP address for outbound packets.
TCPSourceVipa	BIT	1	If set, and zSourceVipa is also set, the stack uses the interface in field zTcpSrcVipalName to determine the source IP address for outbound TCP connections.
TempAddrs	BIT	1	If set, the TCP/IP stack generates IPv6 temporary addresses for IPAQENET6 OSA-Express QDIO interfaces for which stateless address autoconfiguration is enabled. When this flag is set, the following fields contain life time values for the generated addresses: zTempAddrsPrefLifeTime, zTempAddrsValidLifeTime.
ChkOffload	BIT	1	If set, UDP and TCP checksum processing is offloaded to an OSA-Express feature.
SegOffload	BIT	1	If set, TCP segmentation is offloaded to an OSA-Express feature.
DynXcfSMCD	BIT	1	If set, the dynamically generated XCF interface can be used for new TCP connections with SMC-D.

<i>SMF119#04_IPv6_IP_configuration.<fieldname></i>			
zDynXcfIntID	HEX	8	(IBM name: N/A) Dynamic XCF interface ID. This field is valid only if the DynXcflfID flag is set.
zDynXcfAddr	IPADDRESS	16	(IBM name: N/A) Dynamic XCF IP address. This field is valid only if the DynamicXcf flag is set.

zDynXcfSrcVipalntName	CHAR	16	(IBM name: N/A) Dynamic XCF source VIPA interface name. This field is valid only if the DynXcfSrcVipalfName flag is set.
zTcpSrcVipalntName	CHAR	16	(IBM name: N/A) The VIPA interface name that is used for source IP address selection for outbound TCP connections. This field is valid only if flags SourceVipa and TCPSourceVipa are set.
zDynXcfPfxRteLen	INT	1	(IBM name: N/A) Dynamic XCF prefix route length. This field is valid only if the DynamicXcf flag is set. If a prefix route length was not specified, then the value is zero.
zDynXcfSecClass	INT	1	(IBM name: N/A) Dynamic XCF security class. This field is valid only if the DynamicXcf flag is set.
zHopLimit	INT	1	(IBM name: N/A) Hop limit for outbound packets.
zIcmpErrLimit	INT	1	(IBM name: N/A) Number of ICMPv6 error messages sent per second to a particular IPv6 destination.
zIgnRedirectRsn	INT (ENUM)	1	(IBM name: N/A) Reason why the IgnoreRedirectAct flag is set.
zOSMSecClass	INT	1	(IBM name: N/A) OSM security class. This field is valid only when flag IPSecurity is set.
zTempAdrsPrefLifeTime	INT	2	(IBM name: N/A) Preferred life time for temporary addresses, specified in hours. This field is valid only if the TempAdrs flag is set.
zTempAdrsValidLifeTime	INT	2	(IBM name: N/A) Valid life time for temporary addresses, specified in hours. This field is valid only if the TempAdrs flag is set.

Secondary segment: SMF119#04_TCP_configuration

Field Name	Type	Len	Description
<i>SMF119#04_TCP_configuration.<fieldname></i>			
zDesc	CHAR	4	(IBM name: N/A) TCCF eyecatcher.

SMF119#04_TCP_configuration.zFlags.<fieldname>

DelayAcks	BIT	1	If set, an acknowledgment is delayed when a packet is received for this port, or range of ports, with the PUSH bit on in the TCP header. If not set, the acknowledgment is returned immediately.
RestrictLowPorts	BIT	1	If set, access to TCP port numbers 1-1023 are restricted.
SendGarbage	BIT	1	If set, keepalive packets contain one byte of random data. If not set, keepalive packets contain no data.
TCPTimeStamp	BIT	1	If set, the TCP layer engages in TCP timestamp negotiation during connection setup.
TTLS	BIT	1	If set, the AT-TLS function is active.
SelectiveACK	BIT	1	If set, TCP participates in selective acknowledgement (SACK) processing.
Nagle	BIT	1	If set, the Nagle algorithm is enabled.

SMF119#04_TCP_configuration.<fieldname>

zFinWait2Time	INT	2	(IBM name: N/A) The number of seconds a TCP connection should remain in the FINWAIT2 state.
zInterval	INT	2	(IBM name: N/A) The default TCP keepalive interval, in minutes.

zSoMaxConn	INT	4	(IBM name: N/A) The maximum number of connection requests queued for any listening socket.
zMaxRcvBufSize	INT	4	(IBM name: N/A) The maximum receive buffer size, in bytes, that an application can set using the Setsockopt socket function call.
zRcvBufSize	INT	4	(IBM name: N/A) The default receive buffer size, in bytes, for applications which do not set a size using the Setsockopt socket function call.
zSendBufSize	INT	4	(IBM name: N/A) The default send buffer size, in bytes, for applications that do not set a size using the Setsockopt socket function call.
zEphemPortBegNum	INT	2	(IBM name: N/A) The beginning ephemeral port number.
zEphemPortEndNum	INT	2	(IBM name: N/A) The ending ephemeral port number.

Secondary segment: **SMF119#04_UDP_configuration**

Field Name	Type	Len	Description
<i>SMF119#04_UDP_configuration.<fieldname></i>			
zDesc	CHAR	4	(IBM name: N/A) UDCF eyecatcher.

<i>SMF119#04_UDP_configuration.zFlags.<fieldname></i>			
RestrictLowPorts	BIT	1	If set, access to UDP port numbers 1-1023 is restricted.
ChkSum	BIT	1	If set, the UDP layer performs checksum processing.
QueueLimit	BIT	1	If set, UDP limits queued incoming datagrams to 2000 per socket.

<i>SMF119#04_UDP_configuration.<fieldname></i>			
zRcvBufSize	INT	2	(IBM name: N/A) The default UDP receive buffer size, in bytes, for applications that do not set a size using the Setsockopt socket function call.
zSendBufSize	INT	2	(IBM name: N/A) The default UDP send buffer size, in bytes, for applications that do not set a size using the Setsockopt socket function call.
zEphemPortBegNum	INT	2	(IBM name: N/A) The beginning ephemeral port number.
zEphemPortEndNum	INT	2	(IBM name: N/A) The ending ephemeral port number.

Secondary segment: **SMF119#04_Global_configuration**

Field Name	Type	Len	Description
<i>SMF119#04_Global_configuration.<fieldname></i>			
zDesc	CHAR	4	(IBM name: N/A) GBCF eyecatcher.

<i>SMF119#04_Global_configuration.zFlags.<fieldname></i>			
ExpBindPortRange	BIT	1	If set, fields zExpBindPortRangeBegNum and zExpBindPortRangeEndNum contain the beginning and ending port numbers of the range of reserved TCP ports in the sysplex.

IqdMultiWrite	BIT	1	If set, multiple write support is enabled for HiperSockets interfaces.
MlsCheckTerminate	BIT	1	If set, the stack terminates if multi-level secure configuration inconsistencies are encountered.
SegOffload	BIT	1	If set, TCP segmentation is offloaded to an OSA-Express feature. Guideline: This flag is deprecated. Use IPv4 flag SegOffload instead.
TcpipStats	BIT	1	If set, several counters are written to the CFGPRINT DD data set when the TCP/IP stack terminates.
Ziip	BIT	1	If set, field zZiipOptions indicates for which workloads CPU cycles are displaced to a zIIP.
WlmPriorityQ	BIT	1	If set, the following fields indicate the OSA-Express QDIO priority values that are assigned for packets associated with WLM service classes and for forwarded packets according to the control values for the WLM PRIORITYQ parameter: zWPQCV0Pri, zWPQCV1Pri, zWPQCV2Pri, zWPQCV3Pri, zWPQCV4Pri, zWPQCV5Pri, zWPQCV6Pri, zWPQFwdPri.
SMCR	BIT	1	If set, this stack is enabled for SMC-R communications.
SMCD	BIT	1	If set, this stack is enabled for SMC-D communications.
ZERT	BIT	1	If set, this stack is enabled for the zERT discovery function. The zZertParms field identifies additional ZERT subparameter settings.

SMF119#04_Global_configuration.zSysMonOptions.<fieldname>

SysMonAutoRejoin	BIT	1	If set, the stack automatically rejoins the sysplex group after problems that caused it to leave the sysplex group are resolved.
SysMonDelayJoin	BIT	1	If set, the stack delays joining the sysplex group until OMPROUTE is active.
SysMonDynRoute	BIT	1	If set, the TCP/IP stack monitors the presence of dynamic routes over those network interfaces for which the MONSYSPLEX parameter was specified. This setting is dynamically changed if the MONINTERFACE or NOMONINTERFACE subparameters are specified.
SysMonMonIntf	BIT	1	If set, the TCP/IP stack monitors the status of network interfaces for which the MONSYSPLEX parameter was specified.
SysMonRecovery	BIT	1	If set, the TCP/IP stack issues error messages, leaves the sysplex group, and deletes all DVIPA interfaces when a sysplex problem is detected.
SysMonNoJoin	BIT	1	If set, the TCP/IP stack does not join the sysplex group until the V TCPIP,,SYSPLEX,JOINGROUP command is issued.

SMF119#04_Global_configuration.<fieldname>

zIqdVlanID	INT	2	(IBM name: N/A) VLAN ID for the dynamic XCF HiperSockets interface. If not specified the value is 0.
zSysWlmPoll	INT	1	(IBM name: N/A) The number of seconds used by the sysplex distributor and its target servers, when polling WLM for new weight values.

SMF119#04_Global_configuration.zZiipOptions.<fieldname>

ZiipIPSecurity	BIT	1	If set, the stack automatically rejoins the sysplex group after problems that caused it to leave the sysplex group are resolved.
ZiipQdioMultiWrite	BIT	1	If set, the stack delays joining the sysplex group until OMPROUTE is active.

SMF119#04_Global_configuration.<fieldname>

zSysMonTimerSecs	INT	2	(IBM name: N/A) The number of seconds used by the sysplex monitor function to react to problems with needed sysplex resources.
zXcfGroupID	CHAR	2	(IBM name: N/A) The 2-digit suffix used to generate the sysplex group name that the TCP/IP stack joins. If not specified the value is zero.

zExpBindPortRangeBegNum	INT	2	(IBM name: N/A) If flag ExpBindPortRange is set, this field contains the beginning port number in the reserved range.
zExpBindPortRangeEndNum	INT	2	(IBM name: N/A) If flag ExpBindPortRange is set, this field contains the ending port number in the reserved range.
zMaxRecs	INT	4	(IBM name: N/A) Configured maximum records value for the DTCPIP,,NETSTAT command. The value range is 1-65535. The value 65536 indicates that the * (asterisk) value was specified. This means all records.
zEcsaLimit	INT	4	(IBM name: N/A) The maximum ECSA storage size in bytes that can be used by the TCP/IP stack.
zPoolLimit	INT	4	(IBM name: N/A) The maximum private storage size in bytes that can be used in the TCP/IP address space.
zWPQCV0Pri	INT	1	(IBM name: N/A) The OSA-Express QDIO priority value that is assigned to packets represented by control value 0. This field is valid only if flag WlmPriorityQ is set.
zWPQCV1Pri	INT	1	(IBM name: N/A) The OSA-Express QDIO priority value that is assigned to packets represented by control value 1. This field is valid only if flag WlmPriorityQ is set.
zWPQCV2Pri	INT	1	(IBM name: N/A) The OSA-Express QDIO priority value that is assigned to packets represented by control value 2. This field is valid only if flag WlmPriorityQ is set.
zWPQCV3Pri	INT	1	(IBM name: N/A) The OSA-Express QDIO priority value that is assigned to packets represented by control value 3. This field is valid only if flag WlmPriorityQ is set.
zWPQCV4Pri	INT	1	(IBM name: N/A) The OSA-Express QDIO priority value that is assigned to packets represented by control value 4. This field is valid only if flag WlmPriorityQ is set.
zWPQCV5Pri	INT	1	(IBM name: N/A) The OSA-Express QDIO priority value that is assigned to packets represented by control value 5. This field is valid only if flag WlmPriorityQ is set.
zWPQCV6Pri	INT	1	(IBM name: N/A) The OSA-Express QDIO priority value that is assigned to packets represented by control value 6. This field is valid only if flag WlmPriorityQ is set.
zWPQFwdPri	INT	1	(IBM name: N/A) The OSA-Express QDIO priority value that is assigned to forwarded packets. This field is valid only if flag WlmPriorityQ is set.
zAutoIQDX	INT (ENUM)	1	(IBM name: N/A) AutoIQDX settings.
zPFidCnt	INT	1	(IBM name: N/A) SMCR PFID count - the current number of configured PFID, port, and MTU entries in the PFs array.

SMF119#04_Global_configuration.zSMCGFlags.<fieldname>

AUTOCACHE	BIT	1	AUTOCACHE is configured. This function is active only when flag SMCR is set and field zPFidCnt is not zero, or flag SMCD is set.
AUTOSMC	BIT	1	AUTOSMC is configured.

SMF119#04_Global_configuration.<fieldname>

zAdjDVMSS	INT (ENUM)	1	(IBM name: N/A) ADJUSTDVIPAMSS settings.
zFixedMemory	INT	4	

			(IBM name: N/A) SMCR FIXEDMEMORY value in megabytes.
zTcpKeepMinInt	INT	4	(IBM name: N/A) SMCR TCPKEEPMININTERVAL value in seconds.

SMF119#04_Global_configuration.zPFs.<fieldname>

zPFid	INT	2	(IBM name: N/A) PFid.
zPFport	INT	1	(IBM name: N/A) Port number. When PFID represents a 10 GbE RoCE Express2 feature, the PortNum value is the port number configured for the PFID in the Hardware Configuration Definition (HCD). This port number is learned by VTAM and TCP/IP during activation of the PFID and might be different from the value coded for PORTNUM for this PFID on the GLOBALCONFIG SMCR statement.
zPFmtu	INT	2	(IBM name: N/A) MTU value.
ZERTAgg	BIT	1	If set, this stack is enabled for the zERT aggregation function.

SMF119#04_Global_configuration.<fieldname>

zAutoIQDC	INT (ENUM)	1	(IBM name: N/A) AutoIQDC settings.
zFixedMemoryD	INT	4	(IBM name: N/A) SMCD FIXEDMEMORY value in megabytes.
zTcpKeepMinIntD	INT	4	(IBM name: N/A) SMCD TCPKEEPMININTERVAL value in seconds.

Secondary segment: **SMF119#04_Port_reservation**

Field Name	Type	Len	Description
SMF119#04_Port_reservation.<fieldname>			
zDesc	CHAR	4	(IBM name: N/A) PORT eyecatcher.

SMF119#04_Port_reservation.zFlags.<fieldname>

IPv6	BIT	1	If set, the BIND parameter was specified with an IPv6 IP address.
Range	BIT	1	If set, this entry represents a range of reserved ports.
Unrsv	BIT	1	If set, this entry applies to unreserved ports. For unreserved port entries field zPORTBegNum is zero and flag field zUnrsvOptions provides settings specific to unreserved ports.
TCP	BIT	1	If set, this entry applies to TCP applications. If this flag is not set, the entry applies to UDP applications.

SMF119#04_Port_reservation.<fieldname>

zUseType	INT (ENUM)	1	(IBM name: N/A) Type of use for the port or ports.
----------	------------	---	---

SMF119#04_Port_reservation.zRsvOptions.<fieldname>

RAutolog	BIT	1	If set, autolog monitoring is in effect for this port or range of ports. If not set, autolog monitoring is not in effect for this port.
RDelayAcks	BIT	1	If set, an acknowledgment is delayed when a packet is received for this port, or range of ports, with the PUSH bit on in the TCP header. If not set, the acknowledgment is returned immediately.
RSharePort	BIT	1	If set, TCP connections can be distributed to multiple listeners, listening on the same combination of port and interface.

RSharePortWlm	BIT	1	If set, TCP connections can be distributed to multiple listeners, listening on the same combination of port and interface, using WLM server-specific recommendations.
RBind	BIT	1	If set, the BIND parameter was specified for the port entry, and field zBindAddr contains the specified IPv4 or IPv6 address.
RSaf	BIT	1	If set, a SAF resource name was specified for the port entry, and field zSafName contains the name.
RNoSMC	BIT	1	If set, NOSMC was specified for the port entry.
RSMC	BIT	1	If set, SMC was specified for the port entry.

SMF119#04_Port_reservation.<fieldname>

zBegNum	INT	2	(IBM name: N/A) Contains one of the following values: 1. The reserved port number, if this is a reserved port entry and flag 'Range' is not set. 2. The beginning reserved port number in the range, if this is a reserved port entry and flag 'Range' is set. 3. Zeros, if this is an unreserved port entry (flag 'Unrsv' is set).
zEndNum	INT	2	(IBM name: N/A) If flag 'Unrsv' is not set, this field contains one of the following values: 1. If flag 'Range' is not set, this field is set to zero. 2. If flag 'Range' is set, this field contains the ending reserved port number in the range.
zUnrsvOptions	INT	1	(IBM name: N/A) Options for unreserved ports. These flags are set only for unreserved port entries (flag 'Unrsv' is set in field zFlags)
zJobName	CHAR	8	(IBM name: N/A) If the zUseType value is 'UTJobname', this field contains the MVS job name value associated with the port entry, padded with trailing blanks.
zSafName	CHAR	8	(IBM name: N/A) If flag 'RSaf' is set, this field contains the SAF resource name, padded with trailing blanks.
zBindAddr	IPADDRESS	16	(IBM name: N/A) If flag 'RBind' is set in the zRsvOptions field, this field contains one of the following values: 1. If the 'IPv6' flag bit is not set, this field contains the IPv4 IP address specified on the BIND parameter. 2. If the 'IPv6' flag bit is set, this field contains the IPv6 IP address specified on the BIND parameter.

Secondary segment: SMF119#04_Interface

Field Name	Type	Len	Description
SMF119#04_Interface.<fieldname>			
zDesc	CHAR	4	(IBM name: N/A) INTF eyecatcher.

SMF119#04_Interface.zFlags.<fieldname>

IPv6	BIT	1	IPv6 indicator. If set, this entry is an IPv6 interface, otherwise this entry is an IPv4 interface.
DefIf	BIT	1	If set, the interface was defined by the INTERFACE statement. Otherwise, the interface was defined by DEVICE and LINK statements.
IfID	BIT	1	If set, an IPv6 interface ID was specified. Field zIntID contains the interface ID value.
AutoRestart	BIT	1	This flag applies only to non-VIRTUAL interfaces defined by DEVICE and LINK profile statements. If set, either AUTORESTART was specified or, the interface is using the same OSA-Express port, MPCPTP TRLE, or HiperSockets CHPID as an IPv6 interface, so the AUTORESTART parameter has been set by default.
IpBcast	BIT	1	If set, IPBCAST was specified.

VlanID	BIT	1	If set, VLANID was specified. Field zVlanID contains the VLAN ID value.
MonSysplex	BIT	1	If set, MONSYSPLEX was specified.
DynVlanReg	BIT	1	If set, DYNVLANREG was specified.
Vmac	BIT	1	If set, VMAC was specified. Field zVmacAddr contains the virtual MAC address.
VmacAddr	BIT	1	If set, the VMAC parameter was specified with a virtual MAC address. If not set, the VMAC parameter was specified without a virtual MAC address. The OSA-Express QDIO feature generates the virtual MAC address. Field zVmacAddr contains the virtual MAC address.
VmacRtLcl	BIT	1	If set, VMAC was specified with the ROUTELCL subparameter. If not set, and flag zVmac is set, then the ROUTEALL subparameter is in effect.
CheckSum	BIT	1	If set, inbound checksum calculation is being performed. This flag applies only to MPCPTP interfaces.
SrcVipalfName	BIT	1	If set, SOURCEVIPAINTERFACE was specified. Field zSrcVipaIntName contains the specified source VIPA interface name.
TempPrefix	BIT	1	If set, TEMPPREFIX was specified. Field zTempPfxType indicates the type of IPv6 temporary address which was requested.
Isolate	BIT	1	If set, ISOLATE was specified. This flag applies only to IPAQENET interfaces defined by the INTERFACE profile statement and to IPAQENET6 interfaces.
OptLatMode	BIT	1	Indicates whether optimized latency mode (OLM parameter) was requested or is in effect. If set, and the interface is not active, the OLM parameter was specified for the interface. If set, and the interface is active, then the OLM setting is in effect for the interface. This flag applies to only IPAQENET interfaces defined by the INTERFACE profile statement and to IPAQENET6 interfaces.
ChpID	BIT	1	If set, an optional CHPID value was specified for an interface that was defined by the INTERFACE statement. The CHPID value is in zChpID field.
TempIP	BIT	1	If set, the TEMPIP value was specified for an interface that was defined by the INTERFACE statement. The zIPv4Addr field is set to zeroes when this flag is set.
SMCR	BIT	1	If set, SMCR was specified or is in effect by default. This flag applies only to IPAQENET interfaces that the INTERFACE profile statement defines and to IPAQENET6 interfaces.
SMCD	BIT	1	If set, SMCD was specified or is in effect by default. This flag only applies to IPAQENET and IPAQIDIO interfaces that the INTERFACE profile statement defines or IPAQENET6 and IPAQIDIO6 interfaces.

SMF119#04_Interface.<fieldname>

zType	INT (ENUM)	1	(IBM name: N/A) Interface Type.
zRtrType	INT (ENUM)	1	(IBM name: N/A) Router type. This field is valid only when the zType field value is 'OSAETH'.
zReadStorType	INT (ENUM)	1	(IBM name: N/A) Read storage amount type. This field is valid only when the zType field value is 'OSAETH' or 'HIPERSOCK'.
zInbPerfType	INT (ENUM)	1	(IBM name: N/A) Inbound performance type. This field is valid only when the zType field value is 'OSAETH'.
zSecClass	INT	1	(IBM name: N/A) SECCLASS value.
zChpID	INT	1	(IBM name: N/A) CHPID value. This field is valid only for the following interface types: 1. IPv6 interfaces or IPv4 interfaces that are defined by the INTERFACE statement where the zType field value is 'HIPERSOCK'. 2. Interfaces for which the 'ChpID' flag is set.
zDupAddrDet	INT	1	(IBM name: N/A) DUPADDRDET count. This field is valid only for IPv6 interfaces, where the

			zType field value is 'OSAETH'.
zIPv4Mask	INT	1	(IBM name: N/A) IPv4 Subnet number of mask bits from INTERFACE or BSDROUTINGPARMS statement. If subnet mask specified on BSDROUTINGPARMS but overridden by OMPROUTE, this field is zero.
zTempPfxType	INT (ENUM)	1	(IBM name: N/A) TEMPPREFIX type. This field is valid only for IPv6 interfaces where flag 'TempPrefix' is set, and the zType field value is 'OSAETH'.

SMF119#04_Interface.zDynTypes.<fieldname>

DynWrkLdQ	BIT	1	If set, INBPERF DYNAMIC WORKLOADQ was configured.
-----------	-----	---	---

SMF119#04_Interface.<fieldname>

zChpIDType	INT (ENUM)	1	(IBM name: N/A) The CHPID type of the OSA-Express QDIO Ethernet interface. This field is valid only for interfaces where the zType field value is 'OSAETH' and the interface was defined by an INTERFACE profile statement (flag 'Deflfl' is set).
zVlanID	INT	2	(IBM name: N/A) VLAN ID. This field is valid only when flag 'VlanID' is set and the zType field value is 'OSAETH' or 'HIPERSOCK'.
zMtu	INT	2	(IBM name: N/A) MTU value. This field is valid only when flag 'Deflfl' is set, and the zType field value is 'OSAETH' or 'HIPERSOCK'.
zIPv4Addr	IPADDRESS	4	(IBM name: N/A) If flag zIPv6 is not set, this field is the IPv4 IP address from the HOME or INTERFACE statement. If an IP address has not been configured for the interface or if the 'TempIP' flag is set, this field is set to zeros.
zIfIndex	INT	4	(IBM name: N/A) The interface index, which is a small, positive number assigned to the interface when it is defined to the TCP/IP stack. For interfaces defined by DEVICE and LINK statements, this is the interface index of the LINK.
zVmacAddr	CHAR	6	(IBM name: N/A) Virtual MAC address. This field is valid only if flag 'Vmac' is set. The field contains one of the following values: 1. If flag 'VmacAddr' is set, the field contains the configured virtual MAC address. 2. If flag 'VmacAddr' is not set, and the interface is active, the field contains the virtual MAC address generated by the OSA-Express QDIO feature, when the interface was activated. If the interface is not yet active, then the field is set to zeros.
zIntID	INT	8	(IBM name: N/A) IPv6 interface ID value. This field is valid only if flag 'IfID' is set.
zName	CHAR	16	(IBM name: N/A) Interface name. For interfaces defined by DEVICE and LINK statements, this is the LINK name. otherwise, it is the interface name defined on the INTERFACE statement.
zAssocName	CHAR	16	(IBM name: N/A) One of the following associated names: 1. DEVICE name for interfaces defined with the LINK profile statement. For IPAQENET interfaces defined with the LINK statement, this is also the OSA-Express port name. For MPCPTP interfaces defined with the LINK statement, this is also the TRLE name. 2. PORTNAME value from the IPAQENET/IPAQENET6 INTERFACE statement. 3. TRLENAME value from the MPCPTP6 profile statement.
zSrcVipaIntName	CHAR	16	(IBM name: N/A) Source VIPA interface name from the INTERFACE profile statement. This field is valid only if flag 'SrcVipalfName' is set.

Secondary segment: SMF119#04_IPv6_address

Field Name	Type	Len	Description
SMF119#04_IPv6_address.<fieldname>			

zDesc	CHAR	4	(IBM name: N/A) IPA6 eyecatcher.
-------	------	---	-------------------------------------

SMF119#04_IPv6_address.<fieldname>

Depracated	BIT	1	If set, the address or address prefix has been deprecated by the DEPRADDR parameter.
------------	-----	---	--

SMF119#04_IPv6_address.<fieldname>

zType	INT (ENUM)	1	(IBM name: N/A) Type of entry.
zPfxLen	INT	1	(IBM name: N/A) Prefix length. This field is only valid when the zType is either 'PFX' or 'TEMPPPFX'.
zIfIndex	HEX	4	(IBM name: N/A) The interface index of the interface to which the IPv6 address is assigned. This is a small, positive number assigned to the interface when it is defined to the TCP/IP stack.
zIntName	CHAR	16	(IBM name: N/A) Associated interface name.
zAddr	HEX	16	(IBM name: N/A) Address or prefix.

Secondary segment: **SMF119#04_Routing**

Field Name	Type	Len	Description
SMF119#04_Routing.<fieldname>			
zDesc	CHAR	4	(IBM name: N/A) ROUT eyecatcher.

SMF119#04_Routing.zFlags.<fieldname>

IPv6	BIT	1	IPv6 indicator. If set, this is an IPv6 route.
Default	BIT	1	If set, this is a default route so there is no destination IP address.
NextHop	BIT	1	If set, a next hop address was specified.
DelayAcks	BIT	1	If set, DELAYACKS was specified.
Replaceable	BIT	1	If set, REPLACEABLE was specified.
Replaced	BIT	1	If set, this is a replaceable static route which has been replaced by a dynamic route. This route is not currently being used by the TCP/IP stack.

SMF119#04_Routing.<fieldname>

zMtu	INT	2	(IBM name: N/A) MTU size.
zDestPfxLen	INT	1	(IBM name: N/A) Destination prefix length for both IPv4 or IPv6 destination addresses. This value is set to the maximum IPv4 (32) or IPv6(128) value in the following cases: 1. If the HOST parameter was specified as the IPv4 address mask or IPv6 prefix length. 2. A prefix length was not specified.
zIfIndex	INT	4	(IBM name: N/A) Interface index of interface over which route is defined.
zMaxRetranTime	INT	4	(IBM name: N/A) Maximum retransmission time in milliseconds.
zMinRetranTime	INT	4	(IBM name: N/A) Minimum retransmission time in milliseconds.
zRoundTripGain	INT	2	(IBM name: N/A) Round trip gain percentage in thousandths of seconds.

zVarGain	INT	2	(IBM name: N/A) Variance gain percentage in thousandths of seconds.
zVarMultiplier	INT	4	(IBM name: N/A) Variance multiplier value in thousandths if seconds.
zIntName	CHAR	16	(IBM name: N/A) Name of interface over which route is defined, padded with trailing blanks.
zDestAddr	IPADDRESS	16	(IBM name: N/A) One of the following values: 1. If the 'IPv6' flag is not set, this field contains the IPv4 destination IP address. 2. If the 'IPv6' flag is set, this field contains the IPv6 destination IP address.
zNextHopAddr	IPADDRESS	16	(IBM name: N/A) Next hop IP address. This field is only valid if flag 'NextHop' is set. The value is one of the following: 1. If the 'IPv6' flag is not set, this field contains the IPv4 next hop IP address. 2. If the 'IPv6' flag is set, this field contains the IPv6 next hop IP address.

Secondary segment: **SMF119#04_Source_IP_address**

Field Name	Type	Len	Description
<i>SMF119#04_Source_IP_address.<fieldname></i>			
zDesc	CHAR	4	(IBM name: N/A) SRCI eyecatcher.
zType	INT (ENUM)	1	(IBM name: N/A) Type of entry.

<i>SMF119#04_Source_IP_address.zFlags.<fieldname></i>			
IPv6	BIT	1	IPv6 indicator. If set IP addresses are IPv6, otherwise IP addresses are IPv4.
SrclfName	BIT	1	Source IP address identifier in field zSrc is an IPv6 interface name.
Clients	BIT	1	Job name Clients.
Servers	BIT	1	Job name Servers.
TempAddr	BIT	1	If the flag is set and default source IP address selection is performed, an IPv6 temporary address is preferred over an IPv6 public address.
PubAddr	BIT	1	If the flag is set and default source IP address selection is performed, an IPv6 public address is preferred over an IPv6 temporary address.

<i>SMF119#04_Source_IP_address.<fieldname></i>			
zDestPfxLen	INT	1	(IBM name: N/A) Destination prefix length for both IPv4 or IPv6 destination addresses. This value is zero if a prefix length was not specified.
zJobName	CHAR	8	(IBM name: N/A) If the zType value is 'JOB' (Job name), this field contains the specified job name, padded with trailing blanks.
zDestAddr	IPADDRESS	16	(IBM name: N/A) One of the following values: 1. If the zType value is 'DEST' (Destination) and the 'IPv6' flag is not set, this field contains the IPv4 destination IP address. 2. If the zType value is Destination and the 'IPv6' flag is set, this field contains the IPv6 destination IP address.
zSrcAddr	IPADDRESS	16	(IBM name: N/A) One of the following values: 1. If the 'IPv6' flag is not set, this field contains the IPv4 source IP address. 2. If the 'IPv6' flag is set, but the 'SrclfName' and 'TempAddr' flags are not set, this field contains the IPv6 source IP address. 3. If both the 'IPv6' and 'SrclfName' flags are set, this field contains the IPv6 source interface name, padded with trailing blanks.

Secondary segment: SMF119#04_Management

NMSmfIPSec	BIT	1	IP Sec.
NMSmfProfile	BIT	1	Profile.
NMSmfCSSMTP	BIT	1	CSSMTP.
NMSmfCSMAIL	BIT	1	CSMail.
NMSmfDvipa	BIT	1	Dynamic VIPAs.

<i>SMF119#04_Management.<fieldname></i>			
zNetMonMinLife	INT	1	(IBM name: N/A) If flag 'NMTcpConn' is set, this field contains the NETMONITOR TCPCONN SERVICE MINLIEFTIME value.

<i>SMF119#04_Management.zSAFlags.<fieldname></i>			
SAEnabled	BIT	1	

			If set, the TCP/IP subagent is enabled. If not set, the TCP/IP subagent is disabled.
SAOsaEnabled	BIT	1	If set, OSA support is enabled. If not set, OSA support is disabled.
SASetsEnabled	BIT	1	If set, Set support is enabled. If not set, Set support is disabled.
SACommunity	BIT	1	If set, a community name was specified.

SMF119#04_Management.<fieldname>

zSAAgent	INT	2	(IBM name: N/A) SACONFIG Agent port number.
zSAOsaSf	INT	2	(IBM name: N/A) SACONFIG OSASF port number.
zSACacheTime	INT	2	(IBM name: N/A) SACONFIG Cache time.
zSACommName	CHAR	32	(IBM name: N/A) SACONFIG Community name, padded with trailing blanks. Due to security concerns, this value is not provided in the SMF record. But if a community name value was specified, flag 'SACommunity' is set.

Secondary segment: **SMF119#04_IPSec_common**

Field Name	Type	Len	Description
SMF119#04_IPSec_common.<fieldname>			
zDesc	CHAR	4	(IBM name: N/A) IPSC eyecatcher.

SMF119#04_IPSec_common.zFlags.<fieldname>

DVIPSec	BIT	1	If set, DVIPSEC was specified.
LogEnable	BIT	1	If set, LOGENABLE was specified.
LogImplicit	BIT	1	If set, LOGIMPLICIT was specified.
DVLocalFltr	BIT	1	If set, DVLOCALFLTR was specified.

Secondary segment: **SMF119#04_IPSec_default_rules**

Field Name	Type	Len	Description
SMF119#04_IPSec_default_rules.<fieldname>			
zDesc	CHAR	4	(IBM name: N/A) IPSR eyecatcher.

SMF119#04_IPSec_default_rules.zFlags.<fieldname>

IPv6	BIT	1	If set, addresses are in IPv6 format.
SrcAddrDef	BIT	1	If set, a source address was specified and field zSrcAddr contains the address. If not set, an asterisk (*) or an address with a prefix length of zero (0) was specified for the source IP address. This means that any source address matches the rule.
DestAddrDef	BIT	1	If set, a destination address was specified and field zDestAddr contains the address. If not set, an asterisk (*) or an address with a prefix length of zero (0) was specified for the destination IP address. This means that any destination address matches the rule.
Log	BIT	1	If set, LOG was specified.
ProtoDef	BIT	1	

			If set, a protocol value other than OPAQUE was specified and field zProto contains the value. If a protocol value of OPAQUE was specified, flag 'ProtoOpaqueDef' is set. If neither the 'ProtoDef' nor the 'ProtoOpaqueDef' flags are set, any protocol value matches the rule.
SrcPortDef	BIT	1	If set, a source port was specified and field zSrcPort contains the port number. If not set, any source port number matches the rule.
DestPortDef	BIT	1	If set, a destination port was specified and field zDestPort contains the port number. If not set, any destination port number matches the rule.
TypeDef	BIT	1	If set, an ICMP, ICMPv6, OSPF, or MIPv6type was specified and field zType contains the type value. If not set, any type matches the rule for the specified or defaulted protocol.
CodeDef	BIT	1	If set, an ICMP or ICMPv6 code was specified and field zCode contains the code value. If not set, any code matches the rule for the specified or defaulted protocol and type.
SrcAddrRangeDef	BIT	1	If set, a source address range was specified and field zSrcAddr contains the beginning address of the range and field zSrcAddrEnd contains the ending address of the range.
DestAddrRangeDef	BIT	1	If set, a destination address range was specified and field zDestAddr contains the beginning address of the range and field zDestAddrEnd contains the ending address of the range.
ProtoOpaqueDef	BIT	1	This flag is valid only when flag zIPv6 is set. If set, PROTOCOL OPAQUE was specified. The OPAQUE protocol setting is indicated only by this flag. Field zProto is not set.
SrcPortRangeDef	BIT	1	If set, a source port range was specified. Field zSrcPort contains the beginning port number and field zSrcPortEnd contains the ending port number.
DestPortRangeDef	BIT	1	If set, a destination port range was specified. Field zDestPort contains the beginning port number and field zDestPortEnd contains the ending port number.
TypeRangeDef	BIT	1	If set, an ICMP, ICMPv6, or MIPv6 type range was specified. Field zType contains the beginning type and field zTypeEnd contains the ending type.
CodeRangeDef	BIT	1	If set, an ICMP or ICMPv6 code range was specified. Field zCode contains the beginning code and field zCodeEnd contains the ending code.

SMF119#04_IPSec_default_rules.<fieldname>

zSrcPfxLen	INT	1	(IBM name: N/A) Source address prefix length. This field is valid only when the specified prefix length is greater than zero (0). Specifying a prefix length of 0 is the same as specifying an IP address of asterisk (*), which means that any source address matches the rule.
zDestPfxLen	INT	1	(IBM name: N/A) Destination address prefix length. This field is valid only when the specified prefix length is greater than zero (0). Specifying a prefix length of 0 is the same as specifying an IP address of asterisk (*), which means that any destination address matches the rule.
zProto	INT (ENUM)	1	(IBM name: N/A) If the flag 'ProtoDef' is set, this field contains the protocol value.
zType	INT	1	(IBM name: N/A) If the flag 'TypeDef' is set, this field contains the ICMP/ICMPv6/OSPF/MIPv6 type value. For ICMP, ICMPv6, and MIPv6, if flag 'TypeRangeDef' is not set, this is the only type value, otherwise this is the beginning type value in a range.
zCode	INT	1	(IBM name: N/A) If the flag 'CodeDef' is set, this field contains the ICMP/ICMPv6 code value. If flag 'CodeRangeDef' is not set, this is the only code value. Otherwise, this is the beginning code value in a range.
zRoutingType	INT (ENUM)	1	(IBM name: N/A) ROUTING type.
zSecClass	INT	1	(IBM name: N/A) SECCLASS value.
zTypeEnd	INT	1	

			(IBM name: N/A) If the flag 'RTypeRangeDef' is set, this field contains the ending ICMP, ICMPv6, or MIPv6 type value in a range. The beginning type value in the range is contained in the zType field.
zCodeEnd	INT	1	(IBM name: N/A) If the flag 'CodeRangeDef' is set, this field contains the ending ICMP, or ICMPv6 code value in a range. The beginning code value in the range is contained in the zCode field.
zDirection	INT (ENUM)	1	(IBM name: N/A) DIRECTION value.
zSrcPort	INT	2	(IBM name: N/A) If the flag 'SrcPortDef' is set, this field contains the source port number. If flag 'SrcPortRangeDef' is not set, this is the only source port number. Otherwise, this is the beginning source port number in a range.
zDestPort	INT	2	(IBM name: N/A) If the flag 'DestPortDef' is set, this field contains the destination port number. If flag 'DestPortRangeDef' is not set, this is the only destination port number. Otherwise, this is the beginning destination port number in a range.
zSrcAddr	IPADDRESS	16	(IBM name: N/A) If the flag 'SrcAddrDef' is set, and the 'IPv6' flag is not set, this field contains an IPv4 source address. If flag 'SrcAddrRangeDef' is not set, this is the only source IP address. Otherwise, this is the beginning source IP address in a range.
zDestAddr	IPADDRESS	16	(IBM name: N/A) If the flag 'DestAddrDef' is set, and the 'IPv6' flag is not set, this field contains an IPv4 destination address. If flag 'DestAddrRangeDef' is not set, this is the only destination IP address. Otherwise, this is the beginning destination IP address in a range.
zSrcAddrEnd	IPADDRESS	16	(IBM name: N/A) If the flag 'SrcAddrRangeDef' is set, and the 'IPv6' flag is not set, this field contains the ending IPv4 IP source address in the range. If the flag 'SrcAddrRangeDef' is set, and the 'IPv6' flag is set, this field contains the ending IPv6 IP source address in the range. The beginning source IP address in the range is contained in the zSrcAddr field.
zDestAddrEnd	IPADDRESS	16	(IBM name: N/A) If the flag 'DestAddrRangeDef' is set, and the 'IPv6' flag is not set, this field contains the ending IPv4 IP destination address in the range. If the flag 'DestAddrRangeDef' is set, and the 'IPv6' flag is set, this field contains the ending IPv6 IP destination address in the range. The beginning destination IP address in the range is contained in the zDestAddr field.
zSrcPortEnd	INT	2	(IBM name: N/A) If the flag 'SrcPortRangeDef' is set, this field contains the ending source port number in a range. The beginning port number in the range is contained in the zSrcPort field.
zDestPortEnd	INT	2	(IBM name: N/A) If the flag 'DestPortRangeDef' is set, this field contains the ending destination port number in a range. The beginning port number in the range is contained in the zDestPort field.

Secondary segment: SMF119#04_Network_access

Field Name	Type	Len	Description
<i>SMF119#04_Network_access.<fieldname></i>			
zDesc	CHAR	4	(IBM name: N/A) IPSR eyecatcher.
<i>SMF119#04_Network_access.zFlags.<fieldname></i>			
IPv6	BIT	1	If set IP addresses are IPv6, otherwise IP addresses are IPv4.
InBound	BIT	1	If set, inbound network access control checking is in effect.
OutBound	BIT	1	If set, outbound network access control checking is in effect.

Default	BIT	1	If set, this is a DEFAULT entry.
DefaultHome	BIT	1	If set, this is a DEFAULTHOME entry.
SMF119#04_Network_access.<fieldname>			
zNetwPfxLen	INT	1	(IBM name: N/A) Network address prefix length for the IPv4 or IPv6 network value.
zCache	INT (ENUM)	1	(IBM name: N/A) CacheAll => When a SAF call is made to check if a user has access to a security zone, the result is cached regardless of whether access is permitted or denied. CachePermit => When a SAF call is made to check if a user has access to a security zone, the result is cached if access is permitted, but is not cached if access is denied. CacheSame => When a SAF call is made to check if a user has access to a security zone, the result is cached if access is permitted, but is not cached if access is denied. In addition, a new SAF call is made for a previously permitted security zone if either the user that is associated with the socket changes, or the IP address that is being accessed changes from the IP address in the previous packet that was received or sent over the socket.
zSafName	CHAR	8	(IBM name: N/A) SAF resource name, padded with trailing blanks.
zNetwAddr	IPADDRESS	16	(IBM name: N/A) If the 'IPv6' flag is not set, and this is not a DEFAULT or DEFAULTHOME entry, this field contains the IPv4 network value. The network value is the IPv4 network address ANDed with the prefix length. If the 'IPv6' flag is set, and this is not a DEFAULT or DEFAULTHOME entry, this field contains the IPv6 network value. The network value is the IPv6 network address ANDed with the prefix length.

Secondary segment: SMF119#04_Dynamic_VIPA_address

Field Name	Type	Len	Description
SMF119#04_Dynamic_VIPA_address.<fieldname>			
zDesc	CHAR	4	(IBM name: N/A) DVCF eyecatcher.

SMF119#04_Dynamic_VIPA_address.zFlags.<fieldname>			
ChgCancelled	BIT	1	If set, pending configuration changes for this section were cancelled because the stack is not currently joined to the sysplex group. If this flag is set, no other information is provided in this section.
IPv6	BIT	1	If set, IP addresses are IPv6. Otherwise, IP addresses are IPv4.
MoveImmed	BIT	1	This flag is valid only when the value of zType is Backup or Define. If set, the DVIPA can be immediately moved to another stack when the other stack requests ownership of it, but existing connections are preserved. If this flag is not set, the DVIPA cannot move to another stack until all current connections have ended.
MoveNonDisrupt	BIT	1	This flag is valid only if the value of zType is Range. If set, the DVIPA can be immediately moved to another stack when the other stack requests ownership of it, but existing connections are preserved. If this flag is not set: 1. A subsequent BIND on another stack for the same DVIPA address fails. A subsequent SIOCSVIPA ioctl on another stack succeeds and the DVIPA is deleted from this stack. Any connections to the DVIPA on this offset are terminated. 2. A subsequent SIOCSVIPA ioctl on another stack succeeds and the DVIPA is deleted from this stack. Any connections to the DVIPA on this stack are terminated.
CpcScope	BIT	1	If set, the DVIPA cannot be moved to or taken over by another TCP/IP stack that is in a different central processor complex (CPC). This flag is valid only if field zType is set to 'Backup' or 'Define'.
Tier1	BIT	1	If set, the DVIPA is used to distribute incoming requests to non-z/OS targets. This flag is valid only if field zType is set to Backup or Define.
Tier2	BIT	1	If set, the DVIPA is used to distribute incoming requests from Tier1 targets to server applications and the DVIPA cannot be moved to or taken over by

			another TCP/IP stack that is in a different CPC. This flag is valid only if field zType is set to 'Backup' or 'Define'.
ServMgr	BIT	1	If set, and this DVIPA is distributed, MultiNode Load Balancing (MNLB) is performed as part of the distribution. This flag is not supported.
Deactivated	BIT	1	If set, the associated DVIPA address is currently deactivated. DVIPA addresses and interfaces can be deactivated by way of the VARY TCPIP,,SYSPLEX,DEACTIVATE command. This flag is valid only if zType is Backup or Define.
SAFNameSet	BIT	1	If set, the SAF parameter is specified on the VIPARANGE statement. Field zSAFName contains the SAF parameter value.

SMF119#04_Dynamic_VIPA_address.<fieldname>			
zType	INT (ENUM)	1	(IBM name: N/A) DVIPA entry type.
zBackupRank	INT	1	(IBM name: N/A) If the zType value is 'Backup', this field contains the rank value.
zPfxLen	INT	1	(IBM name: N/A) This field contains one of the following values: 1. If the zType value is 'Define' or Backup, and the 'IPv6' flag is not set, this field contains the IPv4 subnet prefix length. 2. If the zType value is 'Define' or Backup, and the 'IPv6' flag is set, this field contains the IPv6 subnet prefix length. 3. If the zType value is 'Range', and the 'IPv6' flag is not set, this field contains the prefix length used to create the IPv4 VIPARANGE prefix. 4. If the zType value is 'Range', and the 'IPv6' flag is set, this field contains the prefix length used to create the IPv6 VIPARANGE prefix. 5. 0 if a prefix length was not specified.
zAddr	IPADDRESS	16	(IBM name: N/A) If the 'IPv6' flag is not set, this field contains the IPv4 DVIPA IP address. If the 'IPv6' flag is set, this field contains the IPv6 DVIPA IP address.
zIntfName	CHAR	16	(IBM name: N/A) If the 'IPv6' flag is set, this field contains the IPv6 DVIPA interface name, padded with trailing blanks.
zSAFName	CHAR	8	(IBM name: N/A) If the 'SAFNameSet' flag is set, this field contains the name specified on the SAF parameter of the VIPARANGE statement, padded with trailing blanks.

Secondary segment: **SMF119#04_Dynamic_VIPA_routing**

Field Name	Type	Len	Description
SMF119#04_Dynamic_VIPA_routing.<fieldname>			
zDesc	CHAR	4	(IBM name: N/A) DVRT eyecatcher.

SMF119#04_Dynamic_VIPA_routing.zFlags.<fieldname>			
ChgCancelled	BIT	1	If set, pending configuration changes for this section were cancelled because the stack is not currently joined to the sysplex group. If this flag is set, no other information is provided in this section.
IPv6	BIT	1	If set, IP addresses are IPv6. Otherwise, IP addresses are IPv4.

SMF119#04_Dynamic_VIPA_routing.<fieldname>			
zDynXcfAddr	IPADDRESS	16	(IBM name: N/A) If the 'IPv6' flag is not set, this field contains the IPv4 dynamic XCF IP address. If the 'IPv6' flag is set, this field contains the IPv6 dynamic XCF IP address.
zTargetAddr	IPADDRESS	16	(IBM name: N/A) If the 'IPv6' flag is not set, this field contains the IPv4 target IP address. If the 'IPv6' flag is set, this field contains the IPv6 target IP address.

Secondary segment: **SMF119#04_Distributed_Dynamic_VIPA**

Field Name	Type	Len	Description
SMF119#04_Distributed_Dynamic_VIPA.<fieldname>			
zDesc	CHAR	4	(IBM name: N/A) DDVS eyecatcher.
SMF119#04_Distributed_Dynamic_VIPA.zFlags.<fieldname>			
ChgCancelled	BIT	1	If set, pending configuration changes for this section were cancelled because the stack is not currently joined to the sysplex group. If this flag is set, no other information is provided in this section.
IPv6	BIT	1	If set, this is an IPv6 entry. Otherwise, it is an IPv4 entry.
Port	BIT	1	If set, the PORT parameter was specified and field zDistPortNum contains the distributed port number.
DestipAll	BIT	1	If set, connections to the DVIPA address can be distributed to all stacks connected to this stack by way of a dynamic XCF interface of the same protocol type (IPv4 or IPv6) as the DVIPA address. If flag 'Tier2' is set, connections can be distributed only to targets on the same CPC as the Tier2 distributor.
OptLocal	BIT	1	If set, target stacks should normally process new connection requests locally instead of sending them to the sysplex distributor stack, depending on the OPTLOCAL value in field OptLocalValue.
SysplexPorts	BIT	1	If set, coordinated sysplex-wide ephemeral port assignment is activated for the distributed DVIPA on all stacks where the DVIPA is defined.
Tier1	BIT	1	If this parameter is set, and the 'Tier1Gre' flag is set, incoming connection requests to the distributed DVIPA are distributed to non-z/OS targets. If this parameter is set, and the 'Tier1Gre' flag is not set, incoming connection requests to the distributed DVIPA are distributed to z/OS targets. 1. If 'IPv6' is not set, the zDestipAddr field contains the IPv4 target IP address. 2. If 'IPv6' is set, the zDestipAddr field contains the IPv6 target IP address. 3. The zTierGroupName field contains the TIER1 group name. 4. If the 'Tier1Gre' flag is set, the zControlPortNum field contains the control port number.
Tier1Gre	BIT	1	If set and 'IPv6' is not set, generic routing encapsulation (GRE) is used to distribute requests to IPv4 tier 1 non-z/OS targets. If set and 'IPv6' is set, IPv6 routing encapsulation is used to distribute requests to IPv6 tier 1 non-z/OS targets. This flag can be set only if flag Tier1 is set.
Tier2	BIT	1	If set, the DVIPA is used to distribute incoming requests from tier 1 targets to server applications. The zTierGroupName field contains the TIER2 group name.
Deactivated	BIT	1	If set, the associated distributed DVIPA is currently deactivated. DVIPA distribution can be deactivated by using the VARY TCPIP,,SYSPLEX,DEACTIVATE command to deactivate the corresponding DVIPA address.
SrvTypePreferred	BIT	1	When the value of zDistMethod is 'HotStandby', this flag is set if the server type is Preferred: 1 => This is the preferred server. 0 => This is not the preferred server.
SrvTypeBackup	BIT	1	When the value of zDistMethod is 'HotStandby', this flag is set if the server type is Backup: 1 => This is a backup server. 0 => This is not a backup server.
AutoSwitchBack	BIT	1	When the value of zDistMethod is 'HotStandby', this flag is the AUTOSWITCHBACK setting: 1 => AUTOSWITCHBACK is configured. 0 => NOAUTOSWITCHBACK is configured.
HealthSwitch	BIT	1	When the value of zDistMethod is 'HotStandby', this flag is the HEALTHSWITCH setting: 1 => HEALTHSWITCH is configured. 0 => NOHEALTHSWITCH is configured.
SMF119#04_Distributed_Dynamic_VIPA.<fieldname>			

zDistMethod	INT (ENUM)	1	(IBM name: N/A) Distribution method.
zBWProcTypeCp	INT	1	(IBM name: N/A) When the value of zDistMethod is 'BaseWlm', this field contains the proportion of the workload that is expected to use conventional processors.
zBWProcTypeZaap	INT	1	(IBM name: N/A) When the value of zDistMethod is 'BaseWlm', this field contains the proportion of the workload that is expected to use zAAP processors.
zBWProcTypeZiip	INT	1	(IBM name: N/A) When the value of zDistMethod is 'BaseWlm', this field contains the proportion of the workload that is expected to use zIIP processors.
zSWProcXcostZaap	INT	1	(IBM name: N/A) When the value of zDistMethod is 'ServerWlm', this field contains the crossover cost of running the targeted zAAP workload on a conventional processor instead of the zAAP processor.
zSWProcXcostZiip	INT	1	(IBM name: N/A) When the value of zDistMethod is 'ServerWlm', this field contains the crossover cost of running the targeted zIIP workload on a conventional processor instead of the zIIP processor.
zSWIWeighting	INT	1	(IBM name: N/A) When the value of zDistMethod is 'ServerWlm', this field contains the weighting factor WLM uses when comparing displaceable capacity at different importance levels (IL's) as it determines a SERVERWLM recommendation for each system.
zWADestipWeight	INT	1	(IBM name: N/A) When the value of zDistMethod is 'WeightedActive', this field contains the weight used by the distributor to determine the proportion of active connections on this target.
zOptLocalValue	INT	1	(IBM name: N/A) If flag 'OptLocal' is set, this field contains the OPTLOCAL value.
zBackupRank	INT	1	(IBM name: N/A) When the flag 'SrvTypeBackup' is set, this field contains the rank of the backup server.
zTimedAffinity	INT	2	(IBM name: N/A) The number of seconds during which connection requests from a client are routed to the same target server. This value is valid only if the 'Optlocal' flag is not set.
zControlPortNum	INT	2	(IBM name: N/A) If flag 'Tier1' is set, this field contains the destination port number to be used when establishing a control connection to the Tier1 target.
zDistPortNum	INT	2	(IBM name: N/A) If flag 'Port' is set, this field contains the port number for one of the distributed ports.
zTierGroupName	CHAR	16	(IBM name: N/A) If either flag 'Tier1' or flag 'Tier2' is set, this field contains the group name.
zDist	IPADDRESS	16	(IBM name: N/A) If the 'IPv6' flag is not set, this field contains the IPv4 distributed DVIPA IP address. If the 'IPv6' flag is set, this field contains the IPv6 distributed DVIPA interface name.
zDestIP	IPADDRESS	16	(IBM name: N/A) If the flag DestipAll is not set, this field contains one of the destinations to which connections requests are sent. If the IPv6 flag is set, this field contains an IPv6 IP address, otherwise it contains an IPv4 IP address. The address is one of the following values: 1. If the 'Tier1Gre' flag is not set, a dynamic XCF IP address to a target stack. 2. If the 'Tier1GRE' flag is set, a non- z/OS target's IP address.

<i>SMF119#05_TCP_statistics.<fieldname></i>			
zDuration	TIME	8	(IBM name: N/A) Duration of recording interval in microseconds, where bit 51 is equivalent to one microsecond.
zAlg	INT	4	(IBM name: N/A) Retransmission algorithm.
zMinRet	INT	4	(IBM name: N/A) Minimum retransmission time, in milliseconds.
zMxRet	INT	4	(IBM name: N/A) Maximum retransmission time, in milliseconds.
zMxCon	INT	4	(IBM name: N/A) Maximum TCP connections.
zOpenConn	INT	4	(IBM name: N/A) Number of active open connections, including active open connections across SMC links.
zPassConn	INT	4	(IBM name: N/A) Number of passive open connections, including passive open connections across SMC links.
zOFails	INT	4	(IBM name: N/A) Number of open connection failures.
zConReset	INT	4	(IBM name: N/A) Number of connection resets, including resets for connections across SMC links.
zEstab	INT	4	(IBM name: N/A) Number of current establishments, including establishments for connections across SMC links.
zInSegs	INT	4	(IBM name: N/A) Number of input TCP segments, including input TCP segments for connections across SMC links.
zOSegs	INT	4	(IBM name: N/A) Number of output TCP segments, including output TCP segments for connections across SMC links.
zRxSegs	INT	4	

			(IBM name: N/A) Number of retransmitted segments.
zInErrs	INT	4	(IBM name: N/A) Number of input errors.
zReset	INT	4	(IBM name: N/A) Number of resets sent, including resets for connections across SMC links.
zConCls	INT	4	(IBM name: N/A) Number of TCP connections closed, including connections across SMC links.
zConAttD	INT	4	(IBM name: N/A) Number of TCP connection attempts discarded.
zTWRef	INT	4	(IBM name: N/A) Number of TCP Timewait connections assassinated.
zHOKAck	INT	4	(IBM name: N/A) Number of header predictions (OK for ACK).
zHOKDat	INT	4	(IBM name: N/A) Number of header predictions (OK for Data).
zIDupAck	INT	4	(IBM name: N/A) Number of duplicate ACKs received.
zDscChecksum	INT	4	(IBM name: N/A) Number of received packets discarded due to bad checksum values.
zDscLen	INT	4	(IBM name: N/A) Number of received packets discarded due to bad header length.
zDscInsData	INT	4	(IBM name: N/A) Number of received packets discarded due to insufficient data.
zDscOldTime	INT	4	(IBM name: N/A) Number of received packets discarded due to old timestamp information.
zICmpDupSeg	INT	4	(IBM name: N/A) Number of received complete duplicate segments.
zIPartDupSeg	INT	4	(IBM name: N/A) Number of received partial duplicate segments.
zICmpSegsWin	INT	4	(IBM name: N/A) Number of complete segments received after window closure.
zIPartSegsWin	INT	4	(IBM name: N/A) Number of partial segments received after window closure.
zIOOrder	INT	4	(IBM name: N/A) Number of out-of-order segments received.
zISegCls	INT	4	(IBM name: N/A) Number of segments received after the TCP connection closed.
zIWinPr	INT	4	(IBM name: N/A) Number of received window probes.
zIWinUp	INT	4	(IBM name: N/A) Number of received window updates.
zOWinPr	INT	4	(IBM name: N/A) Number of transmitted window probes.
zOWinUp	INT	4	(IBM name: N/A) Number of transmitted window updates.
zODIAck	INT	4	(IBM name: N/A) Number of transmitted delayed ACKs.
zOKApr	INT	4	(IBM name: N/A) Number of transmitted keepalive probes, including keepalive probes sent on the TCP path for connections across SMC links.
zRxTim	INT	4	(IBM name: N/A) Number of retransmitted timeouts.
zRxMTU	INT	4	(IBM name: N/A) Number of retransmitted Path MTU discovery packets.

zPathM	INT	4	(IBM name: N/A) Number of Path MTUs beyond retransmit limit.
zDropPr	INT	4	(IBM name: N/A) Number of TCP connections dropped due to probes.
zDropKA	INT	4	(IBM name: N/A) Number of TCP connections dropped by KeepAlive, including connections across SMC links.
zDropF2	INT	4	(IBM name: N/A) Number of TCP connections dropped because the FINWAIT2 timer expired before receiving FIN segments, including connections across SMC links.
zDropRx	INT	4	(IBM name: N/A) Number of TCP connections dropped due to retransmits.
zEphPortExh	INT	4	(IBM name: N/A) Number of bind() requests that failed because no TCP ephemeral ports were available.
zEphPortAvail	INT	2	(IBM name: N/A) Number of available TCP ephemeral ports.
zEphPortInUse	INT	2	(IBM name: N/A) Number of TCP ephemeral ports currently in use.
zEphPortMxUse	INT	2	(IBM name: N/A) Maximum number of TCP ephemeral ports that are used.
zCRCurrEstabLnks	INT	4	(IBM name: N/A) Number of current active SMC-R links.
zCRLnkActTimeOut	INT	4	(IBM name: N/A) Number of SMC-R link activation attempts for which a timeout occurred.
zCRActLnkOpened	INT	4	(IBM name: N/A) Number of active SMC-R links that have been opened.
zCRPasLnkOpened	INT	4	(IBM name: N/A) Number of passive SMC-R links that have been opened.
zCRLnksClosed	INT	4	(IBM name: N/A) Number of SMC-R links that have been closed.
zCRCurrEstab	INT	4	(IBM name: N/A) Current number of TCP connections that are across SMC-R links.
zCRActiveOpened	INT	4	(IBM name: N/A) Number of active TCP connections that have been opened across SMC-R links.
zCRPassiveOpened	INT	4	(IBM name: N/A) Number of passive TCP connections that have been opened across SMC-R links.
zCRConnClosed	INT	4	(IBM name: N/A) Number of closed TCP connections that were across SMC-R links.
zCRInSegs	INT	8	(IBM name: N/A) Number of SMC-R inbound write operations.
zCROutSegs	INT	8	(IBM name: N/A) Number of SMC-R outbound write operations.
zCRInRsts	INT	4	(IBM name: N/A) Number of SMC-R inbound write operations that contained the abnormal close flag.
zCROutRsts	INT	4	(IBM name: N/A) Number of SMC-R outbound write operations that contained the abnormal close flag.
zCDCurrEstabLnks	INT	4	(IBM name: N/A) Number of current active SMC-D links.
zCDActLnkOpened	INT	4	(IBM name: N/A) Number of active SMC-D links that have been opened.
zCDPasLnkOpened	INT	4	(IBM name: N/A) Number of passive SMC-D links that have been opened.
zCDLnksClosed	INT	4	

			(IBM name: N/A) Number of SMC-D links that have been closed.
zCDCurrEstab	INT	4	(IBM name: N/A) Current number of TCP connections that are across SMC-D links.
zCDActiveOpened	INT	4	(IBM name: N/A) Number of active TCP connections that have been opened across SMC-D links.
zCDPassiveOpened	INT	4	(IBM name: N/A) Number of passive TCP connections that have been opened across SMC-D links.
zCDConnClosed	INT	4	(IBM name: N/A) Number of closed TCP connections that were across SMC-D links.
zCDInSegs	INT	8	(IBM name: N/A) Number of SMC-D inbound write operations.
zCDOutSegs	INT	8	(IBM name: N/A) Number of SMC-D outbound write operations.
zCDInRsts	INT	4	(IBM name: N/A) Number of SMC-D inbound write operations that contained the abnormal close flag.
zCDOutRsts	INT	4	(IBM name: N/A) Number of SMC-D outbound write operations that contained the abnormal close flag.

Secondary segment: **SMF119#05_UDP_statistics**

Field Name	Type	Len	Description
<i>SMF119#05_UDP_statistics.<fieldname></i>			
zDuration	TIME	8	(IBM name: N/A) Duration of recording interval in microseconds, where bit 51 is equivalent to one microsecond.
zRecData	INT	8	(IBM name: N/A) Number of UDP datagrams received.
zRecNoPort	INT	4	(IBM name: N/A) Number of UDP datagrams received with no port defined.
zNoRec	INT	4	(IBM name: N/A) Number of other UDP datagrams not received.
zXmtData	INT	8	(IBM name: N/A) Number of UDP datagrams sent.
zEphPortExh	INT	4	(IBM name: N/A) Number of bind() requests that failed because no UDP ephemeral ports were available.
zEphPortAvail	INT	2	(IBM name: N/A) Number of available UDP ephemeral ports.
zEphPortInUse	INT	2	(IBM name: N/A) Number of UDP ephemeral ports currently in use.
zEphPortMxUse	INT	2	(IBM name: N/A) Maximum number of UDP ephemeral ports that are used.

Secondary segment: **SMF119#05_ICMP_statistics**

Field Name	Type	Len	Description
<i>SMF119#05_ICMP_statistics.<fieldname></i>			

zDuration	TIME	8	(IBM name: N/A) Duration of recording interval in microseconds, where bit 51 is equivalent to one microsecond.
zInMsg	INT	4	(IBM name: N/A) Number of inbound ICMP messages.
zInError	INT	4	(IBM name: N/A) Number of inbound ICMP error messages.
zInDstUnreach	INT	4	(IBM name: N/A) Number of inbound ICMP destination unreachable messages.
zInTimeExcd	INT	4	(IBM name: N/A) Number of inbound ICMP time exceeded messages.
zInParmProb	INT	4	(IBM name: N/A) Number of inbound ICMP parameter problem messages.
zInSrcQuench	INT	4	(IBM name: N/A) Number of inbound ICMP source quench messages.
zInRedirect	INT	4	(IBM name: N/A) Number of inbound ICMP redirect messages.
zInEcho	INT	4	(IBM name: N/A) Number of inbound ICMP echo request messages.
zInEchoRep	INT	4	(IBM name: N/A) Number of inbound ICMP echo reply messages.
zInTstamp	INT	4	(IBM name: N/A) Number of inbound ICMP timestamp request messages.
zInTstampRep	INT	4	(IBM name: N/A) Number of inbound ICMP timestamp reply messages.
zInAddrMask	INT	4	(IBM name: N/A) Number of inbound ICMP address mask request messages.
zInAddrMRep	INT	4	(IBM name: N/A) Number of inbound ICMP address mask reply messages.
zOutMsg	INT	4	(IBM name: N/A) Number of outbound ICMP messages.
zOutError	INT	4	(IBM name: N/A) Number of outbound ICMP error messages.
zOutDstUnreach	INT	4	(IBM name: N/A) Number of outbound ICMP destination unreachable messages.
zOutTimeExcd	INT	4	(IBM name: N/A) Number of outbound ICMP time exceeded messages.
zOutParmProb	INT	4	(IBM name: N/A) Number of outbound ICMP parameter problem messages.
zOutSrcQuench	INT	4	(IBM name: N/A) Number of outbound ICMP source quench messages.
zOutRedirect	INT	4	(IBM name: N/A) Number of outbound ICMP redirect messages.
zOutEcho	INT	4	(IBM name: N/A) Number of outbound ICMP echo request messages.
zOutEchoRep	INT	4	(IBM name: N/A) Number of outbound ICMP echo reply messages.
zOutTstamp	INT	4	(IBM name: N/A) Number of outbound ICMP timestamp request messages.
zOutTstampRep	INT	4	(IBM name: N/A) Number of outbound ICMP timestamp reply messages.
zOutAddrMask	INT	4	(IBM name: N/A) Number of outbound ICMP address mask request messages.
zOutAddrMRep	INT	4	(IBM name: N/A) Number of outbound ICMP address mask reply messages.

Secondary segment: **SMF119#05_IPv6_IP_statistics**

Field Name	Type	Len	Description
<i>SMF119#05_IPv6_IP_statistics.<fieldname></i>			
zDuration	TIME	8	(IBM name: N/A) Duration of recording interval in microseconds, where bit 51 is equivalent to one microsecond.
zRecData	INT	4	(IBM name: N/A) Number of IPv6 datagrams received.
zDscData	INT	4	(IBM name: N/A) Number of input IPv6 datagrams discarded due to errors in their IP header.
zDscAddr	INT	4	(IBM name: N/A) Number of input IPv6 datagrams discarded because the IP address in their IP header's destination field was not valid.
zAttFwdData	INT	4	(IBM name: N/A) Number of attempts to forward IPv6 datagrams.
zDscDUnkPr	INT	4	(IBM name: N/A) Number of IPv6 datagrams discarded because of an unknown or unsupported protocol.
zDscDOth	INT	4	(IBM name: N/A) Number of input IPv6 datagrams discarded that are not accounted for in another input discard counter.
zDlvData	INT	4	(IBM name: N/A) Number of IPv6 datagrams delivered.
zXData	INT	4	(IBM name: N/A) Number of IPv6 datagrams transmitted.
zXDscOth	INT	4	(IBM name: N/A) Number of IPv6 outbound datagrams discarded, due to reasons other than no route being available.
zXDscRoute	INT	4	(IBM name: N/A) Number of IPv6 outbound datagrams discarded, due to no route being available.
zTimeouts	INT	4	(IBM name: N/A) Number of IPv6 reassembly timeouts.
zRecDRsmb	INT	4	(IBM name: N/A) Number of received IPv6 datagrams requiring reassembly.
zRsmb	INT	4	(IBM name: N/A) Number of received IPv6 datagrams reassembled.
zFailRsmb	INT	4	(IBM name: N/A) Number of failed reassembly attempts on IPv6 datagrams.
zRecFgmt	INT	4	(IBM name: N/A) Number of fragmented IPv6 datagrams received.
zDscDFgmt	INT	4	(IBM name: N/A) Number of IPv6 datagrams discarded due to fragmentation failure.
zXFgmt	INT	4	(IBM name: N/A) Number of IPv6 datagram fragments generated.
zRouteDisc	INT	4	(IBM name: N/A) Number of IPv6 routing discards.

Secondary segment: **SMF119#05_IPv6_ICMP_statistics**

Field Name	Type	Len	Description

- [SMF119#06_HOME_IP_Address](#)
- [SMF119#06_Identification](#)
- [SMF119#06_Interface_statistics](#)

Primary segment: [SMF119#06_TCPIP_Statistics](#)

Field Name	Type	Len	Description
<i>SMF119#06_TCPIP_Statistics.<fieldname></i>			
<i>SMF119#06_TCPIP_Statistics.Header.<fieldname></i>			
zFLG	HEX	1	(IBM name: N/A) System indicator: Bit Meaning when set 0-2 Reserved. 3-6 Version indicators 7 Reserved.
zRTY	INT	1	(IBM name: N/A) Record type 119
zTME	TSTMP	8	(IBM name: N/A) Date/Time that the record was moved into the SMF buffer.
zSID	CHAR	4	(IBM name: N/A) System ID.
zSSID	CHAR	4	(IBM name: N/A) Subsystem ID.
zSTY	INT	2	(IBM name: N/A) Record subtype.

<i>SMF119#06_TCPIP_Statistics.Self_defining_Section.<fieldname></i>			
zTRN	INT	2	(IBM name: SMF119SD_TRN) Number of triplets in this record (3).
zDOff	INT	4	(IBM name: N/A) Offset to TCP/IP identification section.
zDLen	INT	2	(IBM name: N/A) Length of TCP/IP identification section.
zDNum	INT	2	(IBM name: N/A) Number of TCP/IP identification sections.
z1Off	INT	4	(IBM name: N/A) Offset to first interface section.
z1Len	INT	2	(IBM name: N/A) Length of each interface section.
z1Num	INT	2	(IBM name: N/A) Number of interface sections.
z2Off	INT	4	(IBM name: N/A) Offset to first IPv6 additional HOME IP address section.
z2Len	INT	2	(IBM name: N/A) Length of each IPv6 additional HOME IP address section.
z2Num	INT	2	(IBM name: N/A) Number of IPv6 additional HOME IP address sections.

Secondary segment: SMF119#06_Identification

Field Name	Type	Len	Description
<i>SMF119#06_Identification.<fieldname></i>			
zSYSName	CHAR	8	(IBM name: SMF119TI_SYSName) System name from SYSNAME in IEASYSxx.
zSysplexName	CHAR	8	(IBM name: SMF119TI_SysplexName) Sysplex name from SYSPLEX in COUPLExx.
zStack	CHAR	8	(IBM name: SMF119TI_Stack) TCP/IP stack name.
zReleaseID	CHAR	8	(IBM name: SMF119TI_ReleaseID) z/OS Communications Server TCP/IP release identifier.
zComp	CHAR	8	(IBM name: SMF119TI_Comp) TCP/IP subcomponent.
zASName	CHAR	8	(IBM name: SMF119TI_ASName) Started task qualifier or name of address space that writes this SMF record.
zUserID	CHAR	8	(IBM name: SMF119TI_UserID) User ID of security context.
zASID	INT	2	(IBM name: SMF119TI_ASID) ASID of address space that writes this SMF record.
zReason	INT (ENUM)	1	(IBM name: SMF119TI_Reason) Reason for writing record. IntInc => Interval record, incomplete. Int => Interval record. IEndInc => Interval ending stats, incomplete. IEnd => Interval ending stats. IShtInc => Interval shutdown stats, incomplete. ISht => Interval shutdown stats. EvtInc => Event record, incomplete. Evt => Event record, complete.
zRecordID	INT	1	(IBM name: SMF119TI_RecordID) ID value for correlating records.

Secondary segment: SMF119#06_Interface_statistics

Field Name	Type	Len	Description
<i>SMF119#06_Interface_statistics.<fieldname></i>			
zDuration	TIME	8	(IBM name: N/A) Duration of recording interval in microseconds, where bit 51 is equivalent to one microsecond.
zLnkHome	IPADDRESS	16	(IBM name: N/A) Interface HOME address. For IPv6 interfaces, additional addresses might be specified in subsequent HOME IP address sections.
zName	CHAR	16	(IBM name: N/A) Link or interface name.
zDevName	CHAR	16	(IBM name: N/A) Device name.
zDesc	CHAR	18	(IBM name: N/A) Interface Description (TCPIP PROFILE keyword for LINK or INTERFACE type.) Possible values include: v ATM v CDLC v CTC v ETHERnet v ETHEROR802.3 v FDDI v HCH v IBMTR v IP v IPAQENET v IPAQIDIO v IPAQTR v MPCPTP v OSAENET v OSAFDDI v SAMEHOST v Unknown v 802.3 v IPAQENET6 v IPAQIDIO6 v MPCPTP6 v IPAQIQDX v IPAQIQDX6 v IPAQIQDC v IPAQIQDC6.

SMF119#06_Interface_statistics.zFlags.<fieldname>

SMCRConf	BIT	1	SMCR configured.
PNetid	BIT	1	PNetID provided.
SMCDConf	BIT	1	SMCD configured.

IQDC	BIT	1	IQDC flag.
SMF119#06_Interface_statistics.<fieldname>			
zActualMtu	INT	4	(IBM name: N/A) MTU size.
zSPeed	INT	4	(IBM name: N/A) Speed Guideline: If the interface speed exceeds X'FFFFFFFF', then this field contains X'FFFFFFFF'. If this field contains X'FFFFFFFF', then use the zHSpeed field to determine the interface speed.
zHSpeed	INT	4	(IBM name: N/A) HSpeed.
zInBytes	INT	8	(IBM name: N/A) Number of inbound bytes.
zInUniC	INT	8	(IBM name: N/A) Number of inbound unicast packets.
zInBroadC	INT	8	(IBM name: N/A) Number of inbound broadcast packets.
zInMultiC	INT	8	(IBM name: N/A) Number of inbound multicast packets.
zInDisc	INT	4	(IBM name: N/A) Number of inbound discarded packets.
zInError	INT	4	(IBM name: N/A) Number of inbound packets in error.
zInUProt	INT	4	(IBM name: N/A) Number of inbound packets with unknown protocol.
zOutBytes	INT	8	(IBM name: N/A) Number of outbound bytes.
zOutUniC	INT	8	(IBM name: N/A) Number of outbound unicast packets.
zOutBroadC	INT	8	(IBM name: N/A) Number of outbound broadcast packets.
zOutMultiC	INT	8	(IBM name: N/A) Number of outbound multicast packets.
zOutDisc	INT	4	(IBM name: N/A) Number of outbound discarded packets.
zOutError	INT	4	(IBM name: N/A) Number of outbound packets in error.
zOQL	INT	4	(IBM name: N/A) Current output queue length.
zIQDName	CHAR	16	(IBM name: N/A) For IPAQENET and IPAQENET6 interfaces that are defined with CHPIDTYPE OSX and with an associated IQDX interface, this field is the associated IQDX interface name. For IPAQENET and IPAQENET6 interfaces that are defined with CHPIDTYPE OSD and with an associated IQDC interface, this field is the associated IQDC interface name (IQDC is on.) Otherwise, this field is blank and the following four counters are not valid.
zInIQDBytes	INT	8	(IBM name: N/A) Number of inbound bytes that were received over the associated IQDX interface. Number of inbound bytes that were received over the associated IQDC interface (IQDC is on.) This field is valid only if the zIQDName field is not blank.
zInIQDUniC	INT	8	(IBM name: N/A) Number of inbound unicast packets that were received over the associated IQDX interface. Number of inbound unicast packets that were received over the associated IQDC interface (IQDC is on.) This field is valid only if the zIQDName/zIQDName field is not blank.
zOutIQDBytes	INT	8	(IBM name: N/A) Number of outbound bytes that were sent over the associated IQDX interface. Number of outbound bytes that were sent over the associated

			IQDC interface (IQDC is on.) This field is valid only if the zIQDName/zIQDName field is not blank.
zOutIQDUniC	INT	8	(IBM name: N/A) Number of outbound unicast packets that were sent over the associated IQDX interface. Number of outbound unicast packets that were sent over the associated IQDC interface (IQDC is on.) This field is valid only if the zIQDName/zIQDName field is not blank.
zPNetID	CHAR	16	(IBM name: N/A) Physical network ID. This field is valid for IPAQIDIO, IPAQIDIO6, IPAQENET, and IPAQENET6 interfaces that are active for Shared Memory Communications.

Secondary segment: **SMF119#06_HOME_IP_Address**

Field Name	Type	Len	Description
<i>SMF119#06_HOME_IP_Address.<fieldname></i>			
zAddIntfName	CHAR	16	(IBM name: N/A) Interface name, used to correlate this additional address to the interface statistics record in Table 192 on page 817.
zAddIntfHome	IPADDRESS	16	(IBM name: N/A) Additional interface HOME address.

zDLen	INT	2	(IBM name: N/A) Length of TCP/IP identification section.
zDNum	INT	2	(IBM name: N/A) Number of TCP/IP identification sections.
z1Off	INT	4	(IBM name: N/A) Offset to first TCP server port section.
z1Len	INT	2	(IBM name: N/A) Length of each TCP server port section.
z1Num	INT	2	(IBM name: N/A) Number of TCP server port sections.
z2Off	INT	4	(IBM name: N/A) Offset to first UDP server port section.
z2Len	INT	2	(IBM name: N/A) Length of each UDP server port section.
z2Num	INT	2	(IBM name: N/A) Number of UDP server port sections.

Secondary segment: SMF119#07_Identification

Field Name	Type	Len	Description
<i>SMF119#07_Identification.<fieldname></i>			
zSYSName	CHAR	8	(IBM name: SMF119TI_SYSName) System name from SYSNAME in IEASYSxx.
zSysplexName	CHAR	8	(IBM name: SMF119TI_SysplexName) Sysplex name from SYSPLEX in COUPLExx.
zStack	CHAR	8	(IBM name: SMF119TI_Stack) TCP/IP stack name.
zReleaseID	CHAR	8	(IBM name: SMF119TI_ReleaseID) z/OS Communications Server TCP/IP release identifier.
zComp	CHAR	8	(IBM name: SMF119TI_Comp) TCP/IP subcomponent.
zASName	CHAR	8	(IBM name: SMF119TI_ASName) Started task qualifier or name of address space that writes this SMF record.
zUserID	CHAR	8	(IBM name: SMF119TI_UserID) User ID of security context.
zASID	INT	2	(IBM name: SMF119TI_ASID) ASID of address space that writes this SMF record.
zReason	INT (ENUM)	1	(IBM name: SMF119TI_Reason) Reason for writing record. IntInc => Interval record, incomplete. Int => Interval record. IEndInc => Interval ending stats, incomplete. IEnd => Interval ending stats. IShtInc => Interval shutdown stats, incomplete. ISht => Interval shutdown stats. EvtInc => Event record, incomplete. Evt => Event record, complete.
zRecordID	INT	1	(IBM name: SMF119TI_RecordID) ID value for correlating records.

Secondary segment: SMF119#07_TCP_server_port_statistics

Field Name	Type	Len	Description
<i>SMF119#07_TCP_server_port_statistics.<fieldname></i>			
zDuration	TIME	8	(IBM name: N/A) Duration of recording interval in microseconds, where bit 51 is equivalent to one microsecond.
zRName	CHAR	8	(IBM name: N/A) Server socket resource name (the name specified on the PORT reservation statement).
zBindIP	IPADDRESS	16	(IBM name: N/A) For bind-specific port reservations: the local IP address.
zPort	INT	2	(IBM name: N/A) Port number.
zConn	INT	4	(IBM name: N/A) Number of successful connection establishments.
zBinds	INT	4	(IBM name: N/A) Number of socket binds to this port reservation.
zBusySrv	INT	4	(IBM name: N/A) Number of connection requests rejected due to server Busy conditions.
zSynAttack	INT	4	(IBM name: N/A) Number of connection requests rejected due to SYN Attack detect conditions.
zHighwater	INT	4	(IBM name: N/A) Highest number of active TCP connections.

zNumConns	INT	4	(IBM name: N/A) Number of active TCP connections.
-----------	-----	---	--

Secondary segment: SMF119#07_UDP_server_port_statistics

Field Name	Type	Len	Description
<i>SMF119#07_UDP_server_port_statistics.<fieldname></i>			
zDuration	TIME	8	(IBM name: N/A) Duration of recording interval.
zRName	CHAR	8	(IBM name: N/A) Server socket resource name (the name specified on the PORT reservation statement).
zBindIP	IPADDRESS	16	(IBM name: N/A) For bind-specific port reservations: the local IP address.
zPort	INT	2	(IBM name: N/A) Port number.
zIDgrams	INT	8	(IBM name: N/A) Number of inbound UDP datagrams to server port.
zODgrams	INT	8	(IBM name: N/A) Number of outbound UDP datagrams from server port.
zIBytes	INT	8	(IBM name: N/A) Number of inbound bytes.
zOBytes	INT	8	(IBM name: N/A) Number of outbound bytes.

Record Type 119 Subtype 8 - TCP/IP Stack start/stop**Primary Segment:**

- SMF119#08_TCPIP_Statistics

Secondary Segment(s): 2 (in alphabetical order)

- SMF119#08_Identification
- SMF119#08_TCP_IP_stack_start_stop

Primary segment: SMF119#08_TCPIP_Statistics

Field Name	Type	Len	Description
<i>SMF119#08_TCPIP_Statistics.<fieldname></i>			
SMF119#08_TCPIP_Statistics.Header.<fieldname>			
zFLG	HEX	1	(IBM name: N/A) System indicator: Bit Meaning when set 0-2 Reserved. 3-6 Version indicators 7 Reserved.
zRTY	INT	1	(IBM name: N/A) Record type 119
zTME	TSTMP	8	(IBM name: N/A) Date/Time that the record was moved into the SMF buffer.
zSID	CHAR	4	(IBM name: N/A) System ID.
zSSID	CHAR	4	(IBM name: N/A) Subsystem ID.
zSTY	INT	2	(IBM name: N/A) Record subtype.

SMF119#08_TCPIP_Statistics.Self_defining_Section.<fieldname>			
zTRN	INT	2	(IBM name: SMF119SD_TRN) Number of triplets in this record (3).
zDOff	INT	4	(IBM name: N/A) Offset to TCP/IP identification section.
zDLen	INT	2	(IBM name: N/A) Length of TCP/IP identification section.
zDNum	INT	2	(IBM name: N/A) Number of TCP/IP identification sections.
z1Off	INT	4	(IBM name: N/A) Offset to TCP/IP start/stop section.
z1Len	INT	2	(IBM name: N/A) Length of TCP/IP start/stop section.
z1Num	INT	2	(IBM name: N/A) Number of TCP/IP start/stop sections.

Secondary segment: SMF119#08_Identification

Field Name	Type	Len	Description
<i>SMF119#08_Identification.<fieldname></i>			
zSYSName	CHAR	8	(IBM name: SMF119TI_SYSName) System name from SYSNAME in IEASYSxx.
zSysplexName	CHAR	8	

			(IBM name: SMF119TI_SysplexName) Sysplex name from SYSPLEX in COUPLExx.
zStack	CHAR	8	(IBM name: SMF119TI_Stack) TCP/IP stack name.
zReleaseID	CHAR	8	(IBM name: SMF119TI_ReleaseID) z/OS Communications Server TCP/IP release identifier.
zComp	CHAR	8	(IBM name: SMF119TI_Comp) TCP/IP subcomponent.
zASName	CHAR	8	(IBM name: SMF119TI_ASName) Started task qualifier or name of address space that writes this SMF record.
zUserID	CHAR	8	(IBM name: SMF119TI_UserID) User ID of security context.
zASID	INT	2	(IBM name: SMF119TI_ASID) ASID of address space that writes this SMF record.
zReason	INT (ENUM)	1	(IBM name: SMF119TI_Reason) Reason for writing record. IntInc => Interval record, incomplete. Int => Interval record. IEndInc => Interval ending stats, incomplete. IEnd => Interval ending stats. IShtInc => Interval shutdown stats, incomplete. ISht => Interval shutdown stats. EvtInc => Event record, incomplete. Evt => Event record, complete.
zRecordID	INT	1	(IBM name: SMF119TI_RecordID) ID value for correlating records.

Secondary segment: SMF119#08_TCP_IP_stack_start_stop

Field Name	Type	Len	Description
<i>SMF119#08_TCP_IP_stack_start_stop.<fieldname></i>			
zType	INT (ENUM)	1	(IBM name: N/A) Event type.

<i>SMF119#08_TCP_IP_stack_start_stop.zFlags.<fieldname></i>			
IPv6	BIT	1	IPv6 supported on this stack.
IPSECconf	BIT	1	IPSEC configured on this stack.
IPSEC6conf	BIT	1	IPSEC6 configured on this stack.

<i>SMF119#08_TCP_IP_stack_start_stop.<fieldname></i>			
zTime	TSTMP	8	(IBM name: N/A) Stack startup or termination time & date.
zECSAMax	INT	8	(IBM name: N/A) Maximum number of ECSA storage bytes allocated since the TCP/IP stack was started.
zECSALimit	INT	8	(IBM name: N/A) Maximum number of ECSA storage bytes allowed, as specified on the GLOBALCONFIG statement in the TCP/IP profile. The value 0 indicates that there is no limit.
zPrivateMax	INT	8	(IBM name: N/A) Maximum number of authorized private subpool storage bytes allocated since the TCP/IP stack was started.
zPrivateLimit	INT	8	(IBM name: N/A) Maximum number of authorized private subpool storage bytes allowed, as specified on the GLOBALCONFIG statement in the TCP/IP profile. The value 0 indicates that there is no limit.

Record Type 119 Subtype 10 - UDP Socket Close**Primary Segment:**

- SMF119#10_TCPIP_Statistics

Secondary Segment(s): 2 (in alphabetical order)

zTME	TSTMP	8	(IBM name: N/A) Date/Time that the record was moved into the SMF buffer.
zSID	CHAR	4	(IBM name: N/A) System ID.
zSSID	CHAR	4	(IBM name: N/A) Subsystem ID.
zSTY	INT	2	(IBM name: N/A) Record subtype.
SMF119#10_TCPIP_Statistics.Self_defining_Section.<fieldname>			
zTRN	INT	2	(IBM name: SMF119SD_TRN) Number of triplets in this record (3).
zDOff	INT	4	(IBM name: N/A) Offset to TCP/IP identification section.
zDLen	INT	2	(IBM name: N/A) Length of TCP/IP identification section.
zDNum	INT	2	(IBM name: N/A) Number of TCP/IP identification sections.
z1Off	INT	4	(IBM name: N/A) Offset to UDP socket close section.
z1Len	INT	2	(IBM name: N/A) Length of UDP socket close section.
z1Num	INT	2	(IBM name: N/A) Number of UDP socket close sections.

Secondary segment: SMF119#10_Identification

Field Name	Type	Len	Description
<i>SMF119#10_Identification.<fieldname></i>			
zSYSName	CHAR	8	(IBM name: SMF119TI_SYSName) System name from SYSNAME in IEASYSxx.
zSysplexName	CHAR	8	

			(IBM name: SMF119TI_SysplexName) Sysplex name from SYSPLEX in COUPLExx.
zStack	CHAR	8	(IBM name: SMF119TI_Stack) TCP/IP stack name.
zReleaseID	CHAR	8	(IBM name: SMF119TI_ReleaseID) z/OS Communications Server TCP/IP release identifier.
zComp	CHAR	8	(IBM name: SMF119TI_Comp) TCP/IP subcomponent.
zASName	CHAR	8	(IBM name: SMF119TI_ASName) Started task qualifier or name of address space that writes this SMF record.
zUserID	CHAR	8	(IBM name: SMF119TI_UserID) User ID of security context.
zASID	INT	2	(IBM name: SMF119TI_ASID) ASID of address space that writes this SMF record.
zReason	INT (ENUM)	1	(IBM name: SMF119TI_Reason) Reason for writing record. IntInc => Interval record, incomplete. Int => Interval record. IEndInc => Interval ending stats, incomplete. IEnd => Interval ending stats. IShtInc => Interval shutdown stats, incomplete. ISht => Interval shutdown stats. EvtInc => Event record, incomplete. Evt => Event record, complete.
zRecordID	INT	1	(IBM name: SMF119TI_RecordID) ID value for correlating records.

Secondary segment: **SMF119#10_UDP_socket_close**

Field Name	Type	Len	Description
<i>SMF119#10_UDP_socket_close.<fieldname></i>			
zRname	CHAR	8	(IBM name: N/A) UDP socket resource name (address space name of address space that opens this socket).
zConnID	INT	4	(IBM name: N/A) UDP socket resource ID (connection ID).
zSubTask	INT	4	(IBM name: N/A) Subtask ID. This is the task TCB for the task owning the socket.
zOTime	TSTMP	8	(IBM name: N/A) Socket open time & date.
zCTime	TSTMP	8	(IBM name: N/A) Socket close time & date.
zRIP	IPADDRESS	16	(IBM name: N/A) Remote IP of last datagram received on socket.
zLIP	IPADDRESS	16	(IBM name: N/A) Local IP address at time of socket close.
zRPort	INT	2	(IBM name: N/A) Remote port of last datagram received on socket.
zLPort	INT	2	(IBM name: N/A) Local port number at time of socket close.
zType	INT (ENUM)	1	(IBM name: N/A) UDP Socket Type. NonEE => Standard, EE => Enterprise Extender.
zReason	INT (ENUM)	1	(IBM name: SMF119TI_Reason) Reason for socket close. Norm => Normal close, Abnorm => Abnormal close (application error or stack termination).
zInDgrams	INT	8	(IBM name: N/A) Number of inbound UDP datagrams.
zOutDgrams	INT	8	

			(IBM name: N/A) Number of outbound UDP datagrams.
zInBytes	INT	8	(IBM name: N/A) Number of inbound bytes.
zOutBytes	INT	8	(IBM name: N/A) Number of outbound bytes.

zDNum	INT	2	(IBM name: N/A) Number of TCP/IP identification sections.
z1Off	INT	4	(IBM name: N/A) Offset to zERT connection detail common section.
z1Len	INT	2	(IBM name: N/A) Length of zERT connection detail common section.
z1Num	INT	2	(IBM name: N/A) Number of zERT connection detail common section.
z2Off	INT	4	(IBM name: N/A) Offset to IP filter-specific section.
z2Len	INT	2	(IBM name: N/A) Length of IP filter-specific section.
z2Num	INT	2	(IBM name: N/A) Number of IP filter-specific sections.
z3Off	INT	4	

			(IBM name: N/A) Offset to TLS protocol attributes section.
z3Len	INT	2	(IBM name: N/A) Length of TLS protocol attributes section.
z3Num	INT	2	(IBM name: N/A) Number of TLS protocol attributes sections.
z4Off	INT	4	(IBM name: N/A) Offset to SSH protocol attributes section.
z4Len	INT	2	(IBM name: N/A) Length of SSH protocol attributes section.
z4Num	INT	2	(IBM name: N/A) Number of SSH protocol attributes sections.
z5Off	INT	4	(IBM name: N/A) Offset to IPSec protocol attributes section.
z5Len	INT	2	(IBM name: N/A) Length of IPSec protocol attributes section.
z5Num	INT	2	(IBM name: N/A) Number of IPSec protocol attributes sections.
z6Off	INT	4	(IBM name: N/A) Offset to certificate DNs section.
z6Len	INT	2	(IBM name: N/A) Length of certificate DNs section.
z6Num	INT	2	(IBM name: N/A) Number of certificate DNs sections.

Secondary segment: **SMF119#11_Identification**

Field Name	Type	Len	Description
<i>SMF119#11_Identification.<fieldname></i>			
zSYSName	CHAR	8	(IBM name: SMF119TI_SYSName) System name from SYSNAME in IEASYSxx.
zSysplexName	CHAR	8	(IBM name: SMF119TI_SysplexName) Sysplex name from SYSPLEX in COUPLExx.
zStack	CHAR	8	(IBM name: SMF119TI_Stack) TCP/IP stack name.
zReleaseID	CHAR	8	(IBM name: SMF119TI_ReleaseID) z/OS Communications Server TCP/IP release identifier.
zComp	CHAR	8	(IBM name: SMF119TI_Comp) TCP/IP subcomponent.
zASName	CHAR	8	(IBM name: SMF119TI_ASName) Started task qualifier or name of address space that writes this SMF record.
zUserID	CHAR	8	(IBM name: SMF119TI_UserID) User ID of security context.
zASID	INT	2	(IBM name: SMF119TI_ASID) ASID of address space that writes this SMF record.
zReason	INT (ENUM)	1	(IBM name: SMF119TI_Reason) Reason for writing record. IntInc => Interval record, incomplete. Int => Interval record. IEndInc => Interval ending stats, incomplete. IEnd => Interval ending stats. IShtInc => Interval shutdown stats, incomplete. ISht => Interval shutdown stats. EvtInc => Event record, incomplete. Evt => Event record, complete.
zRecordID	INT	1	(IBM name: SMF119TI_RecordID) ID value for correlating records.

Secondary segment: **SMF119#11_zERT_connection_detail_common**

Field Name	Type	Len	Description
SMF119#11_zERT_connection_detail_common.<fieldname>			
zEvent_Type	INT (ENUM)	1	(IBM name: N/A) Event type. 'Init' => Connection initiation. 'Crypto' => Change in cryptographic attributes. 'Term' => Connection termination. 'Short' => Short connection termination (Connection terminates within 10 seconds of being established. No associated Connection initiation record is written.). 'zERTEn' => zERT Enabled (all remaining fields in this section are unused and set to 0). 'zERTDis' => zERT Disabled (all remaining fields in this section are unused and set to 0).
SMF119#11_zERT_connection_detail_common.zSecProtos.<fieldname>			
zTLS	BIT	1	TLS/SSL protocol used for this connection.
zSSH	BIT	1	SSH protocol used for this connection.
zIPSec	BIT	1	IPSec protocol used for this connection.
SMF119#11_zERT_connection_detail_common.zFlags.<fieldname>			
zIPv6	BIT	1	IPv6 connection
zTTLSBypass	BIT	1	AT-TLS cryptographic operations are bypassed for this connection as part of a stack optimization for intra-host connections.
SMF119#11_zERT_connection_detail_common.zSecFlags.<fieldname>			
zIPSec	BIT	1	IP security is enabled
zIPSecIPv6	BIT	1	IPv6 security is enabled
zIPFilt	BIT	1	IP filtering done for connection.
SMF119#11_zERT_connection_detail_common.<fieldname>			
zIPProto	INT (ENUM)	1	(IBM name: N/A) IP Protocol value. TCP => TCP protocol. UDP => UDP protocol.
zJobname	CHAR	8	(IBM name: N/A) Jobname associated with the socket.
zJobID	CHAR	8	(IBM name: N/A) Job ID associated with the socket.
zUserID	CHAR	8	(IBM name: SMF119TI_UserID) z/OS user ID associated with the socket.
zSTime	TSTMP	8	(IBM name: N/A) Connection establishment time & date (UTC).
zETime	TSTMP	8	(IBM name: N/A) Connection ended time & date (UTC). Set when zEvent_type is 'Term' or 'Short' connection termination, otherwise 0.
zRIP	IPADDRESS	16	(IBM name: N/A) Remote connection endpoint IP address. If zFlags indicates IPv6, then this is a 16-byte IPv6 address. Otherwise, it is a 4-byte IPv4 address in the first 4 bytes of the field.
zLIP	IPADDRESS	16	(IBM name: N/A) Local connection endpoint IP address. If zFlags indicates IPv6, then this is a 16-byte IPv6 address. Otherwise, it is a 4-byte IPv4 address in the first 4 bytes of the field.
zRPort	INT	2	(IBM name: N/A) Remote port.
zLPort	INT	2	(IBM name: N/A) Local port.

zConnID	INT	4	(IBM name: N/A) Transport layer connection ID.
zInBytes	INT	8	(IBM name: N/A) Inbound byte count since connection started.
zOutBytes	INT	8	(IBM name: N/A) Outbound byte count since connection started.
zInSegDG	INT	8	(IBM name: N/A) Inbound TCP segment or UDP datagram count since connection started.
zOutSegDG	INT	8	(IBM name: N/A) Outbound TCP segment or UDP datagram count since connection started.

Secondary segment: SMF119#11_zERT_IP_filter_specific

Field Name	Type	Len	Description
<i>SMF119#11_zERT_IP_filter_specific.<fieldname></i>			
zOutAct	INT (ENUM)	1	(IBM name: N/A) Outbound IP filtering behavior. A change in this attribute causes a protection state change record to be written. 'NoRule' => No associated outbound filter rule. 'Permitted' => Outbound traffic permitted in the clear. 'IPSec' => Outbound traffic permitted with IPSec protection. 'Denied' => Outbound traffic denied.
zInbAct	INT (ENUM)	1	(IBM name: N/A) Inbound IP filtering behavior. A change in this attribute causes a protection state change record to be written. 'NoRule' => No associated inbound filter rule. 'Permitted' => Inbound traffic permitted in the clear. 'IPSec' => Inbound traffic permitted with IPSec protection. 'Denied' => Inbound traffic denied.
zOutRuleName	CHAR	40	(IBM name: N/A) Outbound traffic IP filter rule name (blank if no associated outbound filter rule).
zOutRuleExt	CHAR	8	(IBM name: N/A) Outbound traffic IP filter rule name extension (blank if no associated outbound filter rule or the filter rule has no rule name extension value).
zInRuleName	CHAR	40	(IBM name: N/A) Inbound traffic IP filter rule name (blank if no associated inbound filter rule).
zInRuleExt	CHAR	8	(IBM name: N/A) Inbound traffic IP filter rule name extension (blank if no associated inbound filter rule or the filter rule has no rule name extension value).

Secondary segment: SMF119#11_zERT_TLS_protocol_attributes

Field Name	Type	Len	Description
<i>SMF119#11_zERT_TLS_protocol_attributes.<fieldname></i>			
zProt_Ver	INT (ENUM)	2	(IBM name: N/A) Protocol version. 'Unknown' => Unknown version. 'SSLv2' => SSLv2. 'SSLv3' => SSLv3. 'TLSv1.0' => TLSv1.0. 'TLSv1.1' => TLSv1.1. 'TLSv1.2' => TLSv1.2.
zSource	INT (ENUM)	1	(IBM name: N/A) Source of the TLS/SSL information in this record. 'Observe' => Stream observation. 'Provider' => Cryptographic protocol provider.
zHandshake_Type	INT (ENUM)	1	(IBM name: N/A) Handshake type. 'Full' => Full handshake. 'Abbrev' => Abbreviated handshake.
zHandshake_Role	INT (ENUM)	1	(IBM name: N/A) Local handshake role. 'Unknown' => Unknown. 'Client' => Client. 'Server' => Server. 'SrvCl' => Server with client authentication.

zSession_ID_Len	INT	1	(IBM name: N/A) Length of TLS session ID value in bytes.
zSession_ID	CHAR	32	(IBM name: N/A) TLS session ID (left justified).
zProtocol_Provider	CHAR	16	(IBM name: N/A) Source of the information in this record (padded with trailing blanks): 'Observation': Information was observed by the TCP/IP stack, not supplied by a CPP. This value is used when zSource is set to 1. 'IBM System SSL' : System SSL other values may be added in the future.
zNeg_Cipher	CHAR	6	(IBM name: N/A) Negotiated cipher suite identifier. If the TLS version is SSLv3 or higher, this is a four character value in the first 4 bytes of this field, padded with trailing blanks. Refer to the TLS Cipher Suite registry at http://www.iana.org/assignments/tlsparameters/tls-parameters.xhtml for a complete list of the 4-hexadecimal-character values. If the TLS version is SSLv2, then all 6 bytes are used: '010080': 128-bit RC4 with MD5 '020080': 40-bit RC4 with MD5 '030080': 128-bit RC2 with MD5 '040080': 40-bit RC2 with MD5 '050080': 128-bit IDEA with MD5 '060040': DES with MD5 '0700C0': 3DES with MD5.
zCS_Enc_Algo	INT (ENUM)	2	(IBM name: N/A) The symmetric encryption algorithm used by the cipher suite.
zCS_Msg_Auth	INT (ENUM)	2	(IBM name: N/A) The message authentication algorithm used by the cipher suite.
zCS_Kex_Algo	INT (ENUM)	2	(IBM name: N/A) The key exchange algorithm used by the cipher suite.
zFIPS_Mode	INT (ENUM)	1	(IBM name: N/A) FIPS 140 mode of the TLS/SSL provider. 'OFF' => Not in FIPS 140 mode. 'ON' => FIPS 140 mode is enabled (80-bit strength enforced). 'LVL1' => FIPS 140 mode is enabled at level 1 (synonymous with X'01'). 'LVL2' => FIPS 140 mode is enabled at level 2 (112-bit strength enforced when creating new keys or performing digital signature generation and encryption type operations. Digital signature verification, decryption using 3DES and RSA decryption with 80-bit key lengths allowed when processing already protected information). 'LVL3' => FIPS 140 mode is enabled at level 3 (112 bit or higher strength enforced as defined in NIST SP800-131A.).

SMF119#11_zERT_TLS_protocol_attributes.zCryptoFlags.<fieldname>

zEnc_Then_Mac	BIT	1	Encrypt-then-MAC processing is used.
---------------	-----	---	--------------------------------------

SMF119#11_zERT_TLS_protocol_attributes.<fieldname>

zSCert_Sig_Method	INT (ENUM)	2	(IBM name: N/A) Server certificate signature method. 'Unknown' => Unknown. 'None' => None. 'RSA_MD2' => RSA with MD2. 'RSA_MD5' => RSA with MD5. 'RSA_SHA1' => RSA with SHA1. 'DSA_SHA1' => DSA with SHA1. 'RSA_SHA224' => RSA with SHA-224. 'RSA_SHA256' => RSA with SHA-256. 'RSA_SHA384' => RSA with SHA-384. 'RSA_SHA512' => RSA with SHA-512. 'ECDSA_SHA1' => ECDSA with SHA1. 'ECDSA_SHA224' => ECDSA with SHA-224. 'ECDSA_SHA256' => ECDSA with SHA-256. 'ECDSA_SHA384' => ECDSA with SHA-384. 'ECDSA_SHA512' => ECDSA with SHA-512. 'DSA_SHA224' => DSA with SHA-224. 'DSA_SHA256' => DSA with SHA-256.
zSCert_Enc_Method	INT (ENUM)	2	(IBM name: N/A) Server certificate encryption method.
zSCert_Digest_Algo	INT (ENUM)	2	(IBM name: N/A) Server certificate digest algorithm.
zSCert_Serial_Len	INT	1	(IBM name: N/A) Server certificate serial number length in bytes.
zSCert_Serial	HEX	20	(IBM name: N/A) Server certificate serial number, left justified.
zSCert_Time_Type	INT (ENUM)	1	(IBM name: N/A) Format of server certificate 'not after' time. 'UTC' => Coordinated Universal Time (UTC). 'GT' => Generalized Time (GT).
zSCert_Time	CHAR	15	(IBM name: N/A) Server certificate 'not after' time. If the time type is UTC

			(zSCert_Time_Type = 'UTC'), the first 13 bytes of this field contain the time in UTC format (YYMMDDhhmmssZ). If the time type is GMT (zSCert_Time_Type = 'GT'), all 15 bytes of this field contain the time in GMT format (YYYYMMDDhhmmssZ).
zSCert_Key_Type	INT (ENUM)	2	(IBM name: N/A) Server certificate key type. 'Unknown' => Unknown. 'None' => None. 'RSA' => RSA. 'DSA' => DSA. 'DH' => Diffie-Hellman (DH). 'ECC' => Elliptic Curve Cryptography (ECC).
zSCert_Key_Len	INT	2	(IBM name: N/A) Server certificate key length in bits.
zCCert_Sig_Method	INT (ENUM)	2	(IBM name: N/A) Client certificate signature method. 'Unknown' => Unknown. 'None' => None. 'RSA_MD2' => RSA with MD2. 'RSA_MD5' => RSA with MD5. 'RSA_SHA1' => RSA with SHA1. 'DSA_SHA1' => DSA with SHA1. 'RSA_SHA224' => RSA with SHA-224. 'RSA_SHA256' => RSA with SHA-256. 'RSA_SHA384' => RSA with SHA-384. 'RSA_SHA512' => RSA with SHA-512. 'ECDSA_SHA1' => ECDSA with SHA1. 'ECDSA_SHA224' => ECDSA with SHA-224. 'ECDSA_SHA256' => ECDSA with SHA-256. 'ECDSA_SHA384' => ECDSA with SHA-384. 'ECDSA_SHA512' => ECDSA with SHA-512. 'DSA_SHA224' => DSA with SHA-224. 'DSA_SHA256' => DSA with SHA-256.
zCCert_Enc_Method	INT (ENUM)	2	(IBM name: N/A) Client certificate encryption method.
zCCert_Digest_Algo	INT (ENUM)	2	(IBM name: N/A) Client certificate digest algorithm.
zCCert_Serial_Len	INT	1	(IBM name: N/A) Client certificate serial number length in bytes.
zCCert_Serial	HEX	20	(IBM name: N/A) Client certificate serial number, left justified.
zCCert_Time_Type	INT (ENUM)	1	(IBM name: N/A) Format of client certificate 'not after' time. 'UTC' => Coordinated Universal Time (UTC). 'GT' => Generalized Time (GT).
zCCert_Time	CHAR	15	(IBM name: N/A) Client certificate 'not after' time. If the time type is UTC (zCCert_Time_Type = 'UTC'), the first 13 bytes of this field contain the time in UTC format (YYMMDDhhmmssZ). If the time type is GMT (zCCert_Time_Type = 'GT'), all 15 bytes of this field contain the time in GMT format (YYYYMMDDhhmmssZ).
zCCert_Key_Type	INT (ENUM)	2	(IBM name: N/A) Client certificate key type. 'Unknown' => Unknown. 'None' => None. 'RSA' => RSA. 'DSA' => DSA. 'DH' => Diffie-Hellman (DH). 'ECC' => Elliptic Curve Cryptography (ECC).
zCCert_Key_Len	INT	2	(IBM name: N/A) Client certificate key length in bits.

Secondary segment: SMF119#11_zERT_SSH_protocol_attributes

Field Name	Type	Len	Description
<i>SMF119#11_zERT_SSH_protocol_attributes.<fieldname></i>			
zProt_Ver	INT (ENUM)	1	(IBM name: N/A) Protocol version. 'SSHv1' => Protocol version 1. 'SSHv2' => Protocol version 2.
zSource	INT (ENUM)	1	(IBM name: N/A) Source of the SSH information in this record. 'Observe' => Stream observation. 'Provider' => Cryptographic protocol provider.
zFIPS_Mode	INT (ENUM)	1	(IBM name: N/A) FIPS 140 mode of the SSH provider. 'OFF' => Not in FIPS 140 mode. 'ON' => FIPS 140 mode is enabled (80-bit strength enforced). 'LVL1' => FIPS 140 mode is enabled at level 1 (synonymous with X'01'). 'LVL2' => FIPS 140 mode is enabled at level 2 (112-bit strength enforced when creating new keys or performing digital signature generation and encryption type

			operations. Digital signature verification, decryption using 3DES and RSA decryption with 80-bit key lengths allowed when processing already protected information). 'LVL3' => FIPS 140 mode is enabled at level 3 (112 bit or higher strength enforced as defined in NIST SP800-131A.).
SMF119#11_zERT_SSH_protocol_attributes.zCryptoFlags.<fieldname>			
zEnc_Then_Mac	BIT	1	Encrypt-then-MAC processing is used.
SMF119#11_zERT_SSH_protocol_attributes.<fieldname>			
zComp	CHAR	8	(IBM name: SMF119TI_Comp) SSH subcomponent (padded with trailing blanks). 'SFTPS' => sftp server, 'SFTPC' => sftp client, 'SCPS' => scp server, 'SCPC' => scp client, 'SSH' => ssh client, 'SSHD' => sshd daemon.
zProtocol_Provider	CHAR	16	(IBM name: N/A) Protocol provider (padded with trailing blanks). 'Observation' => Information was observed by the TCP/IP stack, not supplied by a CPP. (This value is used when zSource is set to 'Observe'.) 'IBM OpenSSH' => z/OS-provided OpenSSH. Other values may be added in the future.
zAuth_Method	INT (ENUM)	2	(IBM name: N/A) First or only peer authentication method used for this connection. 'UNKNOWN' => Unknown. 'NONE' => None. 'PASSWORD' => Password. 'PUBLIC_KEY' => Public key. 'HOST_BASED' => Host-based. 'RHOSTS' => Rhosts. 'RHOSTS_RSA' => RhostsRSA. 'RSA' => RSA. 'KEYB_INT' => Keyboard-interactive. 'CHAL_RESP' => Challenge-response. 'CNTL_SOCKET1' => Control socket 1. 'GSSAPI_MIC' => GSSAPI with MIC. 'GSSAPI_KEX' => GSSAPI Key exchange.
zAuth_Method2	INT (ENUM)	2	(IBM name: N/A) If not 0, the last of multiple authentication methods used for this connection.
zIn_Enc_Alg	INT (ENUM)	2	(IBM name: N/A) Encryption algorithm for inbound traffic.
zIn_Msg_Auth	INT (ENUM)	2	(IBM name: N/A) Message authentication algorithm for inbound traffic.
zKex_Method	INT (ENUM)	2	(IBM name: N/A) Key exchange method.
zOut_Enc_Alg	INT (ENUM)	2	(IBM name: N/A) Encryption algorithm for outbound traffic.
zOut_Msg_Auth	INT (ENUM)	2	(IBM name: N/A) Message authentication algorithm for outbound traffic.
zSKey_Type	INT (ENUM)	2	(IBM name: N/A) Type of raw server key.
zSKey_Len	INT	2	(IBM name: N/A) Length of raw server key in bits.
zCKey_Type	INT (ENUM)	2	(IBM name: N/A) Type of raw client key.
zCKey_Len	INT	2	(IBM name: N/A) Length of raw client key in bits.
zSKey_FPLen	INT	2	(IBM name: N/A) Length (in bytes) of the server public key fingerprint. If no server public key is used, then this length is set to zero.
zCKey_FPLen	INT	2	(IBM name: N/A) Length (in bytes) of the client public key fingerprint. If no client public key is used, then this length is set to zero.
zSKey_FP	HEX	64	(IBM name: N/A) The server public key fingerprint (a hash of the public key used to identify that key), left justified and padded on the right with X'00'.
zCKey_FP	HEX	64	(IBM name: N/A) The client public key fingerprint (a hash of the public key used to identify that key), left justified and padded on the right with X'00'.
zSCert_Sig_Method	INT (ENUM)	2	(IBM name: N/A) Server certificate signature method. 'Unknown' => Unknown. 'None' =>

			None. 'RSA_MD2' => RSA with MD2. 'RSA_MD5' => RSA with MD5. 'RSA_SHA1' => RSA with SHA1. 'DSA_SHA1' => DSA with SHA1. 'RSA_SHA224' => RSA with SHA-224. 'RSA_SHA256' => RSA with SHA-256. 'RSA_SHA384' => RSA with SHA-384. 'RSA_SHA512' => RSA with SHA-512. 'ECDSA_SHA1' => ECDSA with SHA1. 'ECDSA_SHA224' => ECDSA with SHA-224. 'ECDSA_SHA256' => ECDSA with SHA-256. 'ECDSA_SHA384' => ECDSA with SHA-384. 'ECDSA_SHA512' => ECDSA with SHA-512. 'DSA_SHA224' => DSA with SHA-224. 'DSA_SHA256' => DSA with SHA-256.
zSCert_Enc_Method	INT (ENUM)	2	(IBM name: N/A) Server certificate encryption method.
zSCert_Digest_Algo	INT (ENUM)	2	(IBM name: N/A) Server certificate digest algorithm.
zSCert_Serial_Len	INT	1	(IBM name: N/A) Server certificate serial number length in bytes.
zSCert_Serial	HEX	20	(IBM name: N/A) Server certificate serial number, left justified.
zSCert_Time_Type	INT (ENUM)	1	(IBM name: N/A) Format of server certificate 'not after' time. 'UTC' => Coordinated Universal Time (UTC). 'GT' => Generalized Time (GT).
zSCert_Time	CHAR	15	(IBM name: N/A) Server certificate 'not after' time. If the time type is UTC (zSCert_Time_Type = 'UTC'), the first 13 bytes of this field contain the time in UTC format (YYMMDDhhmmssZ). If the time type is GMT (zSCert_Time_Type = 'GT'), all 15 bytes of this field contain the time in GMT format (YYYYMMDDhhmmssZ).
zSCert_Key_Type	INT (ENUM)	2	(IBM name: N/A) Server certificate key type. 'Unknown' => Unknown. 'None' => None. 'RSA' => RSA. 'DSA' => DSA. 'DH' => Diffie-Hellman (DH). 'ECC' => Elliptic Curve Cryptography (ECC).
zSCert_Key_Len	INT	2	(IBM name: N/A) Server certificate key length in bits.
zCCert_Sig_Method	INT (ENUM)	2	(IBM name: N/A) Client certificate signature method. 'Unknown' => Unknown. 'None' => None. 'RSA_MD2' => RSA with MD2. 'RSA_MD5' => RSA with MD5. 'RSA_SHA1' => RSA with SHA1. 'DSA_SHA1' => DSA with SHA1. 'RSA_SHA224' => RSA with SHA-224. 'RSA_SHA256' => RSA with SHA-256. 'RSA_SHA384' => RSA with SHA-384. 'RSA_SHA512' => RSA with SHA-512. 'ECDSA_SHA1' => ECDSA with SHA1. 'ECDSA_SHA224' => ECDSA with SHA-224. 'ECDSA_SHA256' => ECDSA with SHA-256. 'ECDSA_SHA384' => ECDSA with SHA-384. 'ECDSA_SHA512' => ECDSA with SHA-512. 'DSA_SHA224' => DSA with SHA-224. 'DSA_SHA256' => DSA with SHA-256.
zCCert_Enc_Method	INT (ENUM)	2	(IBM name: N/A) Client certificate encryption method.
zCCert_Digest_Algo	INT (ENUM)	2	(IBM name: N/A) Client certificate digest algorithm.
zCCert_Serial_Len	INT	1	(IBM name: N/A) Client certificate serial number length in bytes.
zCCert_Serial	HEX	20	(IBM name: N/A) Client certificate serial number, left justified.
zCCert_Time_Type	INT (ENUM)	1	(IBM name: N/A) Format of server certificate 'not after' time. 'UTC' => Coordinated Universal Time (UTC). 'GT' => Generalized Time (GT).
zCCert_Time	CHAR	15	(IBM name: N/A) Client certificate 'not after' time. If the time type is UTC (zCCert_Time_Type = 'UTC'), the first 13 bytes of this field contain the time in UTC format (YYMMDDhhmmssZ). If the time type is GMT (zCCert_Time_Type = 'GT'), all 15 bytes of this field contain the time in GMT format (YYYYMMDDhhmmssZ).
zCCert_Key_Type	INT (ENUM)	2	(IBM name: N/A) Client certificate key type. 'Unknown' => Unknown. 'None' => None. 'RSA' => RSA. 'DSA' => DSA. 'DH' => Diffie-Hellman (DH). 'ECC' => Elliptic Curve Cryptography (ECC).
zCCert_Key_Len	INT	2	

			(IBM name: N/A) Client certificate key length in bits.
--	--	--	---

Secondary segment: SMF119#11_zERT_IPSec_attributes

Field Name	Type	Len	Description
<i>SMF119#11_zERT_IPSec_attributes.<fieldname></i>			
zIKETunID	INT	4	(IBM name: N/A) IKE tunnel identifier. This value is displayed as Ktunid in ipsec command displays.
zIKEMajVer	INT	1	(IBM name: N/A) Major version of the IKE protocol in use. Only the low-order 4 bits are used.
zIKEMinVer	INT	1	(IBM name: N/A) Minor version of the IKE protocol in use. Only the low-order 4 bits are used.
zIKETunKeyExchRule	CHAR	48	(IBM name: N/A) Key exchange rule for this IKE tunnel (padded with trailing blanks).
zIKETunLclEndpt	IPADDRESS	16	(IBM name: SMF119IS_IKETunLclEndpt) Local IP address of tunnel endpoint. If zFlags in the zERT common identification section indicates IPv6, then this is a 16-byte IPv6 address. Otherwise, it is a 4-byte IPv4 address in the first 4 bytes of the field.
zIKETunRmtEndpt	IPADDRESS	16	(IBM name: SMF119IS_IKETunRmtEndpt) Remote IP address of tunnel endpoint. If zFlags in the zERT common identification section indicates IPv6, then this is a 16-byte IPv6 address. Otherwise, it is a 4-byte IPv4 address in the first 4 bytes of the field.
zIKETunLclAuthMeth	INT (ENUM)	2	(IBM name: N/A) The authentication method for the local endpoint. 'Unknown' => Unknown or manual tunnel. 'None' => None. 'RSA' => RSA signature. 'Preshared_Key' => Preshared key. 'ECDSA-256' => ECDSA-256 signature. 'ECDSA-384' => ECDSA-384 signature. 'ECDSA-521' => ECDSA-521 signature. 'Digital_Sign' => Digital signature.
zIKETunRmtAuthMeth	INT (ENUM)	2	(IBM name: N/A) The authentication method for the remote endpoint. 'Unknown' => Unknown or manual tunnel. 'None' => None. 'RSA' => RSA signature. 'Preshared_Key' => Preshared key. 'ECDSA-256' => ECDSA-256 signature. 'ECDSA-384' => ECDSA-384 signature. 'ECDSA-521' => ECDSA-521 signature. 'Digital_Sign' => Digital signature.
zIKETunAuthAlg	INT (ENUM)	2	(IBM name: N/A) Tunnel authentication algorithm.
zIKETunEncAlg	INT (ENUM)	2	(IBM name: N/A) Tunnel encryption algorithm.
zIKETunDHGroup	INT (ENUM)	2	(IBM name: N/A) Diffie-Hellman group used to generate the keying material for this IKE tunnel.
zIKETunPseudoRFunc	INT (ENUM)	2	(IBM name: N/A) Pseudo-random function used for seeding keying material.
zIKETunLifesize	INT	4	(IBM name: N/A) IKE tunnel lifesize. If not 0, this value indicates the lifesize limit for the tunnel, in Kbytes. Otherwise (value is 0), no lifesize enforced.
zIKETunLifetime	INT	4	(IBM name: N/A) IKE tunnel lifetime. This value indicates the total number of minutes the tunnel remains active.
zIKETunReauthIntvl	INT	4	(IBM name: N/A) Reauthentication interval. Indicates the number of minutes between reauthentication operations.
zLclCert_Sign_Meth	INT (ENUM)	2	(IBM name: N/A) Local IKE certificate signature method. 'Unknown' => Unknown. 'None' => None. 'RSA_MD2' => RSA with MD2. 'RSA_MD5' => RSA with MD5. 'RSA_SHA1' => RSA with SHA1. 'DSA_SHA1' => DSA with SHA1.

			'RSA_SHA224' => RSA with SHA-224. 'RSA_SHA256' => RSA with SHA-256. 'RSA_SHA384' => RSA with SHA-384. 'RSA_SHA512' => RSA with SHA-512. 'ECDSA_SHA1' => ECDSA with SHA1. 'ECDSA_SHA224' => ECDSA with SHA-224. 'ECDSA_SHA256' => ECDSA with SHA-256. 'ECDSA_SHA384' => ECDSA with SHA-384. 'ECDSA_SHA512' => ECDSA with SHA-512. 'DSA_SHA224' => DSA with SHA-224. 'DSA_SHA256' => DSA with SHA-256.
zLclCert_Enc_Meth	INT (ENUM)	2	(IBM name: N/A) Local IKE certificate encryption method.
zLclCert_Digest_Algo	INT (ENUM)	2	(IBM name: N/A) Local IKE certificate digest algorithm.
zLclCert_Serial_Len	INT	1	(IBM name: N/A) Local IKE certificate serial number length in bytes.
zLclCert_Serial	HEX	20	(IBM name: N/A) Local IKE certificate serial number, left justified.
zLclCert_Time_Type	INT (ENUM)	1	(IBM name: N/A) Format of local IKE certificate 'not after' time. 'UTC' => Coordinated Universal Time (UTC). 'GT' => Generalized Time (GT).
zLclCert_Time	CHAR	15	(IBM name: N/A) Local IKE certificate 'not after' time. If the time type is UTC (zLclCert_Time_Type = 'UTC'), the first 13 bytes of this field contain the time in UTC format (YYMMDDhhmmssZ). If the time type is GMT (zLclCert_Time_Type = 'GT'), all 15 bytes of this field contain the time in GMT format (YYYYMMDDhhmmssZ).
zLclCert_Key_Type	INT (ENUM)	2	(IBM name: N/A) Local IKE certificate key type. 'Unknown' => Unknown. 'None' => None. 'RSA' => RSA. 'DSA' => DSA. 'DH' => Diffie-Hellman (DH). 'ECC' => Elliptic Curve Cryptography (ECC).
zLclCert_Key_Len	INT	2	(IBM name: N/A) Local IKE certificate key length in bits.
zRmtCert_Sign_Meth	INT (ENUM)	2	(IBM name: N/A) Remote IKE certificate signature method. 'Unknown' => Unknown. 'None' => None. 'RSA_MD2' => RSA with MD2. 'RSA_MD5' => RSA with MD5. 'RSA_SHA1' => RSA with SHA1. 'DSA_SHA1' => DSA with SHA1. 'RSA_SHA224' => RSA with SHA-224. 'RSA_SHA256' => RSA with SHA-256. 'RSA_SHA384' => RSA with SHA-384. 'RSA_SHA512' => RSA with SHA-512. 'ECDSA_SHA1' => ECDSA with SHA1. 'ECDSA_SHA224' => ECDSA with SHA-224. 'ECDSA_SHA256' => ECDSA with SHA-256. 'ECDSA_SHA384' => ECDSA with SHA-384. 'ECDSA_SHA512' => ECDSA with SHA-512. 'DSA_SHA224' => DSA with SHA-224. 'DSA_SHA256' => DSA with SHA-256.
zRmtCert_Enc_Meth	INT (ENUM)	2	(IBM name: N/A) Remote IKE certificate encryption method.
zRmtCert_Digest_Algo	INT (ENUM)	2	(IBM name: N/A) Remote IKE certificate digest algorithm.
zRmtCert_Serial_Len	INT	1	(IBM name: N/A) Remote IKE certificate serial number length in bytes.
zRmtCert_Serial	HEX	20	(IBM name: N/A) Remote IKE certificate serial number, left justified.
zRmtCert_Time_Type	INT (ENUM)	1	(IBM name: N/A) Format of remote IKE certificate 'not after' time. 'UTC' => Coordinated Universal Time (UTC). 'GT' => Generalized Time (GT).
zRmtCert_Time	CHAR	15	(IBM name: N/A) Remote IKE certificate 'not after' time. If the time type is UTC (zRmtCert_Time_Type = 'UTC'), the first 13 bytes of this field contain the time in UTC format (YYMMDDhhmmssZ). If the time type is GMT (zRmtCert_Time_Type = 'GT'), all 15 bytes of this field contain the time in GMT format (YYYYMMDDhhmmssZ).
zRmtCert_Key_Type	INT (ENUM)	2	(IBM name: N/A) Remote IKE certificate key type. 'Unknown' => Unknown. 'None' => None. 'RSA' => RSA. 'DSA' => DSA. 'DH' => Diffie-Hellman (DH). 'ECC' => Elliptic Curve Cryptography (ECC).
zRmtCert_Key_Len	INT	2	(IBM name: N/A) Remote IKE certificate key length in bits.

zTunID	INT	4	(IBM name: N/A) IPSec tunnel identifier. This value is displayed as Ytunid or Mtunid in ipsec command displays.
--------	-----	---	--

SMF119#11_zERT_IPSec_attributes.zTunFlags.<fieldname>

zIPv6	BIT	1	IPv6 indicator. If set, security endpoint addresses and data endpoint addresses are IPv6, otherwise, they are IPv4.
zFIPS140	BIT	1	FIPS 140 mode indicator. If this field is set, cryptographic operations for this tunnel are performed using cryptographic algorithms and modules that are designed to meet the FIPS 140 requirements, otherwise, cryptographic algorithms and modules that do not meet the FIPS 140 requirements might be used.

SMF119#11_zERT_IPSec_attributes.<fieldname>

zTunType	INT (ENUM)	1	(IBM name: N/A) Tunnel type. One of the following values. 'Manual' => Manual IPSec tunnel. 'Dynamic' => Dynamic IPSec tunnel. 'Shadow' => Shadow tunnel.
zTunState	INT (ENUM)	1	(IBM name: N/A) One of the following tunnel states. 'Active' => Manual or dynamic tunnel is active. 'Inactive' => Manual tunnel is inactive.
zEncapMode	INT (ENUM)	1	(IBM name: N/A) Tunnel encapsulation modes. 'Tunnel' => Tunnel Mode. 'Transport' => Transport Mode.
zAuthProto	INT (ENUM)	1	(IBM name: N/A) The protocol used for message authentication. 'ESP' => Encapsulating Security Payload. 'AH' => Authentication Header.
zAuthAlg	INT (ENUM)	2	(IBM name: N/A) The tunnel authentication algorithm.
zEncAlg	INT (ENUM)	2	(IBM name: N/A) The tunnel encryption algorithm.
zPFSGroup	INT (ENUM)	2	(IBM name: N/A) Diffie-Hellman group used for perfect forward secrecy.
zLifesize	INT	4	(IBM name: N/A) SA lifesize in KBytes. Zero if zTunType is set to 'Manual'.
zLifetime	INT	4	(IBM name: N/A) SA lifetime in minutes. Zero if zTunType is set to 'Manual'.
zVPNLifeExpire	INT	4	(IBM name: N/A) Tunnel VPN lifetime in minutes (length of time after which the tunnel family ceases to be refreshed). Zero indicates no VPN lifetime limit is enforced.

Secondary segment: SMF119#11_zERT_Distinguished_Name

Field Name	Type	Len	Description
SMF119#11_zERT_Distinguished_Name.<fieldname>			
zDN_Len	INT	2	(IBM name: N/A) Length of the DN structure (includes the length of zDN_Len, zDN_Type, and zDN).
zDN_Type	INT (ENUM)	2	(IBM name: N/A) Type of Distinguished Name. 'IPSec_LCL_SDN' => IPSec Local Certificate Subject DN. 'IPSec_LCL_IDN' => IPSec Local Certificate Issuer DN. 'IPSec_RMT_SDN' => IPSec Remote Certificate Subject DN. 'IPSec_RMT_IDN' => IPSec Remote Certificate Issuer DN. 'TLS_SRV_SDN' => TLS Server Certificate Subject DN. 'TLS_SRV_IDN' => TLS Server Certificate Issuer DN. 'TLS_CLI_SDN' => TLS Client Certificate Subject DN. 'TLS_CLI_IDN' => TLS Client Certificate Issuer DN. 'SSH_SRV_SDN' => SSH Server Certificate Subject DN. 'SSH_SRV_IDN' => SSH Server Certificate Issuer DN. 'SSH_CLI_SDN' => SSH Client Certificate Subject DN. 'SSH_CLI_IDN' => SSH Client Certificate Issuer DN.

zDN	XVCHAR	0 1024	(IBM name: N/A) The variable length DN value.

Primary segment: [SMF119#12_TCPIP_Statistics](#)

Field Name	Type	Len	Description
<i>SMF119#12_TCPIP_Statistics.<fieldname></i>			
<i>SMF119#12_TCPIP_Statistics.Header.<fieldname></i>			
zFLG	HEX	1	(IBM name: N/A) System indicator: Bit Meaning when set 0-2 Reserved. 3-6 Version indicators 7 Reserved.
zRTY	INT	1	(IBM name: N/A) Record type 119
zTME	TSTMP	8	(IBM name: N/A) Date/Time that the record was moved into the SMF buffer.
zSID	CHAR	4	(IBM name: N/A) System ID.
zSSID	CHAR	4	(IBM name: N/A) Subsystem ID.
zSTY	INT	2	(IBM name: N/A) Record subtype.
<i>SMF119#12_TCPIP_Statistics.Self_defining_Section.<fieldname></i>			
zTRN	INT	2	(IBM name: N/A) Number of triplets in this record (3).
zDOff	INT	4	(IBM name: N/A) Offset to TCP/IP identification section.
zDLen	INT	2	(IBM name: N/A) Length of TCP/IP identification section.
zDNum	INT	2	(IBM name: N/A) Number of TCP/IP identification sections.
z1Off	INT	4	(IBM name: N/A) Offset to zERT common section.
z1Len	INT	2	(IBM name: N/A) Length of zERT common section.
z1Num	INT	2	(IBM name: N/A) Number of zERT common section.
z2Off	INT	4	(IBM name: N/A) Offset to TLS-specific section.
z2Len	INT	2	(IBM name: N/A) Length of TLS-specific section.
z2Num	INT	2	(IBM name: N/A) Number of TLS section.
z3Off	INT	4	(IBM name: N/A) Offset to SSH-specific section.

z3Len	INT	2	(IBM name: N/A) Length of SSH-specific section.
z3Num	INT	2	(IBM name: N/A) Number of SSH-specific sections.
z4Off	INT	4	(IBM name: N/A) Offset to IPsec-specific section.
z4Len	INT	2	(IBM name: N/A) Length of IPsec-specific section.
z4Num	INT	2	(IBM name: N/A) Number of IPsec-specific section.
z5Off	INT	4	(IBM name: N/A) Offset to certificate DN section.
z5Len	INT	2	(IBM name: N/A) Length of certificate DN section.
z5Num	INT	2	(IBM name: N/A) Number of certificate DN section.

Secondary segment: **SMF119#12_Identification**

Field Name	Type	Len	Description
<i>SMF119#12_Identification.<fieldname></i>			
zSYSName	CHAR	8	(IBM name: SMF119TI_SYSName) System name from SYSNAME in IEASYSxx.
zSysplexName	CHAR	8	(IBM name: SMF119TI_SysplexName) Sysplex name from SYSPLEX in COUPLExx.
zStack	CHAR	8	(IBM name: SMF119TI_Stack) TCP/IP stack name.
zReleaseID	CHAR	8	(IBM name: SMF119TI_ReleaseID) z/OS Communications Server TCP/IP release identifier.
zComp	CHAR	8	(IBM name: SMF119TI_Comp) TCP/IP subcomponent.
zASName	CHAR	8	(IBM name: SMF119TI_ASName) Started task qualifier or name of address space that writes this SMF record.
zUserID	CHAR	8	(IBM name: SMF119TI_UserID) User ID of security context.
zASID	INT	2	(IBM name: SMF119TI_ASID) ASID of address space that writes this SMF record.
zReason	INT (ENUM)	1	(IBM name: SMF119TI_Reason) Reason for writing record. IntInc => Interval record, incomplete. Int => Interval record. IEndInc => Interval ending stats, incomplete. IEnd => Interval ending stats. IShtInc => Interval shutdown stats, incomplete. ISht => Interval shutdown stats. EvtInc => Event record, incomplete. Evt => Event record, complete.
zRecordID	INT	1	(IBM name: SMF119TI_RecordID) ID value for correlating records.

Secondary segment: **SMF119#12_zERTSumm_common**

Field Name	Type	Len	Description
<i>SMF119#12_zERTSumm_common.<fieldname></i>			
zIntervalDuration	TIME	8	

			(IBM name: N/A) Duration of recording interval.
zEvent_Type	INT (ENUM)	1	(IBM name: N/A) Event type. 1 => Summary interval record. 2 => zERT aggregation function enabled event record. 3 => zERT aggregation function disabled event record.

SMF119#12_zERTSumm_common.zFlags.<fieldname>

zIPv6	BIT	1	The session uses IPv6 addresses
zLclServer	BIT	1	The local socket of this session is acting as the server (only meaningful when zIPProto indicates TCP)
zLclClient	BIT	1	The local socket of this session is acting as the client (only meaningful when zIPProto indicates TCP)
zSecEE	BIT	1	This security session represents Enterprise Extender connections (only meaningful when zIPProto indicates UDP)
zSecFTPC	BIT	1	This security session represents IPv4 outbound data connections that are established by the FTP server to the FTP client.
zNoTLS	BIT	1	AT-TLS cryptographic operations are bypassed for this security session as part of a stack optimization for intra-host connections.

SMF119#12_zERTSumm_common.<fieldname>

zSecProtos	INT (ENUM)	1	(IBM name: N/A) Cryptographic security protocol. 'None' => No cryptographic protection. 'TLS#SSL' => TLS/SSL. 'SSH' => SSH. 'IPSec' => IPSec.
zJobname	CHAR	8	(IBM name: N/A) Jobname that is associated with the socket.
zUserID	CHAR	8	(IBM name: SMF119TI_UserID) z/OS user ID associated with the socket Note: The value *FTPUSR* is specified when this security session represents an aggregation of FTP data connections and we are reporting at the FTP server (zFlags = x'40').
zIPProto	INT (ENUM)	1	(IBM name: N/A) IP Protocol value. Possible values are TCP and UDP.
zSrvIP	IPADDRESS	16	(IBM name: N/A) Server IP address. If zFlags indicates IPv6, then this is a 16-byte IPv6 address. Otherwise, it is a 4-byte IPv4 address in the first 4 bytes of the field.
zCltIP	IPADDRESS	16	(IBM name: N/A) Client IP address. If zFlags indicates IPv6, then this is a 16-byte IPv6 address. Otherwise, it is a 4-byte IPv4 address in the first 4 bytes of the field.
zSrvPortStart	INT	2	(IBM name: N/A) Starting value for server port range.
zSrvPortEnd	INT	2	(IBM name: N/A) Ending value for server port range. If this security session represents a single-server port, then the ending value equals the starting value for the port range.
zSessionID	CHAR	42	(IBM name: N/A) Session identifier that uniquely identifies a security session based on the server and client endpoints plus the significant security attributes for the session. The session identifier is in the form p-value, where p represents the cryptographic protocol. Possible values for 'p' are: C = clear text, I = IPSec, T = TLS/SSL, S = SSH. '-' is a separator character, 'value' is a 20-character hexadecimal string.
zInitLifeConnCnt	INT	4	(IBM name: N/A) Count of connections for the life of this security session at the beginning of the summary interval.
zInitLifePartialConnCnt	INT	4	(IBM name: N/A) Count of the partial connections for the life of this security session at the beginning of the summary interval. This is a subset of the connections reported in zInitLifeConnCnt. A connection is considered to be a partial connection if one or more of these conditions is met: 1. The connection was in existence before it was associated with this security session. 2.

			The security session stopped being associated with the connection, but the connection continued to exist.
zInitLifeShortConnCnt	INT	4	(IBM name: N/A) Count of short connections for the life of this security session at the beginning of the summary interval. Short connections are connections that last less than 10 seconds. This value is only meaningful when zIPProto indicates TCP.
zInitActiveConnCnt	INT	4	(IBM name: N/A) Number of active connections that are associated with this security session at the beginning of the summary interval.
zInitLifeInBytes	INT	8	(IBM name: N/A) Inbound byte count for the life of this security session at the beginning of the summary interval.
zInitLifeOutBytes	INT	8	(IBM name: N/A) Outbound byte count for the life of this security session at the beginning of the summary interval.
zInitLifeInSegDG	INT	8	(IBM name: N/A) Inbound TCP segment or UDP datagram count for the life of this security session at the beginning of the summary interval.
zInitLifeOutSegDG	INT	8	(IBM name: N/A) Outbound TCP segment or UDP datagram count for the life of this security session at the beginning of the summary interval.
zEndLifeConnCnt	INT	4	(IBM name: N/A) Count of connections for the life of this security session at the end of the summary interval.
zEndLifePartialConnCnt	INT	4	(IBM name: N/A) Count of partial connections for the life of this security session at the end of the summary interval. This is a subset of the connections reported in zEndLifeConnCnt that were associated with the security session for only part of their existence, using the same conditions described for zInitLifePartialConnCnt.
zEndLifeShortConnCnt	INT	4	(IBM name: N/A) Count of short connections for the life of this security session at the end of the summary interval. Short connections are ones that last less than 10 seconds. This value is only meaningful when SMF119SS_SAIPProto indicates TCP.
zEndActiveConnCnt	INT	4	(IBM name: N/A) Number of active connections that are associated with this security session at the end of the summary interval.
zEndLifeInBytes	INT	8	(IBM name: N/A) Inbound byte count for the life of this security session at the end of the summary interval.
zEndLifeOutBytes	INT	8	(IBM name: N/A) Outbound byte count for the life of this security session at the end of the summary interval.
zEndLifeInSegDG	INT	8	(IBM name: N/A) Inbound TCP segment or UDP datagram count for the life of this security session at the end of the summary interval.
zEndLifeOutSegDG	INT	8	(IBM name: N/A) Outbound TCP segment or UDP datagram count for the life of this security session at the end of the summary interval.

Secondary segment: **SMF119#12_zERTSumm_TLS_attributes**

Field Name	Type	Len	Description
SMF119#12_zERTSumm_TLS_attributes.<fieldname>			
zSource	INT (ENUM)	1	(IBM name: N/A) Source of the TLS/SSL information in this record. 'Observe' => Stream observation. 'Provider' => Cryptographic protocol provider.

SMF119#12_zERTSumm_TLS_attributes.zCryptoFlags.<fieldname>			
zEnc_Then_Mac	BIT	1	Encrypt-then-MAC processing is used.
SMF119#12_zERTSumm_TLS_attributes.<fieldname>			
zProt_Ver	INT (ENUM)	2	(IBM name: N/A) Protocol version. 'Unknown' => Unknown version. 'SSLv2' => SSLv2. 'SSLv3' => SSLv3. 'TLSv1.0' => TLSv1.0. 'TLSv1.1' => TLSv1.1. 'TLSv1.2' => TLSv1.2.
zNeg_Cipher	CHAR	6	(IBM name: N/A) Negotiated cipher suite identifier. If the TLS version is SSLv3 or higher, this is a four character value in the first 4 bytes of this field, padded with trailing blanks. Refer to the TLS Cipher Suite registry at http://www.iana.org/assignments/tlsparameters/tls-parameters.xhtml for a complete list of the 4-hexadecimal-character values. If the TLS version is SSLv2, then all 6 bytes are used: '010080': 128-bit RC4 with MD5 '020080': 40-bit RC4 with MD5 '030080': 128-bit RC2 with MD5 '040080': 40-bit RC2 with MD5 '050080': 128-bit IDEA with MD5 '060040': DES with MD5 '0700C0': 3DES with MD5.
zCS_Enc_Algo	INT (ENUM)	2	(IBM name: N/A) The symmetric encryption algorithm used by the cipher suite.
zCS_Msg_Auth	INT (ENUM)	2	(IBM name: N/A) The message authentication algorithm used by the cipher suite.
zCS_Kex_Algo	INT (ENUM)	2	(IBM name: N/A) The key exchange algorithm used by the cipher suite.
zSCert_Sig_Method	INT (ENUM)	2	(IBM name: N/A) Server certificate signature method. 'Unknown' => Unknown. 'None' => None. 'RSA_MD2' => RSA with MD2. 'RSA_MD5' => RSA with MD5. 'RSA_SHA1' => RSA with SHA1. 'DSA_SHA1' => DSA with SHA1. 'RSA_SHA224' => RSA with SHA-224. 'RSA_SHA256' => RSA with SHA-256. 'RSA_SHA384' => RSA with SHA-384. 'RSA_SHA512' => RSA with SHA-512. 'ECDSA_SHA1' => ECDSA with SHA1. 'ECDSA_SHA224' => ECDSA with SHA-224. 'ECDSA_SHA256' => ECDSA with SHA-256. 'ECDSA_SHA384' => ECDSA with SHA-384. 'ECDSA_SHA512' => ECDSA with SHA-512. 'DSA_SHA224' => DSA with SHA-224. 'DSA_SHA256' => DSA with SHA-256.
zSCert_Enc_Method	INT (ENUM)	2	(IBM name: N/A) Server certificate encryption method.
zSCert_Digest_Algo	INT (ENUM)	2	(IBM name: N/A) Server certificate digest algorithm.
zSCert_Key_Type	INT (ENUM)	2	(IBM name: N/A) Server certificate key type. 'Unknown' => Unknown. 'None' => None. 'RSA' => RSA. 'DSA' => DSA. 'DH' => Diffie-Hellman (DH). 'ECC' => Elliptic Curve Cryptography (ECC).
zSCert_Key_Len	INT	2	(IBM name: N/A) Server certificate key length in bits.
zCCert_Sig_Method	INT (ENUM)	2	(IBM name: N/A) Client certificate signature method. 'Unknown' => Unknown. 'None' => None. 'RSA_MD2' => RSA with MD2. 'RSA_MD5' => RSA with MD5. 'RSA_SHA1' => RSA with SHA1. 'DSA_SHA1' => DSA with SHA1. 'RSA_SHA224' => RSA with SHA-224. 'RSA_SHA256' => RSA with SHA-256. 'RSA_SHA384' => RSA with SHA-384. 'RSA_SHA512' => RSA with SHA-512. 'ECDSA_SHA1' => ECDSA with SHA1. 'ECDSA_SHA224' => ECDSA with SHA-224. 'ECDSA_SHA256' => ECDSA with SHA-256. 'ECDSA_SHA384' => ECDSA with SHA-384. 'ECDSA_SHA512' => ECDSA with SHA-512. 'DSA_SHA224' => DSA with SHA-224. 'DSA_SHA256' => DSA with SHA-256.
zCCert_Enc_Method	INT (ENUM)	2	(IBM name: N/A) Client certificate encryption method.
zCCert_Digest_Algo	INT (ENUM)	2	(IBM name: N/A) Client certificate digest algorithm.
zCCert_Key_Type	INT (ENUM)	2	(IBM name: N/A) Client certificate key type. 'Unknown' => Unknown. 'None' => None. 'RSA' => RSA. 'DSA' => DSA. 'DH' => Diffie-Hellman (DH). 'ECC' => Elliptic Curve Cryptography (ECC).
zCCert_Key_Len	INT	2	

			(IBM name: N/A) Client certificate key length in bits.

zCCert_Key_Len	INT	2	(IBM name: N/A) Client certificate key length in bits.

Secondary segment: SMF119#12_zERTSumm_IPSec_attributes

Field Name	Type	Len	Description
<i>SMF119#12_zERTSumm_IPSec_attributes.<fieldname></i>			
zIKEMajVer	INT	1	(IBM name: N/A) Major version of the IKE protocol in use. Only the low-order 4 bits are used.
zIKEMinVer	INT	1	(IBM name: N/A) Minor version of the IKE protocol in use. Only the low-order 4 bits are used.
zIKETunLclEndpt	IPADDRESS	16	(IBM name: SMF119IS_IKETunLclEndpt) Local IP address of tunnel endpoint. If zFlags indicates IPv6, then this is a 16-byte IPv6 address. Otherwise, it is a 4-byte IPv4 address in the first 4 bytes of the field.
zIKETunRmtEndpt	IPADDRESS	16	(IBM name: SMF119IS_IKETunRmtEndpt) Remote IP address of tunnel endpoint. If zFlags indicates IPv6, then this is a 16-byte IPv6 address. Otherwise, it is a 4-byte IPv4 address in the first 4 bytes of the field.
zIKETunLclAuthMeth	INT (ENUM)	2	(IBM name: N/A) The authentication method for the local endpoint. 'Unknown' => Unknown or manual tunnel. 'None' => None. 'RSA' => RSA signature. 'Preshared_Key' => Preshared key. 'ECDSA-256' => ECDSA-256 signature. 'ECDSA-384' => ECDSA-384 signature. 'ECDSA-521' => ECDSA-521 signature. 'Digital_Sign' => Digital signature.
zIKETunRmtAuthMeth	INT (ENUM)	2	(IBM name: N/A) The authentication method for the remote endpoint. 'Unknown' => Unknown or manual tunnel. 'None' => None. 'RSA' => RSA signature. 'Preshared_Key' => Preshared key. 'ECDSA-256' => ECDSA-256 signature. 'ECDSA-384' => ECDSA-384 signature. 'ECDSA-521' =>

			ECDSA-521 signature. 'Digital_Sign' => Digital signature.
zIKETunAuthAlg	INT (ENUM)	2	(IBM name: N/A) Tunnel authentication algorithm.
zIKETunEncAlg	INT (ENUM)	2	(IBM name: N/A) Tunnel encryption algorithm.
zIKETunDHGroup	INT (ENUM)	2	(IBM name: N/A) Diffie-Hellman group used to generate the keying material for this IKE tunnel.
zIKETunPseudoRFunc	INT (ENUM)	2	(IBM name: N/A) Pseudo-random function used for seeding keying material.
zLclCert_Sign_Meth	INT (ENUM)	2	(IBM name: N/A) Local IKE certificate signature method. 'Unknown' => Unknown. 'None' => None. 'RSA_MD2' => RSA with MD2. 'RSA_MD5' => RSA with MD5. 'RSA_SHA1' => RSA with SHA1. 'DSA_SHA1' => DSA with SHA1. 'RSA_SHA224' => RSA with SHA-224. 'RSA_SHA256' => RSA with SHA-256. 'RSA_SHA384' => RSA with SHA-384. 'RSA_SHA512' => RSA with SHA-512. 'ECDSA_SHA1' => ECDSA with SHA1. 'ECDSA_SHA224' => ECDSA with SHA-224. 'ECDSA_SHA256' => ECDSA with SHA-256. 'ECDSA_SHA384' => ECDSA with SHA-384. 'ECDSA_SHA512' => ECDSA with SHA-512. 'DSA_SHA224' => DSA with SHA-224. 'DSA_SHA256' => DSA with SHA-256.
zLclCert_Enc_Meth	INT (ENUM)	2	(IBM name: N/A) Local IKE certificate encryption method.
zLclCert_Digest_Algo	INT (ENUM)	2	(IBM name: N/A) Local IKE certificate digest algorithm.
zLclCert_Key_Type	INT (ENUM)	2	(IBM name: N/A) Local IKE certificate key type. 'Unknown' => Unknown. 'None' => None. 'RSA' => RSA. 'DSA' => DSA. 'DH' => Diffie-Hellman (DH). 'ECC' => Elliptic Curve Cryptography (ECC).
zLclCert_Key_Len	INT	2	(IBM name: N/A) Local IKE certificate key length in bits.
zRmtCert_Sign_Meth	INT (ENUM)	2	(IBM name: N/A) Remote IKE certificate signature method. 'Unknown' => Unknown. 'None' => None. 'RSA_MD2' => RSA with MD2. 'RSA_MD5' => RSA with MD5. 'RSA_SHA1' => RSA with SHA1. 'DSA_SHA1' => DSA with SHA1. 'RSA_SHA224' => RSA with SHA-224. 'RSA_SHA256' => RSA with SHA-256. 'RSA_SHA384' => RSA with SHA-384. 'RSA_SHA512' => RSA with SHA-512. 'ECDSA_SHA1' => ECDSA with SHA1. 'ECDSA_SHA224' => ECDSA with SHA-224. 'ECDSA_SHA256' => ECDSA with SHA-256. 'ECDSA_SHA384' => ECDSA with SHA-384. 'ECDSA_SHA512' => ECDSA with SHA-512. 'DSA_SHA224' => DSA with SHA-224. 'DSA_SHA256' => DSA with SHA-256.
zRmtCert_Enc_Meth	INT (ENUM)	2	(IBM name: N/A) Remote IKE certificate encryption method.
zRmtCert_Digest_Algo	INT (ENUM)	2	(IBM name: N/A) Remote IKE certificate digest algorithm.
zRmtCert_Key_Type	INT (ENUM)	2	(IBM name: N/A) Remote IKE certificate key type. 'Unknown' => Unknown. 'None' => None. 'RSA' => RSA. 'DSA' => DSA. 'DH' => Diffie-Hellman (DH). 'ECC' => Elliptic Curve Cryptography (ECC).
zRmtCert_Key_Len	INT	2	(IBM name: N/A) Remote IKE certificate key length in bits.
zPFSGroup	INT (ENUM)	2	(IBM name: N/A) Diffie-Hellman group used for perfect forward secrecy.
zEncapMode	INT (ENUM)	1	(IBM name: N/A) Tunnel encapsulation mode. 'Tunnel' => Tunnel Mode. 'Transport' => Transport Mode.
zAuthProto	INT (ENUM)	1	(IBM name: N/A) The protocol used for message authentication. 'ESP' => Encapsulating Security Payload. 'AH' => Authentication Header.
zAuthAlg	INT (ENUM)	2	(IBM name: N/A) The tunnel authentication algorithm.
zEncAlg	INT (ENUM)	2	

		(IBM name: N/A) The tunnel encryption algorithm.

z22Len	INT	2	(IBM name: N/A) Length of LineModeAppl section.
z22Num	INT	2	(IBM name: N/A) Number of LineModeAppl sections.
z23Off	INT	4	(IBM name: N/A) Offset to MapAppl section.
z23Len	INT	2	(IBM name: N/A) Length of MapAppl section.
z23Num	INT	2	(IBM name: N/A) Number of MapAppl sections.
z24Off	INT	4	(IBM name: N/A) Offset to UssTcp section.
z24Len	INT	2	(IBM name: N/A) Length of UssTcp section.
z24Num	INT	2	(IBM name: N/A) Number of UssTcp sections.
z25Off	INT	4	(IBM name: N/A) Offset to INTERPTCP section.
z25Len	INT	2	(IBM name: N/A) Length of INTERPTCP section.
z25Num	INT	2	(IBM name: N/A) Number of INTERPTCP sections.
z26Off	INT	4	(IBM name: N/A) Offset to ParmMap section.
z26Len	INT	2	(IBM name: N/A) Length of ParmMap section.
z26Num	INT	2	(IBM name: N/A) Number of ParmMap sections.
z27Off	INT	4	(IBM name: N/A) Offset to LUMap section.
z27Len	INT	2	(IBM name: N/A) Length of LUMap section.
z27Num	INT	2	(IBM name: N/A) Number of LUMap sections.
z28Off	INT	4	(IBM name: N/A) Offset to PrtMap section.

z28Len	INT	2	(IBM name: N/A) Length of PrtMap section.
z28Num	INT	2	(IBM name: N/A) Number of PrtMap sections.
z29Off	INT	4	(IBM name: N/A) Offset to MonitorMap section.
z29Len	INT	2	(IBM name: N/A) Length MonitorMap section.
z29Num	INT	2	(IBM name: N/A) Number of MonitorMap sections TN3270E Telnet server profile record TCP/IP stack identification section Common TCP/IP identification section on page 718 shows the contents of the TCP/IP stack identification section. For the TN3270E Telnet server profile record, the TCP/IP stack identification section indicates TELNET as the subcomponent. The record reason field is set to one of the following bit values: v X'08' (event record) v X'48' (event record incomplete, more records follow) TN3270E Telnet server profile record profile information common section This section provides some general TN3270E Telnet server values and information about the last time when the profile was changed. Only one of these sections exists in the record.

Secondary segment: **SMF119#24_Identification**

Field Name	Type	Len	Description
<i>SMF119#24_Identification.<fieldname></i>			
zSYSName	CHAR	8	(IBM name: SMF119TI_SYSName) System name from SYSNAME in IEASYSxx.
zSysplexName	CHAR	8	(IBM name: SMF119TI_SysplexName) Sysplex name from SYSPLEX in COUPLExx.
zStack	CHAR	8	(IBM name: SMF119TI_Stack) TCP/IP stack name.
zReleaseID	CHAR	8	(IBM name: SMF119TI_ReleaseID) z/OS Communications Server TCP/IP release identifier.
zComp	CHAR	8	(IBM name: SMF119TI_Comp) TCP/IP subcomponent.
zASName	CHAR	8	(IBM name: SMF119TI_ASName) Started task qualifier or name of address space that writes this SMF record.
zUserID	CHAR	8	(IBM name: SMF119TI_UserID) User ID of security context.
zASID	INT	2	(IBM name: SMF119TI_ASID) ASID of address space that writes this SMF record.
zReason	INT (ENUM)	1	(IBM name: SMF119TI_Reason) Reason for writing record. IntInc => Interval record, incomplete. Int => Interval record. IEndInc => Interval ending stats, incomplete. IEnd => Interval ending stats. IShtInc => Interval shutdown stats,incomplete. ISht => Interval shutdown stats. EvtInc => Event record, incomplete. Evt => Event record, complete.
zRecordID	INT	1	(IBM name: SMF119TI_RecordID) ID value for correlating records.

Secondary segment: **SMF119#24_Profile_Information_Common**

Field Name	Type	Len	Description
<i>SMF119#24_Profile_Information_Common.<fieldname></i>			

zDesc	CHAR	4	(IBM name: N/A) TNPI eyecatcher.
zStartStck	TSTMP	8	(IBM name: N/A) Time TN3270E Telnet server was started (TOD clock value).
zStartTime	TSTMP	8	(IBM name: N/A) TN3270E Telnet server start date & time.
zProfStck	TSTMP	8	(IBM name: N/A) Time TN3270E Telnet profile processed (TOD clock value).
zProfTime	TSTMP	8	(IBM name: N/A) TN3270E Telnet profile created date & time.

SMF119#24_Profile_Information_Common.zFlags.<fieldname>

zInitProf	BIT	1	This is the initial profile.
-----------	-----	---	------------------------------

SMF119#24_Profile_Information_Common.<fieldname>

zConsName	CHAR	8	(IBM name: N/A) Name of console from which VARY TCPIP,tproc,OBEYFILE command was issued.
zUserToken	HEX	80	(IBM name: N/A) RACF user security token of user responsible for change. For a mapping of the fields, see the ICHRUTKN data area in z/OS Security Server RACF Data Areas.

Secondary segment: **SMF119#24_Profile_Information_DSN**

Field Name	Type	Len	Description
SMF119#24_Profile_Information_DSN.<fieldname>			
zDesc	CHAR	4	(IBM name: N/A) TNDS eyecatcher.

SMF119#24_Profile_Information_DSN.zFlag.<fieldname>

zDSInclude	BIT	1	Include data set. If set, the data set was specified on an INCLUDE statement. If not set, the data set was the main data set.
------------	-----	---	---

SMF119#24_Profile_Information_DSN.<fieldname>

zName	CHAR	54	(IBM name: N/A) The data set name value is padded with trailing blanks.
-------	------	----	--

Secondary segment: **SMF119#24_TelnetGlobals**

Field Name	Type	Len	Description
SMF119#24_TelnetGlobals.<fieldname>			
zDesc	CHAR	4	(IBM name: N/A) TNTG eyecatcher.

SMF119#24_TelnetGlobals.zFlag1.<fieldname>

zFmt_Long	BIT	1	Format Long, otherwise Format Short
zShareACB	BIT	1	ShareAcb, otherwise NoShareACB
zSMFProfile	BIT	1	SMFPROFILE, otherwise NOSMFPROFILE
zSMF_GrpDtl	BIT	1	SMFPROFILE GroupDetail, otherwise SMFPROFILE NOGroupDetail

zLimitQ	BIT	1	LIMITQ, otherwise NOLIMITQ.
SMF119#24_TelnetGlobals.zFlag2.<fieldname>			
zSAEnable	BIT	1	TNSACONFIG ENABLE, otherwise TNSACONFIG DISABLE
zSATrace	BIT	1	TNSACONFIG TRACE, otherwise TNSACONFIG NOTRACE
SMF119#24_TelnetGlobals.zFlag3.<fieldname>			
zXCJoin	BIT	1	XCF JOIN, otherwise XCF NOJOIN
zLUPrimary	BIT	1	LUNS Primary, otherwise LUNS Backup
SMF119#24_TelnetGlobals.<fieldname>			
zTCPName	CHAR	8	(IBM name: N/A) TCPIP Jobname.
zSACacheTime	INT	4	(IBM name: N/A) TNSACONFIG CacheTime.
zSACommName	CHAR	32	(IBM name: N/A) TNSACONFIG Community. Blank if in an SMF record. Non-blank in an NMI call.
zSAPort	INT	2	(IBM name: N/A) TNSACONFIG AGENT Port.
zXCSubplex	CHAR	8	(IBM name: N/A) XCF Subplex name.
zXCFTMon	INT	4	(IBM name: N/A) XCF XCFMonitor.
zXCConnTO	INT	4	(IBM name: N/A) XCF ConnectionTimeout.
zXCRCvyTO	INT	4	(IBM name: N/A) XCF RecoveryTimeout.
zLUPort	INT	2	(IBM name: N/A) LUNS Port.
zLUPAddr	IPADDRESS	16	(IBM name: N/A) LUNS Ip address.
zLURank	INT	4	(IBM name: N/A) LUNS Rank.
zLDAPPort	INT	2	(IBM name: N/A) CRL LDAP Port number.
zLDAPNameLen	INT	2	(IBM name: N/A) CRL LDAP Name Length.
zLDAPNames	CHAR	256	(IBM name: N/A) CRL LDAP Names. A set of up to five names that are separated by a space.

Secondary segment: **SMF119#24_TelnetParms**

Field Name	Type	Len	Description
SMF119#24_TelnetParms.<fieldname>			
zDesc	CHAR	4	(IBM name: N/A) TNTP eyecatcher.
zPortNum	INT	2	(IBM name: N/A) Port number.
zIndex	INT	2	(IBM name: N/A) TNTP index.

zPortIpAddr	IPADDRESS	16	(IBM name: N/A) Port Qualified IP address.
zPortLink	CHAR	16	(IBM name: N/A) Port Qualified Link name.

SMF119#24_TelnetParms.zFlag00.<fieldname>

zPQ_Link	BIT	1	Port Qualification is LinkName
zPQ_IPAddr	BIT	1	Port Qualification is IP address.

SMF119#24_TelnetParms.zFlag01.<fieldname>

zBinLMode	BIT	1	BINARYLINEMODE, otherwise NOBINARYLINEMODE
zCCConn	BIT	1	CHECKCLIENTCONN, otherwise NOCHECKCLIENTCONN
zCodePage	BIT	1	CODEPAGE, otherwise NOCODEPAGE
zDbcsTrace	BIT	1	DBCSTRACE, otherwise NODBCSTRACE
zDbcs	BIT	1	DBCSTRANSFORM, otherwise NODBCSTRANSFORM

SMF119#24_TelnetParms.zFlag02.<fieldname>

zConnT_SSL	BIT	1	CONNTYPE SSL
zConnT_NegTSSL	BIT	1	CONNTYPE NETTSSL
zConnT_Any	BIT	1	CONNTYPE ANY
zConnT_Basic	BIT	1	CONNTYPE BASIC
zConnT_None	BIT	1	CONNTYPE NONE
zCIAuth_SSL	BIT	1	CLIENTAUTH SSL
zCIAuth_SAF	BIT	1	CLIENTAUTH SAF
zCIAuth_None	BIT	1	CLIENTAUTH None.

SMF119#24_TelnetParms.zFlag03.<fieldname>

zDrpAscPrt	BIT	1	DROPASSOCPRINTER, otherwise NODROPASSOCPRINTER
zFDTrace	BIT	1	FULLDATATRACE, otherwise NOFULLDATATRACE
zFKR_SAF	BIT	1	KEYRING SAF 1
zFKR_MVS	BIT	1	KEYRING MVS
zFKR_HFS	BIT	1	KEYRING HFS
zLUSess_P	BIT	1	LUSESSIONPEND, otherwise NOLUSESSIONPEND
zMsg07	BIT	1	MSG07, otherwise NOMSG07

SMF119#24_TelnetParms.zFlag04.<fieldname>

zOldSol	BIT	1	OLDSOLICITOR, otherwise NOOLDSOLICITOR
zPPhrase	BIT	1	PASSWORDPHRASE, otherwise NOPASSWORDPHRASE
zDisPPhrase	BIT	1	DISABLEPASSWORDPHRASE
zSecurePort	BIT	1	SECUREPORT, otherwise PORT 0
zTTLSPort	BIT	1	TTLSPORT, otherwise PORT 0
zRefMsg10	BIT	1	REFRESHMSG10, otherwise NOREFRESHMSG10
zSeqLu	BIT	1	SEQUENTIALLU, otherwise NOSEQUENTIALLU
zSGA	BIT	1	SGA, otherwise NOSGA or DISABLESGA

SMF119#24_TelnetParms.zFlag05.<fieldname>

zSimCliLu	BIT	1	SIMCLIENTLU, otherwise NOSIMCLIENTLU
-----------	-----	---	--------------------------------------

zSingleAttn	BIT	1	SINGLEATTN10, otherwise NOSINGLEATTN
zSMFInit119	BIT	1	SMFINIT TYPE119, otherwise SMFINIT NOTYPE119
zSMFTerm119	BIT	1	SMFTERM TYPE119, otherwise SMFTERM NOTYPE119
zSNAExt	BIT	1	SNAEXT, otherwise NOSNAEXT
zSSLV2	BIT	1	SSLV2, otherwise NOSSLV2
zSSLV3	BIT	1	SSLV3, otherwise NOSSLV3

SMF119#24_TelnetParms.zFlag06.<fieldname>

zTKOGenLu	BIT	1	TKOGENLU
zTKOGenLuR	BIT	1	TKOGENLURECON
zTKOGKeepON	BIT	1	KEEPONTMRESET, otherwise NOKEEPONTMRESET
zTKOGSameIP	BIT	1	SAMEIPADDR, otherwise NOSAMEIPADDR
zTKOGSameCT	BIT	1	SAMECONNTYPE, otherwise NOSAMECONNTYPE
zExpLogonMFA	BIT	1	EXPRESSLOGONMFA, otherwise NOEXPRESSLOGONMFA
zMFAFallback	BIT	1	EXPRESSLOGONMFA FALLBACK, otherwise EXPRESSLOGONMFA NOFALLBACK

SMF119#24_TelnetParms.zFlag07.<fieldname>

zTKOSpecLu	BIT	1	TKOSPECLU
zTKOSpecLuR	BIT	1	TKOSPECLURECON
zTKOSKeepON	BIT	1	KEEPONTMRESET, otherwise NOKEEPONTMRESET
zTKOSSameIP	BIT	1	SAMEIPADDR, otherwise NOSAMEIPADDR
zTKOSSameCT	BIT	1	SAMECONNTYPE, otherwise NOSAMECONNTYPE

SMF119#24_TelnetParms.zFlag08.<fieldname>

zTN3270E	BIT	1	TN3270E, otherwise NOTN3270E
zUnlKybd_B	BIT	1	UNLOCK BeforeRead, otherwise UNLOCK AfterRead
zTN3270Bind	BIT	1	TN3270BIND, otherwise NOTN3270BIND

SMF119#24_TelnetParms.<fieldname>

zProfId	INT	2	(IBM name: N/A) Profile Id.
zCConnSec	INT	4	(IBM name: N/A) CHECKCLIENTCONN sec.
zCConnMax	INT	4	(IBM name: N/A) CHECKCLIENTCONN maxconns.
zCodePage_A	CHAR	12	(IBM name: N/A) Codepage ASCII.
zCodePage_E	CHAR	12	(IBM name: N/A) Codepage EBCDIC.
zCipherCnt	INT	2	(IBM name: N/A) Number of ENCRYPTION algorithms.

SMF119#24_TelnetParms.zV3Cipher.<fieldname>

zCipher	CHAR	2	(IBM name: N/A) ENCRYPTION algorithms.
---------	------	---	---

SMF119#24_TelnetParms.<fieldname>

zKeyRingLen	INT	2	(IBM name: N/A) Length of TPKeyRing.
-------------	-----	---	---

zInactSec	INT	4	(IBM name: N/A) INACTIVE sec.
zKeepInact	INT	4	(IBM name: N/A) KEEPINACTIVE sec.
zKeepLUSec	INT	4	(IBM name: N/A) KEEPLU sec.
zKeyRing	CHAR	256	(IBM name: N/A) KEYRING data set name. See zKeyRingLen last 255 bytes of name if the name is longer than 255.
zMaxRcv	INT	4	(IBM name: N/A) MAXRECEIVE bytes.
zMaxReqSess	INT	4	(IBM name: N/A) MAXREQSESS num_req.
zMax_RUChain	INT	4	(IBM name: N/A) MAXRUCHAIN num_RUs.
zMaxTcpSendQ	INT	4	(IBM name: N/A) MAXTCPSENDQ bytes.
zMaxVtamSend	INT	4	(IBM name: N/A) MAXVTAMSENDQ num_rpls.
zNacUserId	CHAR	8	(IBM name: N/A) NACUSERID NAC_name.
zPrtInact	INT	4	(IBM name: N/A) PRTINACTIVE sec.
zProfInact	INT	4	(IBM name: N/A) PROFILEINACTIVE sec.
zScan_Sec	INT	4	(IBM name: N/A) SCANINTERVAL sec1.
zTMark_Sec	INT	4	(IBM name: N/A) TIMEMARK sec2.
zSMFInit118	INT	1	(IBM name: N/A) SMFINIT nn.
zSMFTerm118	INT	1	(IBM name: N/A) SMFTERM nn.
zSSL_Sec	INT	4	(IBM name: N/A) SSLTIMEOUT sec.

SMF119#24_TelnetParms.zTelnetDevice.<fieldname>

zLogmode	CHAR	8	(IBM name: N/A) TN3270 Logmode.
zELogmode	CHAR	8	(IBM name: N/A) TN3270E Logmode.

zDynPorts	BIT	1	If set, dynamic ports were specified for this target.
<i>SMF119#35_DVIPA_Target_Removed.<fieldname></i>			
zPort	INT	2	(IBM name: N/A) The DVIPA distributed port number. If dynamic ports are in use for this DVIPA, this port number might be 0.

Record Type 119 Subtype 36 - DVIPA Target Server started

Primary Segment:

- SMF119#36_TCPIP_Statistics

Secondary Segment(s): 2 (in alphabetical order)

- SMF119#36_DVIPA_Target_Server_Started
- SMF119#36_Identification

Primary segment: SMF119#36_TCPIP_Statistics

Field Name	Type	Len	Description
<i>SMF119#36_TCPIP_Statistics.<fieldname></i>			
<i>SMF119#36_TCPIP_Statistics.Header.<fieldname></i>			
zFLG	HEX	1	(IBM name: N/A) System indicator: Bit Meaning when set 0-2 Reserved. 3-6 Version indicators 7 Reserved.
zRTY	INT	1	(IBM name: N/A) Record type 119
zTME	TSTMP	8	(IBM name: N/A) Date/Time that the record was moved into the SMF buffer.
zSID	CHAR	4	(IBM name: N/A) System ID.
zSSID	CHAR	4	(IBM name: N/A) Subsystem ID.
zSTY	INT	2	(IBM name: N/A) Record subtype.
<i>SMF119#36_TCPIP_Statistics.Self_defining_Section.<fieldname></i>			
zTRN	INT	2	(IBM name: SMF119SD_TRN) Number of triplets in this record (3).
zDOff	INT	4	(IBM name: N/A) Offset to TCP/IP identification section.
zDLen	INT	2	(IBM name: N/A) Length of TCP/IP identification section.
zDNum	INT	2	(IBM name: N/A) Number of TCP/IP identification sections.
z1Off	INT	4	(IBM name: N/A) Offset to DVIPA target server started section.
z1Len	INT	2	(IBM name: N/A) Length of DVIPA target server started section.
z1Num	INT	2	(IBM name: N/A) Number of DVIPA target server started sections.

Secondary segment: SMF119#36_Identification

Field Name	Type	Len	Description
<i>SMF119#36_Identification.<fieldname></i>			
zSYSName	CHAR	8	(IBM name: SMF119TI_SYSName) System name from SYSNAME in IEASYSxx.
zSysplexName	CHAR	8	

			(IBM name: SMF119TI_SysplexName) Sysplex name from SYSPLEX in COUPLExx.
zStack	CHAR	8	(IBM name: SMF119TI_Stack) TCP/IP stack name.
zReleaseID	CHAR	8	(IBM name: SMF119TI_ReleaseID) z/OS Communications Server TCP/IP release identifier.
zComp	CHAR	8	(IBM name: SMF119TI_Comp) TCP/IP subcomponent.
zASName	CHAR	8	(IBM name: SMF119TI_ASName) Started task qualifier or name of address space that writes this SMF record.
zUserID	CHAR	8	(IBM name: SMF119TI_UserID) User ID of security context.
zASID	INT	2	(IBM name: SMF119TI_ASID) ASID of address space that writes this SMF record.
zReason	INT (ENUM)	1	(IBM name: SMF119TI_Reason) Reason for writing record. IntInc => Interval record, incomplete. Int => Interval record. IEndInc => Interval ending stats, incomplete. IEnd => Interval ending stats. IShtInc => Interval shutdown stats, incomplete. ISht => Interval shutdown stats. EvtInc => Event record, incomplete. Evt => Event record, complete.
zRecordID	INT	1	(IBM name: SMF119TI_RecordID) ID value for correlating records.

Secondary segment: **SMF119#36_DVIPA_Target_Server_Started**

Field Name	Type	Len	Description
<i>SMF119#36_DVIPA_Target_Server_Started.<fieldname></i>			
zIPAddr	IPADDRESS	16	(IBM name: N/A) If zFlags 'IPv6' is set, this field contains the IPv6 DVIPA address.
zDxcfAddr	IPADDRESS	16	(IBM name: N/A) If zFlags 'IPv6' is set, this field contains the IPv6 destination XCF address of the target stack on which the target server was added.
<i>SMF119#36_DVIPA_Target_Server_Started.zFlags.<fieldname></i>			
zIPv6	BIT	1	If set, DVIPA address and dynamic XCF address are IPv6.
<i>SMF119#36_DVIPA_Target_Server_Started.<fieldname></i>			
zPort	INT	2	(IBM name: N/A) The DVIPA distributed port number.
zSReadyCount	INT	4	(IBM name: N/A) The number of servers on the indicated target stack that are ready to service connection requests for the indicated port.

Record Type 119 Subtype 37 - DVIPA Target Server ended**Primary Segment:**

- SMF119#37_TCPIP_Statistics

z1Off	INT	4	(IBM name: N/A) Offset to first ISM interface section.
z1Len	INT	2	(IBM name: N/A) Length of each ISM interface section.
z1Num	INT	2	(IBM name: N/A) Number of ISM interface sections.

Secondary segment: [SMF119#45_Identification](#)

Field Name	Type	Len	Description
<i>SMF119#45_Identification.<fieldname></i>			
zSYSName	CHAR	8	(IBM name: SMF119TI_SYSName) System name from SYSNAME in IEASYSxx.
zSysplexName	CHAR	8	

			(IBM name: SMF119TI_SysplexName) Sysplex name from SYSPLEX in COUPLExx.
zStack	CHAR	8	(IBM name: SMF119TI_Stack) TCP/IP stack name.
zReleaseID	CHAR	8	(IBM name: SMF119TI_ReleaseID) z/OS Communications Server TCP/IP release identifier.
zComp	CHAR	8	(IBM name: SMF119TI_Comp) TCP/IP subcomponent.
zASName	CHAR	8	(IBM name: SMF119TI_ASName) Started task qualifier or name of address space that writes this SMF record.
zUserID	CHAR	8	(IBM name: SMF119TI_UserID) User ID of security context.
zASID	INT	2	(IBM name: SMF119TI_ASID) ASID of address space that writes this SMF record.
zReason	INT (ENUM)	1	(IBM name: SMF119TI_Reason) Reason for writing record. IntInc => Interval record, incomplete. Int => Interval record. IEndInc => Interval ending stats, incomplete. IEnd => Interval ending stats. IShtInc => Interval shutdown stats, incomplete. ISht => Interval shutdown stats. EvtInc => Event record, incomplete. Evt => Event record, complete.
zRecordID	INT	1	(IBM name: SMF119TI_RecordID) ID value for correlating records.

Secondary segment: **SMF119#45_ISM_Interface_Statistics**

Field Name	Type	Len	Description
<i>SMF119#45_ISM_Interface_Statistics.<fieldname></i>			
zDuration	TIME	8	(IBM name: N/A) Duration of stack recording interval.
zName	CHAR	16	(IBM name: N/A) Interface name.
zPNetID	CHAR	16	(IBM name: N/A) Physical network ID.
zBytesIn	INT	8	(IBM name: N/A) Bytes received across this ISM interface.
zInOperations	INT	8	(IBM name: N/A) Inbound operations across this ISM interface.
zBytesOut	INT	8	(IBM name: N/A) Bytes sent across this ISM interface.
zOutOperations	INT	8	(IBM name: N/A) Outbound operations across this ISM interface.
zSMCLinks	INT	4	(IBM name: N/A) Total number of SMC-D links established across this ISM interface.
zTCPConns	INT	4	(IBM name: N/A) Total number of TCP connections established across this ISM interface.
zRcvBufInuse	INT	4	(IBM name: N/A) Current amount of fixed 64-bit storage that is in use for inbound processing.

<i>SMF119#45_ISM_Interface_Statistics.zFlags.<fieldname></i>			
zPNetIdx	BIT	1	PNetID provided. If on, zPNetID contains the Physical network ID.
zAssocISM	BIT	1	Associated ISM interface. This flag applies to only active ISM interfaces. If set, this ISM interface is associated with those active IPAQIDIO, IPAQIDIO6, IPAQENET and IPAQENET6 interfaces that have all of the following attributes: 1. The interface is defined by the INTERFACE

		statement, and for IPAQENET and IPAQENET6 with CHIPTYPE OSD. 2. The interface is enabled for SMC-D. 3. The zPNetID value reported for the ISM interface matches the zPNetID value reported for the OSD, or HiperSockets interface.

zASName	CHAR	8	(IBM name: SMF119TI_ASName) Started task qualifier or name of address space that writes this SMF record.
zUserID	CHAR	8	(IBM name: SMF119TI_UserID) User ID of security context.
zASID	INT	2	(IBM name: SMF119TI_ASID) ASID of address space that writes this SMF record.
zReason	INT (ENUM)	1	(IBM name: SMF119TI_Reason) Reason for writing record. IntInc => Interval record, incomplete. Int => Interval record. IEndInc => Interval ending stats, incomplete. IEnd => Interval ending stats. IShtInc => Interval shutdown stats, incomplete. ISht => Interval shutdown stats. EvtInc => Event record, incomplete. Evt => Event record, complete.
zRecordID	INT	1	(IBM name: SMF119TI_RecordID) ID value for correlating records.

Secondary segment: **SMF119#50_CSSMTP_Common_Info**

Field Name	Type	Len	Description
<i>SMF119#50_CSSMTP_Common_Info.<fieldname></i>			
zJOBNAME	CHAR	8	(IBM name: N/A) Jobname.
zEntry	TSTMP	8	(IBM name: N/A) Time & date when CSSMTP JOB card for this job recognised on reader.
zUSERID	CHAR	8	(IBM name: N/A) User-defined identification field (taken from common exit parameter area, not from USER=parameter on job statement).

zEXTWRT	CHAR	8	(IBM name: N/A) External writer name.
zJes	CHAR	4	(IBM name: N/A) JES subsystem name.

Secondary segment: **SMF119#50_CSSMTP_Spool_Id**

Field Name	Type	Len	Description
<i>SMF119#50_CSSMTP_Spool_Id.<fieldname></i>			
zJOBNAME	CHAR	8	(IBM name: N/A) Jobname.
zEntry	TSTMP	8	(IBM name: N/A) Time & date when CSSMTP JOB card for this job recognised on reader.
zUSERID	CHAR	8	(IBM name: N/A) User-defined identification field (taken from common exit parameter area, not from USER=parameter on job statement).
zJobId	CHAR	8	(IBM name: N/A) Job Id of selected job.
zSYS	CHAR	8	(IBM name: N/A) System name of the MVS image where the job output was created.
zXEQ	CHAR	8	(IBM name: N/A) NJE node where job executed.
zCRER	CHAR	8	(IBM name: N/A) Owning user id of data set.
zTKID	INT	4	(IBM name: N/A) JES task ID.
zJnum	INT	4	(IBM name: N/A) JES job number in binary.
zDsky	INT	4	(IBM name: N/A) JES dataset key.
zDsnm	INT	4	(IBM name: N/A) JES dataset number.

Secondary segment: **SMF119#50_CSSMTP_Mail_Data**

Field Name	Type	Len	Description
<i>SMF119#50_CSSMTP_Mail_Data.<fieldname></i>			
zSTime	TSTMP	8	(IBM name: N/A) Time & date that mail was read from JES.
zETime	TSTMP	8	(IBM name: N/A) Time & date that mail was completed.
zDur	FIXED	4 (10,2)	(IBM name: N/A) Time mail was in progress in seconds.
zID	INT	4	(IBM name: SMF119TN_ID) Mail message number in spool file.
zType	INT (ENUM)	4	(IBM name: N/A) Type of mail message. 'RegNote' => mail message is regular type created by customer. 'UndelNote' => mail message is error note created by customer. 'Report' => mail message is a CSSMTP error report. 'UMNOTIF' => mail message is a undeliverable mail notification.
zBYCT	INT	8	(IBM name: N/A) Body byte count.

zRLoc	INT	4	(IBM name: N/A) Record location of MAIL command in spool file.
zRcpts	INT	4	(IBM name: N/A) Number of total recipients.
zFRcpts	INT	4	(IBM name: N/A) Number of failed recipients.
zRetry	INT	4	(IBM name: N/A) Number of retry attempts.

SMF119#50_CSSMTP_Mail_Data.zFlags.<fieldname>

zESMTP	BIT	1	EHLO(RFC 2821) command.
zTLS	BIT	1	STARTTLS command.
zFinis	BIT	1	Mail was completed without errors.
zError	BIT	1	Mail was completed with errors.
zERetry	BIT	1	Mail was saved for extended retry.
zMHFul	BIT	1	The SMF record is full. Data in the mail header section was truncated.
zFrom	BIT	1	Mail contains a From header specified in the spool file.
zTo	BIT	1	Mail contains a To header specified in the spool file.
zDate	BIT	1	Mail contains a Date header specified in the spool file.
zMsgID	BIT	1	Mail contains a msg-ID specified in the spool file.
zSubj	BIT	1	Mail contains a subject specified in the spool file.

Secondary segment: SMF119#50_CSSMTP_Mail_Header

Field Name	Type	Len	Description
SMF119#50_CSSMTP_Mail_Header.<fieldname>			
zLen	INT	2	(IBM name: N/A) Mail header length.
zKey	INT (ENUM)	2	(IBM name: N/A) Mail header type value. 'FROM' => Mail box address of MAIL FROM: command. 'RCPT' => Mail box address of RCPT TO: command. 'RCPTRPY' => Error reply text to previous RCPT TO: command. If this field contains a single character 'F', the recipient did not receive the mail as the result of the reason in the generalerror field for 'ERRTXT' or command error field for 'CMDTXT' or 'RPYTXT'. 'SUBJ' => Subject: subject text. 'DATE' => Date: date value. 'MSGID' => Message-id: value. 'CMDTXT' => Text of SMTP command in error. 'RPYTXT' => Server reply to the SMTP command in error. 'ERRTXT' => Text of error message not associated with SMTP command processing.
zData	XVCHAR	0 512	(IBM name: N/A) Mail header data string.

<i>SMF119#52_Target_Server_Stats.<fieldname></i>			
zIP	IPADDRESS	16	(IBM name: SMF119ML_IP) Target server IP address.
zPort	INT	2	(IBM name: N/A) Target server port number.
zConnState	INT (ENUM)	4	(IBM name: N/A) Connection state. 'New' => Target server is new so its capabilities are unknown but it is in the configured address list. 'Active' => The target server is available. 'Monitoring' => The target server is being monitored for a successful connection open and reply from the server. 'NonActive' => The target server is not available.
zMsgSize	INT	4	(IBM name: N/A) Maximum message size.
zRecvdCount	INT	4	(IBM name: N/A) Total mail messages received.
zSentCount	INT	4	(IBM name: N/A) Total mail messages sent.
zConCount	INT	4	(IBM name: N/A) Connection count.
zConFailCount	INT	4	(IBM name: N/A) Connection failure count.
zRsvd2	INT	4	(IBM name: N/A) Reserved.
zRcvdBytes	INT	8	(IBM name: N/A) Total number of received bytes.
zSentBytes	INT	8	(IBM name: N/A) Total number of sent bytes.
<i>SMF119#52_Target_Server_Stats.zFlags.<fieldname></i>			
zESMTP	BIT	1	ESMTP supported.

Record Type 119 Subtype 70 - FTP Server Transfer Completion

Primary Segment:

- SMF119#70_TCPIP_Statistics

Secondary Segment(s): 7 (in alphabetical order)

- SMF119#70_FTP_Server_Transfer_Completion
- SMF119#70_FTP_Server_Transfer_Completion_First_DSN
- SMF119#70_FTP_Server_Transfer_Completion_Host
- SMF119#70_FTP_Server_Transfer_Completion_LOADMOD
- SMF119#70_FTP_Server_Transfer_Completion_Second_DSN
- SMF119#70_FTP_Server_Transfer_Completion_Security
- SMF119#70_Identification

Primary segment: SMF119#70_TCPIP_Statistics

Field Name	Type	Len	Description
<i>SMF119#70_TCPIP_Statistics.<fieldname></i>			
<i>SMF119#70_TCPIP_Statistics.Header.<fieldname></i>			
zFLG	HEX	1	(IBM name: N/A) System indicator: Bit Meaning when set 0-2 Reserved. 3-6 Version indicators 7 Reserved.
zRTY	INT	1	(IBM name: N/A) Record type 119
zTME	TSTMP	8	(IBM name: N/A) Date/Time that the record was moved into the SMF buffer.
zSID	CHAR	4	(IBM name: N/A) System ID.
zSSID	CHAR	4	(IBM name: N/A) Subsystem ID.
zSTY	INT	2	(IBM name: N/A) Record subtype.

<i>SMF119#70_TCPIP_Statistics.Self_defining_Section.<fieldname></i>			
zTRN	INT	2	(IBM name: SMF119SD_TRN) Number of triplets.
zDOff	INT	4	(IBM name: N/A) Offset to the TCP/IP Identification section from the beginning of the record (including RDW).
zDLen	INT	2	(IBM name: N/A) Length of the TCP/IP Identification section.
zDNum	INT	2	(IBM name: N/A) Number of TCP/IP Identification sections.
z1Off	INT	4	(IBM name: N/A) Offset to FTP server transfer completion section.
z1Len	INT	2	(IBM name: N/A) Length of FTP server transfer completion section.
z1Num	INT	2	(IBM name: N/A) Number of FTP server transfer completion sections.
z2Off	INT	4	(IBM name: N/A) Offset to FTP server host name section.
z2Len	INT	2	(IBM name: N/A) Length of FTP server host name section.
z2Num	INT	2	(IBM name: N/A) Number of FTP server host name sections.

z3Off	INT	4	(IBM name: N/A) Offset to FTP server first associated data set name section.
z3Len	INT	2	(IBM name: N/A) Length of FTP server first associated data set name section.
z3Num	INT	2	(IBM name: N/A) Number of FTP server first associated data set name sections.
z4Off	INT	4	(IBM name: N/A) Offset to FTP server second associated data set name section.
z4Len	INT	2	(IBM name: N/A) Length of FTP server second associated data set name section.
z4Num	INT	2	(IBM name: N/A) Number of FTP server second associated data set name sections.
z5Off	INT	4	(IBM name: N/A) Offset to FTP server Security section.
z5Len	INT	2	(IBM name: N/A) Length of FTP server Security section.
z5Num	INT	2	(IBM name: N/A) Number of FTP server Security sections.
z6Off	INT	4	(IBM name: N/A) Offset to FTP server load module name section.
z6Len	INT	2	(IBM name: N/A) Length of FTP server load module name section.
z6Num	INT	2	(IBM name: N/A) Number of FTP server load module name sections. There is only 1 server load module name section per record.

Secondary segment: **SMF119#70_Identification**

Field Name	Type	Len	Description
<i>SMF119#70_Identification.<fieldname></i>			
zSYSName	CHAR	8	(IBM name: SMF119TI_SYSName) System name from SYSNAME in IEASYSxx.
zSysplexName	CHAR	8	(IBM name: SMF119TI_SysplexName) Sysplex name from SYSPLEX in COUPLExx.
zStack	CHAR	8	(IBM name: SMF119TI_Stack) TCP/IP stack name.
zReleaseID	CHAR	8	(IBM name: SMF119TI_ReleaseID) z/OS Communications Server TCP/IP release identifier.
zComp	CHAR	8	(IBM name: SMF119TI_Comp) TCP/IP subcomponent.
zASName	CHAR	8	(IBM name: SMF119TI_ASName) Started task qualifier or name of address space that writes this SMF record.
zUserID	CHAR	8	(IBM name: SMF119TI_UserID) User ID of security context.
zASID	INT	2	(IBM name: SMF119TI_ASID) ASID of address space that writes this SMF record.
zReason	INT (ENUM)	1	(IBM name: SMF119TI_Reason) Reason for writing record. IntInc => Interval record, incomplete. Int => Interval record. IEndInc => Interval ending stats, incomplete. IEnd => Interval ending stats. IShtInc => Interval shutdown stats, incomplete. ISht => Interval shutdown stats. EvtInc => Event record, incomplete. Evt => Event record, complete.
zRecordID	INT	1	(IBM name: SMF119TI_RecordID) ID value for correlating records.

Secondary segment: **SMF119#70_FTP_Server_Transfer_Completion**

Field Name	Type	Len	Description
<i>SMF119#70_FTP_Server_Transfer_Completion.<fieldname></i>			
zFT_FSOper	INT (ENUM)	1	(IBM name: SMF119FT_FSOper) FTP Operation according to SMF77 subtype classification.
zCmd	CHAR	4	(IBM name: N/A) FTP command (according to RFC 959+).
zFType	CHAR	4	(IBM name: N/A) File type (SEQ, JES, or SQL).
zDRIP	IPADDRESS	16	(IBM name: N/A) Remote IP address (data connection). This field is 0 for Delete or Rename operation.
zDLIP	IPADDRESS	16	(IBM name: N/A) Local IP address (data connection). This field is 0 for Delete or Rename operation.
zDRPort	INT	2	(IBM name: N/A) Remote port number (data connection - client). This field is 0 for Delete or Rename operation.
zDLPort	INT	2	(IBM name: N/A) Local port number (data connection - server). This field is 0 for Delete or Rename operation.
zCRIP	IPADDRESS	16	(IBM name: N/A) Remote IP address (control connection).
zCLIP	IPADDRESS	16	(IBM name: N/A) Local IP address (control connection).
zCRPort	INT	2	(IBM name: N/A) Remote port number (control connection - client).
zCLPort	INT	2	(IBM name: N/A) Local port number (control connection - server).
zSUser	CHAR	8	(IBM name: N/A) Client User ID on server.
zType	INT (ENUM)	1	(IBM name: N/A) Data type.
zMode	INT (ENUM)	1	(IBM name: N/A) Transmission mode.
zStruct	INT (ENUM)	1	(IBM name: N/A) Data Structure.
zDsType	INT (ENUM)	1	(IBM name: N/A) Data set type.
zSTime	TSTMP	8	(IBM name: N/A) Transmission start date & time.
zETime	TSTMP	8	(IBM name: N/A) Transmission end date & time.
zDur	FIXED	4 (10,2)	(IBM name: N/A) File transmission duration in units of seconds.
zBytes	INT	8	(IBM name: N/A) Transmission byte count (64-bit integer).
zLReply	CHAR	4	(IBM name: N/A) Last reply to client (3-digit RFC 959 code, right-aligned).
zM1	CHAR	8	(IBM name: N/A) PDS Member name.
zM2	CHAR	8	(IBM name: N/A) Second PDS member name (if rename operation).

zBytesFloat	FLOAT	8	(IBM name: N/A) Transmission byte count (floating point).
zConnID	INT	4	(IBM name: N/A) TCP connection ID of FTP control connection.
zDConnID	INT	4	(IBM name: N/A) TCP connection ID of FTP data connection, or 0. This field is 0 for Delete or Rename operation.
zSessionID	CHAR	15	(IBM name: N/A) FTP activity logging session ID. The activity logging session ID uniquely identifies the FTP session between a client and a server. The identifier is created by combining the job name of the FTP daemon with a 5-digit number in the range 00000 - 99999.

Secondary segment: SMF119#70_FTP_Server_Transfer_Completion_Host

Field Name	Type	Len	Description
<i>SMF119#70_FTP_Server_Transfer_Completion_Host.<fieldname></i>			
zHostname	XVCHAR	0 128	(IBM name: N/A) Host Name.

Secondary segment: SMF119#70_FTP_Server_Transfer_Completion_First_DSN

Field Name	Type	Len	Description
<i>SMF119#70_FTP_Server_Transfer_Completion_First_DSN.<fieldname></i>			
zFileName1	XVCHAR	0 4096	(IBM name: N/A) Server MVS or z/OS UNIX file name associated with the file transfer or rename operation. When the operation is a rename, this is the file or data set original name.

Secondary segment: SMF119#70_FTP_Server_Transfer_Completion_Second_DSN

Field Name	Type	Len	Description
<i>SMF119#70_FTP_Server_Transfer_Completion_Second_DSN.<fieldname></i>			
zFileName2	XVCHAR	0 4096	(IBM name: N/A) Second MVS or z/OS UNIX file name associated with a rename. This is the new file or data set name.

Secondary segment: SMF119#70_FTP_Server_Transfer_Completion_Security

Field Name	Type	Len	Description
<i>SMF119#70_FTP_Server_Transfer_Completion_Security.<fieldname></i>			
zMechanism	INT (ENUM)	1	(IBM name: N/A) Protection Mechanism.
zCProtect	INT (ENUM)	1	(IBM name: N/A) Control connection Protection Level.
zDProtect	INT (ENUM)	1	(IBM name: N/A) Data connection Protection Level.
zLoginMech		1	

	INT (ENUM)		(IBM name: N/A) Login Method.
zProtoLevel	CHAR	8	(IBM name: N/A) (Control connection.) Protocol level (present only if Protocol Mechanism is TLS or AT-TLS). Possible values are: v SSLV2 v SSLV3 v TLSV1 v TLSV1.1 v TLSV1.2.
zCipherSpec	CHAR	20	(IBM name: N/A) (Control connection.) Cipher Specification (present only if Protocol Mechanism is TLS or AT-TLS). Possible values when Protocol Level is SSLV2: v RC4 US v RC4 Export v RC2 US v RC2 Export v DES 56-Bit v Triple DES US Possible values when Protocol Level is SSLV3, TLSV1, TLSV1.1, or TLSV1.2: v SSL_NULL_MD5 v SSL_NULL_SHA v SSL_RC4_MD5_EX v SSL_RC4_MD5 v SSL_RC4_SHA v SSL_RC2_MD5_EX v SSL_DES_SHA v SSL_3DES_SHA v SSL_AES_128_SHA v SSL_AES_256_SHA If this field is blank, the value of SMF119FT_FSCipher for the cipher is used for the connection.
zProtBuffSize	INT	4	(IBM name: N/A) Negotiated protection buffer size.
zCipher	CHAR	2	(IBM name: N/A) (Control connection.) Hexadecimal value of cipher specification (present only when Protocol Mechanism is TLS or AT-TLS). If the value is 4X, the cipher specification must be obtained from the SMF119FT_FSCipher4 field.
zFips140	INT (ENUM)	1	(IBM name: N/A) FIPS 140 compliance level.
zCipher4	CHAR	4	(IBM name: N/A) (Control connection.) Four byte hexadecimal value of Cipher Specification (present only if Protocol Mechanism is TLS or AT-TLS).
zSessReuse	INT (ENUM)	1	(IBM name: N/A) SSL Session reuse.
zCSSLSessIDL	INT	2	(IBM name: N/A) Length of the SSL session ID of FTP control connection.
zCSSLSessID	CHAR	32	(IBM name: N/A) SSL session ID of FTP control connection.
zDSSLSessIDL	INT	2	(IBM name: N/A) Length of the SSL session ID of FTP data connection.
zDSSLSessID	CHAR	32	(IBM name: N/A) SSL session ID of FTP data connection.

Secondary segment: SMF119#70_FTP_Server_Transfer_Completion_LOADMOD

Field Name	Type	Len	Description
<i>SMF119#70_FTP_Server_Transfer_Completion_LOADMOD.<fieldname></i>			
zMemNum	INT	4	(IBM name: N/A) Number of members associated with the file transfer operation. The member names begin in field SMF119FT_FSMemName.
zLibNameLen	INT	1	(IBM name: N/A) Length of the name of the Load module or program object library associated with the file transfer operation.
zLibName	CHAR	44	(IBM name: N/A) Name of the Load module or program object library associated with the file transfer operation, padded with trailing blanks.
zMemName	CHAR	8	(IBM name: N/A) Names of members associated with the file transfer operation.

Record Type 119 Subtype 71 - FTP Server Daemon Config

Primary Segment:

- SMF119#71_TCPIP_Statistics

Secondary Segment(s): 5 (in alphabetical order)

- SMF119#71_FTP_Daemon_Config_Data
- SMF119#71_FTP_Daemon_Config_Data_Item
- SMF119#71_FTP_Daemon_Config_General
- SMF119#71_FTP_Daemon_Id
- SMF119#71_Identification

Primary segment: SMF119#71_TCPIP_Statistics

Field Name	Type	Len	Description
<i>SMF119#71_TCPIP_Statistics.<fieldname></i>			
SMF119#71_TCPIP_Statistics.Header.<fieldname>			
zFLG	HEX	1	(IBM name: N/A) System indicator: Bit Meaning when set 0-2 Reserved. 3-6 Version indicators 7 Reserved.
zRTY	INT	1	(IBM name: N/A) Record type 119
zTME	TSTMP	8	(IBM name: N/A) Date/Time that the record was moved into the SMF buffer.
zSID	CHAR	4	(IBM name: N/A) System ID.
zSSID	CHAR	4	(IBM name: N/A) Subsystem ID.
zSTY	INT	2	(IBM name: N/A) Record subtype.
SMF119#71_TCPIP_Statistics.Self_defining_Section.<fieldname>			
zTRN	INT	2	(IBM name: SMF119SD_TRN) Number of triplets.
zDOff	INT	4	(IBM name: N/A) Offset to the TCP/IP Identification section from the beginning of the record (including RDW).
zDLen	INT	2	(IBM name: N/A) Length of the TCP/IP Identification section.
zDNum	INT	2	(IBM name: N/A) Number of TCP/IP Identification sections.
z1Off	INT	4	(IBM name: N/A) Offset to FTP daemon identification section.
z1Len	INT	2	(IBM name: N/A) Length of FTP daemon identification section.
z1Num	INT	2	(IBM name: N/A) Number of FTP daemon identification sections.
z2Off	INT	4	(IBM name: N/A) Offset to FTP daemon general configuration section.
z2Len	INT	2	(IBM name: N/A) Length of FTP daemon general configuration section.
z2Num	INT	2	(IBM name: N/A) Number of FTP daemon general configuration sections.
z3Off	INT	4	(IBM name: N/A) Offset to FTP daemon configuration data section.

z3Len	INT	2	(IBM name: N/A) Length of FTP daemon configuration data section.
z3Num	INT	2	(IBM name: N/A) Number of FTP daemon configuration data section.

Secondary segment: **SMF119#71_Identification**

Field Name	Type	Len	Description
<i>SMF119#71_Identification.<fieldname></i>			
zSYSName	CHAR	8	(IBM name: SMF119TI_SYSName) System name from SYSNAME in IEASYSxx.
zSysplexName	CHAR	8	(IBM name: SMF119TI_SysplexName) Sysplex name from SYSPLEX in COUPLExx.
zStack	CHAR	8	(IBM name: SMF119TI_Stack) TCP/IP stack name.
zReleaseID	CHAR	8	(IBM name: SMF119TI_ReleaseID) z/OS Communications Server TCP/IP release identifier.
zComp	CHAR	8	(IBM name: SMF119TI_Comp) TCP/IP subcomponent.
zASName	CHAR	8	(IBM name: SMF119TI_ASName) Started task qualifier or name of address space that writes this SMF record.
zUserID	CHAR	8	(IBM name: SMF119TI_UserID) User ID of security context.
zASID	INT	2	(IBM name: SMF119TI_ASID) ASID of address space that writes this SMF record.
zReason	INT (ENUM)	1	(IBM name: SMF119TI_Reason) Reason for writing record. IntInc => Interval record, incomplete. Int => Interval record. IEndInc => Interval ending stats, incomplete. IEnd => Interval ending stats. IShtInc => Interval shutdown stats, incomplete. ISht => Interval shutdown stats. EvtInc => Event record, incomplete. Evt => Event record, complete.
zRecordID	INT	1	(IBM name: SMF119TI_RecordID) ID value for correlating records.

Secondary segment: **SMF119#71_FTP_Daemon_Id**

Field Name	Type	Len	Description
<i>SMF119#71_FTP_Daemon_Id.<fieldname></i>			
zIdent	CHAR	4	(IBM name: N/A) FDID eyecatcher.
zJobName	CHAR	8	(IBM name: N/A) Job name of the FTP daemon.
zASID	INT	2	(IBM name: SMF119TI_ASID) ASID of the FTP daemon address space.
zStartTime	TSTMP	8	(IBM name: N/A) Time & date the FTP daemon started (UTC).
zUserID	CHAR	8	(IBM name: SMF119TI_UserID) User ID that started this FTP daemon.
zUToken	HEX	80	(IBM name: N/A) User token of the user that started the FTP daemon.

Secondary segment: **SMF119#71_FTP_Daemon_Config_General**

Field Name	Type	Len	Description
<i>SMF119#71_FTP_Daemon_Config_General.<fieldname></i>			
zDesc	CHAR	4	(IBM name: N/A) FDCF eyecatcher.
<i>SMF119#71_FTP_Daemon_Config_General.zFlags.<fieldname></i>			
zAccErrMsg	BIT	1	ACCESSERRORMSG statement. 0 FALSE 1 TRUE.
zAnonSurr	BIT	1	ANONYMOUS statement. 1 Indicates user_id/SURROGATE is configured.
zAnonSysHFS	BIT	1	ANONYMOUSFILEACCESS statement. 1 Allows anonymous users access to z/OS UNIX System Service files.
zAnonSysMVS	BIT	1	ANONYMOUSFILEACCESS statement. 1 Allows anonymous users access to MVS data sets.
zAnonFTJES	BIT	1	ANONYMOUSFILETYPEJES statement. 0 FALSE 1 TRUE.
zAnonFTSEQ	BIT	1	ANONYMOUSFILETYPESEQ statement. 0 FALSE 1 TRUE.
zAnonFTSQL	BIT	1	ANONYMOUSFILETYPESQL statement. 0 FALSE 1 TRUE.
zAnonFTPLog	BIT	1	ANONYMOUSFTPLOGGING statement. 0 FALSE 1 TRUE.
zAsatrans	BIT	1	ASATRANS statement. 0 FALSE 1 TRUE.
zAutoMount	BIT	1	AUTOMOUNT statement. 0 FALSE 1 TRUE.
zAuRecall	BIT	1	AUTORECALL statement. 0 FALSE 1 TRUE.
zAuTapeMount	BIT	1	AUTOTAPEMOUNT statement. 0 FALSE 1 TRUE.
zChkConfid	BIT	1	CHKCONFIDENCE statement. 0 FALSE 1 TRUE.
zDBSub	BIT	1	DBSUB statement. 0 FALSE 1 TRUE.
zDebugOnSite	BIT	1	DEBUGONSITE statement. 0 FALSE 1 TRUE.
zDirMode	BIT	1	DIRECTORYMODE statement. 0 FALSE 1 TRUE.
zDumpOnSite	BIT	1	DUMPONSITE statement.
zFTPLogging	BIT	1	FTPLOGGING statement. 0 FALSE 1 TRUE if zDsnLookup = 1, TRUENODNS if zDsnLookup = 0.
zdsnlookup	BIT	1	FTPLOGGING TRUE option. 0 TRUENODNS 1 TRUE.
zISPFStats	BIT	1	ISPFSTATS statement. 0 FALSE 1 TRUE.
zJESGetByDsn	BIT	1	JESGETBYDSN statement. 0 FALSE 1 TRUE.
zListSubDir	BIT	1	LISTSUBDIR statement. 0 FALSE 1 TRUE.
zMBReLastEOL	BIT	1	MBREQUIRELASTEOL statement. 0 FALSE 1 TRUE.
zNonSwapd	BIT	1	NONSWAPD statement. 0 FALSE 1 TRUE..
zPassPhrase	BIT	1	PASSPHRASE statement. 0 FALSE 1 TRUE.

zUcsSub	BIT	1	UCSSUB statement. 0 FALSE 1 TRUE.
zUcsTrunc	BIT	1	UCSTRUNC statement. 0 FALSE 1 TRUE.
zVerifyUser	BIT	1	VERIFYUSER statement. 0 FALSE 1 TRUE.
zWapRec	BIT	1	WRAPRECORD statement. 0 FALSE 1 TRUE.
zTapefastIO	BIT	1	WRTAPEFASTIO statement. 0 FALSE 1 TRUE.
zFTChkip	BIT	1	FTCHKIP_FLAG statement. 1 Server user exit FTCHKIP found.
zTlscertcheck	BIT	1	TLSCERTCROSSCHECK statement. 0 FALSE 1 TRUE.
zSslv3	BIT	1	SSLV3 statement. 0 FALSE 1 TRUE.

SMF119#71_FTP_Daemon_Config_General.<fieldname>

zAnonUser	CHAR	8	(IBM name: N/A) ANONYMOUS statement. If ANONYMOUS is not set, the value defaults to blanks. If ANONYMOUS is set without user_id, the value is ANONYMO.
zAnonPass	CHAR	8	(IBM name: N/A) ANONYMOUS statement. If the password is set, the value is set and the password is not displayed explicitly. If the password is not set, the value defaults to blanks.
zAnonHFSDirM	HEX	4	(IBM name: N/A) ANONYMOUSHFSDIRMODE statement. The three octal digits describe the mode bits, which are used for directories that anonymous users create.
zAnonHFSFileM	HEX	4	(IBM name: N/A) ANONYMOUSHFSFILEMODE statement. The three octal digits describe that the mode bits used for storing files are created by anonymous users.
zAnonLevel	INT	4	(IBM name: N/A) ANONYMOUSLEVEL statement.
zBlksize	INT	4	(IBM name: N/A) BLKSIZE statement.
zBufno	INT	4	(IBM name: N/A) BUFNO statement.
zCcxlattelnit	CHAR	8	(IBM name: N/A) CCXLATE statement. The value defaults to blanks if the statement is not set.
zChkptint	INT	4	(IBM name: N/A) CHKPTINT statement.
zCondDisp		1	

	INT (ENUM)		(IBM name: N/A) CONDISP statement.
zemailAddrChk	CHAR	7	(IBM name: N/A) EMAILADDRCHECK statement.
zDataClass	CHAR	8	(IBM name: N/A) DATACLASS statement. The value defaults to blanks if the statement is not set.
zDataKeepAlive	INT	4	(IBM name: N/A) DATAKEEPALIVE statement.
zDataTimeOut	INT	4	(IBM name: N/A) DATATIMEOUT statement.
zDB2Name	CHAR	4	(IBM name: N/A) DB2 statement.
zDB2plan	CHAR	8	(IBM name: N/A) DB2PLAN statement.
zDConnTime	INT	4	(IBM name: N/A) DCONNTIME statement.
zDebug	INT (ENUM)	4	(IBM name: N/A) DEBUG statement.
zdestnode	CHAR	8	(IBM name: N/A) DEST statement. The destnode value defaults to blanks if the statement is not set.
zdestuser	CHAR	8	(IBM name: N/A) DEST statement. The destuser value defaults to blanks if the statement is not set.
zDirctory	INT	4	(IBM name: N/A) DIRECTORY statement.
zDSNType	INT (ENUM)	4	(IBM name: N/A) DSNTYPE statement.
zDSWaitTime	INT	4	(IBM name: N/A) DSWAITTIME statement.
zDSWaitTimeRep	INT	4	(IBM name: N/A) DSWAITTIMEREPLY statement.
zEATTR	INT (ENUM)	4	(IBM name: N/A) EATTR statement.
zEncoding	INT (ENUM)	1	(IBM name: N/A) ENCODING statement.
zMigrateVol	CHAR	6	(IBM name: N/A) MIGRATEVOL statement.
zPasvDataConn	INT (ENUM)	1	(IBM name: N/A) PASSIVEDATACONN statement.
zExtensions	INT (ENUM)	4	(IBM name: N/A) EXTENSIONS statement.
zFIFOTime	INT	4	(IBM name: N/A) FIFOIOTIME statement.
zFIFOOpenTime	INT	4	(IBM name: N/A) FIFOOPEN TIME statement.
zFileType	INT (ENUM)	4	(IBM name: N/A) FILETYPE statement.
zTPKeepAlive	INT	4	(IBM name: N/A) FTPKEEPALIVE statement.
zInActive	INT	4	(IBM name: N/A) INACTIVE statement.
zJESLimit	INT	4	(IBM name: N/A) JESENTRYLIMIT statement.
zJESIntLevel	INT	4	(IBM name: N/A) JESINTERFACELEVEL statement.

zJESLrecl	INT	4	(IBM name: N/A) JESLRECL statement.
zJESPGTO	INT	4	(IBM name: N/A) JESPUTGETTO statement.
zJESrefcm	INT (ENUM)	4	(IBM name: N/A) JESRECFM statement.
zListLevel	INT	4	(IBM name: N/A) LISTLEVEL statement.
zLrecl	INT	4	(IBM name: N/A) LRECL statement.
zMBSendEOL	INT (ENUM)	4	(IBM name: N/A) MBSENDEOL statement.
zMgmtClass	CHAR	8	(IBM name: N/A) MGMTCLASS statement. The value defaults to blanks if the statement is not set.
zLowPasvDataPort	INT	4	(IBM name: N/A) PASSIVEDATAPORTS statement. The lowPassiveDataPort value defaults to 0 if the statement is not set.
zHighPasvDataPort	INT	4	(IBM name: N/A) PASSIVEDATAPORTS statement. The highPassiveDataPort value defaults to blanks if the statement is not set.
zPDSType	INT (ENUM)	1	(IBM name: N/A) PDSTYPE statement.
zPortcmd	INT (ENUM)	1	(IBM name: N/A) PORTCOMMAND statement.
zPortcmdIPAddr	INT (ENUM)	1	(IBM name: N/A) PORTCOMMANDIPADDR statement.
zPortcmdPort	INT (ENUM)	1	(IBM name: N/A) PORTCOMMANDPORT statement.
zRecfm	CHAR	4	(IBM name: N/A) RECFM statement.
zPrimary	INT	4	(IBM name: N/A) PRIMARY statement.
zRlySecLevel	INT	4	(IBM name: N/A) REPLYSECURITYLEVEL statement.
zRetpt	INT	4	(IBM name: N/A) RETPD statement. The value defaults to -1 if the statement is not set.
zSBSendEOL	INT (ENUM)	4	(IBM name: N/A) SBSENDEOL statement.
zSecondary	INT	4	(IBM name: N/A) SECONDARY statement.
zSBSUBChar	CHAR	1	(IBM name: N/A) SBSUBCHAR statement.
zSecCtrConn	INT (ENUM)	1	(IBM name: N/A) SECURE_CTRLCONN statement.
zSecDataConn	INT (ENUM)	1	(IBM name: N/A) SECURE_DATACONN statement.
zSecFTP	INT (ENUM)	1	(IBM name: N/A) SECURE_FTP statement.
zSecLogin	INT (ENUM)	1	(IBM name: N/A) SECURE_LOGIN statement.
zSecPSW	INT (ENUM)	1	(IBM name: N/A) SECURE_PASSWORD statement.
zSecPSWKerb	INT (ENUM)	1	(IBM name: N/A) SECURE_PASSWORD_KERBEROS statement.
zSqlcol	INT (ENUM)	1	(IBM name: N/A) SQLCOL statement.

zSecPBSZ	INT	4	(IBM name: N/A) SECURE_PBSZ statement.
zSMFSubType	INT	4	(IBM name: N/A) SMF statement. The value defaults to 0 if the statement is not set.
zSMFAppe	INT	4	(IBM name: N/A) SMFAPPE statement. The value defaults to 0 if the statement is not set.
zSMFAppe119	INT	4	(IBM name: N/A) SMFAPPE statement. The value defaults to 0 if the statement is not set.
zSMFDcfg119	INT	4	(IBM name: N/A) SMFDCFG statement. The value defaults to 0 if the statement is not set.
zSMFDele	INT	4	(IBM name: N/A) SMFDELE statement. The value defaults to 0 if the statement is not set.
zSMFDele119	INT	4	(IBM name: N/A) SMFDELE statement. The value defaults to 0 if the statement is not set.
zSMFLogon	INT	4	(IBM name: N/A) SMFLOGN statement. The value defaults to 0 if the statement is not set.
zSMFLogon119	INT	4	(IBM name: N/A) SMFLOGN statement. The value defaults to 0 if the statement is not set.
zSMFRen	INT	4	(IBM name: N/A) SMFREN statement. The value defaults to 0 if the statement is not set.
zSMFRen119	INT	4	(IBM name: N/A) SMFREN statement. The value defaults to 0 if the statement is not set. TYPE119 SMF subtype for rename.
zSMFRetr	INT	4	(IBM name: N/A) SMFRETR statement. The value defaults to 0 if the statement is not set .
zSMFRetr119	INT	4	(IBM name: N/A) SMFRETR statement. The value defaults to 0 if the statement is not set.
zSMFStor	INT	4	(IBM name: N/A) SMFSTOR statement. The value defaults to 0 if the statement is not set.
zSMFStor119	INT	4	(IBM name: N/A) SMFSTOR statement. The value defaults to 0 if the statement is not set.
zSpaceType	INT (ENUM)	4	(IBM name: N/A) SPACETYPE statement.
zStartDir	INT (ENUM)	4	(IBM name: N/A) STARTDIRECTORY statement.
zStorClass	CHAR	8	(IBM name: N/A) STORCLASS statement. The value defaults to blanks if the statement is not set.
zTLSMec	INT (ENUM)	4	(IBM name: N/A) TLSMECHANISM statement.
zTLSPort	INT	4	(IBM name: N/A) TLSPORT statement.
zTLSRfcLevel	INT (ENUM)	4	(IBM name: N/A) TLSRFCLEVEL statement.
zTLSTimeOut	INT	4	(IBM name: N/A) TLSTIMEOUT statement.
zUcount	INT	4	(IBM name: N/A) UCOUNT statement. 60 => P (parallel mounts). The value defaults to 0 if the statement is not set.
zUcsHostCS	CHAR	8	(IBM name: N/A) UCSHOSTCS statement.
zUnFileSysBOM	INT (ENUM)	4	(IBM name: N/A) UNICODEFILESYSTEMBOM statement.
zUnitName	CHAR	8	(IBM name: N/A) UNITNAME statement. The value defaults to blanks if the statement is not set.
zUnixFileType		4	

	INT (ENUM)		(IBM name: N/A) UNIXFILETYPE statement.
zVcount	INT	4	(IBM name: N/A) UCSHOSTCS statement.
zXlateInit	CHAR	8	(IBM name: N/A) XLATE statement. The value defaults to blanks if the statement is not set.
zPort	INT	2	(IBM name: N/A) PORT start parameter.
zUmaskstr	CHAR	3	(IBM name: N/A) UMASK statement.
zSecSessReuse	INT (ENUM)	1	(IBM name: N/A) SECURE_SESSION_REUSE statement.
zApplName	CHAR	8	(IBM name: N/A) FTP server application name.

Secondary segment: SMF119#71_FTP_Daemon_Config_Data

Field Name	Type	Len	Description
<i>SMF119#71_FTP_Daemon_Config_Data.<fieldname></i>			
zDesc	CHAR	4	(IBM name: N/A) FDCD eyecatcher.

Secondary segment: SMF119#71_FTP_Daemon_Config_Data_Item

Field Name	Type	Len	Description
<i>SMF119#71_FTP_Daemon_Config_Data_Item.<fieldname></i>			
zLen	INT	2	(IBM name: N/A) Configuration data length (including the length of this field itself and also the length of the SMF119FT_FDCD_Key field).
zKey	INT (ENUM)	2	(IBM name: N/A) Configuration data key.
zData	XVCHAR	0 1024	(IBM name: N/A) Configuration data string.

Record Type 119 Subtype 72 - FTP Server Logon Failure

Primary Segment:

- SMF119#72_TCPIP_Statistics

Secondary Segment(s): 3 (in alphabetical order)

- SMF119#72_FTP_Server_Logon_Failure
- SMF119#72_FTP_Server_Logon_Failure_Security
- SMF119#72_Identification

Primary segment: SMF119#72_TCPIP_Statistics

Field Name	Type	Len	Description
<i>SMF119#72_TCPIP_Statistics.<fieldname></i>			
<i>SMF119#72_TCPIP_Statistics.Header.<fieldname></i>			
zFLG	HEX	1	(IBM name: N/A) System indicator: Bit Meaning when set 0-2 Reserved. 3-6 Version indicators 7 Reserved.
zRTY	INT	1	(IBM name: N/A) Record type 119
zTME	TSTMP	8	(IBM name: N/A) Date/Time that the record was moved into the SMF buffer.
zSID	CHAR	4	(IBM name: N/A) System ID.
zSSID	CHAR	4	(IBM name: N/A) Subsystem ID.
zSTY	INT	2	(IBM name: N/A) Record subtype.

<i>SMF119#72_TCPIP_Statistics.Self_defining_Section.<fieldname></i>			
zTRN	INT	2	(IBM name: SMF119SD_TRN) Number of triplets.
zDOff	INT	4	(IBM name: N/A) Offset to the TCP/IP Identification section from the beginning of the record (including RDW).
zDLen	INT	2	(IBM name: N/A) Length of the TCP/IP Identification section.
zDNum	INT	2	(IBM name: N/A) Number of TCP/IP Identification sections.
z1Off	INT	4	(IBM name: N/A) Offset to FTP server logon failure section.
z1Len	INT	2	(IBM name: N/A) Length of FTP server logon failure section.
z1Num	INT	2	(IBM name: N/A) Number of FTP server logon failure sections.
z2Off	INT	4	(IBM name: N/A) Offset to FTP server logon failure Security section.
z2Len	INT	2	(IBM name: N/A) Length of FTP server logon failure Security section.
z2Num	INT	2	(IBM name: N/A) Number of FTP server logon failure Security sections.

Secondary segment: **SMF119#72_Identification**

Field Name	Type	Len	Description
<i>SMF119#72_Identification.<fieldname></i>			
zSYSName	CHAR	8	(IBM name: SMF119TI_SYSName) System name from SYSNAME in IEASYSxx.
zSysplexName	CHAR	8	(IBM name: SMF119TI_SysplexName) Sysplex name from SYSPLEX in COUPLExx.
zStack	CHAR	8	(IBM name: SMF119TI_Stack) TCP/IP stack name.
zReleaseID	CHAR	8	(IBM name: SMF119TI_ReleaseID) z/OS Communications Server TCP/IP release identifier.
zComp	CHAR	8	(IBM name: SMF119TI_Comp) TCP/IP subcomponent.
zASName	CHAR	8	(IBM name: SMF119TI_ASName) Started task qualifier or name of address space that writes this SMF record.
zUserID	CHAR	8	(IBM name: SMF119TI_UserID) User ID of security context.
zASID	INT	2	(IBM name: SMF119TI_ASID) ASID of address space that writes this SMF record.
zReason	INT (ENUM)	1	(IBM name: SMF119TI_Reason) Reason for writing record. IntInc => Interval record, incomplete. Int => Interval record. IEndInc => Interval ending stats, incomplete. IEnd => Interval ending stats. IShtInc => Interval shutdown stats, incomplete. ISht => Interval shutdown stats. EvtInc => Event record, incomplete. Evt => Event record, complete.
zRecordID	INT	1	(IBM name: SMF119TI_RecordID) ID value for correlating records.

Secondary segment: **SMF119#72_FTP_Server_Logon_Failure**

Field Name	Type	Len	Description
<i>SMF119#72_FTP_Server_Logon_Failure.<fieldname></i>			
zRIP	IPADDRESS	16	(IBM name: N/A) Remote IP address.
zLIP	IPADDRESS	16	(IBM name: N/A) Local IP address.
zRPort	INT	2	(IBM name: N/A) Remote port number (Client).
zLPort	INT	2	(IBM name: N/A) Local port number (Server).
zUserID	CHAR	8	(IBM name: SMF119TI_UserID) Client User ID received by server.
zReason	INT (ENUM)	1	Login failure reason. 'Term' => FTP session terminated after USERID was processed, but before PASSWORD was entered.. 'Invalid' => Password is not valid.. 'Expired' => Password has expired.. 'Revoked' => User ID has been revoked.. 'NoAcces' => User does not have server access.. 'Exit' => FTCHKPWD User exit reject login.. 'Excess' => Excessive bad passwords.. 'GroupID' => Group ID process failed.. 'Unknown' => User ID is unknown.. 'Cert' => Certificate is not valid. 'Client' => Client name associated with certificate or ticket does not match user name.
zConnID	INT	4	(IBM name: N/A) TCP connection ID of FTP control connection.
zSessionID	CHAR	15	(IBM name: N/A) FTP activity logging session ID. The activity logging session ID uniquely identifies the FTP session between a client and a server. The identifier is

		created by combining the job name of the FTP daemon with a 5-digit number in the range 00000 - 99999.
--	--	---

Secondary segment: SMF119#72_FTP_Server_Logon_Failure_Security

Field Name	Type	Len	Description
<i>SMF119#72_FTP_Server_Logon_Failure_Security.<fieldname></i>			
zMechanism	INT (ENUM)	1	(IBM name: N/A) Protection Mechanism.
zCProtect	INT (ENUM)	1	(IBM name: N/A) Control Connection Protection Level.
zDProtect	INT (ENUM)	1	(IBM name: N/A) Data connection protection level.
zLoginMech	INT (ENUM)	1	(IBM name: N/A) Login Method. 'Undetermined' => Login failure occurred before login method was determined.
zProtoLevel	CHAR	8	(IBM name: N/A) Protocol level (present only if Protocol Mechanism is TLS or AT-TLS) Possible values are: SSLV2, SSLV3, TLSV1, TLSV1.1, TLSV1.2.
zCipherSpec	CHAR	20	(IBM name: N/A) Cipher specification (present only if protocol mechanism is TLS or AT-TLS) Possible values when protocol level is SSLV2: RC4 US, RC4 Export, RC2 US, RC2 Export, DES 56-Bit, Triple DES US. Possible values when protocol level is SSLV3, TLSV1, TLSV1.1, or TLSV1.2: SSL_NULL_MD5, SSL_NULL_SHA, SSL_RC4_MD5_EX, SSL_RC4_MD5, SSL_RC4_SHA, SSL_RC2_MD5_EX, SSL_DES_SHA, SSL_3DES_SHA, SSL_AES_128_SHA, SSL_AES_256_SHA.
zProtBuffSize	INT	4	(IBM name: N/A) Negotiated protection buffer size.
zCipher	CHAR	2	(IBM name: N/A) Hexadecimal value of cipher specification (present only if protocol mechanism is TLS or AT-TLS). If the value is 4X, the Cipher Specification must be obtained from the zCipher4 field.
zFips140	INT (ENUM)	1	(IBM name: N/A) FIPS 140 status.
zCipher4	CHAR	4	(IBM name: N/A) Four byte hexadecimal value of Cipher Specification (present only if Protocol Mechanism is TLS or AT-TLS).
zSessReuse	INT (ENUM)	1	(IBM name: N/A) SSL session reuse.
zCSSLSessIDLen	INT	2	(IBM name: N/A) Length of the SSL session ID of FTP control connection.
zCSSLSessID	CHAR	32	(IBM name: N/A) SSL session ID of FTP control connection.
zDSSLSessIDLen	INT	2	(IBM name: N/A) Length of the SSL session ID of FTP data connection.
zDSSLSessID	CHAR	32	(IBM name: N/A) SSL session ID of FTP data connection.

Record Type 119 Subtype 73 - IPsec IKE Tunnel Activate/Refresh**Primary Segment:**

<i>SMF119#73_TCPIP_Statistics.Self_defining_Section.<fieldname></i>			
zTRN	INT	2	(IBM name: SMF119SD_TRN) Number of triplets.
zDOff	INT	4	(IBM name: N/A) Offset to the TCP/IP Identification section from the beginning of the record (including RDW).
zDLen	INT	2	(IBM name: N/A) Length of the TCP/IP Identification section.
zDNum	INT	2	(IBM name: N/A) Number of TCP/IP Identification sections.
z1Off	INT	4	(IBM name: N/A) Offset to common IKE tunnel section.
z1Len	INT	2	(IBM name: N/A) Length of common IKE tunnel section.
z1Num	INT	2	(IBM name: N/A) Number of common IKE tunnel sections.
z2Off	INT	4	(IBM name: N/A) Offset to local ID section.
z2Len	INT	2	(IBM name: N/A) Length of local ID section.
z2Num	INT	2	(IBM name: N/A) Number of local ID sections.

z3Off	INT	4	(IBM name: N/A) Offset to remote ID section.
z3Len	INT	2	(IBM name: N/A) Length of remote ID section.
z3Num	INT	2	(IBM name: N/A) Number of remote ID sections.
z4Off	INT	4	(IBM name: N/A) Offset to local issuer distinguished name section.
z4Len	INT	2	(IBM name: N/A) Length of local issuer distinguished name section.
z4Num	INT	2	(IBM name: N/A) Number of local issuer distinguished name sections.
z5Off	INT	4	(IBM name: N/A) Offset to remote issuer distinguished name section.
z5Len	INT	2	(IBM name: N/A) Length of remote issuer distinguished name section.
z5Num	INT	2	(IBM name: N/A) Number of remote issuer distinguished name sections.
z6Off	INT	4	(IBM name: N/A) Offset to local subject distinguished name section.
z6Len	INT	2	(IBM name: N/A) Length of local subject distinguished name section.
z6Num	INT	2	(IBM name: N/A) Number of local subject distinguished name sections.
z7Off	INT	4	(IBM name: N/A) Offset to remote subject distinguished name section.
z7Len	INT	2	(IBM name: N/A) Length of remote subject distinguished name section.
z7Num	INT	2	(IBM name: N/A) Number of remote subject distinguished name sections.

Secondary segment: **SMF119#73_Identification**

Field Name	Type	Len	Description
<i>SMF119#73_Identification.<fieldname></i>			
zSYSName	CHAR	8	(IBM name: SMF119TI_SYSName) System name from SYSNAME in IEASYSxx.
zSysplexName	CHAR	8	(IBM name: SMF119TI_SysplexName) Sysplex name from SYSPLEX in COUPLExx.
zStack	CHAR	8	(IBM name: SMF119TI_Stack) TCP/IP stack name.
zReleaseID	CHAR	8	(IBM name: SMF119TI_ReleaseID) z/OS Communications Server TCP/IP release identifier.
zComp	CHAR	8	(IBM name: SMF119TI_Comp) TCP/IP subcomponent.
zASName	CHAR	8	(IBM name: SMF119TI_ASName) Started task qualifier or name of address space that writes this SMF record.
zUserID	CHAR	8	(IBM name: SMF119TI_UserID) User ID of security context.
zASID	INT	2	(IBM name: SMF119TI_ASID) ASID of address space that writes this SMF record.
zReason	INT (ENUM)	1	(IBM name: SMF119TI_Reason) Reason for writing record. IntInc => Interval record, incomplete. Int =>

			Interval record. IEndInc => Interval ending stats, incomplete. IEnd => Interval ending stats. IShtInc => Interval shutdown stats,incomplete. ISht => Interval shutdown stats. EvtInc => Event record, incomplete. Evt => Event record, complete.
zRecordID	INT	1	(IBM name: SMF119T1_RecordID) ID value for correlating records.

Secondary segment: **SMF119#73_IPSec_IKE_Tunnel_Common**

Field Name	Type	Len	Description
<i>SMF119#73_IPSec_IKE_Tunnel_Common.<fieldname></i>			
zIPv6	BIT	1	The IPv6 indicator. If this bit is set, all IKE tunnel security endpoints are IPv6 addresses. If this bit is not set, the endpoints are IPv4 addresses.
zNATAAllowed	BIT	1	NAT traversal indicator. The NAT traversal function is enabled for this IKE tunnel.
zLclNAT	BIT	1	Local NAT indicator. A NAT has been detected in front of the local security endpoint.
zRmtNAT	BIT	1	Remote NAT indicator. A NAT has been detected in front of the remote security endpoint.
zRmtNAPT	BIT	1	Remote NAPT indicator. An NAPT has been detected in front of the remote security endpoint. Result: Some NAPTs might be undetected. In that case, the zRmtNAT bit is set, but this bit is not set.
zCanInitP1	BIT	1	IKE tunnel (P1) initiation indicator. The local security endpoint can initiate IKE tunnel negotiations with the remote security endpoint. If this bit is not set, the remote security endpoint must initiate IKE tunnel negotiations. Either side can initiate refreshes.
zFIPS140	BIT	1	FIPS 140 mode indicator. If this field is set, cryptographic operations for this IKE tunnel are performed using cryptographic algorithms and modules that are designed to meet the FIPS 140 requirements, otherwise, cryptographic algorithms and modules that do not meet the FIPS 140 requirements might be used.
zID	CHAR	48	(IBM name: SMF119TN_ID) Tunnel ID for this IKE tunnel.
zKeyExchRule	CHAR	48	(IBM name: N/A) Key exchange rule name for this IKE tunnel.
zKeyExchAction	CHAR	48	(IBM name: N/A) Key exchange action name for this IKE tunnel.
zLclEndpt	IPADDRESS	16	(IBM name: N/A) If zIPv6 is set, this field is the 16 byte IPv6 local security endpoint for this IKE tunnel. Otherwise, this field is the 4 byte IPv4 local security endpoint for this IKE tunnel.
zRmtEndpt	IPADDRESS	16	(IBM name: N/A) If zIPv6 is set, this field is the 16 byte IPv6 remote security endpoint for this IKE tunnel. Otherwise, this field is the 4 byte IPv4 remote security endpoint for this IKE tunnel.
zCookie	CHAR	8	(IBM name: N/A) The icookie for this IKE tunnel.
zRCookie	CHAR	8	(IBM name: N/A) The rcookie for this IKE tunnel.
zExchangeMode	INT (ENUM)	1	(IBM name: N/A) Tunnel exchange mode for IKEv1 SAs. N/A for IKEv2 SAs.
zState	INT (ENUM)	1	(IBM name: N/A) Tunnel state.
zAuthAlg	INT (ENUM)	1	(IBM name: N/A) Tunnel authentication algorithm. 'HMAC_MD5' => The tunnel uses HMAC-MD5 authentication with the full 128-bit Integrity Check Value (ICV). This value is applicable only to IKEv1 tunnels. 'HMAC_SHA1' => The tunnel uses HMAC-SHA1 authentication with the full 160-bit ICV. This

			value is applicable only to IKEv1 tunnels. 'HMAC_MD5_96' => The tunnel uses HMAC-MD5 authentication with ICV truncation to 96 bits. This value is applicable only to IKEv2 tunnels. 'HMAC_SHA1_96' => The tunnel uses HMAC-SHA1 authentication with ICV truncation to 96 bits. This value is applicable only to IKEv2 tunnels. 'HMAC_SHA2_256_128' => The tunnel uses HMAC-SHA2-256 authentication with ICV truncation to 128 bits. 'HMAC_SHA2_384_192' => The tunnel uses HMAC-SHA2-384 authentication with ICV truncation to 192 bits. 'HMAC_SHA2_512_256' => The tunnel uses HMAC-SHA2-512 authentication with ICV truncation to 256 bits. 'AES128_XCBC_96' => The tunnel uses AES128-XCBC authentication with ICV truncation to 96 bits.
zEncryptAlg	INT (ENUM)	1	(IBM name: N/A) Tunnel encryption algorithm.
zDHGroup	INT	4	(IBM name: N/A) Diffie-Hellman group used to generate keying material for this IKE tunnel.
zPeerAuthMethod	INT (ENUM)	1	(IBM name: N/A) Tunnel peer authentication method.
zRole	INT (ENUM)	1	(IBM name: N/A) Tunnel role.
zNATTLevel	INT (ENUM)	1	(IBM name: N/A) NAT traversal support level. 'NONE' => No NAT traversal support, support is either not configured or not negotiated. 'RFCD2' => RFC 3947 draft 2 support. 'RFCD3' => RFC 3947 draft 3 support. 'RFC' => RFC 3947 support with non-z/OS peer. 'ZOS' => RFC 3947 support with z/OS peer. 'V2' => IKEv2 NAT traversal support. 'V2ZOS' => IKEv2 NAT traversal support with z/OS peer.
zExtState	INT (ENUM)	1	(IBM name: N/A) Extended tunnel state information. 'ACTIVATE' => This value is a new Phase 1 activation. 'REFRESH' => This value is a Phase 1 refresh.
zLifesize	INT	8	(IBM name: N/A) Tunnel lifesize. If this value is not 0, this value indicates the lifesize limit for the tunnel, in bytes.
zLifetime	INT	4	(IBM name: N/A) Tunnel lifetime. This value indicates the total number of seconds the tunnel remains active.
zLifetimeRefresh	TIME	4	(IBM name: N/A) Tunnel lifetime refresh. This value indicates the time at which the tunnel is refreshed (in UNIX format).
zLifetimeExpire	TIME	4	(IBM name: N/A) Tunnel lifetime expiration. This value indicates the time at which the tunnel expires (in UNIX format).
zRmtUDPPort	INT	2	(IBM name: N/A) Remote UDP port used for IKE negotiations.
zLIDType	INT	1	(IBM name: N/A) ISAKMP identity type for the local security endpoint identity, as defined in RFC 2407. ISAKMP peers exchange and verify identities as part of the IKE tunnel (phase 1) negotiation.
zRIDType	INT	1	(IBM name: N/A) ISAKMP identity type for the remote security endpoint identity, as defined in RFC 2407. ISAKMP peers exchange and verify identities as part of the IKE tunnel (phase 1) negotiation.
zStartTime	TIME	4	(IBM name: N/A) Tunnel start time. Indicates the time at which the tunnel was activated or refreshed (in UNIX format).
zMajorVer	INT	1	(IBM name: N/A) Major version of the IKE protocol in use. Only the low-order 4 bits are used.
zMinorVer	INT	1	(IBM name: N/A) Minor version of the IKE protocol in use. Only the low-order 4 bits are used.
zPseudoRandomFunc	INT (ENUM)	1	(IBM name: N/A) Pseudo-random function used for seeding keying material.
zLocalAuthMethod	INT (ENUM)	1	(IBM name: N/A) The authentication method for the local endpoint.

zReauthInterval	INT	4	(IBM name: N/A) Reauthentication interval. Indicates the number of seconds between reauthentication operations.
zReauthTime	TIME	4	(IBM name: N/A) Tunnel reauthentication time. Indicates the time at which the tunnel is reauthenticated (in UNIX format).
zGeneration	INT	4	(IBM name: N/A) Tunnel generation number. The first IKE tunnel with a particular tunnel ID has generation 1. Subsequent refreshes of this IKE tunnel have the same tunnel ID, but with higher generation numbers.
zEncryptKeyLength	INT	4	(IBM name: N/A) Encryption key length for variable-length algorithms, in bits. This value is 0 for encryption algorithms that have a fixed key length (such as DES and 3DES) and nonzero for encryption algorithms that have a variable key length (such as AES-CBC). Result: Example values are 128 and 256.
zLclNotAfterType	INT (ENUM)	1	(IBM name: SMF119IS_IKE-TunLclNotAfterType) Format of local certificate expiration time: When the local host is using pre-shared keys for authentication (NMsiKETunLocalAuthMethod = NMsec_IKETUN_PRESHAREDKEY (3)), this value will be 0.
zLclCertExp	CHAR	15	(IBM name: SMF119IS_IKE-TunLclCertExp) Local certificate 'not after' time: If the time type is UTC (NMsiKETunLclNotAfterType = X'01'), the first 13 bytes of this field contain the time in UTC format (YYMMDDhhmmssZ). If the time type is GT (NMsiKETun-LclNotAfterType = X'02'), all 15 bytes of this field contain the time in GT format (YYYYMMDDhhmmssZ). When the local host is using pre-shared keys for authentication (NMsiKETunLo-calAuthMethod = NMsec_IKETUN_PRESHAREDKEY (3)), this field will contain binary zeroes.
zLclSerialNumber	HEX	20	(IBM name: SMF119IS_IKE-TunLclSerialNumber) Local certificate serial number. When the local host is using pre-shared keys for authentication (NMsiKETunLo-calAuthMethod = NMsec_IKETUN_PRESHAREDKEY (3)), this value will be 0.
zLclSerialNumLen	INT	2	(IBM name: SMF119IS_IKE-TunLclSerialNumLen) Local certificate serial number length in bytes. When the local host is using pre-shared keys for authentication (NMsiKETunLo-calAuthMethod = NMsec_IKETUN_PRESHAREDKEY (3)), this value will be 0.
zRmtNotAfterType	INT (ENUM)	1	(IBM name: SMF119IS_IKE-TunRmtNotAfterType) Format of remote certificate expiration time: When the remote host is using pre-shared keys for authentication (NMsiKETunPeerAuthMethod = NMsec_IKETUN_PRESHAREDKEY (3)), this value will be 0.
zRmtCertExp	CHAR	15	(IBM name: SMF119IS_IKE-TunRmtCertExp) Remote certificate 'not after' time: If the time type is UTC (NMsiKETunRmtNotAfterType = X'01'), the first 13 bytes of this field contain the time in UTC format (YYMMDDhhmmssZ). If the time type is GT (NMsiKETunRmtNotAfterType = X'02'), all 15 bytes of this field contain the time in GT format (YYYYMMDDhhmmssZ). When the remote host is using pre-shared keys for authentication (NMsiKETunPeerAuthMethod = NMsec_IKETUN_PRESHAREDKEY (3)), this value will contain binary zeroes.
zRmtSerialNumber	HEX	20	(IBM name: SMF119IS_IKE-TunRmtSerialNumber) Remote certificate serial number. When the remote host is using pre-shared keys for authentication (NMsiKETunPeerAuthMethod = NMsec_IKETUN_PRESHAREDKEY (3)), this value will be 0.
zRmtSerialNumLen	INT	2	(IBM name: SMF119IS_IKE-TunRmtSerialNumLen) Remote certificate serial number length in bytes.

			When the remote host is using pre-shared keys for authentication (NMsiKETunPeerAuthMethod = NMsec_IKETUN_PRESHAREDKEY (3)), this value will be 0.

Secondary segment: **SMF119#74_Identification**

Field Name	Type	Len	Description
<i>SMF119#74_Identification.<fieldname></i>			
zSYSName	CHAR	8	(IBM name: SMF119TI_SYSName) System name from SYSNAME in IEASYSxx.
zSysplexName	CHAR	8	(IBM name: SMF119TI_SysplexName) Sysplex name from SYSPLEX in COUPLExx.
zStack	CHAR	8	(IBM name: SMF119TI_Stack) TCP/IP stack name.
zReleaseID	CHAR	8	(IBM name: SMF119TI_ReleaseID) z/OS Communications Server TCP/IP release identifier.
zComp	CHAR	8	(IBM name: SMF119TI_Comp) TCP/IP subcomponent.

zASName	CHAR	8	(IBM name: SMF119TI_ASName) Started task qualifier or name of address space that writes this SMF record.
zUserID	CHAR	8	(IBM name: SMF119TI_UserID) User ID of security context.
zASID	INT	2	(IBM name: SMF119TI_ASID) ASID of address space that writes this SMF record.
zReason	INT (ENUM)	1	(IBM name: SMF119TI_Reason) Reason for writing record. IntInc => Interval record, incomplete. Int => Interval record. IEndInc => Interval ending stats, incomplete. IEnd => Interval ending stats. IShtInc => Interval shutdown stats, incomplete. ISht => Interval shutdown stats. EvtInc => Event record, incomplete. Evt => Event record, complete.
zRecordID	INT	1	(IBM name: SMF119TI_RecordID) ID value for correlating records.

Secondary segment: SMF119#74_IPSec_IKE_Tunnel_Common

Field Name	Type	Len	Description
<i>SMF119#74_IPSec_IKE_Tunnel_Common.<fieldname></i>			
zIPv6	BIT	1	The IPv6 indicator. If this bit is set, all IKE tunnel security endpoints are IPv6 addresses. If this bit is not set, the endpoints are IPv4 addresses.
zNATAAllowed	BIT	1	NAT traversal indicator. The NAT traversal function is enabled for this IKE tunnel.
zLclNAT	BIT	1	Local NAT indicator. A NAT has been detected in front of the local security endpoint.
zRmtNAT	BIT	1	Remote NAT indicator. A NAT has been detected in front of the remote security endpoint.
zRmtNAPT	BIT	1	Remote NAPT indicator. An NAPT has been detected in front of the remote security endpoint. Result: Some NAPTs might be undetected. In that case, the zRmtNAT bit is set, but this bit is not set.
zCanInitP1	BIT	1	IKE tunnel (P1) initiation indicator. The local security endpoint can initiate IKE tunnel negotiations with the remote security endpoint. If this bit is not set, the remote security endpoint must initiate IKE tunnel negotiations. Either side can initiate refreshes.
zFIPS140	BIT	1	FIPS 140 mode indicator. If this field is set, cryptographic operations for this IKE tunnel are performed using cryptographic algorithms and modules that are designed to meet the FIPS 140 requirements, otherwise, cryptographic algorithms and modules that do not meet the FIPS 140 requirements might be used.
zID	CHAR	48	(IBM name: SMF119TN_ID) Tunnel ID for this IKE tunnel.
zKeyExchRule	CHAR	48	(IBM name: N/A) Key exchange rule name for this IKE tunnel.
zKeyExchAction	CHAR	48	(IBM name: N/A) Key exchange action name for this IKE tunnel.
zLclEndpt	IPADDRESS	16	(IBM name: N/A) If zIPv6 is set, this field is the 16 byte IPv6 local security endpoint for this IKE tunnel. Otherwise, this field is the 4 byte IPv4 local security endpoint for this IKE tunnel.
zRmtEndpt	IPADDRESS	16	(IBM name: N/A) If zIPv6 is set, this field is the 16 byte IPv6 remote security endpoint for this IKE tunnel. Otherwise, this field is the 4 byte IPv4 remote security endpoint for this IKE tunnel.
zICookie	CHAR	8	(IBM name: N/A) The icookie for this IKE tunnel.
zRCookie	CHAR	8	(IBM name: N/A) The rcookie for this IKE tunnel.

zExchangeMode	INT (ENUM)	1	(IBM name: N/A) Tunnel exchange mode for IKEv1 SAs. N/A for IKEv2 SAs.
zState	INT (ENUM)	1	(IBM name: N/A) Tunnel state.
zAuthAlg	INT (ENUM)	1	(IBM name: N/A) Tunnel authentication algorithm. 'HMAC_MD5' => The tunnel uses HMAC-MD5 authentication with the full 128-bit Integrity Check Value (ICV). This value is applicable only to IKEv1 tunnels. 'HMAC_SHA1' => The tunnel uses HMAC-SHA1 authentication with the full 160-bit ICV. This value is applicable only to IKEv1 tunnels. 'HMAC_MD5_96' => The tunnel uses HMAC-MD5 authentication with ICV truncation to 96 bits. This value is applicable only to IKEv2 tunnels. 'HMAC_SHA1_96' => The tunnel uses HMAC-SHA1 authentication with ICV truncation to 96 bits. This value is applicable only to IKEv2 tunnels. 'HMAC_SHA2_256_128' => The tunnel uses HMAC-SHA2-256 authentication with ICV truncation to 128 bits. 'HMAC_SHA2_384_192' => The tunnel uses HMAC-SHA2-384 authentication with ICV truncation to 192 bits. 'HMAC_SHA2_512_256' => The tunnel uses HMAC-SHA2-512 authentication with ICV truncation to 256 bits. 'AES128_XCBC_96' => The tunnel uses AES128-XCBC authentication with ICV truncation to 96 bits.
zEncryptAlg	INT (ENUM)	1	(IBM name: N/A) Tunnel encryption algorithm.
zDHGroup	INT	4	(IBM name: N/A) Diffie-Hellman group used to generate keying material for this IKE tunnel.
zPeerAuthMethod	INT (ENUM)	1	(IBM name: N/A) Tunnel peer authentication method.
zRole	INT (ENUM)	1	(IBM name: N/A) Tunnel role.
zNATLevel	INT (ENUM)	1	(IBM name: N/A) NAT traversal support level. 'NONE' => No NAT traversal support, support is either not configured or not negotiated. 'RFC2' => RFC 3947 draft 2 support. 'RFC3' => RFC 3947 draft 3 support. 'RFC' => RFC 3947 support with non-z/OS peer. 'ZOS' => RFC 3947 support with z/OS peer. 'V2' => IKEv2 NAT traversal support. 'V2ZOS' => IKEv2 NAT traversal support with z/OS peer.
zExtState	INT (ENUM)	1	(IBM name: N/A) Extended tunnel state information. 'ACTIVATE' => This value is a new Phase 1 activation. 'REFRESH' => This value is a Phase 1 refresh.
zLifesize	INT	8	(IBM name: N/A) Tunnel lifesize. If this value is not 0, this value indicates the lifesize limit for the tunnel, in bytes.
zLifetime	INT	4	(IBM name: N/A) Tunnel lifetime. This value indicates the total number of seconds the tunnel remains active.
zLifetimeRefresh	TIME	4	(IBM name: N/A) Tunnel lifetime refresh. This value indicates the time at which the tunnel is refreshed (in UNIX format).
zLifetimeExpire	TIME	4	(IBM name: N/A) Tunnel lifetime expiration. This value indicates the time at which the tunnel expires (in UNIX format).
zRmtUDPPort	INT	2	(IBM name: N/A) Remote UDP port used for IKE negotiations.
zLIDType	INT	1	(IBM name: N/A) ISAKMP identity type for the local security endpoint identity, as defined in RFC 2407. ISAKMP peers exchange and verify identities as part of the IKE tunnel (phase 1) negotiation.
zRIDType	INT	1	(IBM name: N/A) ISAKMP identity type for the remote security endpoint identity, as defined in RFC 2407. ISAKMP peers exchange and verify identities as part of the IKE tunnel (phase 1) negotiation.
zStartTime	TIME	4	(IBM name: N/A) Tunnel start time. Indicates the time at which the tunnel was activated or refreshed (in UNIX format).
zMajorVer	INT	1	(IBM name: N/A) Major version of the IKE protocol in use. Only the low-order 4 bits are

			used.
zMinorVer	INT	1	(IBM name: N/A) Minor version of the IKE protocol in use. Only the low-order 4 bits are used.
zPseudoRandomFunc	INT (ENUM)	1	(IBM name: N/A) Pseudo-random function used for seeding keying material.
zLocalAuthMethod	INT (ENUM)	1	(IBM name: N/A) The authentication method for the local endpoint.
zReauthInterval	INT	4	(IBM name: N/A) Reauthentication interval. Indicates the number of seconds between reauthentication operations.
zReauthTime	TIME	4	(IBM name: N/A) Tunnel reauthentication time. Indicates the time at which the tunnel is reauthenticated (in UNIX format).
zGeneration	INT	4	(IBM name: N/A) Tunnel generation number. The first IKE tunnel with a particular tunnel ID has generation 1. Subsequent refreshes of this IKE tunnel have the same tunnel ID, but with higher generation numbers.
zEncryptKeyLength	INT	4	(IBM name: N/A) Encryption key length for variable-length algorithms, in bits. This value is 0 for encryption algorithms that have a fixed key length (such as DES and 3DES) and nonzero for encryption algorithms that have a variable key length (such as AES-CBC). Result: Example values are 128 and 256.
zLclNotAfterType	INT (ENUM)	1	(IBM name: SMF119IS_IKE-TunLclNotAfterType) Format of local certificate expiration time: When the local host is using pre-shared keys for authentication (NMsiKETunLocalAuthMethod = NMsec_IKETUN_PRESHAREDKEY (3)), this value will be 0.
zLclCertExp	CHAR	15	(IBM name: SMF119IS_IKE-TunLclCertExp) Local certificate 'not after' time: If the time type is UTC (NMsiKETunLclNotAfterType = X'01'), the first 13 bytes of this field contain the time in UTC format (YYMMDDhhmmssZ). If the time type is GT (NMsiKETun-LclNotAfterType = X'02'), all 15 bytes of this field contain the time in GT format (YYYYMMDDhhmmssZ). When the local host is using pre-shared keys for authentication (NMsiKETunLo-calAuthMethod = NMsec_IKETUN_PRESHAREDKEY (3)), this field will contain binary zeroes.
zLclSerialNumber	HEX	20	(IBM name: SMF119IS_IKE-TunLclSerialNumber) Local certificate serial number. When the local host is using pre-shared keys for authentication (NMsiKETunLo-calAuthMethod = NMsec_IKETUN_PRESHAREDKEY (3)), this value will be 0.
zLclSerialNumLen	INT	2	(IBM name: SMF119IS_IKE-TunLclSerialNumLen) Local certificate serial number length in bytes. When the local host is using pre-shared keys for authentication (NMsiKETunLo-calAuthMethod = NMsec_IKETUN_PRESHAREDKEY (3)), this value will be 0.
zRmtNotAfterType	INT (ENUM)	1	(IBM name: SMF119IS_IKE-TunRmtNotAfterType) Format of remote certificate expiration time: When the remote host is using pre-shared keys for authentication (NMsiKETunPeerAuthMethod = NMsec_IKETUN_PRESHAREDKEY (3)), this value will be 0.
zRmtCertExp	CHAR	15	(IBM name: SMF119IS_IKE-TunRmtCertExp) Remote certificate 'not after' time: If the time type is UTC (NMsiKETunRmtNotAfterType = X'01'), the first 13 bytes of this field contain the time in UTC format (YYMMDDhhmmssZ). If the time type is GT (NMsiKETunRmtNotAfterType = X'02'), all 15 bytes of this field contain the time in GT format (YYYYMMDDhhmmssZ). When the remote host is using pre-shared keys for authentication (NMsiKETunPeerAuthMethod = NMsec_IKETUN_PRESHAREDKEY (3)),

			this value will contain binary zeroes.
zRmtSerialNumber	HEX	20	(IBM name: SMF119IS_IKE-TunRmtSerialNumber) Remote certificate serial number. When the remote host is using pre-shared keys for authentication (NMsiKETunPeerAuthMethod = NMsec_IKETUN_PRESHAREDKEY (3)), this value will be 0.
zRmtSerialNumLen	INT	2	(IBM name: SMF119IS_IKE-TunRmtSerialNumLen) Remote certificate serial number length in bytes. When the remote host is using pre-shared keys for authentication (NMsiKETunPeerAuthMethod = NMsec_IKETUN_PRESHAREDKEY (3)), this value will be 0.

Secondary segment: SMF119#74_IPSec_IKE_Counter

Field Name	Type	Len	Description
<i>SMF119#74_IPSec_IKE_Counter.<fieldname></i>			
zP2Current	INT	4	(IBM name: N/A) Current count of active dynamic tunnels associated with this IKE tunnel.
zP2InProgress	INT	4	(IBM name: N/A) Current count of pending or in progress dynamic tunnels associated with this IKE tunnel.
zP2LclActSuccess	INT	4	(IBM name: N/A) Cumulative count of locally initiated dynamic tunnels that were successfully activated for this IKE tunnel.
zP2RmtActSuccess	INT	4	(IBM name: N/A) Cumulative count of remotely initiated dynamic tunnel activations that were successfully activated for this IKE tunnel.
zP2LclActFailure	INT	4	(IBM name: N/A) Cumulative count of failed dynamic tunnel activations that were initiated locally for this IKE tunnel.
zP2RmtActFailure	INT	4	(IBM name: N/A) Cumulative count of failed dynamic tunnel activations that were initiated for this IKE tunnel.
zBytes	INT	8	(IBM name: N/A) Cumulative number of bytes protected by this IKE tunnel.
zP1Rexmit	INT	8	(IBM name: N/A) Cumulative number of retransmitted key exchange (phase 1) messages sent for this tunnel over the life of the IKE daemon. This data is cumulative even across TCP/IP restarts.
zP1Replay	INT	8	(IBM name: N/A) Cumulative number of replayed key exchange (phase 1) messages received for this stack over the life of the IKE daemon. This data is cumulative even a cross TCP/IP restarts.
zP2Rexmit	INT	8	(IBM name: N/A) Cumulative number of retransmitted key exchange (phase 2) messages sent for this tunnel over the life of the IKE daemon. This data is cumulative even a cross TCP/IP restarts.
zP2Replay	INT	8	(IBM name: N/A) Cumulative number of replayed key exchange (phase 2) messages received for this stack over the life of the IKE daemon. This data is cumulative even a cross TCP/IP restarts.

z3Num	INT	2	(IBM name: N/A) Number of IKE dynamic tunnel sections.
z4Off	INT	4	(IBM name: N/A) Offset to local client ID section.
z4Len	INT	2	(IBM name: N/A) Length of local client ID section.
z4Num	INT	2	(IBM name: N/A) Number of local client ID sections.
z5Off	INT	4	(IBM name: N/A) Offset to remote client ID sections.
z5Len	INT	2	(IBM name: N/A) Length of remote client ID section.
z5Num	INT	2	(IBM name: N/A) Number of remote client ID sections.

Secondary segment: **SMF119#75_Identification**

Field Name	Type	Len	Description
<i>SMF119#75_Identification.<fieldname></i>			
zSYSName	CHAR	8	(IBM name: SMF119TI_SYSName) System name from SYSNAME in IEASYSxx.
zSysplexName	CHAR	8	(IBM name: SMF119TI_SysplexName) Sysplex name from SYSPLEX in COUPLExx.
zStack	CHAR	8	(IBM name: SMF119TI_Stack) TCP/IP stack name.
zReleaseID	CHAR	8	(IBM name: SMF119TI_ReleaseID) z/OS Communications Server TCP/IP release identifier.
zComp	CHAR	8	(IBM name: SMF119TI_Comp) TCP/IP subcomponent.
zASName	CHAR	8	(IBM name: SMF119TI_ASName) Started task qualifier or name of address space that writes this SMF record.
zUserID	CHAR	8	(IBM name: SMF119TI_UserID) User ID of security context.
zASID	INT	2	(IBM name: SMF119TI_ASID) ASID of address space that writes this SMF record.
zReason	INT (ENUM)	1	(IBM name: SMF119TI_Reason) Reason for writing record. IntInc => Interval record, incomplete. Int => Interval record. IEndInc => Interval ending stats, incomplete. IEnd => Interval ending stats. IShtInc => Interval shutdown stats,incomplete. ISht => Interval shutdown stats. EvtInc => Event record, incomplete. Evt => Event record, complete.
zRecordID	INT	1	(IBM name: SMF119TI_RecordID) ID value for correlating records.

Secondary segment: **SMF119#75_IPSec_IP_Tunnel_Common**

Field Name	Type	Len	Description
------------	------	-----	-------------

SMF119#75_IPSec_IP_Tunnel_Common.<fieldname>			
zID	CHAR	48	(IBM name: SMF119TN_ID) Tunnel ID.
zVPNAction	CHAR	48	(IBM name: N/A) Tunnel VPN action name.
zIPv6	BIT	1	The IPv6 indicator. If this bit is set, all IKE tunnel security endpoints are IPv6 addresses. If this bit is not set, the endpoints are IPv4 addresses.
zFIPS140	BIT	1	FIPS 140 mode indicator. If this field is set, cryptographic operations for this tunnel are performed using cryptographic algorithms and modules that are designed to meet the FIPS 140 requirements, otherwise, cryptographic algorithms and modules that do not meet the FIPS 140 requirements might be used.
zType	INT (ENUM)	1	(IBM name: N/A) Tunnel type.
zState	INT (ENUM)	1	(IBM name: N/A) Tunnel state.
zLclEndpt	IPADDRESS	16	(IBM name: N/A) If zIPv6 is set, this field is the 16 byte IPv6 local security endpoint address. Otherwise, this field is the 4 byte IPv4 local security endpoint address.
zRmtEndpt	IPADDRESS	16	(IBM name: N/A) If zIPv6 is set, this field is the 16 byte IPv6 remote security endpoint address. Otherwise, this field is the 4 byte IPv4 remote security endpoint address.
zEncapMode	INT (ENUM)	1	(IBM name: N/A) Encapsulation mode.
zAuthProto	INT (ENUM)	1	(IBM name: N/A) Tunnel Authentication Protocol.
zAuthAlg	INT (ENUM)	1	(IBM name: N/A) Tunnel authentication algorithm. 'HMAC_MD5' => The tunnel uses HMAC-MD5 authentication with the full 128-bit Integrity Check Value (ICV). This value is applicable only to IKEv1 tunnels. 'HMAC_SHA1' => The tunnel uses HMAC-SHA1 authentication with the full 160-bit ICV. This value is applicable only to IKEv1 tunnels. 'HMAC_MD5_96' => The tunnel uses HMAC-MD5 authentication with ICV truncation to 96 bits. This value is applicable only to IKEv2 tunnels. 'HMAC_SHA1_96' => The tunnel uses HMAC-SHA1 authentication with ICV truncation to 96 bits. This value is applicable only to IKEv2 tunnels. 'HMAC_SHA2_256_128' => The tunnel uses HMAC-SHA2-256 authentication with ICV truncation to 128 bits. 'HMAC_SHA2_384_192' => The tunnel uses HMAC-SHA2-384 authentication with ICV truncation to 192 bits. 'HMAC_SHA2_512_256' => The tunnel uses HMAC-SHA2-512 authentication with ICV truncation to 256 bits. 'AES128_XCBC_96' => The tunnel uses AES128-XCBC authentication with ICV truncation to 96 bits.
zEncryptAlg	INT (ENUM)	1	(IBM name: N/A) Tunnel encryption algorithm.
zInbAuthSPI	INT	4	(IBM name: N/A) Tunnel inbound authentication SPI.
zOutbAuthSPI	INT	4	(IBM name: N/A) Tunnel outbound authentication SPI.
zInbEncryptSPI	INT	4	(IBM name: N/A) Tunnel inbound encryption SPI.
zOutbEncryptSPI	INT	4	(IBM name: N/A) Tunnel outbound encryption SPI.
zStartTime	TIME	4	(IBM name: N/A) Indicates the tunnel start time at which the tunnel was activated or refreshed, in UNIX format. Offset Name Ln. Format Description.
zEncryptKeyLength	INT	4	(IBM name: N/A) Encryption key length for variable-length algorithms, in bits. Zero for encryption algorithms that have a fixed key length (such as DES and 3DES) and nonzero for encryption algorithms that have a variable key length (such as AES-CBC and AES-GCM). Result: Example values are 128 and 256.

Secondary segment: **SMF119#75_IPSec_Dynamic_Tunnel**

Field Name	Type	Len	Description
<i>SMF119#75_IPSec_Dynamic_Tunnel.<fieldname></i>			
zUDPEncap	BIT	1	UDP encapsulation indicator. The tunnel uses UDP encapsulation mode.
zLclNAT	BIT	1	Local NAT indicator. A NAT has been detected in front of the local security endpoint.
zRmtNAT	BIT	1	Remote NAT indicator. A NAT has been detected in front of the remote security endpoint.
zRmtNAPT	BIT	1	Remote NAPT indicator. An NAPT has been detected in front of the remote security endpoint. Result: Some NAPTs might be undetected. In that case, the 'zRmtNAT' bit is set, but this bit is not set.
zRmtGW	BIT	1	Remote NAT traversal gateway indicator. The tunnel uses UDP encapsulation and the remote security endpoint is acting as an IPSec gateway.
zRmtZOS	BIT	1	Remote z/OS indicator. The remote peer has been detected to be z/OS. The remote peer might be running z/OS but it might not be detected as such, if NAT traversal is not enabled.
zCanInitP2	BIT	1	Dynamic tunnel (P2) initiation indicator. If set, the local security endpoint can initiate dynamic tunnel negotiations with the remote security endpoint, otherwise, the remote security endpoint must initiate dynamic tunnel negotiations. Either side can initiate refreshes.
zSrcIsSingle	BIT	1	Single source address indicator. Traffic source address is indicated by the zSrcAddr4 or zSrcAddr6 fields.
zSrcIsPrefix	BIT	1	Prefixed source address indicator. Traffic source address is indicated by the zSrcAddr4 or zSrcAddr6, fields and the source address prefix is indicated by the zSrcAddrPrefix field.
zSrcIsRange	BIT	1	Ranged source address indicator. Traffic source address range is indicated by the zSrcAddr4 and zSrcAddrRange4 fields, or by the zSrcAddr6 and zSrcAddrRange6 fields.
zDstIsSingle	BIT	1	Single destination address indicator. Traffic destination address is indicated by the zDstAddr4 or zDstAddr6 fields.
zDstIsPrefix	BIT	1	Prefixed destination address indicator. Traffic destination address is indicated by the zDstAddr4 or zDstAddr6 fields, and destination address prefix is indicated by the zDstAddrPrefix field.
zDstIsRange	BIT	1	Ranged destination address indicator. Traffic destination address range is indicated by the zDstAddr4 and zDstAddrRange4 fields, or by the zDstAddr6 and zDstAddrRange6 field.
zTransportOpaque	BIT	1	Opaque transport selector indicator. If set, the dynamic tunnel is protecting data traffic where the upper layer selectors, source and destination ports, ICMP or ICMPv6 type and code or IPv6 Mobility header type are not available as a result of fragmentation.
zVPNRule	CHAR	48	(IBM name: N/A) Dynamic VPN rule name for this tunnel. This field is blank if there is no local dynamic VPN rule.
zP1TunnelID	CHAR	48	(IBM name: N/A) Tunnel ID for this tunnel's parent IKE (phase 1) tunnel. As a result of refreshes, this tunnel ID might represent multiple related IKE tunnels.
zLifesize	INT	8	(IBM name: N/A) Tunnel lifesize. Nonzero values indicate the lifesize value limit for the tunnel, in bytes.
zLifesizeRefresh	INT	8	(IBM name: N/A) Tunnel lifesize refresh. Nonzero values indicate the lifesize value at which the tunnel is refreshed, in bytes.
zLifetimeExpire	TIME	4	(IBM name: N/A) Tunnel lifetime. Indicates the time at which the tunnel expires, in UNIX format.
zLifetimeRefresh	TIME	4	

			(IBM name: N/A) Tunnel lifetime refresh. Indicates the time at which the tunnel is refreshed, in UNIX format.
zVPNLifeExpire	TIME	4	(IBM name: N/A) Tunnel VPN lifetime expire. Nonzero values indicate the time at which the tunnel family ceases to be refreshed, in UNIX format. This field retains its original value for a refreshed tunnel.
zActMethod	INT (ENUM)	1	One of the following tunnel activation methods. 'USER' => User activation (from the command line). 'REMOTE' => Remote activation from IPsec peer. 'ONDEMAND' => On-demand activation caused by IP traffic. 'TAKEOVER' => SWSA activation as a result of a DVIPA takeover. 'AUTOACT' => Auto-activation This field retains its original value for a refreshed tunnel.
zRmtUDPPort	INT	2	(IBM name: N/A) If the tunnel uses UDP encapsulation mode, this value is the IKE UDP port of the remote security endpoint, otherwise, the value is 0.
zSrcNATOA	IPADDRESS	4	(IBM name: N/A) Source NAT original IP address. NAT original IP addresses are exchanged only for certain UDP-encapsulated tunnels. During NAT traversal negotiations, the IKE peer sends the source IP address that it is aware of. If NAT traversal negotiation did not occur or if an IKEv1 peer did not send a source NAT-OA payload, the value of this field is 0. Restriction: An IKEv1 peer at a pre-RFC3947 NAT traversal support level cannot send a source NAT-OA payload.
zDstNATOA	IPADDRESS	4	(IBM name: N/A) Destination NAT original IP address. NAT original IP addresses are exchanged only for certain UDP-encapsulated tunnels. During NAT traversal negotiations, the IKE peer sends the destination IP address that it is aware of. If NAT traversal negotiation did not occur or if an IKEv1 peer did not send a source NAT-OA payload, the value of this field is 0. Restriction: An IKEv1 peer at a pre-RFC3947 NAT traversal support level cannot send a source NAT-OA payload.
zProtocol	INT	1	(IBM name: N/A) Protocol for tunnel data. If the value is 0, the tunnel includes all protocols.
zSrcPort	INT	2	(IBM name: N/A) Low end of source port range for tunnel data or 0 if the tunnel is not limited to TCP or UDP.
zDstPort	INT	2	(IBM name: N/A) Low end of destination port range for tunnel data, or 0 if the tunnel is not limited to TCP or UDP.
zSrcAddr	IPADDRESS	16	(IBM name: N/A) One of the following values: If the zSrcIsSingle field is set, this field is the IPv4 or IPv6 source address for tunnel data. If the zSrcIsPrefix field is set, this field is the IPv4 or IPv6 source address base for tunnel data. If the zSrcIsRange field is set, this field is the low end of the IPv4 or IPv6 source address range for tunnel data.
zSrcAddrRange	IPADDRESS	16	(IBM name: N/A) If the zSrcIsRange field is set, this field is the highest address in the range of the IPv4 or IPv6 source addresses tunnel data.
zDstAddr	IPADDRESS	16	(IBM name: N/A) One of the following values: If the zDstIsSingle field is set, this field is the IPv4 or IPv6 destination address for tunnel data. If the zDstIsPrefix field is set, this field is the IPv4 or IPv6 destination address base for tunnel data. If the zDstIsRange field is set, this field is the lowest IPv4 or IPv6 destination address in the range for tunnel data.
zDstAddrRange	IPADDRESS	16	(IBM name: N/A) If the zDstIsRange field is set, this field is the highest IPv4 or IPv6 destination address in the range range for tunnel data.
zSrcAddrPrefix	INT	1	(IBM name: N/A) If the zSrcIsPrefix field is set, this field is the length of the tunnel data source address prefix in bits.
zDstAddrPrefix	INT	1	(IBM name: N/A) If the zDstIsPrefix field is set, this field is the length of the tunnel data destination address prefix in bits.
zMajorVer	INT	1	(IBM name: N/A) Major version of the IKE protocol in use. Only the low-order 4 bits are

			used.
zMinorVer	INT	1	(IBM name: N/A) Minor version of the IKE protocol in use. Only the low-order 4 bits are used.
zType	INT	1	(IBM name: N/A) Low end of ICMP, ICMPv6, or MIPv6 type range for tunnel data, otherwise, this value is 0 if the tunnel is not limited to ICMP, ICMPv6, or MIPv6.
zTypeRange	INT	1	(IBM name: N/A) High end of ICMP, ICMPv6, or MIPv6 type range for tunnel data, otherwise this value is 0 if the tunnel is not limited to ICMP, ICMPv6, or MIPv6. A tunnel applying to all type values is indicated as a value in the range 0- 255.
zCode	INT	1	(IBM name: N/A) Low end of ICMP or ICMPv6 code range for tunnel data, otherwise this value is 0 if the tunnel is not limited to ICMP or ICMPv6.
zCodeRange	INT	1	(IBM name: N/A) High end of ICMP or ICMPv6 code range for tunnel data, otherwise, this value is 0 if the tunnel is not limited to ICMP or ICMPv6. A tunnel applying to all code values is indicated as a value in the range 0 - 255.
zSrcPortRange	INT	2	(IBM name: N/A) High end of source port range for tunnel data, otherwise this value is 0 if the tunnel is not limited to TCP or UDP. A tunnel applying to all source port values is indicated as a value in the range 0- 65 535.
zDstPortRange	INT	2	(IBM name: N/A) High end of destination port range for tunnel data, or 0 if the tunnel is not limited to TCP or UDP. A tunnel applying to all destination port values is indicated as a value in the range 0 - 65 535.
zGeneration	INT	4	(IBM name: N/A) Tunnel generation number. The first dynamic tunnel with a particular tunnel ID has generation 1. Subsequent refreshes of this dynamic tunnel have the same tunnel ID but higher generation numbers.

Secondary segment: **SMF119#75_IPSec_IKE_Dynamic_Tunnel**

Field Name	Type	Len	Description
<i>SMF119#75_IPSec_IKE_Dynamic_Tunnel.<fieldname></i>			
zFilter	CHAR	48	(IBM name: N/A) Filter name for the IP filter related to this dynamic tunnel.
zDHGroup	INT	4	(IBM name: N/A) Diffie-Hellman group used for PFS for this dynamic tunnel, or 0 if phase 2 PFS is not configured.
zLclIDType	INT	1	(IBM name: N/A) ISAKMP identity type for the local client ID, as defined in RFC 2407. Client identities can be exchanged during negotiation to limit or define the scope of data protected by the tunnel. If client identities are not exchanged, then the scope of data protection is defined to include the peers' tunnel endpoint addresses. If client identities were not exchanged during negotiation, this field is 0.
zRmtIDType	INT	1	(IBM name: N/A) ISAKMP identity type for the remote client ID, as defined in RFC 2407. Client identities might be exchanged during negotiation to limit or define the scope of data protected by the tunnel. If client identities are not exchanged, then the scope of data protection is defined to include the peers' tunnel endpoint addresses. If client identities were not exchanged during negotiation, this field is 0.
zExtState	INT (ENUM)	2	(IBM name: N/A) Extended tunnel state information types

Secondary segment: SMF119#75_IPSec_Local_Client_ID

Field Name	Type	Len	Description
<i>SMF119#75_IPSec_Local_Client_ID.<fieldname></i>			
zID	XVCHAR	0 1024	(IBM name: SMF119TN_ID) The local client ID for this tunnel's phase 2 negotiation. Regardless of the identity's type, the ID is expressed as an EBCDIC string (an IP address is returned in printable form).

Secondary segment: SMF119#75_IPSec_Remote_Client_ID

Field Name	Type	Len	Description
<i>SMF119#75_IPSec_Remote_Client_ID.<fieldname></i>			
zID	XVCHAR	0 1024	(IBM name: SMF119TN_ID) The remote client ID for this tunnel's phase 2 negotiation. Regardless of the identity's type, the ID is expressed as an EBCDIC string (an IP address is returned in printable form).

Record Type 119 Subtype 76 - IPSec Dynamic Tunnel Deactivate/Expire

Primary Segment:

- SMF119#76_TCPIP_Statistics

Secondary Segment(s): 6 (in alphabetical order)

- SMF119#76_Identification

Primary segment: SMF119#76_TCPIP_Statistics

Field Name	Type	Len	Description
<i>SMF119#76_TCPIP_Statistics.<fieldname></i>			
<i>SMF119#76_TCPIP_Statistics.Header.<fieldname></i>			
zFLG	HEX	1	(IBM name: N/A) System indicator: Bit Meaning when set 0-2 Reserved. 3-6 Version indicators 7 Reserved.
zRTY	INT	1	(IBM name: N/A) Record type 119
zTME	TSTMP	8	(IBM name: N/A) Date/Time that the record was moved into the SMF buffer.
zSID	CHAR	4	(IBM name: N/A) System ID.
zSSID	CHAR	4	(IBM name: N/A) Subsystem ID.
zSTY	INT	2	(IBM name: N/A) Record subtype.

<i>SMF119#76_TCPIP_Statistics.Self_defining_Section.<fieldname></i>			
zTRN	INT	2	(IBM name: SMF119SD_TRN) Number of triplets.
zDOff	INT	4	(IBM name: N/A) Offset to the TCP/IP Identification section from the beginning of the record (including RDW).
zDLen	INT	2	(IBM name: N/A) Length of the TCP/IP Identification section.
zDNum	INT	2	(IBM name: N/A) Number of TCP/IP Identification sections.
z1Off	INT	4	(IBM name: N/A) Offset to common IP tunnel section.
z1Len	INT	2	(IBM name: N/A) Length of common IP tunnel section.
z1Num	INT	2	(IBM name: N/A) Number of common IP tunnel sections.
z2Off	INT	4	(IBM name: N/A) Offset to dynamic tunnel section.
z2Len	INT	2	(IBM name: N/A) Length of dynamic tunnel section.
z2Num	INT	2	(IBM name: N/A) Number of tunnel sections.
z3Off	INT	4	

			(IBM name: N/A) Offset to IKE dynamic tunnel sections.
z3Len	INT	2	(IBM name: N/A) Length of IKE dynamic tunnel section.
z3Num	INT	2	(IBM name: N/A) Number of IKE dynamic tunnel sections.
z4Off	INT	4	(IBM name: N/A) Offset to local client ID section.
z4Len	INT	2	(IBM name: N/A) Length of local client ID section.
z4Num	INT	2	(IBM name: N/A) Number of local client ID sections.
z5Off	INT	4	(IBM name: N/A) Offset to remote client ID sections.
z5Len	INT	2	(IBM name: N/A) Length of remote client ID section.
z5Num	INT	2	(IBM name: N/A) Number of remote client ID sections.

Secondary segment: **SMF119#76_Identification**

Field Name	Type	Len	Description
<i>SMF119#76_Identification.<fieldname></i>			
zSYSName	CHAR	8	(IBM name: SMF119TI_SYSName) System name from SYSNAME in IEASYSxx.
zSysplexName	CHAR	8	(IBM name: SMF119TI_SysplexName) Sysplex name from SYSPLEX in COUPLExx.
zStack	CHAR	8	(IBM name: SMF119TI_Stack) TCP/IP stack name.
zReleaseID	CHAR	8	(IBM name: SMF119TI_ReleaseID) z/OS Communications Server TCP/IP release identifier.
zComp	CHAR	8	(IBM name: SMF119TI_Comp) TCP/IP subcomponent.
zASName	CHAR	8	(IBM name: SMF119TI_ASName) Started task qualifier or name of address space that writes this SMF record.
zUserID	CHAR	8	(IBM name: SMF119TI_UserID) User ID of security context.
zASID	INT	2	(IBM name: SMF119TI_ASID) ASID of address space that writes this SMF record.
zReason	INT (ENUM)	1	(IBM name: SMF119TI_Reason) Reason for writing record. IntInc => Interval record, incomplete. Int => Interval record. IEndInc => Interval ending stats, incomplete. IEnd => Interval ending stats. IShtInc => Interval shutdown stats,incomplete. ISht => Interval shutdown stats. EvtInc => Event record, incomplete. Evt => Event record, complete.
zRecordID	INT	1	(IBM name: SMF119TI_RecordID) ID value for correlating records.

Secondary segment: **SMF119#76_IPSec_IP_Tunnel_Common**

Field Name	Type	Len	Description
------------	------	-----	-------------

SMF119#76_IPSec_IP_Tunnel_Common.<fieldname>			
zID	CHAR	48	(IBM name: SMF119TN_ID) Tunnel ID.
zVPNAction	CHAR	48	(IBM name: N/A) Tunnel VPN action name.
zIPv6	BIT	1	The IPv6 indicator. If this bit is set, all IKE tunnel security endpoints are IPv6 addresses. If this bit is not set, the endpoints are IPv4 addresses.
zFIPS140	BIT	1	FIPS 140 mode indicator. If this field is set, cryptographic operations for this tunnel are performed using cryptographic algorithms and modules that are designed to meet the FIPS 140 requirements, otherwise, cryptographic algorithms and modules that do not meet the FIPS 140 requirements might be used.
zType	INT (ENUM)	1	(IBM name: N/A) Tunnel type.
zState	INT (ENUM)	1	(IBM name: N/A) Tunnel state.
zLclEndpt	IPADDRESS	16	(IBM name: N/A) If zIPv6 is set, this field is the 16 byte IPv6 local security endpoint address. Otherwise, this field is the 4 byte IPv4 local security endpoint address.
zRmtEndpt	IPADDRESS	16	(IBM name: N/A) If zIPv6 is set, this field is the 16 byte IPv6 remote security endpoint address. Otherwise, this field is the 4 byte IPv4 remote security endpoint address.
zEncapMode	INT (ENUM)	1	(IBM name: N/A) Encapsulation mode.
zAuthProto	INT (ENUM)	1	(IBM name: N/A) Tunnel Authentication Protocol.
zAuthAlg	INT (ENUM)	1	(IBM name: N/A) Tunnel authentication algorithm. 'HMAC_MD5' => The tunnel uses HMAC-MD5 authentication with the full 128-bit Integrity Check Value (ICV). This value is applicable only to IKEv1 tunnels. 'HMAC_SHA1' => The tunnel uses HMAC-SHA1 authentication with the full 160-bit ICV. This value is applicable only to IKEv1 tunnels. 'HMAC_MD5_96' => The tunnel uses HMAC-MD5 authentication with ICV truncation to 96 bits. This value is applicable only to IKEv2 tunnels. 'HMAC_SHA1_96' => The tunnel uses HMAC-SHA1 authentication with ICV truncation to 96 bits. This value is applicable only to IKEv2 tunnels. 'HMAC_SHA2_256_128' => The tunnel uses HMAC-SHA2-256 authentication with ICV truncation to 128 bits. 'HMAC_SHA2_384_192' => The tunnel uses HMAC-SHA2-384 authentication with ICV truncation to 192 bits. 'HMAC_SHA2_512_256' => The tunnel uses HMAC-SHA2-512 authentication with ICV truncation to 256 bits. 'AES128_XCBC_96' => The tunnel uses AES128-XCBC authentication with ICV truncation to 96 bits.
zEncryptAlg	INT (ENUM)	1	(IBM name: N/A) Tunnel encryption algorithm.
zInbAuthSPI	INT	4	(IBM name: N/A) Tunnel inbound authentication SPI.
zOutbAuthSPI	INT	4	(IBM name: N/A) Tunnel outbound authentication SPI.
zInbEncryptSPI	INT	4	(IBM name: N/A) Tunnel inbound encryption SPI.
zOutbEncryptSPI	INT	4	(IBM name: N/A) Tunnel outbound encryption SPI.
zStartTime	TIME	4	(IBM name: N/A) Indicates the tunnel start time at which the tunnel was activated or refreshed, in UNIX format. Offset Name Ln. Format Description.
zEncryptKeyLength	INT	4	(IBM name: N/A) Encryption key length for variable-length algorithms, in bits. Zero for encryption algorithms that have a fixed key length (such as DES and 3DES) and nonzero for encryption algorithms that have a variable key length (such as AES-CBC and AES-GCM). Result: Example values are 128 and 256.

Secondary segment: **SMF119#76_IPSec_Dynamic_Tunnel**

Field Name	Type	Len	Description
<i>SMF119#76_IPSec_Dynamic_Tunnel.<fieldname></i>			
zUDPEncap	BIT	1	UDP encapsulation indicator. The tunnel uses UDP encapsulation mode.
zLclNAT	BIT	1	Local NAT indicator. A NAT has been detected in front of the local security endpoint.
zRmtNAT	BIT	1	Remote NAT indicator. A NAT has been detected in front of the remote security endpoint.
zRmtNAPT	BIT	1	Remote NAPT indicator. An NAPT has been detected in front of the remote security endpoint. Result: Some NAPTs might be undetected. In that case, the 'zRmtNAT' bit is set, but this bit is not set.
zRmtGW	BIT	1	Remote NAT traversal gateway indicator. The tunnel uses UDP encapsulation and the remote security endpoint is acting as an IPSec gateway.
zRmtZOS	BIT	1	Remote z/OS indicator. The remote peer has been detected to be z/OS. The remote peer might be running z/OS but it might not be detected as such, if NAT traversal is not enabled.
zCanInitP2	BIT	1	Dynamic tunnel (P2) initiation indicator. If set, the local security endpoint can initiate dynamic tunnel negotiations with the remote security endpoint, otherwise, the remote security endpoint must initiate dynamic tunnel negotiations. Either side can initiate refreshes.
zSrcIsSingle	BIT	1	Single source address indicator. Traffic source address is indicated by the zSrcAddr4 or zSrcAddr6 fields.
zSrcIsPrefix	BIT	1	Prefixed source address indicator. Traffic source address is indicated by the zSrcAddr4 or zSrcAddr6, fields and the source address prefix is indicated by the zSrcAddrPrefix field.
zSrcIsRange	BIT	1	Ranged source address indicator. Traffic source address range is indicated by the zSrcAddr4 and zSrcAddrRange4 fields, or by the zSrcAddr6 and zSrcAddrRange6 fields.
zDstIsSingle	BIT	1	Single destination address indicator. Traffic destination address is indicated by the zDstAddr4 or zDstAddr6 fields.
zDstIsPrefix	BIT	1	Prefixed destination address indicator. Traffic destination address is indicated by the zDstAddr4 or zDstAddr6 fields, and destination address prefix is indicated by the zDstAddrPrefix field.
zDstIsRange	BIT	1	Ranged destination address indicator. Traffic destination address range is indicated by the zDstAddr4 and zDstAddrRange4 fields, or by the zDstAddr6 and zDstAddrRange6 field.
zTransportOpaque	BIT	1	Opaque transport selector indicator. If set, the dynamic tunnel is protecting data traffic where the upper layer selectors, source and destination ports, ICMP or ICMPv6 type and code or IPv6 Mobility header type are not available as a result of fragmentation.
zVPNRule	CHAR	48	(IBM name: N/A) Dynamic VPN rule name for this tunnel. This field is blank if there is no local dynamic VPN rule.
zP1TunnelID	CHAR	48	(IBM name: N/A) Tunnel ID for this tunnel's parent IKE (phase 1) tunnel. As a result of refreshes, this tunnel ID might represent multiple related IKE tunnels.
zLifesize	INT	8	(IBM name: N/A) Tunnel lifesize. Nonzero values indicate the lifesize value limit for the tunnel, in bytes.
zLifesizeRefresh	INT	8	(IBM name: N/A) Tunnel lifesize refresh. Nonzero values indicate the lifesize value at which the tunnel is refreshed, in bytes.
zLifetimeExpire	TIME	4	(IBM name: N/A) Tunnel lifetime. Indicates the time at which the tunnel expires, in UNIX format.
zLifetimeRefresh	TIME	4	

			(IBM name: N/A) Tunnel lifetime refresh. Indicates the time at which the tunnel is refreshed, in UNIX format.
zVPNLifeExpire	TIME	4	(IBM name: N/A) Tunnel VPN lifetime expire. Nonzero values indicate the time at which the tunnel family ceases to be refreshed, in UNIX format. This field retains its original value for a refreshed tunnel.
zActMethod	INT (ENUM)	1	One of the following tunnel activation methods. 'USER' => User activation (from the command line). 'REMOTE' => Remote activation from IPsec peer. 'ONDEMAND' => On-demand activation caused by IP traffic. 'TAKEOVER' => SWSA activation as a result of a DVIPA takeover. 'AUTOACT' => Auto-activation This field retains its original value for a refreshed tunnel.
zRmtUDPPort	INT	2	(IBM name: N/A) If the tunnel uses UDP encapsulation mode, this value is the IKE UDP port of the remote security endpoint, otherwise, the value is 0.
zSrcNATOA	IPADDRESS	4	(IBM name: N/A) Source NAT original IP address. NAT original IP addresses are exchanged only for certain UDP-encapsulated tunnels. During NAT traversal negotiations, the IKE peer sends the source IP address that it is aware of. If NAT traversal negotiation did not occur or if an IKEv1 peer did not send a source NAT-OA payload, the value of this field is 0. Restriction: An IKEv1 peer at a pre-RFC3947 NAT traversal support level cannot send a source NAT-OA payload.
zDstNATOA	IPADDRESS	4	(IBM name: N/A) Destination NAT original IP address. NAT original IP addresses are exchanged only for certain UDP-encapsulated tunnels. During NAT traversal negotiations, the IKE peer sends the destination IP address that it is aware of. If NAT traversal negotiation did not occur or if an IKEv1 peer did not send a source NAT-OA payload, the value of this field is 0. Restriction: An IKEv1 peer at a pre-RFC3947 NAT traversal support level cannot send a source NAT-OA payload.
zProtocol	INT	1	(IBM name: N/A) Protocol for tunnel data. If the value is 0, the tunnel includes all protocols.
zSrcPort	INT	2	(IBM name: N/A) Low end of source port range for tunnel data or 0 if the tunnel is not limited to TCP or UDP.
zDstPort	INT	2	(IBM name: N/A) Low end of destination port range for tunnel data, or 0 if the tunnel is not limited to TCP or UDP.
zSrcAddr	IPADDRESS	16	(IBM name: N/A) One of the following values: If the zSrcIsSingle field is set, this field is the IPv4 or IPv6 source address for tunnel data. If the zSrcIsPrefix field is set, this field is the IPv4 or IPv6 source address base for tunnel data. If the zSrcIsRange field is set, this field is the low end of the IPv4 or IPv6 source address range for tunnel data.
zSrcAddrRange	IPADDRESS	16	(IBM name: N/A) If the zSrcIsRange field is set, this field is the highest address in the range of the IPv4 or IPv6 source addresses tunnel data.
zDstAddr	IPADDRESS	16	(IBM name: N/A) One of the following values: If the zDstIsSingle field is set, this field is the IPv4 or IPv6 destination address for tunnel data. If the zDstIsPrefix field is set, this field is the IPv4 or IPv6 destination address base for tunnel data. If the zDstIsRange field is set, this field is the lowest IPv4 or IPv6 destination address in the range for tunnel data.
zDstAddrRange	IPADDRESS	16	(IBM name: N/A) If the zDstIsRange field is set, this field is the highest IPv4 or IPv6 destination address in the range range for tunnel data.
zSrcAddrPrefix	INT	1	(IBM name: N/A) If the zSrcIsPrefix field is set, this field is the length of the tunnel data source address prefix in bits.
zDstAddrPrefix	INT	1	(IBM name: N/A) If the zDstIsPrefix field is set, this field is the length of the tunnel data destination address prefix in bits.
zMajorVer	INT	1	(IBM name: N/A) Major version of the IKE protocol in use. Only the low-order 4 bits are

			used.
zMinorVer	INT	1	(IBM name: N/A) Minor version of the IKE protocol in use. Only the low-order 4 bits are used.
zType	INT	1	(IBM name: N/A) Low end of ICMP, ICMPv6, or MIPv6 type range for tunnel data, otherwise, this value is 0 if the tunnel is not limited to ICMP, ICMPv6, or MIPv6.
zTypeRange	INT	1	(IBM name: N/A) High end of ICMP, ICMPv6, or MIPv6 type range for tunnel data, otherwise this value is 0 if the tunnel is not limited to ICMP, ICMPv6, or MIPv6. A tunnel applying to all type values is indicated as a value in the range 0- 255.
zCode	INT	1	(IBM name: N/A) Low end of ICMP or ICMPv6 code range for tunnel data, otherwise this value is 0 if the tunnel is not limited to ICMP or ICMPv6.
zCodeRange	INT	1	(IBM name: N/A) High end of ICMP or ICMPv6 code range for tunnel data, otherwise, this value is 0 if the tunnel is not limited to ICMP or ICMPv6. A tunnel applying to all code values is indicated as a value in the range 0 - 255.
zSrcPortRange	INT	2	(IBM name: N/A) High end of source port range for tunnel data, otherwise this value is 0 if the tunnel is not limited to TCP or UDP. A tunnel applying to all source port values is indicated as a value in the range 0- 65 535.
zDstPortRange	INT	2	(IBM name: N/A) High end of destination port range for tunnel data, or 0 if the tunnel is not limited to TCP or UDP. A tunnel applying to all destination port values is indicated as a value in the range 0 - 65 535.
zGeneration	INT	4	(IBM name: N/A) Tunnel generation number. The first dynamic tunnel with a particular tunnel ID has generation 1. Subsequent refreshes of this dynamic tunnel have the same tunnel ID but higher generation numbers.

Secondary segment: **SMF119#76_IPSec_IKE_Dynamic_Tunnel**

Field Name	Type	Len	Description
<i>SMF119#76_IPSec_IKE_Dynamic_Tunnel.<fieldname></i>			
zFilter	CHAR	48	(IBM name: N/A) Filter name for the IP filter related to this dynamic tunnel.
zDHGroup	INT	4	(IBM name: N/A) Diffie-Hellman group used for PFS for this dynamic tunnel, or 0 if phase 2 PFS is not configured.
zLclIDType	INT	1	(IBM name: N/A) ISAKMP identity type for the local client ID, as defined in RFC 2407. Client identities can be exchanged during negotiation to limit or define the scope of data protected by the tunnel. If client identities are not exchanged, then the scope of data protection is defined to include the peers' tunnel endpoint addresses. If client identities were not exchanged during negotiation, this field is 0.
zRmtIDType	INT	1	(IBM name: N/A) ISAKMP identity type for the remote client ID, as defined in RFC 2407. Client identities might be exchanged during negotiation to limit or define the scope of data protected by the tunnel. If client identities are not exchanged, then the scope of data protection is defined to include the peers' tunnel endpoint addresses. If client identities were not exchanged during negotiation, this field is 0.
zExtState	INT (ENUM)	2	(IBM name: N/A) Extended tunnel state information types

Secondary segment: SMF119#76_IPSec_Local_Client_ID

Field Name	Type	Len	Description
<i>SMF119#76_IPSec_Local_Client_ID.<fieldname></i>			
zID	XVCHAR	0 1024	(IBM name: SMF119TN_ID) The local client ID for this tunnel's phase 2 negotiation. Regardless of the identity's type, the ID is expressed as an EBCDIC string (an IP address is returned in printable form).

Secondary segment: SMF119#76_IPSec_Remote_Client_ID

Field Name	Type	Len	Description
<i>SMF119#76_IPSec_Remote_Client_ID.<fieldname></i>			
zID	XVCHAR	0 1024	(IBM name: SMF119TN_ID) The remote client ID for this tunnel's phase 2 negotiation. Regardless of the identity's type, the ID is expressed as an EBCDIC string (an IP address is returned in printable form).

Record Type 119 Subtype 77 - IPSec Dynamic Tunnel Added**Primary Segment:**

- SMF119#77_TCPIP_Statistics

Secondary Segment(s): 4 (in alphabetical order)

Field Name	Type	Len	Description
<i>SMF119#77_TCPIP_Statistics.<fieldname></i>			
<i>SMF119#77_TCPIP_Statistics.Header.<fieldname></i>			
zFLG	HEX	1	(IBM name: N/A) System indicator: Bit Meaning when set 0-2 Reserved. 3-6 Version indicators 7 Reserved.
zRTY	INT	1	(IBM name: N/A) Record type 119
zTME	TSTMP	8	(IBM name: N/A) Date/Time that the record was moved into the SMF buffer.
zSID	CHAR	4	(IBM name: N/A) System ID.
zSSID	CHAR	4	(IBM name: N/A) Subsystem ID.
zSTY	INT	2	(IBM name: N/A) Record subtype.

<i>SMF119#77_TCPIP_Statistics.Self_defining_Section.<fieldname></i>			
zTRN	INT	2	(IBM name: SMF119SD_TRN) Number of triplets.
zDOff	INT	4	(IBM name: N/A) Offset to the TCP/IP Identification section from the beginning of the record (including RDW).
zDLen	INT	2	(IBM name: N/A) Length of the TCP/IP Identification section.
zDNum	INT	2	(IBM name: N/A) Number of TCP/IP Identification sections.
z1Off	INT	4	(IBM name: N/A) Offset to common IP tunnel section.
z1Len	INT	2	(IBM name: N/A) Length of common IP tunnel section.
z1Num	INT	2	(IBM name: N/A) Number of common IP tunnel sections.
z2Off	INT	4	(IBM name: N/A) Offset to dynamic tunnel section.
z2Len	INT	2	(IBM name: N/A) Length of dynamic tunnel section.
z2Num	INT	2	(IBM name: N/A) Number of dynamic tunnel sections.
z3Off	INT	4	(IBM name: N/A) Offset to stack dynamic tunnel added section.

z3Len	INT	2	(IBM name: N/A) Length of stack dynamic tunnel added sections.
z3Num	INT	2	(IBM name: N/A) Number of stack dynamic tunnel added sections.

Secondary segment: **SMF119#77_Identification**

Field Name	Type	Len	Description
<i>SMF119#77_Identification.<fieldname></i>			
zSYSName	CHAR	8	(IBM name: SMF119TI_SYSName) System name from SYSNAME in IEASYSxx.
zSysplexName	CHAR	8	(IBM name: SMF119TI_SysplexName) Sysplex name from SYSPLEX in COUPLExx.
zStack	CHAR	8	(IBM name: SMF119TI_Stack) TCP/IP stack name.
zReleaseID	CHAR	8	(IBM name: SMF119TI_ReleaseID) z/OS Communications Server TCP/IP release identifier.
zComp	CHAR	8	(IBM name: SMF119TI_Comp) TCP/IP subcomponent.
zASName	CHAR	8	(IBM name: SMF119TI_ASName) Started task qualifier or name of address space that writes this SMF record.
zUserID	CHAR	8	(IBM name: SMF119TI_UserID) User ID of security context.
zASID	INT	2	(IBM name: SMF119TI_ASID) ASID of address space that writes this SMF record.
zReason	INT (ENUM)	1	(IBM name: SMF119TI_Reason) Reason for writing record. IntInc => Interval record, incomplete. Int => Interval record. IEndInc => Interval ending stats, incomplete. IEnd => Interval ending stats. IShtInc => Interval shutdown stats, incomplete. ISht => Interval shutdown stats. EvtInc => Event record, incomplete. Evt => Event record, complete.
zRecordID	INT	1	(IBM name: SMF119TI_RecordID) ID value for correlating records.

Secondary segment: **SMF119#77_IPSec_IP_Tunnel_Common**

Field Name	Type	Len	Description
<i>SMF119#77_IPSec_IP_Tunnel_Common.<fieldname></i>			
zID	CHAR	48	(IBM name: SMF119TN_ID) Tunnel ID.
zVPNAction	CHAR	48	(IBM name: N/A) Tunnel VPN action name.
zIPv6	BIT	1	The IPv6 indicator. If this bit is set, all IKE tunnel security endpoints are IPv6 addresses. If this bit is not set, the endpoints are IPv4 addresses.
zFIPS140	BIT	1	FIPS 140 mode indicator. If this field is set, cryptographic operations for this tunnel are performed using cryptographic algorithms and modules that are designed to meet the FIPS 140 requirements, otherwise, cryptographic algorithms and modules that do not meet the FIPS 140 requirements might be used.
zType	INT (ENUM)	1	(IBM name: N/A) Tunnel type.
zState	INT (ENUM)	1	

			(IBM name: N/A) Tunnel state.
zLclEndpt	IPADDRESS	16	(IBM name: N/A) If zIPv6 is set, this field is the 16 byte IPv6 local security endpoint address. Otherwise, this field is the 4 byte IPv4 local security endpoint address.
zRmtEndpt	IPADDRESS	16	(IBM name: N/A) If zIPv6 is set, this field is the 16 byte IPv6 remote security endpoint address. Otherwise, this field is the 4 byte IPv4 remote security endpoint address.
zEncapMode	INT (ENUM)	1	(IBM name: N/A) Encapsulation mode.
zAuthProto	INT (ENUM)	1	(IBM name: N/A) Tunnel Authentication Protocol.
zAuthAlg	INT (ENUM)	1	(IBM name: N/A) Tunnel authentication algorithm. 'HMAC_MD5' => The tunnel uses HMAC-MD5 authentication with the full 128-bit Integrity Check Value (ICV). This value is applicable only to IKEv1 tunnels. 'HMAC_SHA1' => The tunnel uses HMAC-SHA1 authentication with the full 160-bit ICV. This value is applicable only to IKEv1 tunnels. 'HMAC_MD5_96' => The tunnel uses HMAC-MD5 authentication with ICV truncation to 96 bits. This value is applicable only to IKEv2 tunnels. 'HMAC_SHA1_96' => The tunnel uses HMAC-SHA1 authentication with ICV truncation to 96 bits. This value is applicable only to IKEv2 tunnels. 'HMAC_SHA2_256_128' => The tunnel uses HMAC-SHA2-256 authentication with ICV truncation to 128 bits. 'HMAC_SHA2_384_192' => The tunnel uses HMAC-SHA2-384 authentication with ICV truncation to 192 bits. 'HMAC_SHA2_512_256' => The tunnel uses HMAC-SHA2-512 authentication with ICV truncation to 256 bits. 'AES128_XCBC_96' => The tunnel uses AES128-XCBC authentication with ICV truncation to 96 bits.
zEncryptAlg	INT (ENUM)	1	(IBM name: N/A) Tunnel encryption algorithm.
zInbAuthSPI	INT	4	(IBM name: N/A) Tunnel inbound authentication SPI.
zOutbAuthSPI	INT	4	(IBM name: N/A) Tunnel outbound authentication SPI.
zInbEncryptSPI	INT	4	(IBM name: N/A) Tunnel inbound encryption SPI.
zOutbEncryptSPI	INT	4	(IBM name: N/A) Tunnel outbound encryption SPI.
zStartTime	TIME	4	(IBM name: N/A) Indicates the tunnel start time at which the tunnel was activated or refreshed, in UNIX format. Offset Name Ln. Format Description.
zEncryptKeyLength	INT	4	(IBM name: N/A) Encryption key length for variable-length algorithms, in bits. Zero for encryption algorithms that have a fixed key length (such as DES and 3DES) and nonzero for encryption algorithms that have a variable key length (such as AES-CBC and AES-GCM). Result: Example values are 128 and 256.

Secondary segment: SMF119#77_IPSec_Dynamic_Tunnel

Field Name	Type	Len	Description
SMF119#77_IPSec_Dynamic_Tunnel.<fieldname>			
zUDPEncap	BIT	1	UDP encapsulation indicator. The tunnel uses UDP encapsulation mode.
zLclNAT	BIT	1	Local NAT indicator. A NAT has been detected in front of the local security endpoint.
zRmtNAT	BIT	1	Remote NAT indicator. A NAT has been detected in front of the remote security endpoint.
zRmtNAPT	BIT	1	Remote NAPT indicator. An NAPT has been detected in front of the remote security endpoint. Result: Some NAPTs might be undetected. In

			that case, the 'zRmtNAT' bit is set, but this bit is not set.
zRmtGW	BIT	1	Remote NAT traversal gateway indicator. The tunnel uses UDP encapsulation and the remote security endpoint is acting as an IPsec gateway.
zRmtZOS	BIT	1	Remote z/OS indicator. The remote peer has been detected to be z/OS. The remote peer might be running z/OS but it might not be detected as such, if NAT traversal is not enabled.
zCanInitP2	BIT	1	Dynamic tunnel (P2) initiation indicator. If set, the local security endpoint can initiate dynamic tunnel negotiations with the remote security endpoint, otherwise, the remote security endpoint must initiate dynamic tunnel negotiations. Either side can initiate refreshes.
zSrcsSingle	BIT	1	Single source address indicator. Traffic source address is indicated by the zSrcAddr4 or zSrcAddr6 fields.
zSrcsPrefix	BIT	1	Prefixed source address indicator. Traffic source address is indicated by the zSrcAddr4 or zSrcAddr6, fields and the source address prefix is indicated by the zSrcAddrPrefix field.
zSrcsRange	BIT	1	Ranged source address indicator. Traffic source address range is indicated by the zSrcAddr4 and zSrcAddrRange4 fields, or by the zSrcAddr6 and zSrcAddrRange6 fields.
zDstlsSingle	BIT	1	Single destination address indicator. Traffic destination address is indicated by the zDstAddr4 or zDstAddr6 fields.
zDstlsPrefix	BIT	1	Prefixed destination address indicator. Traffic destination address is indicated by the zDstAddr4 or zDstAddr6 fields, and destination address prefix is indicated by the zDstAddrPrefix field.
zDstlsRange	BIT	1	Ranged destination address indicator. Traffic destination address range is indicated by the zDstAddr4 and zDstAddrRange4 fields, or by the zDstAddr6 and zDstAddrRange6 field.
zTransportOpaque	BIT	1	Opaque transport selector indicator. If set, the dynamic tunnel is protecting data traffic where the upper layer selectors, source and destination ports, ICMP or ICMPv6 type and code or IPv6 Mobility header type are not available as a result of fragmentation.
zVPNRule	CHAR	48	(IBM name: N/A) Dynamic VPN rule name for this tunnel. This field is blank if there is no local dynamic VPN rule.
zP1TunnelID	CHAR	48	(IBM name: N/A) Tunnel ID for this tunnel's parent IKE (phase 1) tunnel. As a result of refreshes, this tunnel ID might represent multiple related IKE tunnels.
zLifeseize	INT	8	(IBM name: N/A) Tunnel lifeseize. Nonzero values indicate the lifeseize value limit for the tunnel, in bytes.
zLifeseizeRefresh	INT	8	(IBM name: N/A) Tunnel lifeseize refresh. Nonzero values indicate the lifeseize value at which the tunnel is refreshed, in bytes.
zLifetimeExpire	TIME	4	(IBM name: N/A) Tunnel lifetime. Indicates the time at which the tunnel expires, in UNIX format.
zLifetimeRefresh	TIME	4	(IBM name: N/A) Tunnel lifetime refresh. Indicates the time at which the tunnel is refreshed, in UNIX format.
zVPNLifeExpire	TIME	4	(IBM name: N/A) Tunnel VPN lifetime expire. Nonzero values indicate the time at which the tunnel family ceases to be refreshed, in UNIX format. This field retains its original value for a refreshed tunnel.
zActMethod	INT (ENUM)	1	One of the following tunnel activation methods. 'USER' => User activation (from the command line). 'REMOTE' => Remote activation from IPsec peer. 'ONDEMAND' => On-demand activation caused by IP traffic. 'TAKEOVER' => SWSA activation as a result of a DVIPA takeover. 'AUTOACT' => Auto-activation This field retains its original value for a refreshed tunnel.
zRmtUDPPort	INT	2	(IBM name: N/A) If the tunnel uses UDP encapsulation mode, this value is the IKE UDP port of the remote security endpoint, otherwise, the value is 0.

zSrcNATOA	IPADDRESS	4	(IBM name: N/A) Source NAT original IP address. NAT original IP addresses are exchanged only for certain UDP-encapsulated tunnels. During NAT traversal negotiations, the IKE peer sends the source IP address that it is aware of. If NAT traversal negotiation did not occur or if an IKEv1 peer did not send a source NAT-OA payload, the value of this field is 0. Restriction: An IKEv1 peer at a pre-RFC3947 NAT traversal support level cannot send a source NAT-OA payload.
zDstNATOA	IPADDRESS	4	(IBM name: N/A) Destination NAT original IP address. NAT original IP addresses are exchanged only for certain UDP-encapsulated tunnels. During NAT traversal negotiations, the IKE peer sends the destination IP address that it is aware of. If NAT traversal negotiation did not occur or if an IKEv1 peer did not send a source NAT-OA payload, the value of this field is 0. Restriction: An IKEv1 peer at a pre-RFC3947 NAT traversal support level cannot send a source NAT-OA payload.
zProtocol	INT	1	(IBM name: N/A) Protocol for tunnel data. If the value is 0, the tunnel includes all protocols.
zSrcPort	INT	2	(IBM name: N/A) Low end of source port range for tunnel data or 0 if the tunnel is not limited to TCP or UDP.
zDstPort	INT	2	(IBM name: N/A) Low end of destination port range for tunnel data, or 0 if the tunnel is not limited to TCP or UDP.
zSrcAddr	IPADDRESS	16	(IBM name: N/A) One of the following values: If the zSrcIsSingle field is set, this field is the IPv4 or IPv6 source address for tunnel data. If the zSrcIsPrefix field is set, this field is the IPv4 or IPv6 source address base for tunnel data. If the zSrcIsRange field is set, this field is the low end of the IPv4 or IPv6 source address range for tunnel data.
zSrcAddrRange	IPADDRESS	16	(IBM name: N/A) If the zSrcIsRange field is set, this field is the highest address in the range of the IPv4 or IPv6 source addresses tunnel data.
zDstAddr	IPADDRESS	16	(IBM name: N/A) One of the following values: If the zDstIsSingle field is set, this field is the IPv4 or IPv6 destination address for tunnel data. If the zDstIsPrefix field is set, this field is the IPv4 or IPv6 destination address base for tunnel data. If the zDstIsRange field is set, this field is the lowest IPv4 or IPv6 destination address in the range for tunnel data.
zDstAddrRange	IPADDRESS	16	(IBM name: N/A) If the zDstIsRange field is set, this field is the highest IPv4 or IPv6 destination address in the range range for tunnel data.
zSrcAddrPrefix	INT	1	(IBM name: N/A) If the zSrcIsPrefix field is set, this field is the length of the tunnel data source address prefix in bits.
zDstAddrPrefix	INT	1	(IBM name: N/A) If the zDstIsPrefix field is set, this field is the length of the tunnel data destination address prefix in bits.
zMajorVer	INT	1	(IBM name: N/A) Major version of the IKE protocol in use. Only the low-order 4 bits are used.
zMinorVer	INT	1	(IBM name: N/A) Minor version of the IKE protocol in use. Only the low-order 4 bits are used.
zType	INT	1	(IBM name: N/A) Low end of ICMP, ICMPv6, or MIPv6 type range for tunnel data, otherwise, this value is 0 if the tunnel is not limited to ICMP, ICMPv6, or MIPv6.
zTypeRange	INT	1	(IBM name: N/A) High end of ICMP, ICMPv6, or MIPv6 type range for tunnel data, otherwise this value is 0 if the tunnel is not limited to ICMP, ICMPv6, or MIPv6. A tunnel applying to all type values is indicated as a value in the range 0- 255.
zCode	INT	1	(IBM name: N/A) Low end of ICMP or ICMPv6 code range for tunnel data, otherwise this value is 0 if the tunnel is not limited to ICMP or ICMPv6.

zCodeRange	INT	1	(IBM name: N/A) High end of ICMP or ICMPv6 code range for tunnel data, otherwise, this value is 0 if the tunnel is not limited to ICMP or ICMPv6. A tunnel applying to all code values is indicated as a value in the range 0 - 255.
zSrcPortRange	INT	2	(IBM name: N/A) High end of source port range for tunnel data, otherwise this value is 0 if the tunnel is not limited to TCP or UDP. A tunnel applying to all source port values is indicated as a value in the range 0- 65 535.
zDstPortRange	INT	2	(IBM name: N/A) High end of destination port range for tunnel data, or 0 if the tunnel is not limited to TCP or UDP. A tunnel applying to all destination port values is indicated as a value in the range 0 - 65 535.
zGeneration	INT	4	(IBM name: N/A) Tunnel generation number. The first dynamic tunnel with a particular tunnel ID has generation 1. Subsequent refreshes of this dynamic tunnel have the same tunnel ID but higher generation numbers.

Secondary segment: **SMF119#77_IPSec_Dynamic_Tunnel_Added**

Field Name	Type	Len	Description
<i>SMF119#77_IPSec_Dynamic_Tunnel_Added.<fieldname></i>			
zShadow	BIT	1	SWSA shadow indicator. The tunnel is an SWSA shadow tunnel originating from a distributing stack.

zReason	INT (ENUM)	1	(IBM name: SMF119TI_Reason) Reason for writing record. IntInc => Interval record, incomplete. Int => Interval record. IEndInc => Interval ending stats, incomplete. IEnd => Interval ending stats. IShtInc => Interval shutdown stats, incomplete. ISht => Interval shutdown stats. EvtInc => Event record, incomplete. Evt => Event record, complete.
zRecordID	INT	1	(IBM name: SMF119TI_RecordID) ID value for correlating records.

Secondary segment: **SMF119#78_IPSec_IP_Tunnel_Common**

Field Name	Type	Len	Description
<i>SMF119#78_IPSec_IP_Tunnel_Common.<fieldname></i>			
zID	CHAR	48	(IBM name: SMF119TN_ID) Tunnel ID.
zVPNAction	CHAR	48	(IBM name: N/A) Tunnel VPN action name.
zIPv6	BIT	1	The IPv6 indicator. If this bit is set, all IKE tunnel security endpoints are IPv6 addresses. If this bit is not set, the endpoints are IPv4 addresses.
zFIPS140	BIT	1	FIPS 140 mode indicator. If this field is set, cryptographic operations for this tunnel are performed using cryptographic algorithms and modules that are designed to meet the FIPS 140 requirements, otherwise, cryptographic algorithms and modules that do not meet the FIPS 140 requirements might be used.
zType	INT (ENUM)	1	(IBM name: N/A) Tunnel type.
zState	INT (ENUM)	1	

			(IBM name: N/A) Tunnel state.
zLclEndpt	IPADDRESS	16	(IBM name: N/A) If zIPv6 is set, this field is the 16 byte IPv6 local security endpoint address. Otherwise, this field is the 4 byte IPv4 local security endpoint address.
zRmtEndpt	IPADDRESS	16	(IBM name: N/A) If zIPv6 is set, this field is the 16 byte IPv6 remote security endpoint address. Otherwise, this field is the 4 byte IPv4 remote security endpoint address.
zEncapMode	INT (ENUM)	1	(IBM name: N/A) Encapsulation mode.
zAuthProto	INT (ENUM)	1	(IBM name: N/A) Tunnel Authentication Protocol.
zAuthAlg	INT (ENUM)	1	(IBM name: N/A) Tunnel authentication algorithm. 'HMAC_MD5' => The tunnel uses HMAC-MD5 authentication with the full 128-bit Integrity Check Value (ICV). This value is applicable only to IKEv1 tunnels. 'HMAC_SHA1' => The tunnel uses HMAC-SHA1 authentication with the full 160-bit ICV. This value is applicable only to IKEv1 tunnels. 'HMAC_MD5_96' => The tunnel uses HMAC-MD5 authentication with ICV truncation to 96 bits. This value is applicable only to IKEv2 tunnels. 'HMAC_SHA1_96' => The tunnel uses HMAC-SHA1 authentication with ICV truncation to 96 bits. This value is applicable only to IKEv2 tunnels. 'HMAC_SHA2_256_128' => The tunnel uses HMAC-SHA2-256 authentication with ICV truncation to 128 bits. 'HMAC_SHA2_384_192' => The tunnel uses HMAC-SHA2-384 authentication with ICV truncation to 192 bits. 'HMAC_SHA2_512_256' => The tunnel uses HMAC-SHA2-512 authentication with ICV truncation to 256 bits. 'AES128_XCBC_96' => The tunnel uses AES128-XCBC authentication with ICV truncation to 96 bits.
zEncryptAlg	INT (ENUM)	1	(IBM name: N/A) Tunnel encryption algorithm.
zInbAuthSPI	INT	4	(IBM name: N/A) Tunnel inbound authentication SPI.
zOutbAuthSPI	INT	4	(IBM name: N/A) Tunnel outbound authentication SPI.
zInbEncryptSPI	INT	4	(IBM name: N/A) Tunnel inbound encryption SPI.
zOutbEncryptSPI	INT	4	(IBM name: N/A) Tunnel outbound encryption SPI.
zStartTime	TIME	4	(IBM name: N/A) Indicates the tunnel start time at which the tunnel was activated or refreshed, in UNIX format. Offset Name Ln. Format Description.
zEncryptKeyLength	INT	4	(IBM name: N/A) Encryption key length for variable-length algorithms, in bits. Zero for encryption algorithms that have a fixed key length (such as DES and 3DES) and nonzero for encryption algorithms that have a variable key length (such as AES-CBC and AES-GCM). Result: Example values are 128 and 256.

Secondary segment: SMF119#78_IPSec_Dynamic_Tunnel

Field Name	Type	Len	Description
SMF119#78_IPSec_Dynamic_Tunnel.<fieldname>			
zUDPEncap	BIT	1	UDP encapsulation indicator. The tunnel uses UDP encapsulation mode.
zLclNAT	BIT	1	Local NAT indicator. A NAT has been detected in front of the local security endpoint.
zRmtNAT	BIT	1	Remote NAT indicator. A NAT has been detected in front of the remote security endpoint.
zRmtNAPT	BIT	1	Remote NAPT indicator. An NAPT has been detected in front of the remote security endpoint. Result: Some NAPTs might be undetected. In

			that case, the 'zRmtNAT' bit is set, but this bit is not set.
zRmtGW	BIT	1	Remote NAT traversal gateway indicator. The tunnel uses UDP encapsulation and the remote security endpoint is acting as an IPSec gateway.
zRmtZOS	BIT	1	Remote z/OS indicator. The remote peer has been detected to be z/OS. The remote peer might be running z/OS but it might not be detected as such, if NAT traversal is not enabled.
zCanInitP2	BIT	1	Dynamic tunnel (P2) initiation indicator. If set, the local security endpoint can initiate dynamic tunnel negotiations with the remote security endpoint, otherwise, the remote security endpoint must initiate dynamic tunnel negotiations. Either side can initiate refreshes.
zSrcsSingle	BIT	1	Single source address indicator. Traffic source address is indicated by the zSrcAddr4 or zSrcAddr6 fields.
zSrcsPrefix	BIT	1	Prefixed source address indicator. Traffic source address is indicated by the zSrcAddr4 or zSrcAddr6, fields and the source address prefix is indicated by the zSrcAddrPrefix field.
zSrcsRange	BIT	1	Ranged source address indicator. Traffic source address range is indicated by the zSrcAddr4 and zSrcAddrRange4 fields, or by the zSrcAddr6 and zSrcAddrRange6 fields.
zDstlsSingle	BIT	1	Single destination address indicator. Traffic destination address is indicated by the zDstAddr4 or zDstAddr6 fields.
zDstlsPrefix	BIT	1	Prefixed destination address indicator. Traffic destination address is indicated by the zDstAddr4 or zDstAddr6 fields, and destination address prefix is indicated by the zDstAddrPrefix field.
zDstlsRange	BIT	1	Ranged destination address indicator. Traffic destination address range is indicated by the zDstAddr4 and zDstAddrRange4 fields, or by the zDstAddr6 and zDstAddrRange6 field.
zTransportOpaque	BIT	1	Opaque transport selector indicator. If set, the dynamic tunnel is protecting data traffic where the upper layer selectors, source and destination ports, ICMP or ICMPv6 type and code or IPv6 Mobility header type are not available as a result of fragmentation.
zVPNRule	CHAR	48	(IBM name: N/A) Dynamic VPN rule name for this tunnel. This field is blank if there is no local dynamic VPN rule.
zP1TunnelID	CHAR	48	(IBM name: N/A) Tunnel ID for this tunnel's parent IKE (phase 1) tunnel. As a result of refreshes, this tunnel ID might represent multiple related IKE tunnels.
zLifeseize	INT	8	(IBM name: N/A) Tunnel lifeseize. Nonzero values indicate the lifeseize value limit for the tunnel, in bytes.
zLifeseizeRefresh	INT	8	(IBM name: N/A) Tunnel lifeseize refresh. Nonzero values indicate the lifeseize value at which the tunnel is refreshed, in bytes.
zLifetimeExpire	TIME	4	(IBM name: N/A) Tunnel lifetime. Indicates the time at which the tunnel expires, in UNIX format.
zLifetimeRefresh	TIME	4	(IBM name: N/A) Tunnel lifetime refresh. Indicates the time at which the tunnel is refreshed, in UNIX format.
zVPNLifeExpire	TIME	4	(IBM name: N/A) Tunnel VPN lifetime expire. Nonzero values indicate the time at which the tunnel family ceases to be refreshed, in UNIX format. This field retains its original value for a refreshed tunnel.
zActMethod	INT (ENUM)	1	One of the following tunnel activation methods. 'USER' => User activation (from the command line). 'REMOTE' => Remote activation from IPSec peer. 'ONDEMAND' => On-demand activation caused by IP traffic. 'TAKEOVER' => SWSA activation as a result of a DVIPA takeover. 'AUTOACT' => Auto-activation This field retains its original value for a refreshed tunnel.
zRmtUDPPort	INT	2	(IBM name: N/A) If the tunnel uses UDP encapsulation mode, this value is the IKE UDP port of the remote security endpoint, otherwise, the value is 0.

zSrcNATOA	IPADDRESS	4	(IBM name: N/A) Source NAT original IP address. NAT original IP addresses are exchanged only for certain UDP-encapsulated tunnels. During NAT traversal negotiations, the IKE peer sends the source IP address that it is aware of. If NAT traversal negotiation did not occur or if an IKEv1 peer did not send a source NAT-OA payload, the value of this field is 0. Restriction: An IKEv1 peer at a pre-RFC3947 NAT traversal support level cannot send a source NAT-OA payload.
zDstNATOA	IPADDRESS	4	(IBM name: N/A) Destination NAT original IP address. NAT original IP addresses are exchanged only for certain UDP-encapsulated tunnels. During NAT traversal negotiations, the IKE peer sends the destination IP address that it is aware of. If NAT traversal negotiation did not occur or if an IKEv1 peer did not send a source NAT-OA payload, the value of this field is 0. Restriction: An IKEv1 peer at a pre-RFC3947 NAT traversal support level cannot send a source NAT-OA payload.
zProtocol	INT	1	(IBM name: N/A) Protocol for tunnel data. If the value is 0, the tunnel includes all protocols.
zSrcPort	INT	2	(IBM name: N/A) Low end of source port range for tunnel data or 0 if the tunnel is not limited to TCP or UDP.
zDstPort	INT	2	(IBM name: N/A) Low end of destination port range for tunnel data, or 0 if the tunnel is not limited to TCP or UDP.
zSrcAddr	IPADDRESS	16	(IBM name: N/A) One of the following values: If the zSrcIsSingle field is set, this field is the IPv4 or IPv6 source address for tunnel data. If the zSrcIsPrefix field is set, this field is the IPv4 or IPv6 source address base for tunnel data. If the zSrcIsRange field is set, this field is the low end of the IPv4 or IPv6 source address range for tunnel data.
zSrcAddrRange	IPADDRESS	16	(IBM name: N/A) If the zSrcIsRange field is set, this field is the highest address in the range of the IPv4 or IPv6 source addresses tunnel data.
zDstAddr	IPADDRESS	16	(IBM name: N/A) One of the following values: If the zDstIsSingle field is set, this field is the IPv4 or IPv6 destination address for tunnel data. If the zDstIsPrefix field is set, this field is the IPv4 or IPv6 destination address base for tunnel data. If the zDstIsRange field is set, this field is the lowest IPv4 or IPv6 destination address in the range for tunnel data.
zDstAddrRange	IPADDRESS	16	(IBM name: N/A) If the zDstIsRange field is set, this field is the highest IPv4 or IPv6 destination address in the range range for tunnel data.
zSrcAddrPrefix	INT	1	(IBM name: N/A) If the zSrcIsPrefix field is set, this field is the length of the tunnel data source address prefix in bits.
zDstAddrPrefix	INT	1	(IBM name: N/A) If the zDstIsPrefix field is set, this field is the length of the tunnel data destination address prefix in bits.
zMajorVer	INT	1	(IBM name: N/A) Major version of the IKE protocol in use. Only the low-order 4 bits are used.
zMinorVer	INT	1	(IBM name: N/A) Minor version of the IKE protocol in use. Only the low-order 4 bits are used.
zType	INT	1	(IBM name: N/A) Low end of ICMP, ICMPv6, or MIPv6 type range for tunnel data, otherwise, this value is 0 if the tunnel is not limited to ICMP, ICMPv6, or MIPv6.
zTypeRange	INT	1	(IBM name: N/A) High end of ICMP, ICMPv6, or MIPv6 type range for tunnel data, otherwise this value is 0 if the tunnel is not limited to ICMP, ICMPv6, or MIPv6. A tunnel applying to all type values is indicated as a value in the range 0- 255.
zCode	INT	1	(IBM name: N/A) Low end of ICMP or ICMPv6 code range for tunnel data, otherwise this value is 0 if the tunnel is not limited to ICMP or ICMPv6.

zCodeRange	INT	1	(IBM name: N/A) High end of ICMP or ICMPv6 code range for tunnel data, otherwise, this value is 0 if the tunnel is not limited to ICMP or ICMPv6. A tunnel applying to all code values is indicated as a value in the range 0 - 255.
zSrcPortRange	INT	2	(IBM name: N/A) High end of source port range for tunnel data, otherwise this value is 0 if the tunnel is not limited to TCP or UDP. A tunnel applying to all source port values is indicated as a value in the range 0- 65 535.
zDstPortRange	INT	2	(IBM name: N/A) High end of destination port range for tunnel data, or 0 if the tunnel is not limited to TCP or UDP. A tunnel applying to all destination port values is indicated as a value in the range 0 - 65 535.
zGeneration	INT	4	(IBM name: N/A) Tunnel generation number. The first dynamic tunnel with a particular tunnel ID has generation 1. Subsequent refreshes of this dynamic tunnel have the same tunnel ID but higher generation numbers.

Secondary segment: **SMF119#78_IPSec_Dynamic_Tunnel_Removed**

Field Name	Type	Len	Description
<i>SMF119#78_IPSec_Dynamic_Tunnel_Removed.<fieldname></i>			
zShadow	BIT	1	SWSA shadow indicator. The tunnel is an SWSA shadow tunnel originating from a distributing stack.
zLifesizeCur	INT	8	(IBM name: N/A) Current lifesize value. If the tunnel lifesize value is set, this setting represents the current value of the lifesize counter.
zOutPkt	INT	8	(IBM name: N/A) Outbound packet count for this tunnel. For SWSA tunnels, this value represents this tunnel's outbound packet count only for this particular TCP/IP stack.
zInPkt	INT	8	(IBM name: N/A) Inbound packet count for this tunnel. For SWSA tunnels, this value represents this tunnel's inbound packet count only for this particular TCP/IP stack.
zOutBytes	INT	8	(IBM name: N/A) Outbound byte count for this tunnel, representing the number of outbound data bytes protected by the tunnel. For SWSA tunnels, this value represents this tunnel's outbound byte count only for this particular TCP/IP stack.
zInBytes	INT	8	(IBM name: N/A) Inbound byte count for this tunnel, representing the number of inbound data bytes protected by the tunnel. For SWSA tunnels, this value represents this tunnel's inbound byte count only for this particular TCP/IP stack.

Record Type 119 Subtype 79 - IPsec Manual Tunnel Activate/Refresh

Primary Segment:

- [SMF119#79_TCPIP_Statistics](#)

Secondary Segment(s): 2 (in alphabetical order)

- [SMF119#79_Identification](#)

<i>SMF119#79_TCPIP_Statistics.<fieldname></i>			
<i>SMF119#79_TCPIP_Statistics.Header.<fieldname></i>			
zFLG	HEX	1	(IBM name: N/A) System indicator: Bit Meaning when set 0-2 Reserved. 3-6 Version indicators 7 Reserved.
zRTY	INT	1	(IBM name: N/A) Record type 119
zTME	TSTMP	8	(IBM name: N/A) Date/Time that the record was moved into the SMF buffer.
zSID	CHAR	4	(IBM name: N/A) System ID.
zSSID	CHAR	4	(IBM name: N/A) Subsystem ID.
zSTY	INT	2	(IBM name: N/A) Record subtype.
<i>SMF119#79_TCPIP_Statistics.Self_defining_Section.<fieldname></i>			
zTRN	INT	2	(IBM name: SMF119SD_TRN) Number of triplets.
zDOff	INT	4	(IBM name: N/A) Offset to the TCP/IP Identification section from the beginning of the record (including RDW).
zDLen	INT	2	(IBM name: N/A) Length of the TCP/IP Identification section.
zDNum	INT	2	(IBM name: N/A) Number of TCP/IP Identification sections.
z1Off	INT	4	(IBM name: N/A) Offset to common IP tunnel section.
z1Len	INT	2	(IBM name: N/A) Length of common IP tunnel section.
z1Num	INT	2	(IBM name: N/A) Number of common IP tunnel sections.

Secondary segment: [SMF119#79_Identification](#)

Field Name	Type	Len	Description
<i>SMF119#79_Identification.<fieldname></i>			
zSYSName	CHAR	8	(IBM name: SMF119TI_SYSName) System name from SYSNAME in IEASYSxx.

zSysplexName	CHAR	8	(IBM name: SMF119TI_SysplexName) Sysplex name from SYSPLEX in COUPLExx.
zStack	CHAR	8	(IBM name: SMF119TI_Stack) TCP/IP stack name.
zReleaseID	CHAR	8	(IBM name: SMF119TI_ReleaseID) z/OS Communications Server TCP/IP release identifier.
zComp	CHAR	8	(IBM name: SMF119TI_Comp) TCP/IP subcomponent.
zASName	CHAR	8	(IBM name: SMF119TI_ASName) Started task qualifier or name of address space that writes this SMF record.
zUserID	CHAR	8	(IBM name: SMF119TI_UserID) User ID of security context.
zASID	INT	2	(IBM name: SMF119TI_ASID) ASID of address space that writes this SMF record.
zReason	INT (ENUM)	1	(IBM name: SMF119TI_Reason) Reason for writing record. IntInc => Interval record, incomplete. Int => Interval record. IEndInc => Interval ending stats, incomplete. IEnd => Interval ending stats. IShtInc => Interval shutdown stats, incomplete. ISht => Interval shutdown stats. EvtInc => Event record, incomplete. Evt => Event record, complete.
zRecordID	INT	1	(IBM name: SMF119TI_RecordID) ID value for correlating records.

Secondary segment: **SMF119#79_IPSec_IP_Tunnel_Common**

Field Name	Type	Len	Description
<i>SMF119#79_IPSec_IP_Tunnel_Common.<fieldname></i>			
zID	CHAR	48	(IBM name: SMF119TN_ID) Tunnel ID.
zVPNAction	CHAR	48	(IBM name: N/A) Tunnel VPN action name.
zIPv6	BIT	1	The IPv6 indicator. If this bit is set, all IKE tunnel security endpoints are IPv6 addresses. If this bit is not set, the endpoints are IPv4 addresses.
zFIPS140	BIT	1	FIPS 140 mode indicator. If this field is set, cryptographic operations for this tunnel are performed using cryptographic algorithms and modules that are designed to meet the FIPS 140 requirements, otherwise, cryptographic algorithms and modules that do not meet the FIPS 140 requirements might be used.

zRecordID	INT	1	(IBM name: SMF119TI_RecordID) ID value for correlating records.

Secondary segment: **SMF119#80_IPSec_IP_Tunnel_Common**

Field Name	Type	Len	Description
<i>SMF119#80_IPSec_IP_Tunnel_Common.<fieldname></i>			
zID	CHAR	48	(IBM name: SMF119TN_ID) Tunnel ID.
zVPNAction	CHAR	48	(IBM name: N/A) Tunnel VPN action name.
zIPv6	BIT	1	The IPv6 indicator. If this bit is set, all IKE tunnel security endpoints are IPv6 addresses. If this bit is not set, the endpoints are IPv4 addresses.
zFIPS140	BIT	1	FIPS 140 mode indicator. If this field is set, cryptographic operations for this tunnel are performed using cryptographic algorithms and modules that are designed to meet the FIPS 140 requirements, otherwise, cryptographic algorithms and modules that do not meet the FIPS 140 requirements might be used.
zType	INT (ENUM)	1	(IBM name: N/A) Tunnel type.
zState	INT (ENUM)	1	(IBM name: N/A) Tunnel state.
zLclEndpt	IPADDRESS	16	(IBM name: N/A) If zIPv6 is set, this field is the 16 byte IPv6 local security endpoint address. Otherwise, this field is the 4 byte IPv4 local security endpoint address.
zRmtEndpt	IPADDRESS	16	(IBM name: N/A) If zIPv6 is set, this field is the 16 byte IPv6 remote security endpoint address. Otherwise, this field is the 4 byte IPv4 remote security endpoint address.

zEncapMode	INT (ENUM)	1	(IBM name: N/A) Encapsulation mode.
zAuthProto	INT (ENUM)	1	(IBM name: N/A) Tunnel Authentication Protocol.
zAuthAlg	INT (ENUM)	1	(IBM name: N/A) Tunnel authentication algorithm. 'HMAC_MD5' => The tunnel uses HMAC-MD5 authentication with the full 128-bit Integrity Check Value (ICV). This value is applicable only to IKEv1 tunnels. 'HMAC_SHA1' => The tunnel uses HMAC-SHA1 authentication with the full 160-bit ICV. This value is applicable only to IKEv1 tunnels. 'HMAC_MD5_96' => The tunnel uses HMAC-MD5 authentication with ICV truncation to 96 bits. This value is applicable only to IKEv2 tunnels. 'HMAC_SHA1_96' => The tunnel uses HMAC-SHA1 authentication with ICV truncation to 96 bits. This value is applicable only to IKEv2 tunnels. 'HMAC_SHA2_256_128' => The tunnel uses HMAC-SHA2-256 authentication with ICV truncation to 128 bits. 'HMAC_SHA2_384_192' => The tunnel uses HMAC-SHA2-384 authentication with ICV truncation to 192 bits. 'HMAC_SHA2_512_256' => The tunnel uses HMAC-SHA2-512 authentication with ICV truncation to 256 bits. 'AES128_XCBC_96' => The tunnel uses AES128-XCBC authentication with ICV truncation to 96 bits.
zEncryptAlg	INT (ENUM)	1	(IBM name: N/A) Tunnel encryption algorithm.
zInbAuthSPI	INT	4	(IBM name: N/A) Tunnel inbound authentication SPI.
zOutbAuthSPI	INT	4	(IBM name: N/A) Tunnel outbound authentication SPI.
zInbEncryptSPI	INT	4	(IBM name: N/A) Tunnel inbound encryption SPI.
zOutbEncryptSPI	INT	4	(IBM name: N/A) Tunnel outbound encryption SPI.
zStartTime	TIME	4	(IBM name: N/A) Indicates the tunnel start time at which the tunnel was activated or refreshed, in UNIX format. Offset Name Ln. Format Description.
zEncryptKeyLength	INT	4	(IBM name: N/A) Encryption key length for variable-length algorithms, in bits. Zero for encryption algorithms that have a fixed key length (such as DES and 3DES) and nonzero for encryption algorithms that have a variable key length (such as AES-CBC and AES-GCM). Result: Example values are 128 and 256.

Secondary segment: SMF119#80_IPSec_Manual_Tunnel

Field Name	Type	Len	Description
<i>SMF119#80_IPSec_Manual_Tunnel.<fieldname></i>			
zOutPkt	INT	8	(IBM name: N/A) Outbound packet count for this tunnel.
zInPkt	INT	8	(IBM name: N/A) Inbound packet count for this tunnel.
zOutBytes	INT	8	(IBM name: N/A) Outbound byte count for this tunnel, representing the number of outbound data bytes protected by the tunnel.
zInBytes	INT	8	(IBM name: N/A) Inbound byte count for this tunnel, representing the number of inbound data bytes protected by the tunnel.

Record Type 119 Subtype 81 - VTAM 3270 IDS event**Primary Segment:**

- **SMF119#81_TCPIP_Statistics**

Secondary Segment(s): 4 (in alphabetical order)

- **SMF119#81_IDS_3270_Common**
- **SMF119#81_IDS_3270_Inbound_Buffer**
- **SMF119#81_IDS_3270_Outbound_Buffer**

Primary segment: SMF119#81_TCPIP_Statistics

Field Name	Type	Len	Description
<i>SMF119#81_TCPIP_Statistics.<fieldname></i>			
<i>SMF119#81_TCPIP_Statistics.Header.<fieldname></i>			
zFLG	HEX	1	(IBM name: N/A) System indicator: Bit Meaning when set 0-2 Reserved. 3-6 Version indicators 7 Reserved.
zRTY	INT	1	(IBM name: N/A) Record type 119
zTME	TSTMP	8	(IBM name: N/A) Date/Time that the record was moved into the SMF buffer.
zSID	CHAR	4	(IBM name: N/A) System ID.
zSSID	CHAR	4	(IBM name: N/A) Subsystem ID.
zSTY	INT	2	(IBM name: N/A) Record subtype.

<i>SMF119#81_TCPIP_Statistics.Self_defining_Section.<fieldname></i>			
zTRN	INT	2	(IBM name: SMF119SD_TRN) Number of triplets.
zDOff	INT	4	(IBM name: N/A) Offset to the TCP/IP Identification section from the beginning of the record (including RDW).
zDLen	INT	2	(IBM name: N/A) Length of the TCP/IP Identification section.
zDNum	INT	2	(IBM name: N/A) Number of TCP/IP Identification sections.
z1Off	INT	4	(IBM name: N/A) Offset to 3270 IDS common section.
z1Len	INT	2	(IBM name: N/A) Length of 3270 IDS common section.
z1Num	INT	2	(IBM name: N/A) Number of 3270 IDS common sections.
z2Off	INT	4	(IBM name: N/A) Offset to outbound buffer section.
z2Len	INT	2	(IBM name: N/A) Length of outbound buffer section.
z2Num	INT	2	(IBM name: N/A) Number of outbound buffer sections.
z3Off	INT	4	(IBM name: N/A) Offset to inbound buffer section.

z3Len	INT	2	(IBM name: N/A) Length of inbound buffer section.
z3Num	INT	2	(IBM name: N/A) Number of inbound buffer sections.

Secondary segment: **SMF119#81_Identification**

Field Name	Type	Len	Description
<i>SMF119#81_Identification.<fieldname></i>			
zSYSName	CHAR	8	(IBM name: SMF119TI_SYSName) System name from SYSNAME in IEASYSxx.
zSysplexName	CHAR	8	(IBM name: SMF119TI_SysplexName) Sysplex name from SYSPLEX in COUPLExx.
zStack	CHAR	8	(IBM name: SMF119TI_Stack) TCP/IP stack name.
zReleaseID	CHAR	8	(IBM name: SMF119TI_ReleaseID) z/OS Communications Server TCP/IP release identifier.
zComp	CHAR	8	(IBM name: SMF119TI_Comp) TCP/IP subcomponent.
zASName	CHAR	8	(IBM name: SMF119TI_ASName) Started task qualifier or name of address space that writes this SMF record.
zUserID	CHAR	8	(IBM name: SMF119TI_UserID) User ID of security context.
zASID	INT	2	(IBM name: SMF119TI_ASID) ASID of address space that writes this SMF record.
zReason	INT (ENUM)	1	(IBM name: SMF119TI_Reason) Reason for writing record. IntInc => Interval record, incomplete. Int => Interval record. IEndInc => Interval ending stats, incomplete. IEnd => Interval ending stats. IShtInc => Interval shutdown stats, incomplete. ISht => Interval shutdown stats. EvtInc => Event record, incomplete. Evt => Event record, complete.
zRecordID	INT	1	(IBM name: SMF119TI_RecordID) ID value for correlating records.

Secondary segment: **SMF119#81_IDS_3270_Common**

Field Name	Type	Len	Description
<i>SMF119#81_IDS_3270_Common.<fieldname></i>			
zTime	TSTMP	8	(IBM name: N/A) STCK time of the incident (UTC).
zPLUName	CHAR	17	(IBM name: N/A) PLU NetId.name.
zSLUName	CHAR	17	(IBM name: N/A) SLU NetId.name.
zSID	CHAR	8	(IBM name: N/A) Session Id.
zIncTk	INT	4	(IBM name: N/A) Event token.
zECode	CHAR	1	(IBM name: N/A) Event error code.
zDSCOUNT	INT	1	

			(IBM name: N/A) DSCOUNT parameter.
zACTION	INT (ENUM)	1	(IBM name: N/A) DSACTION parameter DS ACTION Report Level.
zRIP	IPADDRESS	16	(IBM name: N/A) Remote IP address (TN3270 sessions only).
zRPort	INT	2	(IBM name: N/A) Remote port number (TN3270 sessions only).
zRow	INT	1	(IBM name: N/A) 3270 display row.
zColumn	INT	1	(IBM name: N/A) 3270 display column.
zOffset	INT	2	(IBM name: N/A) Offset into 3270 Buffer.
zOBufO	INT	2	(IBM name: N/A) Outbound buffer offset.
zIBufO	INT	2	(IBM name: N/A) Inbound buffer offset.
zOBufL	INT	2	(IBM name: N/A) Outbound buffer length.
zIBufL	INT	2	(IBM name: N/A) Inbound buffer length.
zOSEQ	INT	2	(IBM name: N/A) Outbound PIU sequence number.
zISEQ	INT	2	(IBM name: N/A) Inbound PIU sequence number.
zOFLD	CHAR	32	(IBM name: N/A) 32 bytes of outbound 3270 data stream.
zIFLD	CHAR	32	(IBM name: N/A) 32 bytes of inbound PIU field 3270 data stream.

Secondary segment: SMF119#81_IDS_3270_Outbound_Buffer

Field Name	Type	Len	Description
<i>SMF119#81_IDS_3270_Outbound_Buffer.<fieldname></i>			
zTime	TSTMP	8	(IBM name: N/A) STCK time of the buffer (UTC).
zFSNF	INT	2	(IBM name: N/A) First sequence number.
zLSNF	INT	2	(IBM name: N/A) Last sequence number.
zOFF	INT	2	(IBM name: N/A) Offset of data in zRU.
zLen	INT	2	(IBM name: N/A) Length of data in zRU.
zDSBn	INT	1	(IBM name: N/A) DSCOUNT buffer number.
<i>SMF119#81_IDS_3270_Outbound_Buffer.zFlags.<fieldname></i>			
zCData	BIT	1	Confidential data.
<i>SMF119#81_IDS_3270_Outbound_Buffer.<fieldname></i>			
zTH	CHAR	26	

			(IBM name: N/A) SNA Transmission header.
zRH	CHAR	3	(IBM name: N/A) SNA Request header.
zRU	CHAR	4096	(IBM name: N/A) Outbound RU data. Note: There is one record for each outbound buffer.

Secondary segment: **SMF119#81_IDS_3270_Inbound_Buffer**

Field Name	Type	Len	Description
<i>SMF119#81_IDS_3270_Inbound_Buffer.<fieldname></i>			
zTime	TSTMP	8	(IBM name: N/A) STCK time of the buffer (UTC).
zFSNF	INT	2	(IBM name: N/A) First sequence number.
zLSNF	INT	2	(IBM name: N/A) Last sequence number.
zOFF	INT	2	(IBM name: N/A) Offset of data in zRU.
zLen	INT	2	(IBM name: N/A) Length of data in zRU.

<i>SMF119#81_IDS_3270_Inbound_Buffer.zFlags.<fieldname></i>			
zCData	BIT	1	Confidential data.

<i>SMF119#81_IDS_3270_Inbound_Buffer.<fieldname></i>			
zTH	CHAR	26	(IBM name: N/A) SNA Transmission header.
zRH	CHAR	3	(IBM name: N/A) SNA Request header.
zRU	CHAR	4096	(IBM name: N/A) Inbound RU data. Note: The inbound record is recorded in the last (or only) record.

Record Type 120 - WebSphere

SMF Record 120 (WebSphere) has several subtypes, each mapped by a structure member name of the format "T120STnn".

Record Type 120 Subtype 1 - Server Activity

Primary Segment:

- SMF120#01_WebSphere_Server_Activity

Secondary Segment(s): 4 (in alphabetical order)

- SMF120#01_Comms
- SMF120#01_JVM_Heap
- SMF120#01_Product
- SMF120#01_Server_Activity

Primary segment: SMF120#01_WebSphere_Server_Activity

Field Name	Type	Len	Description
<i>SMF120#01_WebSphere_Server_Activity.<fieldname></i>			
SMF120#01_WebSphere_Server_Activity.Header_Self_defining_Section.<fieldname>			
zFLG	HEX	1	(IBM name: SM120FLG) System indicator: Bit Meaning when set 0 New SMF record format 1 Subtypes used 2 Reserved. 3-6 Version indicators 7 System is running in PR/SM mode.
zRTY	INT	1	(IBM name: SM120RTY) Record type 79 (X'4F').
zTME	TSTMP	8	(IBM name: SM120TME) Date/Time when the record was moved into the SMF buffer.
zSID	CHAR	4	(IBM name: SM120SID) System identification (from the SMFPRMxx SID parameter).
zSSI	CHAR	4	(IBM name: SM120SSI) Sub-system identification ('RMF').
zSTY	INT	2	(IBM name: SM120STY) Record subtype. 1=Job start or start of other work unit. The subtype 1 record identifies the work unit but contains no resource data. 2=Activity since previous interval ended. 3=Activity for the last interval before step termination. 4=Step total. 5=Job termination or termination of other work unit. 6=System address space. Contains the total resources used since the start of the address space. Note that the data in the subtype 6 record is cumulative, unlike the subtype 2 record.
zSTYe	INT (ENUM)	2	(IBM name: SM120STYe) Record subtype - short expansion
zTRN	INT	4	(IBM name: SM120TRN) Number of triplets in the record.
zPRS	INT	4	(IBM name: SM120PRS) Offset to product section from RDW.
zPRL	INT	4	(IBM name: SM120PRL) Length of product section.
zPRN	INT	4	(IBM name: SM120PRN) Number of product sections.
zSAS	INT	4	(IBM name: SM120SAS) Offset to server activity section from RDW
zSAL	INT	4	

			(IBM name: SM120SAL) Length of server activity section
zSAN	INT	4	(IBM name: SM120SAN) Number of server activity sections
zCSS	INT	4	(IBM name: SM120CSS) Offset to communication session section from RDW
zCSL	INT	4	(IBM name: SM120CSL) Length of communication session section
zCSN	INT	4	(IBM name: SM120CSN) Number of communication session sections
zJHS	INT	4	(IBM name: SM120JHS) Offset to JVM heap section from RDW
zJHL	INT	4	(IBM name: SM120JHL) Length of JVM heap section
zJHN	INT	4	(IBM name: SM120JHN) Number of jvm heap sections

Secondary segment: SMF120#01_Product

Field Name	Type	Len	Description
<i>SMF120#01_Product.<fieldname></i>			
zMFV	INT	4	(IBM name: SM120MFV) CB SMF version
zCOD	CHAR	8	(IBM name: SM120COD) Character codeset in which strings in the SMF record are encoded
zEND	INT	4	(IBM name: SM120END) Encode of numbers in the SMF record
zTSF	INT	4	(IBM name: SM120TSF) Encoding of timestamps: 1: S390STCK64: The time values are encoded in 64-bit S/390@Store Clock format.
zIXR	INT	4	(IBM name: SM120IXR) Index of this record
zNRC	INT	4	(IBM name: SM120NRC) Total number of records
zNTR	INT	4	(IBM name: SM120NTR) Total number of triplets

Secondary segment: SMF120#01_Server_Activity

Field Name	Type	Len	Description
<i>SMF120#01_Server_Activity.<fieldname></i>			
zHNM	CHAR	64	(IBM name: SM120HNM) WebSphereApplication Server for z/OStransaction server host name
zSNA	CHAR	8	(IBM name: SM120SNA) WebSphereApplication Server for z/OStransaction server name
zINA	CHAR	8	(IBM name: SM120INA) WebSphereApplication Server for z/OStransaction server instance name
zSNM	INT	4	(IBM name: SM120SNM) Total number of server servants that were involved to process this activity. If applicable, up to the first five server servant address space IDs are listed within the next five fields.

zSR1	INT	4	(IBM name: SM120SR1) The specific WebSphereApplication Server for z/OStransaction server instance server servant where the request ran
zSR2	INT	4	(IBM name: SM120SR2) The specific WebSphereApplication Server for z/OStransaction server instance server servant where the request ran
zSR3	INT	4	(IBM name: SM120SR3) The specific WebSphereApplication Server for z/OStransaction server instance server servant where the request ran
zSR4	INT	4	(IBM name: SM120SR4) The specific WebSphereApplication Server for z/OStransaction server instance server servant where the request ran
zSR5	INT	4	(IBM name: SM120SR5) The specific WebSphereApplication Server for z/OStransaction server instance server servant where the request ran
zCRE	CHAR	8	(IBM name: SM120CRE) The user credentials under which the activity began. Due to deferred security authentication, the user credentials assigned to the request when it first reaches the server will often be the unauthenticated guest ID, and not the ID of the authenticated user that submitted the request.
zATY	INT (ENUM)	4	(IBM name: SM120ATY) Type of activity that this record references:
zAID	HEX	20	(IBM name: SM120AID) Identity of the activity
zWLM	HEX	8	(IBM name: SM120WLM) WLM enclave token
zAST	TSTMP	8	(IBM name: SM120AST) Activity start time
zAET	TSTMP	8	(IBM name: SM120AET) Activity stop time
zNIM	INT	4	(IBM name: SM120NIM) Number of input methods
zNGT	INT	4	(IBM name: SM120NGT) Number of global transactions that were started in the server servant
zNLT	INT	4	(IBM name: SM120NLT) Number of local transactions that were started in the server servant
zJ2E	INT	4	(IBM name: SM120J2E) J2EE server
zCEL	CHAR	8	(IBM name: SM120CEL) WebSphereApplication Server for z/OScell name
zNOD	CHAR	8	(IBM name: SM120NOD) WebSphereApplication Server for z/OSnode name
zWCP	INT	8	(IBM name: SM120WCP) Total CPU time accumulated by the WLM enclave. TOD clock format (bit 51 = microseconds).

Secondary segment: SMF120#01_Comms

Field Name	Type	Len	Description
SMF120#01_Comms.<fieldname>			
zCSH	INT	8	(IBM name: SM120CSH) Communications session handle
zCSA	CHAR	64	(IBM name: SM120CSA) Communications session address
zCSO	INT (ENUM)	4	(IBM name: SM120CSO) Communications session optimization

zSDR	INT	4	(IBM name: SM120SDR) Data received: the number of bytes received by the server. 'FFFFFFF'X indicates the 4-byte field is too small. Use SM120CDR, an 8-byte field, instead.
zSDT	INT	4	(IBM name: SM120SDT) Data transferred: the number of bytes transferred from the server back to the client. 'FFFFFFF'X indicates the 4-byte field is too small. Use SM120CDT, an 8-byte field, instead.
zCDR	INT	8	(IBM name: SM120CDR) Data received: the number of bytes received by the server.
zCDT	INT	8	(IBM name: SM120CDT) Data transferred: the number of bytes transferred from the server back to the client.

Secondary segment: **SMF120#01_JVM_Heap**

Field Name	Type	Len	Description
<i>SMF120#01_JVM_Heap.<fieldname></i>			
zJHA	INT	4	(IBM name: SM120JHA) Servant address space ID
zJHH	INT	4	(IBM name: SM120JHH) The heap for which the following data applies.
zJHC	INT	4	(IBM name: SM120JHC) The total number of allocation failures on this heap or, if querying shared storage, the subpool identifier. A negative value indicates the information is for the shared memory page pool.
zJHF	INT	8	(IBM name: SM120JHF) The total number of free bytes in the heap/subpool/page pool.
zJHT	INT	8	(IBM name: SM120JHT) The total number of bytes in the heap, subpool, or page pool.

Record Type 120 Subtype 3 - Server Interval**Primary Segment:**

- SMF120#03_WebSphere_Server_Interval

Secondary Segment(s): 4 (in alphabetical order)

- SMF120#03_HeapID
- SMF120#03_Product
- SMF120#03_Server_Interval
- SMF120#03_Server_Region

Primary segment: SMF120#03_WebSphere_Server_Interval

Field Name	Type	Len	Description
<i>SMF120#03_WebSphere_Server_Interval.<fieldname></i>			
SMF120#03_WebSphere_Server_Interval.Header_Self_defining_Section.<fieldname>			
zFLG	HEX	1	(IBM name: SM120FLG) System indicator: Bit Meaning when set 0 New SMF record format 1 Subtypes used 2 Reserved. 3-6 Version indicators 7 System is running in PR/SM mode.
zRTY	INT	1	(IBM name: SM120RTY) Record type 79 (X'4F').
zTME	TSTMP	8	(IBM name: SM120TME) Date/Time when the record was moved into the SMF buffer.
zSID	CHAR	4	(IBM name: SM120SID) System identification (from the SMFPRMxx SID parameter).
zSSI	CHAR	4	(IBM name: SM120SSI) Sub-system identification ('RMF').
zSTY	INT	2	(IBM name: SM120STY) Record subtype. 1=Job start or start of other work unit. The subtype 1 record identifies the work unit but contains no resource data. 2=Activity since previous interval ended. 3=Activity for the last interval before step termination. 4=Step total. 5=Job termination or termination of other work unit. 6=System address space. Contains the total resources used since the start of the address space. Note that the data in the subtype 6 record is cumulative, unlike the subtype 2 record.
zSTYe	INT (ENUM)	2	(IBM name: SM120STYe) Record subtype - short expansion
zTRN	INT	4	(IBM name: SM120TRN) Number of triplets in the record.
zPRS	INT	4	(IBM name: SM120PRS) Offset to product section from RDW.
zPRL	INT	4	(IBM name: SM120PRL) Length of product section.
zPRN	INT	4	(IBM name: SM120PRN) Number of product sections.
zSIS	INT	4	(IBM name: SM120SIS) Offset to server interval section from RDW
zSIL	INT	4	(IBM name: SM120SIL) Length of server interval section
zSIN	INT	4	(IBM name: SM120SIN) Number of server interval sections
SMF120#03_WebSphere_Server_Interval.Header_Self_defining_Section.Triplet.<fieldname>			
zSRS	INT	4	

			(IBM name: SM120SRS) Offset to server region section from RDW
zSRL	INT	4	(IBM name: SM120SRL) Length of server region section
zSRN	INT	4	(IBM name: SM120SRN) Number of server region sections

Secondary segment: **SMF120#03_Product**

Field Name	Type	Len	Description
<i>SMF120#03_Product.<fieldname></i>			
zMFV	INT	4	(IBM name: SM120MFV) CB SMF version
zCOD	CHAR	8	(IBM name: SM120COD) Character codeset in which strings in the SMF record are encoded
zEND	INT	4	(IBM name: SM120END) Encode of numbers in the SMF record
zTSF	INT	4	(IBM name: SM120TSF) Encoding of timestamps: 1: S390STCK64: The time values are encoded in 64-bit S/390@Store Clock format.
zIXR	INT	4	(IBM name: SM120IXR) Index of this record
zNRC	INT	4	(IBM name: SM120NRC) Total number of records
zNTR	INT	4	(IBM name: SM120NTR) Total number of triplets

Secondary segment: **SMF120#03_Server_Interval**

Field Name	Type	Len	Description
<i>SMF120#03_Server_Interval.<fieldname></i>			
zHN2	CHAR	64	(IBM name: SM120HN2) WebSphereApplication Server for z/OStransaction server host name
zSNI	CHAR	8	(IBM name: SM120SNI) WebSphereApplication Server for z/OStransaction server name
zINI	CHAR	8	(IBM name: SM120INI) WebSphereApplication Server for z/OStransaction server instance name
zSST	TSTMP	8	(IBM name: SM120SST) Time that the sample began in the server
zSET	TSTMP	8	(IBM name: SM120SET) Time that the sample ended
zNG2	INT	4	(IBM name: SM120NG2) Number of global transactions that have run through the server instance during the interval that have been initiated by the server instance during the interval
zNL2	INT	4	(IBM name: SM120NL2) Number of local transactions that have been initiated by the server instance during the interval
zNCS	INT	4	(IBM name: SM120NCS) Reserved
zNCA	INT	4	(IBM name: SM120NCA) The number of communications sessions that have been active during the

			interval
zNLS	INT	4	(IBM name: SM120NLS) Reserved
zNLA	INT	4	(IBM name: SM120NLA) Number of active local communication sessions that have been attached and active within the server instance during the interval
zNRS	INT	4	(IBM name: SM120NRS) Reserved
zNRA	INT	4	(IBM name: SM120NRA) Number of active remote communication sessions that have been attached and active within the server instance during the interval
zBTS	INT	4	(IBM name: SM120BTS) Number of bytes that have been transferred to the server from all attached clients
zBFS	INT	4	(IBM name: SM120BFS) Number of bytes that have been sent from the server to all attached clients
zBTL	INT	4	(IBM name: SM120BTL) Number of bytes that have been transferred to the server from all locally attached clients
zBFL	INT	4	(IBM name: SM120BFL) Number of bytes that have been transferred from the server to all locally attached clients
zBTR	INT	4	(IBM name: SM120BTR) Number of bytes that have been transferred to the server from all remotely attached clients
zBFR	INT	4	(IBM name: SM120BFR) Number of bytes that have been transferred from the server to all remotely attached clients
zJ2	INT	4	(IBM name: SM120J2) J2EE server.
zCL1	CHAR	8	(IBM name: SM120CL1) WebSphereApplication Server for z/OStransaction server cell name
zND1	CHAR	8	(IBM name: SM120ND1) WebSphereApplication Server for z/OStransaction server node name
zNHS	INT	4	(IBM name: SM120NHS) Reserved
zNHA	INT	4	(IBM name: SM120NHA) Number of HTTP communication sessions that have been attached and active within the server instance during the interval
zBTH	INT	4	(IBM name: SM120BTH) Number of bytes that have been transferred to the server from all HTTP attached clients
zBFH	INT	4	(IBM name: SM120BFH) Number of bytes that have been transferred from the server to all HTTP attached clients
zTEC	INT	8	(IBM name: SM120TEC) Total CPU time accumulated by the WLM enclaves. TOD clock format (bit 51 = microseconds).
zITS	INT	8	(IBM name: SM120ITS) Number of bytes that have been transferred to the server from all attached clients.
zIFS	INT	8	(IBM name: SM120IFS) Number of bytes that have been sent from the server to all attached clients
zITL	INT	8	(IBM name: SM120ITL) Number of bytes that have been transferred to the server from all locally attached clients
zIFL	INT	8	(IBM name: SM120IFL) Number of bytes that have been transferred from the server to all locally attached clients

zITR	INT	8	(IBM name: SM120ITR) Number of bytes that have been transferred to the server from all remotely attached clients
zIFR	INT	8	(IBM name: SM120IFR) Number of bytes that have been transferred from the server to all remotely attached clients
zITH	INT	8	(IBM name: SM120ITH) Number of bytes that have been transferred to the server from all HTTP attached clients
zIFH	INT	8	(IBM name: SM120IFH) Number of bytes that have been transferred from the server to all HTTP attached clients
zITP	INT	8	(IBM name: SM120ITP) Number of bytes that have been transferred to the server from all SIP attached clients
zIFP	INT	8	(IBM name: SM120IFP) Number of bytes that have been transferred from the server to all SIP attached clients.
zNPA	INT	4	(IBM name: SM120NPA) Number of SIP communication sessions that have been attached and active within the server instance during the interval
zBTP	INT	4	(IBM name: SM120BTP) Number of bytes that have been transferred to the server from all SIP attached clients.
zBFP	INT	4	(IBM name: SM120BFP) Number of bytes that have been transferred from the server to all SIP attached clients.
zIR1	HEX	4	(IBM name: SM120IR1) Reserved

Secondary segment: **SMF120#03_Server_Region**

Field Name	Type	Len	Description
<i>SMF120#03_Server_Region.<fieldname></i>			
zSSA	INT	4	(IBM name: SM120SSA) Servant address space ID
zSNT	INT	4	(IBM name: SM120SNT) Number of triplets.

<i>SMF120#03_Server_Region.Triplet.<fieldname></i>			
zSSO	INT	4	(IBM name: SM120SSO) Offset to heap id section from the beginning of this server servant section.
zSSL	INT	4	(IBM name: SM120SSL) Length of heap id section.
zSSN	INT	4	(IBM name: SM120SSN) Number of heap id sections.

Secondary segment: **SMF120#03_HeapID**

Field Name	Type	Len	Description
<i>SMF120#03_HeapID.<fieldname></i>			
zHIH	INT	4	(IBM name: SM120HIH) The heap for which the following data applies.

zHIC	INT	4	(IBM name: SM120HIC) Number of allocation failures on this heap during the interval.
zHI1	INT	8	(IBM name: SM120HI1) Minimum number of bytes during the interval.
zHI2	INT	8	(IBM name: SM120HI2) Maximum number of bytes during the interval.
zHI3	INT	8	(IBM name: SM120HI3) Average number of bytes during the interval.
zHI4	INT	8	(IBM name: SM120HI4) Minimum number of free bytes during the interval.
zHI5	INT	8	(IBM name: SM120HI5) Maximum number of free bytes during the interval.
zHI6	INT	8	(IBM name: SM120HI6) Average number of free bytes during the interval.

Record Type 120 Subtype 5 - J2EE Container Activity

Primary Segment:

- SMF120#05_WebSphere_J2EE_Activity

Secondary Segment(s): 4 (in alphabetical order)

- SMF120#05_Bean
- SMF120#05_Bean_Method
- SMF120#05_J2EE_Activity
- SMF120#05_Product

Primary segment: SMF120#05_WebSphere_J2EE_Activity

Field Name	Type	Len	Description
<i>SMF120#05_WebSphere_J2EE_Activity.<fieldname></i>			
<i>SMF120#05_WebSphere_J2EE_Activity.Header_Self_defining_Section.<fieldname></i>			
zFLG	HEX	1	(IBM name: SM120FLG) System indicator: Bit Meaning when set 0 New SMF record format 1 Subtypes used 2 Reserved. 3-6 Version indicators 7 System is running in PR/SM mode.
zRTY	INT	1	(IBM name: SM120RTY) Record type 79 (X'4F').
zTME	TSTMP	8	(IBM name: SM120TME) Date/Time when the record was moved into the SMF buffer.
zSID	CHAR	4	(IBM name: SM120SID) System identification (from the SMFPRMxx SID parameter).
zSSI	CHAR	4	(IBM name: SM120SSI) Sub-system identification ('RMF').
zSTY	INT	2	(IBM name: SM120STY) Record subtype. 1=Job start or start of other work unit. The subtype 1 record identifies the work unit but contains no resource data. 2=Activity since previous interval ended. 3=Activity for the last interval before step termination. 4=Step total. 5=Job termination or termination of other work unit. 6=System address space. Contains the total resources used since the start of the address space. Note that the data in the subtype 6 record is cumulative, unlike the subtype 2 record.
zSTYe	INT (ENUM)	2	(IBM name: SM120STYe) Record subtype - short expansion
zTRN	INT	4	(IBM name: SM120TRN) Number of triplets in the record.
zPRS	INT	4	(IBM name: SM120PRS) Offset to product section from RDW.
zPRL	INT	4	(IBM name: SM120PRL) Length of product section.
zPRN	INT	4	(IBM name: SM120PRN) Number of product sections.
zJA1	INT	4	(IBM name: SM120JA1) Offset to J2EE container activity section from RDW
zJA2	INT	4	(IBM name: SM120JA2) Length of J2EE container activity section

Field Name	Type	Len	Description
<i>SMF120#07_WebCont_Activity.<fieldname></i>			
zWAA	CHAR	64	(IBM name: SM120WAA) The WebSpheretransaction server host name.
zWAB	CHAR	8	(IBM name: SM120WAB) The WebSpheretransaction server name.
zWAC	CHAR	8	(IBM name: SM120WAC) The WebSpheretransaction server instance name.
zWAD	HEX	8	(IBM name: SM120WAD) The WLM enclave token.
zWAE	HEX	20	(IBM name: SM120WAE) The identity of the activity.
zWAF	TSTMP	8	(IBM name: SM120WAF) The time the activity began in the server.
zWAG	TSTMP	8	(IBM name: SM120WAG) The time the activity ended.

zCL4	CHAR	8	(IBM name: SM120CL4) Cell
zND4	CHAR	8	(IBM name: SM120ND4) Node

Secondary segment: **SMF120#07_HttpSes_Activity**

Field Name	Type	Len	Description
<i>SMF120#07_HttpSes_Activity.<fieldname></i>			
zWAH	INT	4	(IBM name: SM120WAH) 'created Sessions': Number of http sessions that were created.
zWAI	INT	4	(IBM name: SM120WAI) 'invalidatedSessions': Number of http session that were invalidated.
zWAJ	INT	4	(IBM name: SM120WAJ) 'activeSessions': Number of http sessions that were referenced during this activity.
zWAK	INT	4	(IBM name: SM120WAK) 'sessionLifeTime': lifetime of the session in milliseconds. If 'invalidatedSessions' > 0, this is the average lifetime (in milliseconds) of the invalidated http session.

Secondary segment: **SMF120#07_WebApp**

Field Name	Type	Len	Description
<i>SMF120#07_WebApp.<fieldname></i>			
zWAL	CHAR	256	(IBM name: SM120WAL) The name of the WebApplication.
zWAM	INT	4	(IBM name: SM120WAM) Number of servlet triplets in this web application section.

<i>SMF120#07_WebApp.Triplet.<fieldname></i>			
zWAN	INT	4	(IBM name: SM120WAN) Offset to servlet section from the beginning of this WebApplication section.
zWAO	INT	4	(IBM name: SM120WAO) Length of servlet section.
zWAP	INT	4	(IBM name: SM120WAP) Number of servlet sections.

Secondary segment: **SMF120#07_Servlet**

Field Name	Type	Len	Description
<i>SMF120#07_Servlet.<fieldname></i>			
zWAQ	CHAR	256	(IBM name: SM120WAQ) The name of the servlet.
zWAR	FIXED	4 (10,3)	(IBM name: SM120WAR) 'responseTime': Response time expressed as seconds.
zWAS	INT	4	(IBM name: SM120WAS) 'numErrors': The number of errors that were encountered during the servlet execution.

zWAT	INT	4	(IBM name: SM120WAT) 'loaded': 0: The servlet did not have to be loaded as a result of this request. 1: The servlet had to be loaded as the result of this request.
zWAU	CHAR	16	(IBM name: SM120WAU) 'loadedSince': Timestamp from System.currentTimeMillis() when the servlet was loaded, in HEX format. Sample:The data as it appears in the record has the format e7ef7c577c , which needs to be converted to a Javalong: 996155348860 . The Javalong digits can be converted to java.util.Date: Thu Jul 26 15:49:08 GMT+02:00 2001
zCPU	TIME	4	(IBM name: SM120CPU) Cpu time in microseconds.

- SMF120#08_HttpSes_Interval
- SMF120#08_Product
- SMF120#08_Servlet
- SMF120#08_WebApp
- SMF120#08_WebCont_Interval

Primary segment: SMF120#08_WebSphere_WebCont_Interval

Field Name	Type	Len	Description
SMF120#08_WebSphere_WebCont_Interval.<fieldname>			
SMF120#08_WebSphere_WebCont_Interval.Header_Self_defining_Section.<fieldname>			
zFLG	HEX	1	(IBM name: SM120FLG) System indicator: Bit Meaning when set 0 New SMF record format 1 Subtypes used 2 Reserved. 3-6 Version indicators 7 System is running in PR/SM mode.
zRTY	INT	1	(IBM name: SM120RTY) Record type 79 (X'4F').
zTME	TSTMP	8	(IBM name: SM120TME) Date/Time when the record was moved into the SMF buffer.
zSID	CHAR	4	(IBM name: SM120SID) System identification (from the SMFPRMxx SID parameter).
zSSI	CHAR	4	(IBM name: SM120SSI) Sub-system identification ('RMF').
zSTY	INT	2	(IBM name: SM120STY) Record subtype. 1=Job start or start of other work unit. The subtype 1 record identifies the work unit but contains no resource data. 2=Activity since previous interval ended. 3=Activity for the last interval before step termination. 4=Step total. 5=Job termination or termination of other work unit. 6=System address space. Contains the total resources used since the start of the address space. Note that the data in the subtype 6 record is cumulative, unlike the subtype 2 record.
zSTYe	INT (ENUM)	2	(IBM name: SM120STYe) Record subtype - short expansion
zTRN	INT	4	(IBM name: SM120TRN) Number of triplets in the record.
zPRS	INT	4	(IBM name: SM120PRS) Offset to product section from RDW.
zPRL	INT	4	(IBM name: SM120PRL) Length of product section.
zPRN	INT	4	(IBM name: SM120PRN) Number of product sections.
zWI1	INT	4	(IBM name: SM120WI1) Offset to WebContainer interval section from RDW.
zWI2	INT	4	(IBM name: SM120WI2) Length of WebContainer interval section.
zWI3	INT	4	(IBM name: SM120WI3) Number of WebContainer interval sections.
zWI4	INT	4	(IBM name: SM120WI4) Offset to HttpSessionManager interval section from RDW.

zWI5	INT	4	(IBM name: SM120WI5) Length of HttpSessionManager interval section.
zWI6	INT	4	(IBM name: SM120WI6) Number of HttpSessionManager interval sections.
SMF120#08_WebSphere_WebCont_Interval.Header_Self_defining_Section.Triplet.<fieldname>			
zWI7	INT	4	(IBM name: SM120WI7) Offset to WebApplication section from RDW.
zWI8	INT	4	(IBM name: SM120WI8) Length of WebApplication section.
zWI9	INT	4	(IBM name: SM120WI9) Number of WebApplication sections.

Secondary segment: **SMF120#08_Product**

Field Name	Type	Len	Description
<i>SMF120#08_Product.<fieldname></i>			
zMFV	INT	4	(IBM name: SM120MFV) CB SMF version
zCOD	CHAR	8	(IBM name: SM120COD) Character codeset in which strings in the SMF record are encoded
zEND	INT	4	(IBM name: SM120END) Encode of numbers in the SMF record
zTSF	INT	4	(IBM name: SM120TSF) Encoding of timestamps: 1: S390STCK64: The time values are encoded in 64-bit S/390@Store Clock format.
zIXR	INT	4	(IBM name: SM120IXR) Index of this record
zNRC	INT	4	(IBM name: SM120NRC) Total number of records
zNTR	INT	4	(IBM name: SM120NTR) Total number of triplets

Secondary segment: **SMF120#08_WebCont_Interval**

Field Name	Type	Len	Description
<i>SMF120#08_WebCont_Interval.<fieldname></i>			
zWIA	CHAR	64	(IBM name: SM120WIA) The WebSpheretransaction server host name.
zWIB	CHAR	8	(IBM name: SM120WIB) The WebSpheretransaction server name.
zWIC	CHAR	8	(IBM name: SM120WIC) The WebSpheretransaction server instance name.
zWID	TSTMP	8	(IBM name: SM120WID) The time the sample began.
zWIE	TSTMP	8	(IBM name: SM120WIE) The time the sample ended.
zCL5	CHAR	8	(IBM name: SM120CL5) Cell
zND5	CHAR	8	(IBM name: SM120ND5) Node

Secondary segment: **SMF120#08_HttpSes_Interval**

Field Name	Type	Len	Description
<i>SMF120#08_HttpSes_Interval.<fieldname></i>			
zWIF	INT	4	(IBM name: SM120WIF) 'createdSessions': Number of http sessions that were created.
zWIG	INT	4	(IBM name: SM120WIG) 'invalidatedSessions': Number of http sessions that were invalidated.
zWIH	INT	4	(IBM name: SM120WIH) 'activeSessions': Current number of http sessions that are actively referenced in the server at the end of the interval.
zWII	INT	4	(IBM name: SM120WII) 'minActiveSessions': Minimum number of active http sessions during the interval..
zWIJ	INT	4	(IBM name: SM120WIJ) 'maxActiveSessions': Maximum number of active http sessions during the interval.
zWIK	INT	4	(IBM name: SM120WIK) 'sessionLifeTime': Average lifetime (in milliseconds) of invalidated http sessions.
zWIL	INT	4	(IBM name: SM120WIL) 'sessionInvalidateTime': Average time (in milliseconds) that was required to process the invalidation of http sessions.
zWIM	INT	4	(IBM name: SM120WIM) 'finalizedSessions': Number of sessions that were finalized.
zWIN	INT	4	(IBM name: SM120WIN) 'liveSessions': Total number of http sessions being tracked by the server at the end of the interval. This includes both active and inactive sessions.
zWIO	INT	4	(IBM name: SM120WIO) 'minLiveSessions': Minimum number of live http sessions during the interval.
zWIP	INT	4	(IBM name: SM120WIP) 'maxLiveSessions': Maximum number of live http sessions during the interval.

Secondary segment: **SMF120#08_WebApp**

Field Name	Type	Len	Description
<i>SMF120#08_WebApp.<fieldname></i>			
zWIQ	CHAR	256	(IBM name: SM120WIQ) The WebApplication name.
zWIR	INT	4	(IBM name: SM120WIR) 'numLoadedServlets': Number of servlets that were loaded. Note This value might differ from the number of servlet sections in this record since servlets might exist that have been inactive during the interval.
zWIS	INT	4	(IBM name: SM120WIS) Number of servlet triplets in this web application section.
<i>SMF120#08_WebApp.Triplet.<fieldname></i>			
zWIT	INT	4	(IBM name: SM120WIT) Offset to servlet section from the beginning of this WebApplication section.
zWIU	INT	4	(IBM name: SM120WIU) Length of the servlet section.

zWIV	INT	4	(IBM name: SM120WIV) Number of servlet section.
------	-----	---	--

Secondary segment: **SMF120#08_Servlet**

Field Name	Type	Len	Description
<i>SMF120#08_Servlet.<fieldname></i>			
zWIW	CHAR	256	(IBM name: SM120WIW) The servlet name.
zWIX	INT	4	(IBM name: SM120WIX) 'totalRequests': Number of times the servlet service was requested during the interval.
zWIY	INT	4	(IBM name: SM120WIY) 'responseTime': Average response time in milliseconds.
zWIZ	INT	4	(IBM name: SM120WIZ) 'minResponseTime': Minimum response time in milliseconds.
zWJ1	INT	4	(IBM name: SM120WJ1) 'maxResponseTime': Maximum response time in milliseconds.
zWJ2	INT	4	(IBM name: SM120WJ2) 'numErrors': The number of errors that were encountered during servlet execution.
zWJ3	CHAR	16	(IBM name: SM120WJ3) 'loadedSince': Timestamp when the servlet was loaded. Sample: Fri May 25 08:42:25 EDT 2001
zWJ4	INT	8	(IBM name: SM120WJ4) Average cpu time in microseconds
zWJ5	INT	8	(IBM name: SM120WJ5) Minimum cpu time in microseconds
zWJ6	INT	8	(IBM name: SM120WJ6) Maximum cpu time in microseconds

Record Type 120 Subtype 9 - Request Activity

Primary segment: SMF120#09_WebSphere_Request_Activity

Field Name	Type	Len	Description
SMF120#09_WebSphere_Request_Activity.<fieldname>			
SMF120#09_WebSphere_Request_Activity.Header_Self_defining_Section.<fieldname>			
zFLG	HEX	1	(IBM name: SM120FLG) System indicator: Bit Meaning when set 0 New SMF record format 1 Subtypes used 2 Reserved. 3-6 Version indicators 7 System is running in PR/SM mode.
zRTY	INT	1	(IBM name: SM120RTY) Record type 79 (X'4F').
zTME	TSTMP	8	(IBM name: SM120TME) Date/Time when the record was moved into the SMF buffer.
zSID	CHAR	4	(IBM name: SM120SID) System identification (from the SMFPRMxx SID parameter).
zSSI	CHAR	4	(IBM name: SM120SSI) Sub-system identification ('RMF').
zSTY	INT	2	(IBM name: SM120STY) Record subtype.
zSTYe	INT (ENUM)	2	(IBM name: SM120STYe) Record subtype - short expansion
zAA	INT	4	(IBM name: SM120AA) Subtype version number
zAB	INT	4	(IBM name: SM120AB) Number of triplets
zAC	INT	4	(IBM name: SM120AC) Index of this record
zAD	INT	4	(IBM name: SM120AD) Total number of records
zAE	HEX	8	(IBM name: SM120AE) Record continuation token
zAF	INT	4	(IBM name: SM120AF) The offset to the Platform neutral server information section
zAG	INT	4	(IBM name: SM120AG) The length of the Platform neutral server information section
zAH	INT	4	(IBM name: SM120AH) The number of Platform neutral server information sections

zAI	INT	4	(IBM name: SM120AI) The offset to the z/OSserver information section
zAJ	INT	4	(IBM name: SM120AJ) The length of the z/OSserver information section
zAK	INT	4	(IBM name: SM120AK) The number of z/OSserver information sections
zAL	INT	4	(IBM name: SM120AL) The offset to the Platform neutral request information section
zAM	INT	4	(IBM name: SM120AM) The length of the Platform neutral request information section
zAN	INT	4	(IBM name: SM120AN) The number of Platform neutral request information sections
zAO	INT	4	(IBM name: SM120AO) The offset to the z/OSrequest information section
zAP	INT	4	(IBM name: SM120AP) The length of the z/OSrequest information section
zAQ	INT	4	(IBM name: SM120AQ) The number of z/OSrequest information sections
zAR	INT	4	(IBM name: SM120AR) The offset to the z/OSformatted timestamps section
zAS	INT	4	(IBM name: SM120AS) The length of the z/OSformatted timestamps section
zAT	INT	4	(IBM name: SM120AT) The number of z/OSformatted timestamps sections
zAU	INT	4	(IBM name: SM120AU) The offset to the Network data for HTTP, SIP and IIOp transports section
zAV	INT	4	(IBM name: SM120AV) The length of the Network data for HTTP, SIP and IIOp transports section
zAW	INT	4	(IBM name: SM120AW) The number of Network data for HTTP, SIP and IIOp transports sections
zAX	INT	4	(IBM name: SM120AX) The offset to the Classification data section
zAY	INT	4	(IBM name: SM120AY) The length of the Classification data section
zAZ	INT	4	(IBM name: SM120AZ) The number of Classification data sections
zBA	INT	4	(IBM name: SM120BA) The offset to the Security data section
zBB	INT	4	(IBM name: SM120BB) The length of the Security data section
zBC	INT	4	(IBM name: SM120BC) The number of Security data sections

SMF120#09_WebSphere_Request_Activity.Header_Self_defining_Section.Triplet.<fieldname>

zBD	INT	4	(IBM name: SM120BD) The offset to the CPU usage breakdown
zBE	INT	4	(IBM name: SM120BE) The length of the CPU usage breakdown section
zBF	INT	4	(IBM name: SM120BF) The number of CPU usage breakdown sections

SMF120#09_WebSphere_Request_Activity.Header_Self_defining_Section.<fieldname>

zFB	INT	4	(IBM name: SM120FB) The offset to the user data section
zFC	INT	4	(IBM name: SM120FC) The length of the user data section

zFD	INT	4	(IBM name: SM120FD) The number of user data sections
zGB	INT	4	(IBM name: SM120GB) The offset to the asynchronous data section
zGC	INT	4	(IBM name: SM120GC) The length of the asynchronous data section
zGD	INT	4	(IBM name: SM120GD) The number of asynchronous data sections

Secondary segment: **SMF120#09_PFM_Neut_Server**

Field Name	Type	Len	Description
<i>SMF120#09_PFM_Neut_Server.<fieldname></i>			
zBG	INT	4	(IBM name: SM120BG) The version of the Server information
zBH	CHAR	8	(IBM name: SM120BH) Cell short name
zBI	CHAR	8	(IBM name: SM120BI) Node short name
zBJ	CHAR	8	(IBM name: SM120BJ) Cluster short name
zBK	CHAR	8	(IBM name: SM120BK) Server short name
zBL	HEX	4	(IBM name: SM120BL) Server or controller PID
zBM	INT	1	(IBM name: SM120BM) Product version level (the w in the format w.x.y.z)
zBN	INT	1	(IBM name: SM120BN) Product release level (the x in the format w.x.y.z)
zBO	INT	1	(IBM name: SM120BO) Part of the product modification level (the y in the format w.x.y.z)
zBP	INT	1	(IBM name: SM120BP) Part of the product modification level (the z in the format w.x.y.z)

Secondary segment: **SMF120#09_zOS_Server**

Field Name	Type	Len	Description
<i>SMF120#09_zOS_Server.<fieldname></i>			
zBQ	INT	4	(IBM name: SM120BQ) The version of the server information
zBR	CHAR	8	(IBM name: SM120BR) The name of the system on which the product is running (CVTSNAME)
zBS	CHAR	8	(IBM name: SM120BS) The name of the sysplex on which the product is running
zBT	CHAR	8	(IBM name: SM120BT) The job name for the controller
zBU	CHAR	8	(IBM name: SM120BU) The job ID for the controller
zBV	INT	8	(IBM name: SM120BV) The STOKEN for the controller
zBW	INT	2	

			(IBM name: SM120BW) Controller ASID
SMF120#09_zOS_Server.zGE.<fieldname>			
zOvFlow	BIT	1	CPU Usage Overflow if turned on, the CPU usage section exceeded 30, which is the maximum number of sections that are allowed. Some of your data was lost
zCEEGMTO	BIT	1	CEEGMTO failed/unavailable if turned on, the GMT offsets failed to be retrieved from the CEEGMTO API or the CEEGMTO API was not available
SMF120#09_zOS_Server.<fieldname>			
zBX	HEX	20	(IBM name: SM120BX) The cluster UUID
zBY	HEX	20	(IBM name: SM120BY) The server UUID
zBZ	CHAR	8	(IBM name: SM120BZ) The daemon group name
zCA	INT	4	(IBM name: SM120CA) The hours portion of the LE GMT offset. The value is obtained from the CEEGMTO API if you are running in 31-bit mode. The field contains all zeros if the CEEGMTO API fails or is unavailable, or if you are running in 64-bit mode. The CEEGMTO API is not supported in 64-bit mode. In these situations, flag zFJ is turned on to indicate that the zeros in this field are not valid GMT offsets.
zCB	INT	4	(IBM name: SM120CB) The minutes portion of the LE GMT offset. The value is obtained from the CEEGMTO API if you are running in 31-bit mode. The field contains all zeros if the CEEGMTO API fails or is unavailable, or if you are running in 64-bit mode. The CEEGMTO API is not supported in 64-bit mode. In these situations, flag zFJ is turned on to indicate that the zeros in this field are not valid GMT offsets.
zCC	INT	8	(IBM name: SM120CC) The seconds portion of the LE GMT offset. The value is obtained from the CEEGMTO API if you are running in 31-bit mode. The field contains all zeros if the CEEGMTO API fails or is unavailable, or if you are running in 64-bit mode. The CEEGMTO API is not supported in 64-bit mode. In these situations, flag zFJ is turned on to indicate that the zeros in this field are not valid GMT offsets.
zCD	INT	8	(IBM name: SM120CD) The system GMT offset as obtained from the CVTLDTO API at startup. If the offset changes, such as for Daylight Saving Time, this value is incorrect until the server is restarted
zHV	CHAR	16	(IBM name: SM120HV) The service level (expanded)

Secondary segment: **SMF120#09_PFM_Neut_Req**

Field Name	Type	Len	Description
SMF120#09_PFM_Neut_Req.<fieldname>			
zCF	INT	4	(IBM name: SM120CF) The version of the request information
zCG	INT	4	(IBM name: SM120CG) The PID of the dispatch servant
zCH	INT	8	(IBM name: SM120CH) The ID of the dispatched task. This value is returned from pthread_self.
zCI	INT	8	(IBM name: SM120CI) The amount of CPU time, in microseconds, that is used by dispatch TCB. This field might contain a negative value if field zCJ contains a value other than 0.

zCJ	INT	4	(IBM name: SM120CJ) The completion minor code. A value of 0 indicates that the request successfully completed. If a value other than 0 is present, a problem occurred during processing of the request.
zCK	INT (ENUM)	4	(IBM name: SM120CK) The type of request that was processed:

Secondary segment: SMF120#09_zOS_Req

Field Name	Type	Len	Description
<i>SMF120#09_zOS_Req.<fieldname></i>			
zCL	INT	4	(IBM name: SM120CL) The version of the request information
zCM	TSTMP	8	(IBM name: SM120CM) The time that the request was received
zCN	TSTMP	8	(IBM name: SM120CN) The time that the request was added to the queue
zCO	TSTMP	8	(IBM name: SM120CO) The time that the request was dispatched
zCP	TSTMP	8	(IBM name: SM120CP) The time that the dispatch completed
zCQ	TSTMP	8	(IBM name: SM120CQ) The time that the controller finished processing the request response
zCR	CHAR	8	(IBM name: SM120CR) The job name for the dispatch servant
zCS	CHAR	8	(IBM name: SM120CS) The job ID for the dispatch servant
zCT	INT	8	(IBM name: SM120CT) The STOKEN for the dispatch servant
zCU	INT	2	(IBM name: SM120CU) The ASID for the dispatch servant
zCV	HEX	4	(IBM name: SM120CV) The address of the dispatch TCB
zCW	HEX	16	(IBM name: SM120CW) The TTOKEN for the dispatch TCB
zCX	INT	8	(IBM name: SM120CX) The amount of CPU time that was spent on non-standard CPs, such as the System z® Application Assist Processor (zAAP) and z® Integrated Information Processor (zIIP). This value is obtained from the TIMEUSED API. A value of -1 displays in this field if A value cannot be obtained from the TIMEUSED service. The level of z/OS on which you are running is not Version 1.9 with APAR OA20758 applied, or Version 1.10 or higher. This field might also contain a negative value if field zCJ contains a value other than 0.
zCY	INT	8	(IBM name: SM120CY) The enclave token
zDA	INT	8	(IBM name: SM120DA) The enclave CPU time at the end of the dispatch of this request, as reported by the CPUTIME parameter of the IWMEQTME API. The units are in TOD format.
zDB	INT	8	(IBM name: SM120DB) The enclave zAAP CPU time at the end of the dispatch of this request, as reported by the ZAAPTME parameter of the IWMEQTME API. The value is zero if the PTF for z/OS APAR OA22160 is not installed on your system.

zDC	INT	8	(IBM name: SM120DC) The amount of CPU time at the end of the dispatch of this request that is spent on a regular CP that could have been run on a zAAP, but the zAAP was not available. This value is obtained from the ZAAPONCPTIME. field in the IWMEQTME macro. The value is zero if the PTF for z/OS APAR OA22160 is not installed on your system.
zDD	INT	8	(IBM name: SM120DD) The zIIP enclave that is on the CPU at the end of the dispatch of this request. This value is obtained from the ZIIPONCPTIME. field in the IWMEQTME macro. The value is zero if the PTF for z/OS APAR OA22160 is not installed on your system.
zDE	INT	8	(IBM name: SM120DE) The zIIP Quality Time enclave that was on the CPU at the end of the dispatch of this request. This value is obtained from the ZIIPQUALTIME field in the IWMEQTME macro. The value is zero if the PTF for z/OS APAR OA22160 is not installed on your system.
zDF	INT	8	(IBM name: SM120DF) The eligible zIIP enclave that is on the CPU at the end of the dispatch of this request. This value is obtained from the ZIIPTIME field in the IWMEQTME macro. The value is zero if the PTF for z/OS APAR OA22160 is not installed on your system.
zDG	INT	4	(IBM name: SM120DG) The zAAP normalization factor at the end of the dispatch of this request. This value is obtained from the ZAAPNFACTOR parameter of the IWMEQTME API. The value is zero if the PTF for z/OS APAR OA22160 is not installed on your system.
zDH	INT	8	(IBM name: SM120DH) The amount of CPU time that was used by the enclave as reported by the CPUTIME parameter of the IWM4EDEL API
zDI	INT	8	(IBM name: SM120DI) The delete zAAP CPU enclave. A value of 0 indicates that the enclave was not deleted or not normalized. This value is obtained from the ZAAPTME field in the IWM4EDEL macro.
zDJ	INT	4	(IBM name: SM120DJ) The enclave delete zAAP normalization factor as reported by the ZAAPNFACTOR parameter of the IWM4EDEL API.
zDK	INT	8	(IBM name: SM120DK) The enclave delete zIIP time accumulated by the enclave as reported by the ZIIPTIME parameter of the IWM4EDEL API. A value of 0 indicates that the enclave was not deleted.
zDL	INT	8	(IBM name: SM120DL) The enclave delete zIIP Service accumulated by the enclave as reported by the ZIIPSERVICE parameter of the IWM4EDEL API. A value of 0 indicates that the enclave was not deleted or not normalized.
zDM	INT	8	(IBM name: SM120DM) The enclave delete zAAP Service accumulated by the enclave as reported by the ZAAPSERVICE parameter of the IWM4EDEL API. A value of 0 indicates that the enclave was not deleted.
zDN	INT	8	(IBM name: SM120DN) The enclave delete CPU service accumulated by the enclave as reported by the CPUSERVICE parameter of the IWM4EDEL API. A value of 0 indicates that the enclave was not deleted.
zDO	INT	4	(IBM name: SM120DO) The enclave delete Response Time ratio as reported by the RESPTIME_RATIO parameter of the IWM4EDEL API. A value of 0 indicates that the enclave was not deleted.
zDP	CHAR	12	(IBM name: SM120DP) Reserved for alignment
zDQ	HEX	73	(IBM name: SM120DQ) The global transaction ID (GTID) value
zDR	INT	4	(IBM name: SM120DR) The dispatch timeout value
zDS	CHAR	8	(IBM name: SM120DS) The transaction class, if one is being used

SMF120#09_zOS_Req.zDT.<fieldname>			
zDU	BIT	1	(bit 1) - if turned on, an enclave was created by this server for this request
zDV	BIT	1	(bit 2) - if turned on, the timeout value was given to the product by an external source instead of being taken from the configuration for the server
zDW	BIT	1	(bit 3) - if turned on, the transaction class value was given to the product by an external source instead of being taken from the configuration for the server
zDX	BIT	1	(bit 4) - if turned on, this is a one way IOP request, for which a response is not expected
zFJ	BIT	1	(bit 7) - CEEGMTO failed/unavailable ((Use of zGG is preferred because this section may not always be present.)
zFK	BIT	1	(bit 8) - if turned on, the classification_only_trace Reliability Availability and Serviceability (RAS) attribute indicated that classification level tracing is in effect for the application server. If you issued a modify TRACERECORD,OFF command, then the classification_only_trace is not in effect. The field is valid only if the zCL field is greater than or equal to 2.
zFM	BIT	1	(bit 9) - if turned on, the server wide environment variable or the SMF_request_activity_enabled RAS attribute indicated to collect an SMF 120 subtype 9 record. If you issued a modify command to stop the collection, the SMF 120 subtype 9 record was not collected. The field is valid only if the zCL field is greater than or equal to 2.
zFN	BIT	1	(bit 10) - if turned on, the server wide environment variable or the SMF_request_activity_timestamps RAS attribute indicated to include the time stamp section in the SMF 120 subtype 9 record. If you issued a modify command to turn off the timestamp section, the SMF record does not contain the timestamp section. The field is valid only if the zCL field is greater than or equal to 2.
zFO	BIT	1	(bit 11) - if turned on, the server wide environment variable or the SMF_request_activity_security RAS attribute indicated to include the security data section in the SMF 120 subtype 9 record. If you issued a modify command to turn off the security data section, the SMF record does not contain the security data section. The field is valid only if the zCL field is greater than or equal to 2.
zFP	BIT	1	(bit 12) - if turned on, the server wide environment variable or the SMF_request_activity_CPU_detail RAS attribute indicated to include the CPU usage breakdown section in the SMF 120 subtype 9 record. If you issued a modify command to turn off the CPU usage breakdown section, the SMF record does not contain the CPU usage breakdown section. The field is valid only if the zCL field is greater than or equal to 2.
zFQ	BIT	1	(bit 13) - if turned on, the propagate_transaction_name attribute indicated to use the Customer Information Control System (CICS®) transaction name as the workload management (WLM) transaction class for the optimized local adapter request. The field is valid only if the zCL field is greater than or equal to 2.

SMF120#09_zOS_Req.<fieldname>			
zFR	INT (ENUM)	4	(IBM name: SM120FR) The numerical value corresponds to the value of the stalled_thread_dump_action RAS attribute. The field is valid only if the zCL field is greater than or equal to 2.
zFS	INT (ENUM)	4	(IBM name: SM120FS) The numerical value corresponds to the value of the cputimeused_dump_action RAS attribute. The field is valid only if the zCL field is greater than or equal to 2.
zFT	INT (ENUM)	4	(IBM name: SM120FT) The numerical value corresponds to the value of the dpm_dump_action RAS attribute. The field is valid only if the zCL field is greater than or equal to 2.
zFU	INT (ENUM)	4	(IBM name: SM120FU) The numerical value corresponds to the value of the timeout_recovery RAS attribute. The field is valid only if the zCL field is greater than or equal to 2.

zFV	INT	4	(IBM name: SM120FV) The value of the dispatch_timeout classification RAS attribute. The field is valid only if the zCL field is greater than or equal to 2.
zFW	INT	4	(IBM name: SM120FW) Queue timeout, which is calculated using the dispatch_timeout and queue_timeout_percent classification RAS attributes. The field is valid only if the zCL field is greater than or equal to 2.
zFX	INT	4	(IBM name: SM120FX) The value of the request_timeout classification RAS attribute. The field is valid only if the zCL field is greater than or equal to 2.
zFY	INT	4	(IBM name: SM120FY) The value of the cputimeused_limit classification RAS attribute. The field is valid only if the zCL field is greater than or equal to 2.
zFZ	INT	4	(IBM name: SM120FZ) The value of the dpm_interval classification RAS attribute. The field is valid only if the zCL field is greater than or equal to 2.
zGA	CHAR	8	(IBM name: SM120GA) The value of the message_tag classification RAS attribute. The field is valid only if the zCL field is greater than or equal to 2.
zGI	CHARVARYING	130	(IBM name: SM120GI) Obtained affinity RNAME
zGK	CHARVARYING	130	(IBM name: SM120GK) Routing affinity RNAME

Secondary segment: SMF120#09_zOS_Timestamp

Field Name	Type	Len	Description
<i>SMF120#09_zOS_Timestamp.<fieldname></i>			
zEA	CHAR	26	(IBM name: SM120EA) The time that the request was received
zEB	CHAR	26	(IBM name: SM120EB) The time that the request was added to the WLM queue
zEC	CHAR	26	(IBM name: SM120EC) The time that the request was dispatched in the servant
zED	CHAR	26	(IBM name: SM120ED) The time that the dispatch completed in the servant
zEE	CHAR	26	(IBM name: SM120EE) The time that the controller finished processing the request

Secondary segment: SMF120#09_Network

Field Name	Type	Len	Description
<i>SMF120#09_Network.<fieldname></i>			
zEF	INT	4	(IBM name: SM120EF) The version of the network data
zEG	INT	8	(IBM name: SM120EG) The size of the request, in bytes, that was received from the client
zEH	INT	8	(IBM name: SM120EH) The size of the response, in bytes, that is sent back to the client
zEI	INT	4	(IBM name: SM120EI) The target port for the request. A value of -1 indicates that local communications was used.
zEK	CHARVARYING	130	

			(IBM name: SM120EK) The origin string. Following is an example of an origin string: ip addr=9.57.7.193 port=1344.The bytes that follow the string contain blank spaces.
--	--	--	--

Secondary segment: **SMF120#09_Classification**

Field Name	Type	Len	Description
<i>SMF120#09_Classification.<fieldname></i>			
zEL	INT	4	(IBM name: SM120EL) The version of the classification data
zEM	INT (ENUM)	4	(IBM name: SM120EM) The data type. Not all of these data types apply to all requests. For example, only data types 6, 7, or 8 appear in this field for an HTTP request.
zEO	CHARVARYING	130	(IBM name: SM120EO) The data string

Secondary segment: **SMF120#09_Security**

Field Name	Type	Len	Description
<i>SMF120#09_Security.<fieldname></i>			
zEP	INT	4	(IBM name: SM120EP) The version of the security data
zEQ	INT (ENUM)	4	(IBM name: SM120EQ) The data type.
zES	CHARVARYING	66	(IBM name: SM120ES) The identity string

Secondary segment: **SMF120#09_CPU_Usage**

Field Name	Type	Len	Description
<i>SMF120#09_CPU_Usage.<fieldname></i>			
zET	INT	4	(IBM name: SM120ET) The version of the CPU usage data
zEU	INT (ENUM)	4	(IBM name: SM120EU) The data type.
zEV	INT	8	(IBM name: SM120EV) The amount of CPU time, in microseconds, that the item, such as an EJB or a servlet, spent in dispatch
zFI	INT	8	(IBM name: SM120FI) The elapsed time, in milliseconds, that is spent processing the item, such as an EJB or servlet
zEW	INT	4	(IBM name: SM120EW) How many times the item, such as an EJB or a servlet, was executed during the dispatch of this request
zEY	CHARVARYING	258	(IBM name: SM120EY) String 1. String 1 has one of the following values: AMC, which indicates that an EJB was processed Web App, which indicates that a Servlet was processed

zFA	CHARVARYING	258	(IBM name: SM120FA) String 2 has one of the following values: The method name or signature, if an EJB is accessing the data The name of the servlet if a servlet is accessing the data
-----	-------------	-----	---

Secondary segment: **SMF120#09_User**

Field Name	Type	Len	Description
<i>SMF120#09_User.<fieldname></i>			
zFE	INT	4	(IBM name: SM120FE) The version of the User data section
zFF	INT	4	(IBM name: SM120FF) The user data type. Types 65535 and lower are reserved for IBM@use.
zFH	CHARVARYING	2050	(IBM name: SM120FH) The data that the application added

Secondary segment: **SMF120#09_ASync**

Field Name	Type	Len	Description
<i>SMF120#09_ASync.<fieldname></i>			
zGM	INT	4	(IBM name: SM120GM) The version of the asynchronous data section.
zGL	TSTMP	8	(IBM name: SM120GL) The time that the execution context was created.
zGN	TSTMP	8	(IBM name: SM120GN) The time that the execution started.
zGO	TSTMP	8	(IBM name: SM120GO) The time that the execution completed.
zGP	INT	4	(IBM name: SM120GP) The servant process ID.
zGQ	CHAR	8	(IBM name: SM120GQ) The servant job name.
zGR	CHAR	8	(IBM name: SM120GR) The servant job ID.
zGS	INT	8	(IBM name: SM120GS) The servant token.
zGT	INT	2	(IBM name: SM120GT) The servant ASID.
zGU	INT	8	(IBM name: SM120GU) The execution context task ID.
zGV	INT	4	(IBM name: SM120GV) The execution context TCB address.
zGW	INT	8	(IBM name: SM120GW) The execution context TCB TToken.
zGX	INT	8	(IBM name: SM120GX) The dispatch task ID.
zGY	INT	4	(IBM name: SM120GY) The dispatch TCB address.
zGZ	INT	8	(IBM name: SM120GZ) The dispatch TCB TToken.

zHA	INT	8	(IBM name: SM120HA) The execution context enclave token.
zHB	INT	8	(IBM name: SM120HB) The dispatch enclave token.
zHC	CHAR	8	(IBM name: SM120HC) The transaction class used to create the enclave.

SMF120#09_ASync.zHD.<fieldname>

zHE	BIT	1	A value of 0 indicates that the enclave was joined. A value of 1 indicates that the enclave was created.
zHF	BIT	1	A value of 1 indicates that the enclave was scheduled with the daemon.

SMF120#09_ASync.<fieldname>

zHG	INT	8	(IBM name: SM120HG) The enclave CPU time at the end of the dispatch of this request, as reported by the CPUTIME parameter of the IWMEQTME API. The units are in TOD format.
zHH	INT	8	(IBM name: SM120HH) The enclave zAAP CPU time at the end of the dispatch of this request, as reported by the ZAAPTIME parameter of the IWMEQTME API. The value is zero if the PTF for z/OS APAR OA22160 is not installed on your system.
zHI	INT	8	(IBM name: SM120HI) The amount of CPU time at the end of the dispatch of this request that is spent on a regular CP that could have been run on a zAAP, but the zAAP was not available. This value is obtained from the ZAAPONCPTIME. field in the IWMEQTME macro. The value is zero if the PTF for z/OS APAR OA22160 is not installed on your system.
zHJ	INT	8	(IBM name: SM120HJ) The eligible zIIP enclave that is on the CPU at the end of the dispatch of this request. This value is obtained from the ZIIPTIME field in the IWMEQTME macro. The value is zero if the PTF for z/OS APAR OA22160 is not installed on your system.
zHK	INT	8	(IBM name: SM120HK) The zIIP Quality Time enclave that was on the CPU at the end of the dispatch of this request. This value is obtained from the ZIIPQUALTIME field in the IWMEQTME macro. The value is zero if the PTF for z/OS APAR OA22160 is not installed on your system.
zHL	INT	8	(IBM name: SM120HL) The zIIP enclave that is on the CPU at the end of the dispatch of this request. This value is obtained from the ZIIPONCPTIME. field in the IWMEQTME macro. The value is zero if the PTF for z/OS APAR OA22160 is not installed on your system.
zHM	INT	4	(IBM name: SM120HM) The zAAP normalization factor at the end of the dispatch of this request. This value is obtained from the ZAAPNFACTOR parameter of the IWMEQTME API. The value is zero if the PTF for z/OS APAR OA22160 is not installed on your system.
zHN	TSTMP	8	(IBM name: SM120HN) The dispatch CPU. Note This value is in time-of-day (TOD) format.
zHO	TSTMP	8	(IBM name: SM120HO) The amount of CPU time that was spent on non-standard CPs, such as the System z Application Assist Processor (zAAP) and z9 Integrated Information Processor (zIIP). This value is obtained from the TIMEUSED API. A value of -1 displays in this field if A value cannot be obtained from the TIMEUSED service. The level of z/OS on which you are running is not Version 1.9 with APAR OA20758 applied, or Version 1.10 or higher. This field might also contain a negative value if field zCJ contains a value other than 0. Note This value is in time-of-day (TOD) format.
zHQ	CHARVARYING	130	(IBM name: SM120HQ) The work package or class name.

zHS	CHARVARYING	130	(IBM name: SM120HS) The work manager name.
zHU	CHARVARYING	66	(IBM name: SM120HU) The identity.

Record Type 120 Subtype 10 - Outbound Request

Primary segment: [SMF120#10_WebSphere_Outbound_Request](#)

Field Name	Type	Len	Description
<i>SMF120#10_WebSphere_Outbound_Request.<fieldname></i>			
<i>SMF120#10_WebSphere_Outbound_Request.Header_Self_defining_Section.<fieldname></i>			
zFLG	HEX	1	(IBM name: SM120FLG) System indicator: Bit Meaning when set 0 New SMF record format 1 Subtypes used 2 Reserved. 3-6 Version indicators 7 System is running in PR/SM mode.
zRTY	INT	1	(IBM name: SM120RTY) Record type 79 (X'4F').
zTME	TSTMP	8	(IBM name: SM120TME) Date/Time when the record was moved into the SMF buffer.
zSID	CHAR	4	(IBM name: SM120SID) System identification (from the SMFPRMxx SID parameter).
zSSI	CHAR	4	(IBM name: SM120SSI) Sub-system identification ('RMF').
zSTY	INT	2	(IBM name: SM120STY) Record subtype.
zSTYe	INT (ENUM)	2	(IBM name: SM120STYe) Record subtype - short expansion
zAA	INT	4	(IBM name: SM120AA) Subtype version number
zAB	INT	4	(IBM name: SM120AB) Number of triplets
zAC	INT	4	(IBM name: SM120AC) Index of this record
zAD	INT	4	(IBM name: SM120AD) Total number of records
zAE	HEX	8	(IBM name: SM120AE) Record continuation token
zAF	INT	4	(IBM name: SM120AF) The offset to the Platform neutral server information section
zAG	INT	4	(IBM name: SM120AG) The length of the Platform neutral server information section
zAH	INT	4	(IBM name: SM120AH) The number of Platform neutral server information sections
zAI	INT	4	(IBM name: SM120AI) The offset to the z/OSserver information section

zAJ	INT	4	(IBM name: SM120AJ) The length of the z/OSserver information section
zAK	INT	4	(IBM name: SM120AK) The number of z/OSserver information sections
zAL	INT	4	(IBM name: SM120AL) The offset to the Outbound request information section
zAM	INT	4	(IBM name: SM120AM) The length of the Outbound request information section
zAN	INT	4	(IBM name: SM120AN) The number of Outbound request information sections
zAR	INT	4	(IBM name: SM120AR) The offset to the WOLA outbound request type specific information section
zAS	INT	4	(IBM name: SM120AS) The length of the WOLA outbound request type specific information section
zAT	INT	4	(IBM name: SM120AT) The number of WOLA outbound request type specific information sections
zAU	INT	4	(IBM name: SM120AU) The offset to the outbound request transaction context section
zAV	INT	4	(IBM name: SM120AV) The length of the outbound request transaction context section
zAW	INT	4	(IBM name: SM120AW) The number of outbound request transaction context sections
zAX	INT	4	(IBM name: SM120AX) The offset to the outbound request security context section.
zAY	INT	4	(IBM name: SM120AY) The length of the outbound request security context section.
zAZ	INT	4	(IBM name: SM120AZ) The number of outbound request security context sections
zA1	INT	4	(IBM name: SM120A1) The offset to the outbound request CICS context section
zA2	INT	4	(IBM name: SM120A2) The length of the outbound request CICS context section
zA3	INT	4	(IBM name: SM120A3) The number of outbound request CICS context sections
zA4	INT	4	(IBM name: SM120A4) The offset to the OTMA outbound request type specific section
zA5	INT	4	(IBM name: SM120A5) The length of the OTMA outbound request type specific section
zA6	INT	4	(IBM name: SM120A6) The number of OTMA outbound request type specific sections

Secondary segment: SMF120#10_PFM_Neut_Server

Field Name	Type	Len	Description
<i>SMF120#10_PFM_Neut_Server.<fieldname></i>			
zBG	INT	4	(IBM name: SM120BG) The version of the server information
zBH	CHAR	8	(IBM name: SM120BH) Cell short name
zBI	CHAR	8	(IBM name: SM120BI) Node short name
zBJ	CHAR	8	(IBM name: SM120BJ) Cluster short name

zAK	CHAR	8	(IBM name: SM120AK) Server short name
zBL	HEX	4	(IBM name: SM120BL) Server or controller PID
zBM	INT	1	(IBM name: SM120BM) Product version level (the w in the format w.x.y.z)
zBN	INT	1	(IBM name: SM120BN) Product release level (the x in the format w.x.y.z)
zBO	INT	1	(IBM name: SM120BO) Part of the product modification level (the y in the format w.x.y.z)
zBP	INT	1	(IBM name: SM120BP) Part of the product modification level (the z in the format w.x.y.z)

Secondary segment: **SMF120#10_zOS_Server**

Field Name	Type	Len	Description
<i>SMF120#10_zOS_Server.<fieldname></i>			
zBQ	INT	4	(IBM name: SM120BQ) The version of the server information
zBR	CHAR	8	(IBM name: SM120BR) The name of the system on which the product is running (CVTSNAME)
zBS	CHAR	8	(IBM name: SM120BS) The name of the sysplex on which the product is running
zBT	CHAR	8	(IBM name: SM120BT) The job name for the controller
zBU	CHAR	8	(IBM name: SM120BU) The job ID for the controller
zBV	INT	8	(IBM name: SM120BV) The STOKEN for the controller
zBW	INT	2	(IBM name: SM120BW) Controller ASID

<i>SMF120#10_zOS_Server.zGE.<fieldname></i>			
zOvFlow	BIT	1	CPU Usage Overflow if turned on, the CPU usage section exceeded 30, which is the maximum number of sections that are allowed. Some of your data was lost
zCEEGMTO	BIT	1	CEEGMTO failed/unavailable if turned on, the GMT offsets failed to be retrieved from the CEEGMTO API or the CEEGMTO API was not available

<i>SMF120#10_zOS_Server.<fieldname></i>			
zBX	CHAR	20	(IBM name: SM120BX) The cluster UUID
zBY	CHAR	20	(IBM name: SM120BY) The server UUID
zBZ	CHAR	8	(IBM name: SM120BZ) The daemon group name
zCA	INT	4	(IBM name: SM120CA) The hours portion of the LE GMT offset. The value is obtained from the CEEGMTO API if you are running in 31-bit mode. The field contains all zeros if the CEEGMTO API fails or is unavailable, or if you are running in 64-bit mode. The CEEGMTO API is not supported in 64-bit mode. In these situations, flag zGG is turned on to indicate that the zeros in this field are not valid GMT offsets.
zCB	INT	4	(IBM name: SM120CB) The minutes portion of the LE GMT offset. The value is obtained from the CEEGMTO API if you are running in 31-bit mode. The field contains all

			zeros if the CEEGMTO API fails or is unavailable, or if you are running in 64-bit mode. The CEEGMTO API is not supported in 64-bit mode. In these situations, flag zGG is turned on to indicate that the zeros in this field are not valid GMT offsets.
zCC	INT	8	(IBM name: SM120CC) The seconds portion of the LE GMT offset. The value is obtained from the CEEGMTO API if you are running in 31-bit mode. The field contains all zeros if the CEEGMTO API fails or is unavailable, or if you are running in 64-bit mode. The CEEGMTO API is not supported in 64-bit mode. In these situations, flag zGG is turned on to indicate that the zeros in this field are not valid GMT offsets.
zCD	INT	8	(IBM name: SM120CD) The system GMT offset. The value is obtained from the CVTLDTO API.
zHV	CHAR	16	(IBM name: SM120HV) The service level (expanded)

Secondary segment: **SMF120#10_Comm_OutReq**

Field Name	Type	Len	Description
<i>SMF120#10_Comm_OutReq.<fieldname></i>			
zCF	INT	4	(IBM name: SM120CF) The version of the outbound request information
zCG	INT	4	(IBM name: SM120CG) The PID of the dispatch servant
zCH	INT	8	(IBM name: SM120CH) The ID of the dispatched task. This value is returned from pthread_self.
zCK	INT (ENUM)	4	(IBM name: SM120CK) Outbound request type
zCR	CHAR	8	(IBM name: SM120CR) The job name for the dispatch servant
zCS	CHAR	8	(IBM name: SM120CS) The job ID for the dispatch servant
zCT	INT	8	(IBM name: SM120CT) The STOKEN for the dispatch servant
zCU	INT	2	(IBM name: SM120CU) The ASID for the dispatch servant
zCV	INT	4	(IBM name: SM120CV) The address of the dispatch TCB
zCW	INT	8	(IBM name: SM120CW) The TTOKEN for the dispatch TCB
zCY	INT	8	(IBM name: SM120CY) The enclave token
zD1	INT	8	(IBM name: SM120D1) The number of bytes sent
zD2	INT	8	(IBM name: SM120D2) The number of response bytes
zD3	TSTMP	8	(IBM name: SM120D3) The time the request went outbound
zD4	TSTMP	8	(IBM name: SM120D4) The time the outbound request returned

Secondary segment: SMF120#10_WOLA_OutReq

Field Name	Type	Len	Description
<i>SMF120#10_WOLA_OutReq.<fieldname></i>			
zD5	INT	4	(IBM name: SM120D5) The version of the WOLA outbound request type specific section
zD6	CHAR	12	(IBM name: SM120D6) The register name the outbound request is going to
zD7	CHAR	256	(IBM name: SM120D7) The service name the outbound request is going to
zD8	CHAR	256	(IBM name: SM120D8) The outbound request correlator context. This correlator context also ends up in the CICS SMF 110 records.
zD9	CHAR	24	(IBM name: SM120D9) Reserved

Secondary segment: SMF120#10_OutReq_Trans

Field Name	Type	Len	Description
<i>SMF120#10_OutReq_Trans.<fieldname></i>			
zDA	INT	4	(IBM name: SM120DA) The version of the outbound request transaction context section
zDB	INT	8	(IBM name: SM120DB) The transactional XID
zDC	CHAR	24	(IBM name: SM120DC) Reserved

Secondary segment: SMF120#10_OutReq_Sec

Field Name	Type	Len	Description
<i>SMF120#10_OutReq_Sec.<fieldname></i>			
zDD	INT	4	(IBM name: SM120DD) The version of the outbound request security context section
zDE	CHAR	8	(IBM name: SM120DE) The security context

Secondary segment: SMF120#10_OutReq_CICS

Field Name	Type	Len	Description
<i>SMF120#10_OutReq_CICS.<fieldname></i>			
zDG	INT	4	(IBM name: SM120DG) The version of the outbound request CICScontext section
zDH	INT	8	(IBM name: SM120DH) The CICScontext
zDI	CHAR	28	(IBM name: SM120DI) Reserved

Secondary segment: **SMF120#10_OTMA_OutReq**

Field Name	Type	Len	Description
<i>SMF120#10_OTMA_OutReq.<fieldname></i>			
zDJ	INT	4	(IBM name: SM120DJ) The version of the OTMA outbound request type specific section
zDK	CHAR	12	(IBM name: SM120DK) The OTMA register name of the outbound request
zDL	CHAR	256	(IBM name: SM120DL) The OTMA service name of the outbound request
zDM	CHAR	8	(IBM name: SM120DM) The OTMA IMS transaction name of the outbound request
zDN	CHAR	8	(IBM name: SM120DN) The OTMA IMSgroup id of the outbound request
zDO	CHAR	16	(IBM name: SM120DO) The OTMA IMSserver name of the outbound request
zDP	CHAR	24	(IBM name: SM120DP) Reserved

Record Type 121 - Java Runtime Performance

SMF Record 121 (Java Runtime Performance) is mapped by structure member "T121ST01".

Primary Segment:

- [SMF121#01_Java_Runtime_Performance](#)

Secondary Segment(s): 3 (in alphabetical order)

- [SMF121#01_Garbage_Collector](#)
- [SMF121#01_Runtime](#)
- [SMF121#01_Thread](#)

Primary segment: [SMF121#01_Java_Runtime_Performance](#)

Field Name	Type	Len	Description
<i>SMF121#01_Java_Runtime_Performance.<fieldname></i>			
SMF121#01_Java_Runtime_Performance.Header_Self_defining_Section.<fieldname>			
zFLG	HEX	1	(IBM name: SMF121FLG) System indicator: Bit Meaning when set 0 New SMF record format 1 Subtypes used 2 Reserved. 3-6 Version indicators 7 System is running in PR/SM mode.
zRTY	INT	1	(IBM name: SMF121RTY) Record type 124 (X'7C').
zTME	TSTMP	8	(IBM name: SMF121TME) Date/Time when the record was moved into the SMF buffer.
zSID	CHAR	4	(IBM name: SMF121SID) System identification (from the SMFPRMxx SID parameter).
zSSI	CHAR	4	(IBM name: SMF121SSI) Sub-system identification ('RMF').
zSTY	INT	2	(IBM name: SMF121STY) Record subtype.
zNT	INT	2	(IBM name: SMF121SDS_TRIPLETS) Number of triplets in record. A triplet is a set of offset/length/number values that defines a section of the record. (Optional.)
zOFFJRS	INT	4	(IBM name: SMF121SDS_OFFJRS) Offset to Java runtime section.
zLENJRS	INT	2	(IBM name: SMF121SDS_LENJRS) Length of each Java runtime section.
zNUMJRS	INT	2	(IBM name: SMF121SDS_NUMJRS) Number of Java runtime sections. (There is only one Java runtime section.)
zOFFGCS	INT	4	(IBM name: SMF121SDS_OFFGCS) Offset to garbage collector section.
zLENGCS	INT	2	(IBM name: SMF121SDS_LENGCS) Length of each garbage collector section.
zNUMGCS	INT	2	(IBM name: SMF121SDS_NUMGCS) Number of garbage collector sections. This depends on how many garbage collectors are active in the JVM.
zOFFTS	INT	4	(IBM name: SMF121SDS_OFFTS) Offset to thread section.
zLENTS	INT	2	(IBM name: SMF121SDS_LENTS) Length of each thread section.
zNUMTS	INT	2	(IBM name: SMF121SDS_NUMTS) Number of thread sections. This depends on the number of active Java threads.

Secondary segment: **SMF121#01_Runtime**

Field Name	Type	Len	Description
<i>SMF121#01_Runtime.<fieldname></i>			
SMF121#01_Runtime.zFD_FLAGS.<fieldname>			
zCPUSumm	BIT	1	Contains CPU usage summary fields, including: SMF121JRS_APPCPU SMF121JRS_SYSCPU SMF121JRS_GCCPU SMF121JRS_JITCPU
SMF121#01_Runtime.<fieldname>			
zNAME	CHAR	80	(IBM name: SMF121JRS_NAME) Formatted JVM name. If longer than 80 characters, string will be truncated.
zSTRTTME	INT	8	(IBM name: SMF121JRS_STRTTME) Start time, in milliseconds.
zUPTIME	INT	8	(IBM name: SMF121JRS_UPTIME) Up time, in milliseconds.
zGCMODE	CHAR	40	(IBM name: SMF121JRS_GCMODE) Garbage collection mode. If longer than 40 characters, string will be truncated.
zPEAKTHRD	INT	4	(IBM name: SMF121JRS_PEAKTHRD) Peak live thread count.
zCURRTHRD	INT	4	(IBM name: SMF121JRS_CURRTHRD) Current number of live threads.
zAPPCPU	INT	8	(IBM name: SMF121JRS_APPCPU) Total CPU usage of all application threads, in microseconds. If not available, value is -1.
zSYSCPU	INT	8	(IBM name: SMF121JRS_SYSCPU) Total CPU usage of all system threads, in microseconds. If not available, value is -1.
zGCCPU	INT	8	(IBM name: SMF121JRS_GCCPU) Total CPU usage of all GC threads, in microseconds. If not available, value is -1.
zJITCPU	INT	8	(IBM name: SMF121JRS_JITCPU) Total CPU usage of all JIT threads, in microseconds. If not available, value is -1.

Secondary segment: **SMF121#01_Garbage_Collector**

Field Name	Type	Len	Description
<i>SMF121#01_Garbage_Collector.<fieldname></i>			
SMF121#01_Garbage_Collector.zFD_FLAGS.<fieldname>			
SMF121#01_Garbage_Collector.<fieldname>			
zNAME	CHAR	40	(IBM name: SMF121GCS_NAME) Garbage collector name. If longer than 40 characters, string will be truncated.
zCOLLCNT	INT	8	(IBM name: SMF121GCS_COLLCNT) Total number of collections.
zCOLLTME	INT	8	(IBM name: SMF121GCS_COLLTME) Approximate accumulated collection elapsed time, in milliseconds.
zTMEMFREED	INT	8	(IBM name: SMF121GCS_TMEMFREED) Cumulative total amount of memory freed, in bytes.

zTCOMPACTS	INT	8	(IBM name: SMF121GCS_TCOMPACTS) Cumulative total number of compacts performed.
zMEMUSED	INT	8	(IBM name: SMF121GCS_MEMUSED) Snapshot of the amount of heap memory used, in bytes.

Secondary segment: SMF121#01_Thread

Field Name	Type	Len	Description
<i>SMF121#01_Thread.<fieldname></i>			
<i>SMF121#01_Thread.zDFDLFLAGS.<fieldname></i>			
<i>SMF121#01_Thread.<fieldname></i>			
zID	INT	8	(IBM name: SMF121TS_ID) Thread ID.
zNAME	CHAR	24	(IBM name: SMF121TS_NAME) Thread name.
zCAT	INT	8	(IBM name: SMF121TS_CAT) Thread category. Possible values are: APP, APP-U1, APP-U2, APP-U3, APP-U4, APP-U5, SYS, GC, JIT, OTHER, RM. Empty string (""), if not available.
zCPU	INT	8	(IBM name: SMF121TS_CPU) Total CPU time, in nanoseconds. If not available, value is -1.
zNATIVEID	INT	8	(IBM name: SMF121TS_NATIVEID) Native OS thread ID. If not available, value is -1.

Record Type 122 - IBM Explorer Developer for z/OS

SMF Record 122 (IBM Explorer Developer for z/OS) is mapped by structure member "T122ST01".

Primary Segment:

- SMF122#01_IBM_Explorer_Developer_for_zOS

Secondary Segment(s): 6 (in alphabetical order)

- SMF122#01_Client_Data
- SMF122#01_Client_Labels
- SMF122#01_Client_UUID
- SMF122#01_Creator_ID
- SMF122#01_Server_Initialization
- SMF122#01_VU_license_Handler_Status

Primary segment: SMF122#01_IBM_Explorer_Developer_for_zOS

Field Name	Type	Len	Description
SMF122#01_IBM_Explorer_Developer_for_zOS.<fieldname>			
SMF122#01_IBM_Explorer_Developer_for_zOS.Header.<fieldname>			
zFLG	HEX	1	(IBM name: SMF122FLG) System indicator: Bit Meaning when set 0-2 Reserved. 3-6 Version indicators 7 Reserved.
zRTY	INT	1	(IBM name: SMF122RTY) Record type 118
zTME	TSTMP	8	(IBM name: SMF122TME) Date/Time that the record was moved into the SMF buffer.
zSID	CHAR	4	(IBM name: SMF122SID) System ID.
zSSID	CHAR	4	Record subtype - number and short expansion.
zSTY	INT	2	(IBM name: SMF122STY) Record subtype.

SMF122#01_IBM_Explorer_Developer_for_zOS.Self_defining_Section.<fieldname>			
zt1h_Len	INT	2	(IBM name: SMF122t1h_Len) Length of header.
zt1h_Cnt	INT	2	(IBM name: SMF122t1h_Cnt) Number of triplets in header.
zS1Len	INT	4	(IBM name: SMF122t1h_S1Len) Section length. It is set to the size of SMF122t1s1_Section.
zS1Cnt	INT	2	(IBM name: SMF122t1h_S1Cnt) Number of sections. This field documents how many times this section is present in the record (can be 0). If the number is greater than 1, then all sections are consecutive.
zS1Offset	INT	2	(IBM name: SMF122t1h_S1Offset) Section offset. The offset, from the start of the record, of this section block.
zS2Len	INT	4	(IBM name: SMF122t1h_S2Len) Section length. It is set to the size of SMF122t1s2_Section.
zS2Cnt	INT	2	(IBM name: SMF122t1h_S2Cnt) Number of sections. This field documents how many times this section is present in the record (can be 0). If the number is greater than 1, then all sections are consecutive.
zS2Offset	INT	2	(IBM name: SMF122t1h_S2Offset) Section offset. The offset, from the start of the record, of this section block.
zS3Len	INT	4	(IBM name: SMF122t1h_S3Len) Section length. It is set to the size of SMF122t1s3_Section.

zS3Cnt	INT	2	(IBM name: SMF122t1h_S3Cnt) Number of sections. This field documents how many times this section is present in the record (can be 0). If the number is greater than 1, then all sections are consecutive.
zS3Offset	INT	2	(IBM name: SMF122t1h_S3Offset) Section offset. The offset, from the start of the record, of this section block.
zS4Len	INT	4	(IBM name: SMF122t1h_S4Len) Section length. It is set to the size of SMF122t1s4_Section.
zS4Cnt	INT	2	(IBM name: SMF122t1h_S4Cnt) Number of sections. This field documents how many times this section is present in the record (can be 0). If the number is greater than 1, then all sections are consecutive.
zS4Offset	INT	2	(IBM name: SMF122t1h_S4Offset) Section offset. The offset, from the start of the record, of this section block.
zS5Len	INT	4	(IBM name: SMF122t1h_S5Len) Section length. It is set to the size of SMF122t1s5_Section.
zS5Cnt	INT	2	(IBM name: SMF122t1h_S5Cnt) Number of sections. This field documents how many times this section is present in the record (can be 0). If the number is greater than 1, then all sections are consecutive.
zS5Offset	INT	2	(IBM name: SMF122t1h_S5Offset) Section offset. The offset, from the start of the record, of this section block.
zS6Len	INT	4	(IBM name: SMF122t1h_S6Len) Section length. It is set to the size of SMF122t1s6_Section.
zS6Cnt	INT	2	(IBM name: SMF122t1h_S6Cnt) Number of sections. This field documents how many times this section is present in the record (can be 0). If the number is greater than 1, then all sections are consecutive.
zS6Offset	INT	2	(IBM name: SMF122t1h_S6Offset) Section offset. The offset, from the start of the record, of this section block.

Secondary segment: SMF122#01_Creator_ID

Field Name	Type	Len	Description
<i>SMF122#01_Creator_ID.<fieldname></i>			
zPlex	CHAR	8	(IBM name: SMF122t1s1_Plex) Sysplex name
zSystem	CHAR	8	(IBM name: SMF122t1s1_Sys) System name
zServer	INT	2	(IBM name: SMF122t1s1_Server) Server ID. This is set to the RSED port number.
<i>SMF122#01_Creator_ID.zFlags.<fieldname></i>			
zLic	BIT	1	(IBM name: SMF122t1s1F_Lic) VU license handler created this record.

Secondary segment: SMF122#01_Server_Initialization

Field Name	Type	Len	Description
<i>SMF122#01_Server_Initialization.<fieldname></i>			
ziTime	TSTMP	8	(IBM name: SMF122t1s2_iTime) IPL timestamp.
zProdID	CHAR	8	

			(IBM name: SMF122t1s2_ProdID) Registered Product ID (PID). This is set to the PID used by the server to (re-)register itself, following the rules defined in SYS1.PARMLIB(IFAPRDxx).
zVer	INT	1	(IBM name: SMF122t1s2_Ver) Server version. This is set to the first nibble of environment variable \$IDZ_VERSION.
zRel	INT	1	(IBM name: SMF122t1s2_Rel) Server release. This is set to the second nibble of environment variable \$IDZ_VERSION.
zMod	INT	1	(IBM name: SMF122t1s2_Mod) Server modification. This is set to the third nibble of environment variable \$IDZ_VERSION.
zLvl	INT	1	(IBM name: SMF122t1s2_Lvl) Server level. This is set to the fourth nibble of environment variable \$IDZ_VERSION.

SMF122#01_Server_Initialization.zFlags.<fieldname>

Secondary segment: SMF122#01_VU_license_Handler_Status

Field Name	Type	Len	Description
<i>SMF122#01_VU_license_Handler_Status.<fieldname></i>			
SMF122#01_VU_license_Handler_Status.zFlags.<fieldname>			
VUon	BIT	1	(IBM name: SMF122t1s3_FVUon) Client activation code provided.
SMF122#01_VU_license_Handler_Status.<fieldname>			
zTrack	INT	2	(IBM name: SMF122t1s3_Track) Request tracker. This field increments by one each time a request for an activation code is processed. The counter wraps back to 0 when the maximum value is reached.

Secondary segment: SMF122#01_Client_UUID

Field Name	Type	Len	Description
<i>SMF122#01_Client_UUID.<fieldname></i>			
zUUID	XVCHAR	0 512	(IBM name: SMF122t1s4_UUID) Unique client ID.

Secondary segment: SMF122#01_Client_Labels

Field Name	Type	Len	Description
<i>SMF122#01_Client_Labels.<fieldname></i>			
zLabels	XVCHAR	0 1024	(IBM name: SMF122t1s5_Labels) Client data labels in comma separated list. 'productName' => Name of the Developer for z/OS client. 'productVersion' => Version of the Developer for z/OS client. 'productRelease' => Release of the Developer for z/OS client. 'productModification' => Modification of the Developer for z/OS client. 'zexplIPaddress' => IP address of the Developer for z/OS client. 'zexplHostName' => DNS name of the Developer for z/OS client.

			'zexplUserId' => User ID of the person that is using the Developer for z/OS client. 'productAPIVersionClient' => Version of the activation code API used by the Developer for z/OS client. 'zexplAPIVersionClient' => Version of the activation code API used by the z/OS Explorer client. 'zexplAPIVersionHost' => Version of the activation code API used by the z/OS Explorer server. 'productAPIVersionHost' => Version of the activation code API used by the Developer for z/OS server. 'returnCode' => Result of z/OS Explorer validating correctness of the data it transferred on behalf of Developer for z/OS.
--	--	--	---

Secondary segment: SMF122#01_Client_Data

Field Name	Type	Len	Description
<i>SMF122#01_Client_Data.<fieldname></i>			
zClient	XVCHAR	0 1024	(IBM name: SMF122t1s5_Labels) Client data in comma separated list.

Record Type 123 - z/OS Connect Enterprise Edition

SMF Record 123 (z/OS Connect EE) is mapped by structure member "T123ST01".

Primary Segment:

- SMF123#01_zOS_Connect

Secondary Segment(s): 8 (in alphabetical order)

- SMF123#01_Server
- SMF123#01_User_Data
- SMF123#01_V1_Header_Ext
- SMF123#01_V1_Triplets
- SMF123#01_V2_Header_Ext
- SMF123#01_V2_Request_Data
- SMF123#01_V2_Server
- SMF123#01_V2_Triplets

Primary segment: SMF123#01_zOS_Connect

Field Name	Type	Len	Description
SMF123#01_zOS_Connect.<fieldname>			
SMF123#01_zOS_Connect.Header.<fieldname>			
zFLG	HEX	1	(IBM name: SMF123FLG) System indicator: Bit Meaning when set 0-2 Reserved. 3-6 Version indicators 7 Reserved.
zRTY	INT	1	(IBM name: SMF123RTY) Record type 118
zTME	TSTMP	8	(IBM name: SMF123TME) Date/Time that the record was moved into the SMF buffer.
zSID	CHAR	4	(IBM name: SMF123SID) System ID.
zSSID	CHAR	4	(IBM name: SMF123SSI) Subsystem ID.
zSTY	INT	2	(IBM name: SMF123STY) Record subtype.
SUBTYPE_VERSION	INT	4	(IBM name: SUBTYPE_VERSION) Record subtype version.

Secondary segment: SMF123#01_V1_Header_Ext

Field Name	Type	Len	Description
SMF123#01_V1_Header_Ext.<fieldname>			
SUBTYPE_VERSION	INT	4	(IBM name: SUBTYPE_VERSION) Record subtype version.
TRIPLET_COUNT	INT	4	(IBM name: TRIPLET_COUNT) Number of triplets. Defaults to x0002
RECORD_INDEX	INT	4	(IBM name: RECORD_INDEX) Index of this record.
RECORD_COUNT	INT	4	(IBM name: RECORD_COUNT) Total number of records.
RECORD_CONT	HEX	8	(IBM name: RECORD_CONT) Record continuation token.

Secondary segment: SMF123#01_V2_Header_Ext

Field Name	Type	Len	Description
<i>SMF123#01_V2_Header_Ext.<fieldname></i>			
SUBTYPE_VERSION	INT	4	(IBM name: SUBTYPE_VERSION) Record subtype version.
TRIPLET_COUNT	INT	1	(IBM name: TRIPLET_COUNT) Number of triplets. Defaults to x0002
TRIPLET_OFFSET	INT	1	(IBM name: TRIPLET_OFFSET) Triplet section offset
LOC_DATETIME_OFF	INT	8	Locate date/time offset (CVTLDTO)

Secondary segment: SMF123#01_V1_Triplets

Field Name	Type	Len	Description
<i>SMF123#01_V1_Triplets.<fieldname></i>			
SERVER_OFFSET	INT	4	(IBM name: SERVER_OFFSET) Server ID section offset
SERVER_LEN	INT	4	(IBM name: SERVER_LEN) Server ID section length
SERVER_COUNT	INT	4	(IBM name: SERVER_COUNT) Server ID section count
USERDATA_OFFSET	INT	4	(IBM name: USERDATA_OFFSET) User Data section offset
USERDATA_LEN	INT	4	(IBM name: USERDATA_LEN) User Data section length
USERDATA_COUNT	INT	4	(IBM name: USERDATA_COUNT) User Data section count

Secondary segment: SMF123#01_V2_Triplets

Field Name	Type	Len	Description
<i>SMF123#01_V2_Triplets.<fieldname></i>			
SERVER_OFFSET	INT	4	(IBM name: SERVER_OFFSET) Server ID section offset
SERVER_LEN	INT	2	(IBM name: SERVER_LEN) Server ID section length
SERVER_COUNT	INT	2	(IBM name: SERVER_COUNT) Server ID section count
REQUESTDATA_OFFSET	INT	4	(IBM name: REQUESTDATA_OFFSET) Request Data section offset
REQUESTDATA_LEN	INT	2	(IBM name: REQUESTDATA_LEN) Request Data section length
REQUESTDATA_COUNT	INT	2	(IBM name: REQUESTDATA_COUNT) Request Data section count

Secondary segment: SMF123#01_Server

Field Name	Type	Len	Description
<i>SMF123#01_Server.<fieldname></i>			
zSECTION_VER	INT	1	(IBM name: SERVER_SECTION_VER) Version of the server section.
zSYSTEM	CHAR	8	(IBM name: SERVER_SYSTEM) System name.
zSYSPLEX	CHAR	8	(IBM name: SERVER_SYSPLEX) Sysplex name.
zJOBID	CHAR	8	(IBM name: SERVER_JOBID) Job ID of the server.
zJOBNAME	CHAR	8	(IBM name: SERVER_JOBNAME) Job name of the server.
zSTOKEN	HEX	8	(IBM name: SERVER_STOKEN) SToken of the server.
zCONFIGDIR	CHAR	128	(IBM name: SERVER_CONFIGDIR) The path to where server.xml for the server is located, this includes the server name

Secondary segment: SMF123#01_V2_Server

Field Name	Type	Len	Description
<i>SMF123#01_V2_Server.<fieldname></i>			
zSECTION_VER	INT	1	(IBM name: SERVER_SECTION_VER) Version of the server section.
zSYSTEM	CHAR	8	(IBM name: SERVER_SYSTEM) System name.
zSYSPLEX	CHAR	8	(IBM name: SERVER_SYSPLEX) Sysplex name.
zJOBID	CHAR	8	(IBM name: SERVER_JOBID) Job ID of the server.
zJOBNAME	CHAR	8	(IBM name: SERVER_JOBNAME) Job name of the server.
zSTOKEN	HEX	8	(IBM name: SERVER_STOKEN) SToken of the server.
zCONFIGDIR	CHAR	128	(IBM name: SERVER_CONFIGDIR) The path to where server.xml for the server is located, this includes the server name
zVERSION	CHAR	16	(IBM name: SERVER_VERSION) Version of the server <v.r.m.f>.

Secondary segment: SMF123#01_User_Data

Field Name	Type	Len	Description
<i>SMF123#01_User_Data.<fieldname></i>			
zHD_VER	INT	4	(IBM name: USERDATAHD_VER) Version of user data header. This template maps version 1 of user data.
zHD_TYPE	INT	4	(IBM name: USERDATAHD_TYPE) User data type.

zHD_DATALEN	INT	4	(IBM name: USERDATAHD_DATALEN) Length of following user data.
z_VER	INT	4	(IBM name: USERDATA_VER) Version of user data record. This template maps version 3 of user data.
TIME_ZC_ENTRY	TSTMP	8	(IBM name: TIME_ZC_ENTRY) Arrival date and time.
TIME_ZC_EXIT	TSTMP	8	(IBM name: TIME_ZC_EXIT) Completion date and time.
REQ_TARGET_URI	CHAR	64	(IBM name: REQ_TARGET_URI) Target URI.
REQ_PAYLOAD_LEN	INT	4	(IBM name: REQ_PAYLOAD_LEN) Request payload length in bytes..
API_SERVICE_NAME	CHAR	64	(IBM name: API_SERVICE_NAME) API or service name.
REQ_METHOD	CHAR	8	(IBM name: REQ_METHOD) Method GET/POST/PUT/DELETE.
RESP_PAYLOAD_LEN	INT	4	(IBM name: RESP_PAYLOAD_LEN) Response payload length in bytes.
USER_NAME	CHAR	64	(IBM name: USER_NAME) User name (eg. Distributed ID).
REQ_ID	INT	8	(IBM name: REQ_ID) Request ID (simple sequence number).
SERVICE_GROUP	CHAR	64	(IBM name: SERVICE_GROUP) Service grouping (unused).
USER_NAME_MAPPED	CHAR	8	(IBM name: USER_NAME_MAPPED) Mapped user name (eg. SAF ID).

Secondary segment: SMF123#01_V2_Request_Data

Field Name	Type	Len	Description
<i>SMF123#01_V2_Request_Data.<fieldname></i>			
REQUESTDATA_VER	INT	1	(IBM name: REQUESTDATA_VER) Version of request data record. Set to 1.
REQ_TYPE	INT (ENUM)	1	(IBM name: REQ_TYPE) Request type (Unknown=0, API =1, Service=2, Admin=3)
HTTP_RESP_CODE	INT	2	(IBM name: HTTP_RESP_CODE) Http response code

SMF123#01_V2_Request_Data.RESP_FLAGS.<fieldname>

REQ_TIMED_OUT	BIT	1	(IBM name: REQ_TIMED_OUT) Request timed out indicator
---------------	-----	---	--

SMF123#01_V2_Request_Data.<fieldname>

RESERVED_04	CHAR	3	(IBM name: RESERVED_04) Reserved.
USER_NAME	CHAR	64	(IBM name: USER_NAME) User name, a distributed or a SAF identity.
USER_NAME_MAPPED	CHAR	8	(IBM name: USER_NAME_MAPPED) SAF mapped user name.
CLIENT_IP_ADDR	CHAR	48	(IBM name: CLIENT_IP_ADDR) Client IP address.
API_NAME	CHAR	64	(IBM name: API_NAME) API name.

API_VERSION	CHAR	8	(IBM name: API_VERSION) API version.
SERVICE_NAME	CHAR	64	(IBM name: SERVICE_NAME) Service name.
SERVICE_VERSION	CHAR	8	(IBM name: SERVICE_VERSION) Service version.
REQ_METHOD	CHAR	8	(IBM name: REQ_METHOD) Method GET/POST/PUT/DELETE.
REQ_QUERY_STR	CHAR	128	(IBM name: REQ_QUERY_STR) Query string.
REQ_TARGET_URI	CHAR	256	(IBM name: REQ_TARGET_URI) Target URI.
REQ_PAYLOAD_LEN	INT	4	(IBM name: REQ_PAYLOAD_LEN) Request payload length in bytes..
RESP_PAYLOAD_LEN	INT	4	(IBM name: RESP_PAYLOAD_LEN) Response payload length in bytes.
TIME_ZC_ENTRY	TSTMP	8	(IBM name: TIME_ZC_ENTRY) Time the request was received by the z/OS Connect EE server.
TIME_ZC_EXIT	TSTMP	8	(IBM name: TIME_ZC_EXIT) Time the response was ready to be sent to the HTTP client.
TIME_SOR_SENT	TSTMP	8	(IBM name: TIME_SOR_SENT) Time the request was ready to be sent to the system of record.
TIME_SOR_RECV	TSTMP	8	(IBM name: TIME_SOR_RECV) Time the response was received from the system of record.
SP_NAME	CHAR	16	(IBM name: SP_NAME) Service provider name. Value of com.ibm.zosconnect.spi.Data.SERVICE_PROVIDER_NAME.
SOR_REFERENCE	CHAR	32	(IBM name: SOR_REFERENCE) Reference to the element in server.xml that identifies the connection to the system of record. Value of com.ibm.zosconnect.spi.Data.SOR_REFERENCE.
SOR_IDENTIFIER	CHAR	64	(IBM name: SOR_IDENTIFIER) System of record identifier. Value of com.ibm.zosconnect.spi.Data.SOR_IDENTIFIER.
SOR_RESOURCE	CHAR	128	(IBM name: SOR_RESOURCE) System of record resource. Value of com.ibm.zosconnect.spi.Data.SOR_RESOURCE
REQ_ID	INT	8	(IBM name: REQ_ID) Request identifier that is unique within a z/OS Connect EE server instance.
TRACKING_TOKEN	HEX	64	(IBM name: TRACKING_TOKEN) Tracking token. Refer to Tracking requests.
REQUEST_HDR1	CHAR	64	(IBM name: REQUEST_HDR1) Request <header1name:header1value>
REQUEST_HDR2	CHAR	64	(IBM name: REQUEST_HDR2) Request <header2name:header2value>
REQUEST_HDR3	CHAR	64	(IBM name: REQUEST_HDR3) Request <header3name:header3value>
REQUEST_HDR4	CHAR	64	(IBM name: REQUEST_HDR4) Request <header4name:header4value>
RESPONSE_HDR1	CHAR	64	(IBM name: RESPONSE_HDR1) Response <header1name:header1value>
RESPONSE_HDR2	CHAR	64	(IBM name: RESPONSE_HDR2) Response <header2name:header2value>
RESPONSE_HDR3	CHAR	64	(IBM name: RESPONSE_HDR3) Response <header3name:header3value>
RESPONSE_HDR4	CHAR	64	(IBM name: RESPONSE_HDR4) Response <header4name:header4value>

Record Type 124 - I/O Supervisor Information

SMF Record 124 (I/O Supervisor Information) has several subtypes, each mapped by a structure member name of the format "T124STnn".

Record Type 124 Subtype 1 - IOS Link Diagnostics

Primary Segment:

- [SMF124#01_IOS_Link_Diagnostic_Information](#)

Secondary Segment(s): 1

- [SMF124#01_Port](#)

Primary segment: [SMF124#01_IOS_Link_Diagnostic_Information](#)

Field Name	Type	Len	Description
<i>SMF124#01_IOS_Link_Diagnostic_Information.<fieldname></i>			
<i>SMF124#01_IOS_Link_Diagnostic_Information.Header_Self_defining_Section.<fieldname></i>			
zFLG	HEX	1	(IBM name: SM124FLG) System indicator: Bit Meaning when set 0 New SMF record format 1 Subtypes used 2 Reserved. 3-6 Version indicators 7 System is running in PR/SM mode.
zRTY	INT	1	(IBM name: SM124RTY) Record type 124 (X'7C').
zTME	TSTMP	8	(IBM name: SM124TME) Date/Time when the record was moved into the SMF buffer.
zSID	CHAR	4	(IBM name: SM124SID) System identification (from the SMFPRMxx SID parameter).
zSSI	CHAR	4	(IBM name: SM124SSI) Sub-system identification ('RMF').
zSTY	INT	2	(IBM name: SM124STY) Record subtype. 1 => Link diagnostic information, 2 => Endpoint security information, 3 => Endpoint security authentication key update, 4 => Endpoint security encryption key update, 5 => External key manager event record
zSTYe	INT (ENUM)	2	(IBM name: SM124STYe) Record subtype - short expansion
zHdr_Len	INT	2	(IBM name: SMF124Hdr_Len) Length of header.
zHdr_TrplCnt	INT	2	(IBM name: SMF124Hdr_TrplCnt) Number of triplets in header.
zHdr_Flags	INT	2	(IBM name: SMF124_Hdr_Flags) Header flags.
zPort_Offset	INT	4	(IBM name: SMF124S1_Port_Offset) Offset to port section from start of record, including record descriptor word (RDW).
zPort_Len	INT	2	(IBM name: SMF124S1_Port_Len) Length of port section.
zPort_Num	INT	2	(IBM name: SMF124S1_Port_Num) Number of port sections.

Secondary segment: **SMF124#01_Port**

Field Name	Type	Len	Description
SMF124#01_Port.<fieldname>			
zRetTime	TSTMP	8	(IBM name: SMF124S1_RetTime) Date and Time that the link diagnostic information was retrieved.
zWWPN	HEX	8	(IBM name: SMF124S1_WWPN) Worldwide port name (WWPN) of the port.
zReportSrc	INT (ENUM)	1	(IBM name: SMF124S1_ReportSrc) Reporting source: 1 => (IBM name: SMF124S1_ReportSrc_Monitor) Periodic monitoring.

SMF124#01_Port.zPortID.<fieldname>**SMF124#01_Port.zPortID.zChannelPort.<fieldname>**

zCHPID	HEX	1	(IBM name: SMF124S1_CHPID) For channel ports, the channel path identifier (CHPID) assigned to the port.
zPCHID	HEX	2	(IBM name: SMF124S1_PCHID) For channel ports, the physical channel identifier (PCHID) assigned to the port.

SMF124#01_Port.zPortID.zSwitchPort1.<fieldname>

zID_LA1	HEX	1	(IBM name: SMF124S1_ID_LA1) For entry and exit switch ports, the 1-byte link address, if the identifier size (SMF124S1_IdSize) is 1.
---------	-----	---	---

SMF124#01_Port.zPortID.zSwitchPort2.<fieldname>

zID_LA2	HEX	2	(IBM name: SMF124S1_ID_LA2) For entry and exit switch ports, the domain and area portions of the 2-byte link address, if the identifier size (SMF124S1_IdSize) is 2.
---------	-----	---	---

SMF124#01_Port.zPortID.zCUPort.<fieldname>

zINTID	HEX	2	(IBM name: SMF124S1_INTID) For control unit ports, the control unit interface ID assigned to the port.
--------	-----	---	---

SMF124#01_Port.zPortID.<fieldname>

zPortType	INT (ENUM)	1	(IBM name: SMF124S1_PortType) Port type: 1 => (IBM name: SMF124S1_PortType_Channel) Channel port, 2 => (IBM name: SMF124S1_PortType_EntrySwitch) Entry switch port, 3 => (IBM name: SMF124S1_PortType_ExitSwitch) Exit switch port, 4 => (IBM name: SMF124S1_PortType_CU) Control unit port.
zAssocCHPID	HEX	1	(IBM name: SMF124S1_AssocCHPID) The associated CHPID for switch and control unit ports.

SMF124#01_Port.zFlag1.<fieldname>

zValSpeed	BIT	1	(IBM name: SMF124S1_ValSpeed) Port speed information is valid.
zValSFPDP	BIT	1	(IBM name: SMF124S1_ValSFPDP) SFP diagnostic parameters are valid.
zValBuff	BIT	1	(IBM name: SMF124S1_ValBuff) Buffer credit information is valid.
zValLESB	BIT	1	(IBM name: SMF124S1_ValLESB) Link error status block (LESB) information is valid.
zValFEC	BIT	1	

			(IBM name: SMF124S1_ValFEC) Forward error correction (FEC) information is valid.
zValAttWWPN	BIT	1	(IBM name: SMF124S1_ValAttWWPN) Attached port name SMF124S1_AttWWPN is valid.
zldSize	BINT	2	(IBM name: SMF124S1_IdSize) Port identifier size (1, 2 or 3).

SMF124#01_Port.zFlag2.<fieldname>

zValThresh_Temp	BIT	1	(IBM name: SMF124S1_ValThresh_Temp) Temperature threshold values are valid.
zValThresh_Voltage	BIT	1	(IBM name: SMF124S1_ValThresh_Voltage) Voltage threshold values are valid.
zValThresh_TxBias	BIT	1	(IBM name: SMF124S1_ValThresh_TxBias) Transmitter laser bias current (Tx bias) threshold values are valid.
zValThresh_TxPower	BIT	1	(IBM name: SMF124S1_ValThresh_TxPower) Optical transmit power (Tx) threshold values are valid.
zValThresh_RxPower	BIT	1	(IBM name: SMF124S1_ValThresh_RxPower) Optical receive power (Rx) threshold values are valid.

SMF124#01_Port.zFlag3.<fieldname>

zOpSpeedUnknown	BIT	1	(IBM name: SMF124S1_OpSpeedUnknown) The operating speed is not known to the port.
zOpSpeedUnRecog	BIT	1	(IBM name: SMF124S1_OpSpeedUnRecog) The operating speed is not recognized by z/OS.
zOpSpeedNotEst	BIT	1	(IBM name: SMF124S1_OpSpeedNotEst) The operating speed has not been established by the port.
zCapSpeedUnknown	BIT	1	(IBM name: SMF124S1_CapSpeedUnknown) The capable speed is not known to the port.
zCapSpeedUnRecog	BIT	1	(IBM name: SMF124S1_CapSpeedUnRecog) The capable speed is not recognized by z/OS.
zFECActive	BIT	1	(IBM name: SMF124S1_FECActive) Indicates whether forward error correction (FEC) for a 16 Gbs port is active. If on, FEC for this 16 Gbs port is active. If off, FEC for the 16 Gbs port is not active or the state is unknown. This field is not relevant to ports whose operating link speed is not 16Gbs. FEC for ports with speeds 32 Gbs or higher, will always be active.

SMF124#01_Port.zFlag4.<fieldname>**SMF124#01_Port.zFlag5.<fieldname>****SMF124#01_Port.zFlag6.<fieldname>****SMF124#01_Port.zFlag7.<fieldname>****SMF124#01_Port.zFlag8.<fieldname>****SMF124#01_Port.<fieldname>**

zPortSpeed	INT	4	(IBM name: SMF124S1_PortSpeed) Port speed information. This information is valid if SMF124S1_ValSpeed is ON.
zOperSpeed	INT	2	(IBM name: SMF124S1_OperSpeed) Current operating speed, in gigabits per second (Gbps). If zero, see operating speed flags in SMF124S1_Flag3 for more information.
zCapSpeed	INT	2	(IBM name: SMF124S1_CapSpeed) Maximum capable speed, in gigabytes per second (Gbps). If zero, see capable speed flags in SMF124S1_Flag3 for more information.

SMF124#01_Port.zSFPDP.<fieldname>			
zSFP_Temp	INT	2	(IBM name: SMF124S1_SFP_Temp) Transceiver temperature. This field contains a signed, two's complement value in increments of 1/256 of a degree Celsius (C). The valid range is -128°C to 128°C (127.996°C).
zSFP_Voltage	INT	2	(IBM name: SMF124S1_SFP_Voltage) Voltage. The value is in units of 100 microvolts (uV). The valid range is 0 - 6.55 volts (V).
zSFP_TxBias	INT	2	(IBM name: SMF124S1_SFP_TxBias) Transmitter laser bias current (Tx bias). The value is in units of two microamps (uA). The valid range is 0 - 131 milliamps (mA).
zSFP_TxPower	INT	2	(IBM name: SMF124S1_SFP_TxPower) Transmit power (Tx). The value is in units of 0.1 microwatts (uW). The valid range is 0 - 6.5 milliwatts (mW).
zSFP_RxPower	INT	2	(IBM name: SMF124S1_SFP_RxPower) Receive power (Rx). The value is in units of 0.1 microwatts (uW). The valid range is 0 - 6.5 milliwatts (mW).

SMF124#01_Port.zBuffCred.<fieldname>			
zThisPort_B2BCredit	INT	4	(IBM name: SMF124S1_ThisPort_B2BCredit) Number of buffer-to-buffer credits for this port.
zAttPort_B2BCredit	INT	4	(IBM name: SMF124S1_AttPort_B2BCredit) Number of buffer-to-buffer credits for the attached port.
zRTT	INT	4	(IBM name: SMF124S1_RTT) Round-trip time from this port to the attached port, in nanoseconds. A value of zero means that the round trip time is unknown.
zEst_Distance	INT	4	(IBM name: SMF124S1_Est_Distance) Estimated distance, in meters, based on the roundtrip time. A value of zero means that the estimated distance is unknown.

SMF124#01_Port.zErrorInfo.<fieldname>			
zLESB_LinkFailureCount	INT	4	(IBM name: SMF124S1_LESB_LinkFailureCount) Link failure count for this monitoring interval. This information is valid if SMF124S1_ValLESB is ON.
zLESB_LossOfSyncCount	INT	4	(IBM name: SMF124S1_LESB_LossOfSyncCount) Loss-of-synchronization count for this monitoring interval. This information is valid if SMF124S1_ValLESB is ON.
zLESB_LossOfSignalCount	INT	4	(IBM name: SMF124S1_LESB_LossOfSignalCount) Loss-of-signal count for this monitoring interval. This information is valid if SMF124S1_ValLESB is ON.
zLESB_PrimitiveSeqProtocol	INT	4	(IBM name: SMF124S1_LESB_PrimitiveSeqProtocol) Count of primitive sequence protocol errors for this monitoring interval. This information is valid if SMF124S1_ValLESB is ON.
zLESB_InvalidTransWord	INT	4	(IBM name: SMF124S1_LESB_InvalidTransWord) Count of invalid transmission words for this monitoring interval. This information is valid if SMF124S1_ValLESB is ON.
zLESB_InvalidCRCCount	INT	4	(IBM name: SMF124S1_LESB_InvalidCRCCount) Invalid CRC count for this monitoring interval. This information is valid if SMF124S1_ValLESB is ON.
zFEC_UnCorrected_Blks	INT	4	(IBM name: SMF124S1_FEC_UnCorrected_Blks) Number of FEC uncorrected blocks for this monitoring interval. This information is valid if SMF124S1_ValFEC is ON.

SMF124#01_Port.zThresholds_Temp.<fieldname>			
zThreshold_Temp_HighAlarm	INT	2	(IBM name: SMF124S1_Threshold_Temp_HighAlarm) High alarm threshold.
zThreshold_Temp_LowAlarm	INT	2	(IBM name: SMF124S1_Threshold_Temp_LowAlarm) Low alarm threshold.
zThreshold_Temp_HighWarn	INT	2	

			(IBM name: SMF124S1_Threshold_Temp_HighWarn) High warning threshold.
zThreshold_Temp_LowWarn	INT	2	(IBM name: SMF124S1_Threshold_Temp_LowWarn) Low warning threshold.

SMF124#01_Port.zThresholds_Voltage.<fieldname>			
zThreshold_Voltage_HighAlarm	INT	2	(IBM name: SMF124S1_Threshold_Voltage_HighAlarm) High alarm threshold in units of 100 microvolts (uV). The valid range is 0 - 6.55 volts (V). This information is valid when SMF124S1_ValThresh_Voltage is ON.
zThreshold_Voltage_LowAlarm	INT	2	(IBM name: SMF124S1_Threshold_Voltage_LowAlarm) Low alarm threshold in units of 100 microvolts (uV). The valid range is 0 - 6.55 volts (V). This information is valid when SMF124S1_ValThresh_Voltage is ON.
zThreshold_Voltage_HighWarn	INT	2	(IBM name: SMF124S1_Threshold_Voltage_HighWarn) High warning threshold in units of 100 microvolts (uV). The valid range is 0 - 6.55 volts (V). This information is valid when SMF124S1_ValThresh_Voltage is ON.
zThreshold_Voltage_LowWarn	INT	2	(IBM name: SMF124S1_Threshold_Voltage_LowWarn) Low warning threshold in units of 100 microvolts (uV). The valid range is 0 - 6.55 volts (V). This information is valid when SMF124S1_ValThresh_Voltage is ON.

SMF124#01_Port.zThresholds_TxBias.<fieldname>			
zThreshold_TxBias_HighAlarm	INT	2	(IBM name: SMF124S1_Threshold_TxBias_HighAlarm) High alarm threshold in units of two microamps (uA). The valid range is 0 - 131 milliamps (mA). This information is valid when SMF124S1_ValThresh_Bias is ON.
zThreshold_TxBias_LowAlarm	INT	2	(IBM name: SMF124S1_Threshold_TxBias_LowAlarm) Low alarm threshold in units of two microamps (uA). The valid range is 0 - 131 milliamps (mA). This information is valid when SMF124S1_ValThresh_Bias is ON.
zThreshold_TxBias_HighWarn	INT	2	(IBM name: SMF124S1_Threshold_TxBias_HighWarn) High warning threshold in units of two microamps (uA). The valid range is 0 - 131 milliamps (mA). This information is valid when SMF124S1_ValThresh_Bias is ON.
zThreshold_TxBias_LowWarn	INT	2	(IBM name: SMF124S1_Threshold_TxBias_LowWarn) Low warning threshold in units of two microamps (uA). The valid range is 0 - 131 milliamps (mA). This information is valid when SMF124S1_ValThresh_Bias is ON.

SMF124#01_Port.zThresholds_TxPower.<fieldname>			
zThreshold_TxPower_HighAlarm	INT	2	(IBM name: SMF124S1_Threshold_TxPower_HighAlarm) High alarm threshold in units of 0.1 microwatts (uW). The valid range is 0 - 6.5 milliwatts (mW). This information is valid if SMF124S1_ValThresh_TxPower is ON.
zThreshold_TxPower_LowAlarm	INT	2	(IBM name: SMF124S1_Threshold_TxPower_LowAlarm) Low alarm threshold in units of 0.1 microwatts (uW). The valid range is 0 - 6.5 milliwatts (mW). This information is valid if SMF124S1_ValThresh_TxPower is ON.
zThreshold_TxPower_HighWarn	INT	2	(IBM name: SMF124S1_Threshold_TxPower_HighWarn) High warning threshold in units of 0.1 microwatts (uW). The valid range is 0 - 6.5 milliwatts (mW). This information is valid if SMF124S1_ValThresh_TxPower is ON.
zThreshold_TxPower_LowWarn	INT	2	(IBM name: SMF124S1_Threshold_TxPower_LowWarn) Low warning threshold in units of 0.1 microwatts (uW). The valid range is 0 - 6.5 milliwatts (mW). This information is valid if SMF124S1_ValThresh_TxPower is ON.

SMF124#01_Port.zThresholds_RxPower.<fieldname>			
zThreshold_RxPower_HighAlarm	INT	2	(IBM name: SMF124S1_Threshold_RxPower_HighAlarm) High alarm threshold in units of 0.1 microwatts (uW). The valid range is 0 - 6.5 milliwatts (mW). This information is valid if SMF124S1_ValThresh_RxPower is ON.

zThreshold_RxPower_LowAlarm	INT	2	(IBM name: SMF124S1_Threshold_RxPower_LowAlarm) Low alarm threshold in units of 0.1 microwatts (uW). The valid range is 0 - 6.5 milliwatts (mW). This information is valid if SMF124S1_ValThresh_RxPower is ON.
zThreshold_RxPower_HighWarn	INT	2	(IBM name: SMF124S1_Threshold_RxPower_HighWarn) High warning threshold in units of 0.1 microwatts (uW). The valid range is 0 - 6.5 milliwatts (mW). This information is valid if SMF124S1_ValThresh_RxPower is ON.
zThreshold_RxPower_LowWarn	INT	2	(IBM name: SMF124S1_Threshold_RxPower_LowWarn) Low warning threshold in units of 0.1 microwatts (uW). The valid range is 0 - 6.5 milliwatts (mW). This information is valid if SMF124S1_ValThresh_RxPower is ON.
SMF124#01_Port.<fieldname>			
zAttWWPN	HEX	8	(IBM name: SMF124S1_AttWWPN) Worldwide port name of the attached port. This information is valid if SMF124S1_ValAttWWPN flag is on.

Record Type 124 Subtype 2 - IOS Endpoint Security

Primary Segment:

- [SMF124#02_IOS_Endpoint_Security_Information](#)

Secondary Segment(s): 1

- [SMF124#02_Endpoint_Security_Status](#)

Primary segment: [SMF124#02_IOS_Endpoint_Security_Information](#)

Field Name	Type	Len	Description
<i>SMF124#02_IOS_Endpoint_Security_Information.<fieldname></i>			
<i>SMF124#02_IOS_Endpoint_Security_Information.Header_Self_defining_Section.<fieldname></i>			
zFLG	HEX	1	(IBM name: SM124FLG) System indicator: Bit Meaning when set 0 New SMF record format 1 Subtypes used 2 Reserved. 3-6 Version indicators 7 System is running in PR/SM mode.
zRTY	INT	1	(IBM name: SM124RTY) Record type 124 (X'7C').
zTME	TSTMP	8	(IBM name: SM124TME) Date/Time when the record was moved into the SMF buffer.
zSID	CHAR	4	(IBM name: SM124SID) System identification (from the SMFPRMxx SID parameter).
zSSI	CHAR	4	(IBM name: SM124SSI) Sub-system identification ('RMF').
zSTY	INT	2	(IBM name: SM124STY) Record subtype. 1 => Link diagnostic information, 2 => Endpoint security information, 3 => Endpoint security authentication key update, 4 => Endpoint security encryption key update, 5 => External key manager event record
zSTYe	INT (ENUM)	2	(IBM name: SM124STYe) Record subtype - short expansion
zHdr_Len	INT	2	(IBM name: SMF124Hdr_Len) Length of header.
zHdr_TrplCnt	INT	2	(IBM name: SMF124Hdr_TrplCnt) Number of triplets in header.
zHdr_Flags	INT	2	(IBM name: SMF124_Hdr_Flags) Header flags.
zEPSECSTAT_Offset	INT	4	(IBM name: SMF124S2_EPSECSTAT_Offset) Offset to endpoint security status section from start of record, including record descriptor word (RDW).
zEPSECSTAT_Len	INT	2	(IBM name: SMF124S2_EPSECSTAT_Len) Length of endpoint security status section.
zEPSECSTAT_Num	INT	2	(IBM name: SMF124S2_EPSECSTAT_Num) Number of endpoint security status sections.

Secondary segment: [SMF124#02_Endpoint_Security_Status](#)

Field Name	Type	Len	Description
<i>SMF124#02_Endpoint_Security_Status.<fieldname></i>			
zCHPID	HEX	1	

			(IBM name: SMF124S2_CHPID) CHPID.
zPCHID	HEX	2	(IBM name: SMF124S2_PCHID) Physical channel ID of CHPID.
zCHPWWPN	HEX	8	(IBM name: SMF124S2_CHPWWPN) Worldwide port number (WWPN) of channel.
zLADDR	HEX	3	(IBM name: SMF124S2_LADDR) Destination link address.
zINTID	HEX	2	(IBM name: SMF124S2_INTID) Interface ID of CU port.
zCUWWPN	HEX	8	(IBM name: SMF124S2_CUWWPN) WWPN of CU port.
zREPORTSRC	INT (ENUM)	1	(IBM name: SMF124S2_ReportSrc) Reporting source: 1 => (IBM name: SMF124S1_ReportSrc_Monitor) Periodic monitoring.
zEPSEC_CURR	INT (ENUM)	1	(IBM name: SMF124S2_EPSEC_CURR) Current endpoint security status. 0 => no endpoint security is in effect, 1 => Authentication is in effect, 2 => Encryption is in effect.
zCHPIDCAPABILITY	INT (ENUM)	1	(IBM name: SMF124S2_CHPIDCAPABILITY) Endpoint security capability of the CHPID. 0 => no endpoint security is in effect, 1 => Authentication is in effect, 2 => Encryption is in effect.

SMF124#02_Endpoint_Security_Status.zFLAG1.<fieldname>

zEPSEC_SUMM	BIT	1	(SMF124S2_EPSEC_SUMM) Summary flag. The following two flags are mutually exclusive. If neither flag is on, then no endpoint security is in effect.
zEPSEC_AUTH	BIT	1	(SMF124S2_EPSEC_AUTH) Authentication is in effect.
zEPSEC_ENCR	BIT	1	(SMF124S2_EPSEC_ENCR) Encryption is in effect.

- [SMF125_SourcePath](#)

Primary segment: [SMF125_Generic_Tracker](#)

Field Name	Type	Len	Description
<i>SMF125_Generic_Tracker.<fieldname></i>			
zFLG	HEX	1	(IBM name: SMF125FLG) System indicator. See 'Standard SMF record header' on page n for details.
zRTY	INT	1	(IBM name: SMF125RTY) Record type 125 (X'7D')
zTME	TSTMP	8	(IBM name: SMF125TME) Date/Time that the record was moved into the SMF buffer.
zSID	CHAR	4	(IBM name: SMF125SID) System identification (from the SID parameter).
zSSI	CHAR	4	(IBM name: SMF125SSI) Subsystem identification: 'GTZ'.
zSTY	INT	2	(IBM name: SMF125STY) Record SubType. Value of 1 iNDICATETRACKDATA.
zTVR	INT	1	(IBM name: SMF125TVR) Version: 1 (GTZSMFVERS10NTRACKDATA1)

<i>SMF125_Generic_Tracker.zTF1.<fieldname></i>			
zSourceFlag	BIT	1	If ON, use SOURCEPATH, with SMF125TSPL and SMF125TSPO, otherwise use SOURCE, with SMF125TSO.
zProgramFlag	BIT	1	If ON, use PROGRAMPATH, with SMF125TPPL and SMF125TPPO, otherwise use PROGRAM, with SMF125TPR.
zAuthEvent	BIT	1	If ON, the tracked EVENT ran authorized.

<i>SMF125_Generic_Tracker.<fieldname></i>			
zTFT	TSTMP	8	(IBM name: SMF125TFT) The time stamp when the first instance of this unique tracked instance was recorded.
zTOW	CHAR	16	(IBM name: SMF125TOW) OWNER value.
zTSO	CHAR	8	(IBM name: SMF125TSO) SOURCE value. Only valid if SMF125TFS is OFF.
zTSPL	INT	2	(IBM name: SMF125TSPL) Length of SOURCEPATH value. Only valid if SMF125TFS is ON.
zTSPO	INT	2	(IBM name: SMF125TSPO) Offset from the start of this GtzSmf125 record to the SOURCEPATH value of the offset 72 IENGTHOnly valid if SMF125TFS is ON.
zTEDL	INT	2	(IBM name: SMF125TEDL) Length of EVENTDESC value.
zTEDO	INT	2	(IBM name: SMF125TEDO) Offset from the start of this GtzSmf125 record to the EVENTDESC value of the offset 76 IENGTH

zTED	HEX	16	(IBM name: SMF125TED) EVENTDATA value.
zEventData1	HEX	8	(IBM name: GtzSmf125TEventData1) First half of EVENTDATA value.
zEventData2	HEX	8	(IBM name: GtzSmf125TEventData2) Second half of EVENTDATA value.
zTEJ	CHAR	8	(IBM name: SMF125TEJ) Derived EVENTJOB-name value.
zTHJ	CHAR	8	(IBM name: SMF125THJ) Derived HOMEJOB-name value.
zTPR	CHAR	8	(IBM name: SMF125TPR) Derived PROGRAM-name value. Only valid if SMF125TFP is OFF. Chapter 16. SMF records
zTPO	HEX	8	(IBM name: SMF125TPO) Derived PROGRAMOFFSET value.
zTPPL	INT	2	(IBM name: SMF125TPPL) Length of PROGRAMPATH value. Only valid if SMF125TFP is ON.
zTPPO	INT	2	(IBM name: SMF125TPPO) Offset from the start of this GtzSmf125 record to the PROGRAMPATH value of the offset 128 IENGTHOnly valid if SMF125TFP is ON.
zTEA	INT	2	(IBM name: SMF125TEA) EVENTASID value.
zTHA	INT	2	(IBM name: SMF125THA) HOMEASID value.
zSYN	CHAR	8	(IBM name: SMF125SYN) Name of system on which this tracked instance was recorded.
zSXN	CHAR	8	(IBM name: SMF125SXN) Name of sysplex on which this tracked instance was recorded.

Secondary segment: SMF125_EventDesc

Field Name	Type	Len	Description
<i>SMF125_EventDesc.<fieldname></i>			
zEventDesc	XVCHAR	0 8192	(IBM name: N/A) EVENTDESC Value.

Secondary segment: SMF125_SourcePath

Field Name	Type	Len	Description
<i>SMF125_SourcePath.<fieldname></i>			
zSourcePath	XVCHAR	0 8192	(IBM name: N/A) SOURCEPATH Value.

Secondary segment: SMF125_ProgramPath

Field Name	Type	Len	Description
<i>SMF125_ProgramPath.<fieldname></i>			
zProgramPath	XVCHAR	0 8192	(IBM name: N/A) PROGRAMPATH Value.

Record Type 200 - CA Spool

SMF Record 200 (CA Spool) is mapped by structure member "T200".

Primary Segment:

- SMF200_CA_SPOOL

Secondary Segment(s): 13 (in alphabetical order)

- SMF200_00_Start
- SMF200_01_Termination
- SMF200_02_SMF_Data_Lost
- SMF200_03_VTAM_Start
- SMF200_04_VTAM_End
- SMF200_05_File_Open
- SMF200_06_File_Close
- SMF200_07_File_Purge
- SMF200_08_File_Route
- SMF200_09_File_Transfer
- SMF200_10_File_Reset
- SMF200_11_Print_End
- SMF200_12_File_Transformation

Primary segment: SMF200_CA_SPOOL

Field Name	Type	Len	Description
<i>SMF200_CA_SPOOL.<fieldname></i>			
SMF200_CA_SPOOL.Header.<fieldname>			
SMF200_CA_SPOOL.Header.zFLG.<fieldname>			
zSubTypes	BINT (ENUM)	1	zFLG bit 1 - Indicating this record has Subtypes
SMF200_CA_SPOOL.Header.<fieldname>			
zRTY	INT	1	(IBM name: SMFRTYPE) OS Record type
zTME	TSTMP	8	(IBM name: SMFTIME) Date/Time when record was moved to the SMF buffer.
zSID	CHAR	4	(IBM name: SMFSYSID) System identification (taken from system SID parameter).
SMF200_CA_SPOOL.Header.SubTypes_N.<fieldname>			
zSTY	INT	1	(IBM name: SMFSTYPE) Record subtype.
zSSI	CHAR	4	(IBM name: SMFSUBID) ESF subsystem identification.
zSSID	CHAR	4	(IBM name: SMFSYSID) SID from parameters or SMF.
SMF200_CA_SPOOL.Header.SubTypes_Y.<fieldname>			
zSSI	CHAR	4	(IBM name: SMFXSSI) ESF subsystem identification.
zSTY	INT	2	(IBM name: SMFXSTY) Record subtype.
zSSID	CHAR	4	(IBM name: SMFXSSID) SID from parameters or SMF.

Secondary segment: SMF200_00_Start

Field Name	Type	Len	Description
<i>SMF200_00_Start.<fieldname></i>			
SMF200_00_Start.zOP.<fieldname>			
zCOLD	BIT	1	COLD started
zFORMAT	BIT	1	FORMAT started
zLIST	BIT	1	LIST requested
zLOG	BIT	1	LOG requested
zBUILDQ	BIT	1	BUILDQ requested

Secondary segment: SMF200_01_Termination

Field Name	Type	Len	Description
<i>SMF200_01_Termination.<fieldname></i>			
zCT	HEX	8	(IBM name: SMFT01CT) TCB time used
zST	HEX	8	(IBM name: SMFT01ST) SRB time used

Secondary segment: SMF200_02_SMF_Data_Lost

Field Name	Type	Len	Description
<i>SMF200_02_SMF_Data_Lost.<fieldname></i>			
zCT	INT	2	(IBM name: SMFT02CT) Number of SMF records lost
zST	TSTMP	8	(IBM name: SMFT02ST) Start date/time of period during which no SMF data sets were available for recording

Secondary segment: SMF200_03_VTAM_Start

Field Name	Type	Len	Description
<i>SMF200_03_VTAM_Start.<fieldname></i>			
zNM	CHAR	8	(IBM name: SMFT03NM) Node name of terminal logged on
zGN	INT	4	(IBM name: SMFT03GN) Network group number

Secondary segment: SMF200_04_VTAM_End

Field Name	Type	Len	Description
<i>SMF200_04_VTAM_End.<fieldname></i>			

zNM	CHAR	8	(IBM name: SMFT04NM) Node name of terminal logged off
zGN	INT	4	(IBM name: SMFT04GN) Network group number

Secondary segment: SMF200_05_File_Open

Field Name	Type	Len	Description
<i>SMF200_05_File_Open.<fieldname></i>			
SMF200_05_File_Open.zFL.<fieldname>			
zOpen	BINT (ENUM)	1	Open input / output if off
zDisp	BINT (ENUM)	1	Open modify / initial if off
zBackward	BINT (ENUM)	1	Open backward / forward if off (input only)

SMF200_05_File_Open.<fieldname>			
zSQ	INT	4	(IBM name: SMFT05SQ) File sequence number
zOW	CHAR	8	(IBM name: SMFT05OW) Filename
zDS	CHAR	8	(IBM name: SMFT05DS) File destination name
zCL	CHAR	1	(IBM name: SMFT05CL) File output class
zFR	CHAR	4	(IBM name: SMFT05FR) Form number
zFC	CHAR	4	(IBM name: SMFT05FC) FCB name
zUS	CHAR	8	(IBM name: SMFT05US) Userid
zAC	CHAR	8	(IBM name: SMFT05AC) Account number
zLC	INT	4	(IBM name: SMFT05LC) Number of lines in file (input only)
zCP	INT	1	(IBM name: SMFT05CP) Number of copies
zPR	INT	1	(IBM name: SMFT05PR) File priority
zCU	CHAR	8	(IBM name: SMFT05CU) Caller's Userid
zF8	CHAR	8	(IBM name: SMFT05F8) 8 character form number
zPL	INT	2	(IBM name: SMFT05PL) Programmer's name length
zPN	XVCHAR	0 255	(IBM name: SMFT05PN) Programmer's name

Secondary segment: SMF200_06_File_Close

Field Name	Type	Len	Description
<i>SMF200_06_File_Close.<fieldname></i>			
<i>SMF200_06_File_Close.zFL.<fieldname></i>			
zTemp	BINT (ENUM)	1	Close temporarily / permanently if off
zOpen	BINT (ENUM)	1	Opened for input /output if off
<i>SMF200_06_File_Close.<fieldname></i>			
zSQ	INT	4	(IBM name: SMFT06SQ) File sequence number
zOW	CHAR	8	(IBM name: SMFT06OW) Filename
zDS	CHAR	8	(IBM name: SMFT06DS) File destination name
zLC	INT	4	(IBM name: SMFT06LC) Number of lines in file
zCP	INT	1	(IBM name: SMFT06CP) Number of copies
zPR	INT	1	(IBM name: SMFT06PR) File priority

Secondary segment: SMF200_07_File_Purge

Field Name	Type	Len	Description
<i>SMF200_07_File_Purge.<fieldname></i>			
<i>SMF200_07_File_Purge.zFL.<fieldname></i>			
zXMem	BINT (ENUM)	1	File purged on cross memory request /file purged by purge processor if off
<i>SMF200_07_File_Purge.<fieldname></i>			
zSQ	INT	4	(IBM name: SMFT07SQ) File sequence number
zOW	CHAR	8	(IBM name: SMFT07OW) Filename
zDS	CHAR	8	(IBM name: SMFT07DS) File destination name
zOP	CHAR	8	(IBM name: SMFT07OP) Requestor's userid

Secondary segment: SMF200_08_File_Route

Field Name	Type	Len	Description
<i>SMF200_08_File_Route.<fieldname></i>			
<i>SMF200_08_File_Route.zFL.<fieldname></i>			
zXMem	BIT	1	Routed by cross memory request handler (ESFXEQ)
zOperator	BIT	1	Routed by system operator

zNetUser	BIT	1	Routed by network user
zComUser	BIT	1	Routed by communication user
zRequeued	BIT	1	File requeued - not routed

SMF200_08_File_Route.zRF.<fieldname>

zFName	BIT	1	Filename changed
zDest	BIT	1	File destination name changed
zClass	BIT	1	File output class changed (ESFXEQ only)
zEofRemv	BIT	1	End of file indicator removed (ESFXEQ only)
zProgNam	BIT	1	Programmer's name changed

SMF200_08_File_Route.<fieldname>

zSQ	INT	4	(IBM name: SMFT08SQ) File sequence number
zOO	CHAR	8	(IBM name: SMFT08OO) Old filename
zOD	CHAR	8	(IBM name: SMFT08OD) Old file destination name
zOC	CHAR	1	(IBM name: SMFT08OC) Old file output class (ESFXEQ only)
zNO	CHAR	8	(IBM name: SMFT08NO) New file destination name
zND	CHAR	8	(IBM name: SMFT08ND) New file destination name
zNC	CHAR	1	(IBM name: SMFT08NC) New file output class (ESFXEQ only)
zOP	CHAR	8	(IBM name: SMFT08OP) Requestor's userid

Secondary segment: SMF200_09_File_Transfer

Field Name	Type	Len	Description
SMF200_09_File_Transfer.<fieldname>			
zSQ	INT	4	(IBM name: SMFT09SQ) File sequence number
zOW	CHAR	8	(IBM name: SMFT09OW) Filename
zDS	CHAR	8	(IBM name: SMFT09DS) Destination name
zCL	CHAR	1	(IBM name: SMFT09CL) Output class
zFR	CHAR	4	(IBM name: SMFT09FR) Form number
zFC	CHAR	4	(IBM name: SMFT09FC) FCB name
zUS	CHAR	8	(IBM name: SMFT09US) Userid
zAC	CHAR	8	(IBM name: SMFT09AC) Account number
zLC	INT	4	(IBM name: SMFT09LC) Line count

zCP	INT	1	(IBM name: SMFT09CP) Number of copies
zPR	INT	1	(IBM name: SMFT09PR) File priority
zF8	CHAR	8	(IBM name: SMFT09F8) 8 character form number
zPL	INT	2	(IBM name: SMFT09PL) Programmer's name length
zPN	XVCHAR	0 255	(IBM name: SMFT09PN) Programmer's name

Secondary segment: SMF200_10_File_Reset

Field Name	Type	Len	Description
<i>SMF200_10_File_Reset.<fieldname></i>			
SMF200_10_File_Reset.zFL.<fieldname>			
zOClass	BIT	1	Output class changed
zOPriority	BIT	1	Output priority changed
zAFFINITY	BIT	1	AFFINITY changed
zFCB	BIT	1	FCB name changed
zForms	BIT	1	Forms number changed
zCopy	BIT	1	Copy count changed
zPartial	BIT	1	Partial print changed
zRetain	BIT	1	Retain time changed

SMF200_10_File_Reset.<fieldname>			
zSQ	INT	4	(IBM name: SMFT0ASQ) File sequence number
zOW	CHAR	8	(IBM name: SMFT0AOW) Filename
zDS	CHAR	8	(IBM name: SMFT0ADS) Destination name
zOQ	CHAR	1	(IBM name: SMFT0AOQ) Old output class
zOP	CHAR	1	(IBM name: SMFT0AOP) Old output priority
zNQ	CHAR	1	(IBM name: SMFT0ANQ) New output priority
zNP	INT	1	(IBM name: SMFT0ANP) New output priority
zOA	INT	1	(IBM name: SMFT0AOA) Old affinity mask
zNA	INT	1	(IBM name: SMFT0ANA) New affinity mask
zOC	CHAR	4	(IBM name: SMFT0AOC) Old FCB Name
zNC	CHAR	4	(IBM name: SMFT0ANC) New FCB Name 62 34 SMFT0A0F 4 EBCDIC FQEFORMS Old forms number
zNF	CHAR	4	(IBM name: SMFT0ANF) New forms number

zON	INT	1	(IBM name: SMFT0AON) Old copy count
zNN	INT	1	(IBM name: SMFT0ANN) New copy count
zOG	INT	2	(IBM name: SMFT0AOG) Old starting page
zNG	INT	2	(IBM name: SMFT0ANG) New starting page
zO#	INT	1	(IBM name: SMFT0AO#) Old page count
zN#	INT	1	(IBM name: SMFT0AN#) New page count
zOR	INT	2	(IBM name: SMFT0AOR) Old retain hours
zNR	INT	2	(IBM name: SMFT0ANR) New retain hours
zOE	CHAR	8	(IBM name: SMFT0AOE) Requestor's userid
zF8	CHAR	8	(IBM name: SMFT0AF8) 8 character form number

Secondary segment: SMF200_11_Print_End

Field Name	Type	Len	Description
<i>SMF200_11_Print_End.<fieldname></i>			
zSQ	INT	4	(IBM name: SMFT0BSQ) File sequence number
zOW	CHAR	8	(IBM name: SMFT0BOW) Filename
zPG	INT	4	(IBM name: SMFT0BPG) Number of pages printed
zOD	CHAR	8	(IBM name: SMFT0BOD) Output device node name
zGN	INT	4	(IBM name: SMFT0BGN) Output device's network group number
zCL	CHAR	1	(IBM name: SMFT0BCL) Output class
zFO	CHAR	4	(IBM name: SMFT0BFO) Form number
zFC	CHAR	4	(IBM name: SMFT0BFC) FCB name
zLC	INT	4	(IBM name: SMFT0BLC) Number of lines in file
zLP	INT	4	(IBM name: SMFT0BLP) Number of lines printed
zDS	CHAR	8	(IBM name: SMFT0BDS) File destination name
zCP	INT	2	(IBM name: SMFT0BCP) Number of copies
zUS	CHAR	8	(IBM name: SMFT0BUS) Userid
zAC	CHAR	10	(IBM name: SMFT0BAC) Account number

zST	TSTMP	8	(IBM name: SMFT0BST) Date/Time when print was started
zF8	CHAR	8	(IBM name: SMFT0BF8) 8 character form number
zPL	INT	2	(IBM name: SMFT0BPL) Programmer's name length
zPN	CHAR	16	(IBM name: SMFT0BPN) Programmer's name

Secondary segment: SMF200_12_File_Transformation

Field Name	Type	Len	Description
<i>SMF200_12_File_Transformation.<fieldname></i>			
zSQ	INT	4	(IBM name: SMFT0CSQ) File sequence number
zOW	CHAR	8	(IBM name: SMFT0COW) Filename
zDS	CHAR	8	(IBM name: SMFT0CDS) Destination name
zCL	CHAR	1	(IBM name: SMFT0CCL) Output class
zFR	CHAR	8	(IBM name: SMFT0CFR) 8 character Form number
zFC	CHAR	4	(IBM name: SMFT0CFC) FCB name
zUS	CHAR	8	(IBM name: SMFT0CUS) User id
zAC	CHAR	10	(IBM name: SMFT0CAC) Account number
zTR	CHAR	10	(IBM name: SMFT0CTR) TRANSFRM= parameter options
zRC	INT	4	(IBM name: SMFT0CRC) Input Record Count
zPC	INT	4	(IBM name: SMFT0CPC) Input Page Count
zOC	INT	4	(IBM name: SMFT0COC) Output Page Count
zTU	INT	4	(IBM name: SMFT0CTU) Transformation CPU time in 1/100 seconds
zPL	INT	2	(IBM name: SMFT0CPL) Programmer's name length
zPN	CHAR	16	(IBM name: SMFT0CPN) Programmer's name

Record Type 208 - SYNCSORT

SMF Record 208 (SYNCSORT) is mapped by structure member "T208".

Primary Segment:

- [SMF208_SYNCSORT](#)

Secondary Segment(s): 5 (in alphabetical order)

- [SMF208_SYNCSORT_RSRV2](#)
- [SMF208_SYNCSORT_RSRV5](#)
- [SMF208_SYNCSORT_SORTWK_CHBG](#)
- [SMF208_SYNCSORT_SORTWK_Entry](#)
- [SMF208_SYNCSORT_WKEXTENTRY](#)

Primary segment: [SMF208_SYNCSORT](#)

Field Name	Type	Len	Description
<i>SMF208_SYNCSORT.<fieldname></i>			
<i>SMF208_SYNCSORT.Header.<fieldname></i>			
zFLG	HEX	1	(IBM name: SMF208FLG) System indicator: Bit Meaning when set 0-2 Reserved 3-6 Version indicators 7 Reserved.
zRTY	INT	1	(IBM name: SMF208RTY) Record type 208 (X'D0').
zTME	TSTMP	8	(IBM name: SMF208TME) Date/Time that the record was moved into the SMF buffer.
zSID	CHAR	4	(IBM name: SMF208SID) System identification (from the SID parameter).
<i>SMF208_SYNCSORT.<fieldname></i>			
zJOBNAME	CHAR	8	(IBM name: SMF208JBN) Job name.
zSTMN	CHAR	8	(IBM name: SMF208STMN) Step name of step invoking SORT.
zSTN	INT	2	(IBM name: SMF208STN) Step number.
zSTID	DATE	4	(IBM name: SMF208STID) SORT initiation date.
zSTIT	TIME	4	(IBM name: SMF208STIT) SORT initiation time.
zSTTT	TIME	4	(IBM name: SMF208STTT) SORT termination time.
zIPVSN	CHAR	6	(IBM name: SMF208IPVSN) SORTIN volume serial number.
zIPDSN	CHAR	44	(IBM name: SMF208IPDSN) SORTIN DSName.
zIPUCB	CHAR	2	(IBM name: SMF208IPUCB) SORTIN UCB type field.
zIPUAD	CHAR	3	(IBM name: SMF208IPUAD) SORTIN UNIT address.
zIPCAT	HEX	1	(IBM name: SMF208IPCAT) SORTIN Concatenation flag.
zIPLRC	INT	2	(IBM name: SMF208IPLRC) SORTIN LRECL.

zIPBLK	INT	2	(IBM name: SMF208IPBLK) SORTIN BLOCKSIZE - If set to X'FFFF', use zIPBLK instead.
zIPRCF	INT (ENUM)	1	(IBM name: SMF208IPRCF) SORTIN RECFM.
zSSTPF	CHAR	1	(IBM name: SMF208SSTPF) TPF level.
zSSTPS	CHAR	1	(IBM name: SMF208SSTPS) SUB TPF level.
zCHSSR	INT	1	(IBM name: SMF208CHSSR) SYNCSORT release number.
zOPVSN	CHAR	6	(IBM name: SMF208OPVSN) SORTOUT volume serial number.
zOPDSN	CHAR	44	(IBM name: SMF208OPDSN) SORTOUT DSName.
zOPUCB	CHAR	2	(IBM name: SMF208OPUCB) SORTOUT UCB type field.
zOPUAD	CHAR	3	(IBM name: SMF208OPUAD) SORTOUT UNIT address.

SMF208_SYNCSORT.zOPCAT.<fieldname>

zUSING	BIT	1	COBOL 'USING' detected.
zGVING	BIT	1	COBOL 'GIVING' detected.
zADACT	BIT	1	COBOL ADVANTAGE active.
zAPRST	BIT	1	COBOL ADVANTAGE present.
zCOBOL	BIT	1	COBOL INVOKER detected.

SMF208_SYNCSORT.<fieldname>

zOPLRC	INT	2	(IBM name: SMF208OPLRC) SORTOUT LRECL.
zOPBLK	INT	2	(IBM name: SMF208OPBLK) SORTOUT BLOCKSIZE - If X'FFFF', use zOPLBK instead.
zOPRCF	INT (ENUM)	1	(IBM name: SMF208OPRCF) COBOL advantage flags.
zWKNOA	INT	2	(IBM name: SMF208WKNOA) Number of SORTWK data sets allocated.
zWKTRK	INT	4	(IBM name: SMF208WKTRK) Number of SORTWK tracks allocated.
zWKNDV	INT	2	(IBM name: SMF208WKNDV) Number of SORTWK devices.
zWKDVT	INT (ENUM)	2	(IBM name: SMF208WKDVT) Device type of SORTWK data sets.
zWKLEN	INT	2	(IBM name: SMF208WKLEN) Length of SORTWK fields following this field, including this field.

Secondary segment: SMF208_SYNCSORT_SORTWK_Entry

Field Name	Type	Len	Description
SMF208_SYNCSORT_SORTWK_Entry.<fieldname>			
zWKDDN	CHAR	8	(IBM name: SMF208WKDDN) DDName of this SORTWK data set.
zWKVSN	CHAR	6	(IBM name: SMF208WKVSN) Volser of this SORTWK data set.

zWKUAD	CHAR	3	(IBM name: SMF208WKUAD) Unit address of this SORTWK dataset.
SMF208_SYNCSORT_SORTWK_Entry.<fieldname>			
zWKS99	BIT	1	Dynamically allocated data set.
zWKOLD	BIT	1	Unopened, DISP OLD data set.
zWKCAH	BIT	1	Cache FAST WRITE used.
zWKCOG	BIT	1	SORTWK contiguous space.
SMF208_SYNCSORT_SORTWK_Entry.<fieldname>			
zWKPTR	INT	2	(IBM name: SMF208WKPTR) Number of primary tracks allocated for this SORTWK data set. If X'FFFF' use full word value zWKEPR in the SORTWK information extension area.
zWKTRL	INT	2	(IBM name: SMF208WKTRL) Number of primary tracks released for this SORTWK data set. If X'FFFF' use full word value zWKERL in the SORTWK information extension area.
zWKTSC	INT	2	(IBM name: SMF208WKTSC) Number of secondary tracks obtained for this data set. If X'FFFF' use full word value zWKESC in the SORTWK information extension area.
zWKEXC	INT	4	(IBM name: SMF208WKEXC) EXCP count for this data set.
zWKUCB	CHAR	4	(IBM name: SMF208WKUCB) 4 digit UCB device number.

Secondary segment: **SMF208_SYNCSORT_SORTWK_CHBG**

Field Name	Type	Len	Description
SMF208_SYNCSORT_SORTWK_CHBG.<fieldname>			
zCHSIZ	INT	4	(IBM name: SMF208CHSIZ) Number of characters sorted. Set to 2147483647 if this number exceeded. (See zP8SIZ in SMF208_SYNCSORT_RSRV2).
zCHRIN	INT	4	(IBM name: SMF208CHRIN) Number of SORTIN/SORTINNN records. Set to 2147483647 if this number exceeded. (See zP8RIN in SMF208_SYNCSORT_RSRV2).
zCHROT	INT	4	(IBM name: SMF208CHROT) Number of sortout records or into OUTFIL processing. Set to 2147483647 if this number exceeded. (See zP8ROT in SMF208_SYNCSORT_RSRV2).
zCHINS	INT	4	(IBM name: SMF208CHINS) Number records inserted by exits. Set to 2147483647 if this number exceeded. (See zP8INS in SMF208_SYNCSORT_RSRV2).
zCHDEL	INT	4	(IBM name: SMF208CHDEL) Number of records deleted by exits INCLUDE/OMIT & SUM processing. Set to 2147483647 if this number exceeded. (See zP8DEL in SMF208_SYNCSORT_RSRV2).
zCHSZP	INT	4	(IBM name: SMF208CHSZP) SIZE parameter from SORT card.
zCHESI	HEX	1	(IBM name: SMF208CHESI) SIZE estimated indicator.
zCHLKI	HEX	1	(IBM name: SMF208CHLKI) Exit link needed indicator.
zCHXT1	HEX	2	(IBM name: SMF208CHXT1) Exit bit indicators.
zCHDB2	HEX	1	(IBM name: SMF208CHDB2) DB2 query input indicator.
zCHJON	HEX	1	

			(IBM name: SMF208CHJON) Join feature indicator.
zCHBAS	INT	2	(IBM name: SMF208CHBAS) Percent bias found in this sort.
zCHCRR	INT	4	(IBM name: SMF208CHCRR) Core requested for this sort.
zCHCRU	INT	4	(IBM name: SMF208CHCRU) Core used by this sort.
zCHPRR	INT	4	(IBM name: SMF208CHPRR) Number of records that fit into record storage area during sort.
zCHIBK	INT	2	(IBM name: SMF208CHIBK) Intermediate storage blocksize.
zCHVML	INT	2	(IBM name: SMF208CHVML) Variable length record modal size.
zCHFLR	INT	2	(IBM name: SMF208CHFLR) Fixed length record LRECL.
zCHIMO	INT	2	(IBM name: SMF208CHIMO) Intermediate merge order.
zCHFMO	INT	2	(IBM name: SMF208CHFMO) Final merge order.
zCHSTR	INT	2	(IBM name: SMF208CHSTR) String count.
zCHNMX	INT	4	(IBM name: SMF208CHNMX) Nmax.
zCHCTM	TIME	4	(IBM name: SMF208CHCTM) CPU time.
zCHCAL	HEX	2	(IBM name: SMF208CHCAL) Invoked by indicator.
zCHOPT	CHAR	2	(IBM name: SMF208CHOPT) Optimization mode used.
zCHERR	CHAR	3	(IBM name: SMF208CHERR) EBCDIC error number.
zCHRLS	CHAR	5	(IBM name: SMF208CHRLS) Release number and base TPF level of SYNCSORT (5th byte is R if sort is reentrant).
zCHSM	INT (ENUM)	1	(IBM name: SMF208CHSM) Sort or merge indicator
zCHOPS	CHAR	3	(IBM name: SMF208CHOPS) Operating system flags (CVT+16).
zCHOU	INT (ENUM)	1	(IBM name: SMF208CHOU) Over/under allocation indicator
zCHALF	CHAR	3	(IBM name: SMF208CHALF) EBCDIC of allocation factor.
zCHCPU	HEX	2	(IBM name: SMF208CHCPU) Packed CPU model number without sign.
zCHORS	DEC	2 (2,0)	(IBM name: SMF208CHORS) Packed operating system release number with sign.
zCHXT2	HEX	2	(IBM name: SMF208CHXT2) Exit bit indicators.
zCHFUT	HEX	2	(IBM name: SMF208CHFUT) Reserved for SYNCSORT internal use.
zSOSOP	INT	4	(IBM name: SMF208SOSOP) SORTOUT primary tracks.
zSOSOS	INT	4	(IBM name: SMF208SOSOS) SORTOUT secondary tracks.
zSAS		1	

	INT (ENUM)		(IBM name: SMF208SAS) SAS/SORT indicator.
zSOSOA	DEC	3 (5,0)	(IBM name: SMF208SOSOA) SORTOUT allocation factor (2 implied decimals).
zSISIF	INT	4	(IBM name: SMF208SISIF) SORTIN size (bytes) for fixed length. record count for variable length. set to 2147483647 if this number exceeded.
zSOSOF	INT	4	(IBM name: SMF208SOSOF) SORTOUT size (bytes) for fixed length. record count for variable length. set to 2147483647 if this number exceeded.
zCHINC	INT (ENUM)	1	(IBM name: SMF208CHINC) Incore sort flag.

SMF208_SYNCSORT_SORTWK_CHBG.zWKWDM.<fieldname>

zMiXDEV	BIT	1	Mixed devices.
---------	-----	---	----------------

SMF208_SYNCSORT_SORTWK_CHBG.<fieldname>

zWKWDB	INT (ENUM)	2	(IBM name: SMF208WKWDB) SORTWK secondary device type.
zCHSKL	INT	2	(IBM name: SMF208CHSKL) Sort key length.
zCHSKN	INT	2	(IBM name: SMF208CHSKN) Number of sort keys.
zCHSRB	TIME	4	(IBM name: SMF208CHSRB) Supervisor CPU time (0.01 second units).
zCHSEG	INT	2	(IBM name: SMF208CHSEG) Sort segment length.
zEXTLN	INT	1	(IBM name: SMF208EXTLN) Number of exit list entries following this field.
zEXLST	CHAR	3	(IBM name: SMF208EXLST) Exit List Entry.

Secondary segment: SMF208_SYNCSORT_RSRV2

Field Name	Type	Len	Description
SMF208_SYNCSORT_RSRV2.<fieldname>			

SMF208_SYNCSORT_RSRV2.zEQULS.<fieldname>

zSOTRP	BIT	1	SORTOUT data striping.
zSITRP	BIT	1	SORTIN data striping.
zBPSI	BIT	1	BATCHPIPES/MVS Dataset SORTIN.
zBPDS	BIT	1	BATCHPIPES/MVS Dataset present.
zEQUON	BIT	1	EQUALS ON.

SMF208_SYNCSORT_RSRV2.zCMP.<fieldname>

zCMPPD	BIT	1	CMP CPD ON.
--------	-----	---	-------------

SMF208_SYNCSORT_RSRV2.zCOPYF.<fieldname>

zCOPY	BIT	1	SORT FIELDS COPY.
-------	-----	---	-------------------

SMF208_SYNCSORT_RSRV2.zGENER.<fieldname>

zGNERF	BIT	1	SYNCGENER invoked.
--------	-----	---	--------------------

SMF208_SYNCSORT_RSRV2.zFTURE.<fieldname>			
zINCOM	BIT	1	INCLUDE/OMIT.
zOUTRC	BIT	1	OUTREC.
zINREC	BIT	1	INREC.
zSUM	BIT	1	SUM / DUPKEYS SUM.
zOUTFL	BIT	1	OUTFIL.
zNONE	BIT	1	SUM/DUPKEYS FIELDS NONE.
zXSUM	BIT	1	SUM XSUM / DUPKEYS XDUP.
zCONV	BIT	1	CONVERT FEATURE OF OUTREC.

SMF208_SYNCSORT_RSRV2.zSIIO.<fieldname>			
zSIVSAM	BIT	1	SORTIN access method is VSAM.
zSIBSAM	BIT	1	SORTIN access method is BSAM.
zSIQSAM	BIT	1	SORTIN access method is QSAM.
zSIEXCP	BIT	1	SORTIN access method is EXCP.
zSIPARA	BIT	1	PARASORT used.

SMF208_SYNCSORT_RSRV2.zSOIO.<fieldname>			
zSOVSAM	BIT	1	SORTOUT access method is VSAM.
zSOBSAM	BIT	1	SORTOUT access method is BSAM.
zSOQSAM	BIT	1	SORTOUT access method is QSAM.
zSOEXCP	BIT	1	SORTOUT access method is EXCP.
zSOFIL	BIT	1	OUTFIL.

SMF208_SYNCSORT_RSRV2.<fieldname>			
zMPGFX	HEX	1	(IBM name: SMF208MPGFX) Merge flag.

SMF208_SYNCSORT_RSRV2.zRETRY.<fieldname>			
zRTYED	BIT	1	Sort will be retried.
zRTYPG	BIT	1	This is a retried sort.

SMF208_SYNCSORT_RSRV2.zFLAG3.<fieldname>			
zDYNSW	BIT	1	DYNALLOC enabled for SORTWK.
zPIPE	BIT	1	Attached from PIPESORT.
zF3DUP	BIT	1	DUPKEYS statement.
zF3O2I	BIT	1	OUTREC Statement converted to INREC.

SMF208_SYNCSORT_RSRV2.<fieldname>			
zINVNM	CHAR	8	(IBM name: SMF208INVNM) Invoking program name.
zSICPC	INT	4	(IBM name: SMF208SICPC) SORTIN EXCP count.
zSOCPC	INT	4	(IBM name: SMF208SOCPC) SORTOUT EXCP count.
zVSCOR	INT	4	(IBM name: SMF208VSCOR) VSCORE value.
zVSCRT	INT	4	

			(IBM name: SMF208VSCRT) VSCORET value.
zCAVLT	INT	4	(IBM name: SMF208CAVLT) Total virtual storage available.
zCAVLA	INT	4	(IBM name: SMF208CAVLA) Storage available above 16MB.
zCUSET	INT	4	(IBM name: SMF208CUSET) Total virtual storage used.
zCUSEA	INT	4	(IBM name: SMF208CUSEA) Storage used above 16MB.
zCREQT	INT	4	(IBM name: SMF208CREQT) Virtual storage requested. If > 0 this is the value requested. If = 0 then 'MAX' requested. If < 0 then 'MAX-VALUE' requested.
zCOBFG	CHAR	1	(IBM name: SMF208COBFG) COBOL status flag.
zCOBNG	CHAR	1	(IBM name: SMF208COBNG) COBOL NOGO reason flag.
zCOBNM	CHAR	8	(IBM name: SMF208COBNM) COBOL program name.
zCOBRR	CHAR	10	(IBM name: SMF208COBRR) COBOL version and release number.
zSRTIN	CHAR	4	(IBM name: SMF208SRTIN) SORTIN 4 digit device number.
zSRTOU	CHAR	4	(IBM name: SMF208SRTOU) SORTOUT 4 digit device number.
zRL2	INT	2	(IBM name: SMF208RL2) Record length after INREC.
zRL3	INT	2	(IBM name: SMF208RL3) Record length after OUTREC.
zJSWK	INT	4	(IBM name: SMF208JSWK) Number of JCL allocated SORTWKS.
zDSWK	INT	4	(IBM name: SMF208DSWK) Number of dynamically allocated SORTWKS.
zRST	TSTMP	8	(IBM name: SMF208RST) Date and time that reader recognized job card. Time in 1/100's second, date in 00yydddf.
zP8SIZ	DEC	8 (15,0)	(IBM name: SMF208P8SIZ) Number of characters sorted.
zP8RIN	DEC	8 (15,0)	(IBM name: SMF208P8RIN) Number of SORTIN/SORTINnn records.
zP8ROT	DEC	8 (15,0)	(IBM name: SMF208P8ROT) Number of SORTOUT records or record into OUTFIL processing.
zP8INS	DEC	8 (15,0)	(IBM name: SMF208P8INS) Number of records inserted by exits.
zP8DEL	DEC	8 (15,0)	(IBM name: SMF208P8DEL) Number of records deleted by exits INCLUDE/OMIT and SUM processing.
zIPLBK	INT	4	(IBM name: SMF208IPLBK) SORTIN block size.
zOPLBK	INT	4	(IBM name: SMF208OPLBK) SORTOUT block size.
zOPSYS	CHAR	16	(IBM name: SMF208OPSYS) Operating system, product name.
zOPV	CHAR	2	(IBM name: N/A) Operating system, product version.
zOPR	CHAR	2	(IBM name: N/A) Operating system, product release.

zOPM	CHAR	2	(IBM name: N/A) Operating system, product mod level.
zWKEXL	INT	2	(IBM name: SMF208WKEXL) Total length of SORTWK Extension Area including this field.

Secondary segment: SMF208_SYNCSORT_WKEXTENTRY

Field Name	Type	Len	Description
<i>SMF208_SYNCSORT_WKEXTENTRY.<fieldname></i>			
zWKPTR	INT	4	(IBM name: SMF208WKPTR) Number of primary tracks allocated for this SORTWK data set. (Full word equivalent of zWKPTR value.)
zWKTRL	INT	4	(IBM name: SMF208WKTRL) Number of primary tracks released for this SORTWK data set. (Full word equivalent of zWKTRL value.)
zWKTSC	INT	4	(IBM name: SMF208WKTSC) Number of secondary tracks obtained for this data set. (Full word equivalent of zWKTSC value.)

Secondary segment: SMF208_SYNCSORT_RSRV5

Field Name	Type	Len	Description
<i>SMF208_SYNCSORT_RSRV5.<fieldname></i>			
zLEN	INT	2	(IBM name: SMF208LEN) SYNCSORT internal use data length.
zRSRV5	XVCHAR	0 198	(IBM name: SMF208RSRV5) SYNCSORT internal use data.

Appendix C: ENUM Values

SMF record field mappings often include values codes that correspond to a specific meaning. e.g. A value X'40' in data set record format fields indicates variable unblocked (RECFM=V).

SELCOPYi SMF record mapping structures include ENUM (enumerations) that provide a meaningful name (or phrase) for each value code in these types of fields.

SELCOPYi SMF Browse and Report utilities will use the ENUM name in place of the value when the field is selected for display. Similarly, the ENUM name may be specified instead of the value when searching for a record within a browse display or when applying a filter on the input records. In the following SMF Report definition example, only SMF type 14 records corresponding to RECFM=FB data sets will be selected:

```
FILTER:
  SMF014_INPUT_or_RDBACK_Dataset.RECFM = 'FB'
```

This is equivalent to:

```
FILTER:
  SMF014_INPUT_or_RDBACK_Dataset.RECFM = x'90'
```

When browsing SMF records which contain an ENUM field, the complete list of ENUM names and corresponding values for that field may be displayed by positioning the cursor on the field entry and pressing <F1> (HELP) twice. The meaning of the each ENUM name are displayed the first time help is executed, the ENUM name to value assignments are displayed on the second execution.

The following details all SELCOPYi ENUM evaluations for SMF record fields.

SMF 2 ENUM: zGHASHMETHe

Field Name	SMF Record	Segment Name
zGHASHMETHe	2	SMF002_01_Sig_Group

Display Text	Value	Hex Value
SHA1	8	X'0000,0008'
SHA256	4	X'0000,0004'
SHA384	2	X'0000,0002'
SHA512	1	X'0000,0001'

SMF 2 ENUM: zGSIGTYPEe

Field Name	SMF Record	Segment Name
zGSIGTYPEe	2	SMF002_01_Sig_Group

Display Text	Value	Hex Value
ECDSA	1	X'0000,0001'
RSA	2	X'0000,0002'

SMF 2 ENUM: zHASHMETHe

Field Name	SMF Record	Segment Name
zHASHMETHe	2	SMF002_02_Sig_Interval

Display Text	Value	Hex Value
SHA1	8	X'0000,0008'
SHA256	4	X'0000,0004'
SHA384	2	X'0000,0002'
SHA512	1	X'0000,0001'

SMF 2 ENUM: zISIGTYPEe

Field Name	SMF Record	Segment Name
zISIGTYPEe	2	SMF002_02_Sig_Interval

Display Text	Value	Hex Value
ECDSA	1	X'0000,0001'
RSA	2	X'0000,0002'

SMF 6 ENUM: zFTL

Field Name	SMF Record	Segment Name
zFTL	6	SMF006_IP_PrintWay_File_Transfer

Display Text	Value	Hex Value
Basic	0	X'0000,0000'
XInf	3	X'0000,0003'
XNoInf	1	X'0000,0001'

SMF 9 ENUM: zVPC

Field Name	SMF Record	Segment Name
zVPC	9	SMF009_Device

Display Text	Value	Hex Value
Enterprise Systems Connection Manager Program Product (5688-008)	3	X'0000,0003'
Operator	0	X'0000,0000'

SMF 11 ENUM: zVPC

Field Name	SMF Record	Segment Name
zVPC	11	SMF011_Device

Display Text	Value	Hex Value
Enterprise Systems Connection Manager Program Product (5688-008)	3	X'0000,0003'
Operator	0	X'0000,0000'

SMF 14 ENUM: Compaction

Field Name	SMF Record	Segment Name
Compaction	14	SMF014_INPUT_or_RDBACK_Dataset

Display Text	Value	Hex Value
IDRC	2	X'0000,0002'
Not used	1	X'0000,0001'
Unknown	0	X'0000,0000'
YES	2	X'0000,0002'
